GOODRICH LIST PRICES

ADJUSTMENT

FABRICS-6,000 MILES. CORDS-8,000 MILES

GOODRICH SILVERTOWN CORD

Apply the Goodrich Caliper of True Tire Value to a tire, and you at once gauge its service value.

Measure its price with the Goodrich List Price, and the adjustment mileage back of it with the More-Mileage Adjustment of Goodrich Tires—6,000 miles for fabrics; 8,000 for Silvertown Cords.

If its price measures more than the List Price, the tire asks you to pay for something it cannot deliver.

If its adjustment mileage measures less in miles than the Goodrich More-Mileage Adjustment, it deprives you of assured mileage your money entitles you to get.

Measure any tire with the Goodrich Caliper, and you realize why the word is running like wildfire through the motoring world, "Goodrich has THE TIRES."

The City of GOODRICH Akron, Ohio

Here and There in the Fruit Business

Australian Dried-Fruit Men Organize.

Fruit growers in the Murray River districts along the South Australian and Victorian border, who represent 95 per cent of the producers of dried fruits in Australia, have organized under the name of the Australian Dried Fruit Association. Like most co-operative concerns the Association is financed solely by and in the interests of the growers themselves. Marketing conditions and administration are entirely in the hands of the members.

Cost of Lemons Increasing in Sicily.

New York has always been the largest market for Sicilian lemons, says the American vice-consul at Palermo. More than half of this season's crop, or 650,000 boxes, have already been shipped to New York. The cost of production has more than doubled since 1914 when a packer was paid 69 cents for a 9-hour day. Now he receives \$1.64 for an 8-hour day. Under this agreement they were to pack not less than 40 boxes a day, though they rarely ever pack over 30 to 32 boxes. Pickers formerly received 58 cents for a 10-hour day where they now get \$1.55 for an 8-hour day. Laborers' and pruners' wages have risen from 58 cents to \$1.93 a day. The cost of material has of course increased. However, the high rate of exchange against the Italian lira has been of benefit to the exporter.

Dusting for Codling-Moth.

Many deciduous fruit growers are anxiously awaiting results from the arsenical dusting experiments in progress in the South in an attempt to control codling moth on walnuts. It is too early to determine definitely the extent of control. We understand, however, that there is abundant evidence of a material reduction in the number of wormy walnuts through the dusting with lead arsenate, and the growers feel that the method is going to be satisfactory.

The Raisin Men Pull Together.

There are about 9,500 growers under contract to deliver their raisin crops to the California Associated Raisin Co. The 1918 (gross) crop sales amounted to about \$24,000,000. Out of this sum the growers received about \$17,000,000. The 1919 sales will total about \$40,000,000, out of which the growers should receive \$30,000,000. These figures represent the business done by the "Associated," which handles about 88 per cent of the crop. They work out an average of approximately \$166 per acre. This leaves an ample margin from which to pay cultural expenses and still leave a good profit if land is not valued too high. It must be remembered that raisin growers had many lean heart-breaking years to make up before they united into an association and thus pulled themselves out of the mire.

The Dependence of Citrus Values.

"The industry must not be misled as to the net value of high prices," says Harold G. Powell, President of the California Fruit Growers' Exchange. "The advance in prices on all citrus fruits since the beginning of the war has not kept pace with the rise in prices of commodities in general—particularly those purchased by the producer. The value of citrus property in California may be said to depend very largely upon the success with which each crop is marketed. The distribution of the California citrus fruit crop through the California Fruit Growers' Exchange represents the most highly developed system of marketing to be found in American agriculture."

State Fruit Growers' Convention.

At a recent preliminary meeting at Chico to arrange the program for the State Fruit Growers and Farmers' Convention to be held in that city in November many counties were represented. November 10 and 11 the County Horticultural Commissioners will hold their meetings. The Farmers' and Fruit Growers' first day will be Wednesday, the 12th, and con-

tinue to Saturday, the 15th. The first day will be devoted to "Standardization," as it pertains to the production, grading, packing, labeling and marketing of fruits and nuts. Growers' co-operative selling organizations and their importance to the industries and further aims will be discussed by members from each industry. Thursday, the meetings will be at Oroville and will be devoted largely to the olive and orange industries. Friday will be devoted to cultural and protective subjects on deciduous fruits, and Saturday the meeting will be at the Durham State Land Settlement Colony, 6 miles south of Chico. A very large attendance is anticipated as the highways are like a billiard table.

Citrus Growers' Fine Showing.

During the last 16 years the California Fruit Growers' Exchange alone has returned to the State \$317,000,000. The losses from bad debts, uncollected bills, and in the transmission of funds have been only about \$8,000, or about 1/400 of one per cent of the f. o. b. returns.

The Farmers' Foreign Trade.

The foreign trade of this country in agricultural products for the year ending June 30, 1919, totaled \$5,770,917,553, or 57 per cent of our entire foreign trade. The farmer may not be a politician, but his business amounts to more than all the other industries put together. When his education has been completed he will make his voice heard in Congress. At present, like Mrs. Ram's husband, all he has to do is to keep quiet and pay the bills; raise what he is told and eat and drink what Mrs. Ram provides. It is about time we had more farmers to represent us both at Sacramento and Washington.

Butte County Prosperous.

The total of the peach, almond and prune crops around Chico is placed at 8,770 tons by Sherman Reynolds of E. T. Reynolds and Son, fruit packers. This tonnage will bring Chico growers \$2,760,000 in round numbers, as follows: Peaches, 1770 tons, value \$510,000; almonds, 2,000 tons, value \$1,000,000; prunes, 5,000 tons, value \$1,250,000.

JUNE DROP OF ORANGES IN TULARE.

(Continued from first page.)

drop off. However, fruit continues to drop in groves where thrips are bad and where thrips are not bad.

The owner of this place recently remarked to the writer, "I have just been reading the latest and most authoritative word about the June drop. It seems decided that the June crop will not be very serious if soil is good, trees thrifty, moisture content of the soil kept just right, cultivation done properly, and no extremes of weather set in; yet, as far as I know everything on my place has been as near right as it was possible to make it, and still the oranges are dropping."

The guess has been made that dry winters have had a bad effect on the June drop. They may have had a general bad effect on many groves, but cannot be blamed for the June drop on trees that are in the pink of condition to all appearances, with a heavy set of fine fruit, but with some of that fruit yellowing and falling.

It is just about here that the subject has to be left at present. Everything that will encourage the health and vigor of the tree should be done, and it will result in the harvesting of a bigger and better crop than if the trees are poorly attended to. On the first-class grove enough fruit will survive the drop to bring in first-class profits, and after all is said and done, that is what people are after.

Citrus Culture Experiments Planned.

It has been just publicly announced that a plan has been perfected for a series of citrus culture experiments in Tulare county. A committee representing the various citrus exchanges has entered into a legal agreement with the Regents of the University of

California, under which these experiments will be conducted on tracts especially selected for the purpose. To defray the expenses of this work an

assessment of not more than one quarter of a cent on each packed box will be levied on citrus fruits grown in the county.

It Helped Me Get My Start

Boys, when I took this place it was a wreck—old, worn out fruit trees and land as tight as your fist. Not fifty boxes of fruit in the whole shooting match. Mostly runts at that. I nearly killed myself the first three years cutting old trees, grubbing stumps, and digging holes for my new trees. Went flat broke and things looked pretty blue until I saw an advertisement of

HERCULES DYNAMITE

I sent for a copy of "Progressive Cultivation". Bought some Hercules dynamite and went to it. It was a cinch! You'll scarcely believe it when I tell you that I did more work that Spring with one helper than I'd done in three years with four men and a team—but it's a fact. You boys were youngsters then and didn't know much about it, but dynamite gave me my start and it'll help you to keep up the good work. The Hercules Powder Co. sends "Progressive Cultivation" free to any farmer or orchardist who will sign and send in the coupon that they print with every one of their advertisements.

MELILOTUS INDICA Supplies Both

Now is the time to plant it. Buy your seed from

Aggeler & Musser Seed Co.

620 S. Spring St., Los Angeles, California

Buy only Melilotus seed that has a quality tag on each sack. It protects you against the low germination seed so general on the market this season. This seed is above 99 per cent pure and above 90 per cent germination.

HOW FAR HAS THE ORIENT
INVADED OUR BORDERS?

(Written for Pacific Rural Press.)

The Hindus in our rice lands are doing very nicely. So they are in the rich farming sections of the Delta. The Japanese are almost in command of the truck and berry situation. There's lots of money in it, and they are now about strong enough to hold command. In the fruit section around Vacaville and in the great San Joaquin Valley in many of the best paying sections, they are crowding the white man out. It is dead easy. When a bunch of them have secured a footing in any district the white man is deprived of neighbors whose ways he understands and his wife won't stand for Orientals as neighbors. Then another lease or sale to a native-born Japanese baby takes place. And we look on—perfectly satisfied so long as we get supplies—just as ancient Rome did under the slave system.

We recently asked Dr. Geo. P. Clements of the Department of Agriculture how Southern California fared at the hands of the Oriental. He said: "I can give you definite figures on that so far as truck crops are concerned with the percentage of whites and Japanese engaged in the various productions." The following are the figures he sent us:

CANTALOUPE.	
Japanese	.85 per cent
Americans	.10 per cent
CAULIFLOWER.	
Japanese	.25 per cent
Chinese	.40 per cent
Americans	.35 per cent
POTATOES.	
Japanese	.20 per cent
Chinese	.20 per cent
Americans	.60 per cent
LETTUCE.	
Japanese	.85 per cent
Americans	.15 per cent
CABBAGE.	
Japanese	.40 per cent
Americans	.60 per cent
CELERY.	
Japanese	.65 per cent
Americans	.35 per cent
ASPARAGUS.	
Americans	.95 per cent
Japanese	.05 per cent
CITY MARKET SPACE.	
Japanese	.75 per cent

The above figures are approximate for Southern California.

Now about our agreement with Japan. The expressed desire for a "gentlemen's agreement" between strangers always looks slippery, and is to be regarded with suspicion. It always leaves room for encroachment and sharp practice. White men like contracts in big affairs to avoid mistakes.

We have recently heard in public speeches, the following statement in effect, generally given with the proud superior smile of the dominant race. "Our boys do not want to work with their hands—they all want to use their heads and employ the immigrant for the drudgery of muscular labor." We've got to forget this and bend our backs to a man's job. Any decent productive labor is honorable. "To labor is to pray," said the old teachers of men. Do we want to grow utterly dependent on what truck the alien can grow for us? There's nothing to be proud of about that. The sooner the market gardening business is put on a higher footing and special attention paid to training our own boys and girls in this vocation, the greater will be the manly strength of our State become—both physically and morally—and financially.

NEW BLOOD IN THE NURSERY
BUSINESS.

H. A. Hyde, the well-known florist, grower and nurseryman at Watsonville, has taken his two sons into the business with him and they will continue to flourish under the new name of "H. A. Hyde Co." The elder son, Harold A. Hyde, was formerly 1st Lieutenant, U. S. Army, and is a graduate of the University of California. The younger son, Clifford M. Hyde, graduated at Watsonville High School this year. Good luck to the new firm at the old stand.

In spite of the shortage of labor in the San Joaquin the harvesting of the raisin crop has been proceeding rapidly. The weather has been propitious.

STYLEPLUS CLOTHES

They have the
winning points!

Styleplus have correct style. All wool-fabrics. Guaranteed quality. Smart suits and overcoats—both in great variety. Styleplus values are always exceptional. The prices are known and moderate: "The sleeve ticket tells the price."

Don't buy clothes *before* you see them. Buy them in a *store*. Try them on first. This insures your satisfaction.

Buy more clothes than usual. Prices are sure to be higher next season.

Sold by one leading clothing-merchant in most cities and towns. Write us (Dept. AA) for name of local dealer.

Local Bank Courts Farm Loans

(Written for Pacific Rural Press by E. E. Hodges.)

"How are you, Jim?" said Manager E. R. Green of the Gilroy branch of the Garden City Bank, as a farmer stepped in while we were talking. Mr. Green's compartment was located where he could greet every customer who came in. The frequency with which our conversation was so interrupted might have been annoying had it not illustrated a cardinal principle in connecting up a local bank with the farmers in its vicinity.

"I have a chance to make a turn-over on some more cows. How much can you finance me," said "Jim," after greetings were over.

"All you need. What is the deal?" inquired Mr. Green, and it was agreed that Jim should come and arrange for the money when he wanted it.

After he left, Mr. Green remarked that he had borrowed money from the bank for other projects—he was level-headed; he kept his place in good shape; and he paid his accounts on time. Mr. Green knew all about the man's business that he needed to know and he knew the man's personality also. There lies a secret of the bank's extra good growth—favor with farmers in its territory.

Deposits Increased 555 Per Cent.

The bank was organized in 1912 as the First National Bank just after a strong competitor entered the same field. Mr. Green became cashier of the new institution and it thrived. In January, 1918, the First National became a branch of the Garden City Bank of San Jose. Summarizing its business preparatory to the change, it was found that in the 39 months between August 15, 1914, and November 20, 1917, this bank's deposits had gained 555 per cent. These deposits were mostly farmers' accounts. A 33 per cent gain in number of accounts was made in one year, and a 15 per cent gain in another, due largely to farmers starting new accounts. The town's people's accounts had been practically stationary. Since the Garden City bank absorbed the one at Gilroy, business has been good, largely on account of the farmer's connection with the Prune and Apricot Growers' Association and in spite of the bond campaigns and war conditions.

Mr. Green has been a bank cashier twenty years. He is proud of the fact that in ten years of Nebraska banking he never lost over \$300, and in seven years of California banking \$300 would cover all of his losses. He is prouder still of the fact that he has never foreclosed a mortgage and has never sued or been sued at law.

Farmers at Home in This Bank.

He found in California that farmers generally found it hard to approach bankers. He found farmers sensitive about any proposition where they might be turned down. He went out at once for the farmers' trade. It has been his object to make farmers enjoy coming into the bank. He called on ranchers in his territory at their homes and learned their first names and when their cows or crops were for sale and why. He became acquainted with their difficulties and

their hopes. He showed them where they could invest money in their business and make it pay more than high interest rates. He passed on to them the lesson that banks have learned in the past ten years—as it is good business for a bank to borrow money to carry its patrons, so it is for farmers to borrow money to carry their business over certain periods so they could do more of it. He gave everybody to understand that the bank would finance them for profit-making investments. He used newspapers all the time to convey his message. He used personal letters very largely. People soon came to know that the bank was interested in them and would help them to help themselves.

Character—Most Satisfactory Security.

"I would rather lend money on a man's character in a majority of cases than on ordinary security," said Mr. Green in substance (part of his \$300 losses had been on supposedly secured claims). Very few men would not be good for a loan of \$150 to \$200 on their own personal security, and where we know a man from previous dealings, we are safe in lending greater amounts for specified profit-making purposes.

"A stranger wanting financial help to plant an orchard would have to give references at least. One man south of town bought twenty acres and paid for it. He wanted \$1,000 with which to plant trees. In such a case he did not need to give a mortgage to secure the \$1,000, but it was necessary for him to furnish a statement of his financial condition. Such a statement is made to a bank without objection when the borrower understands it is to be held confidential.

"One man borrowed money to buy his land. He didn't hesitate to borrow more money to buy more land and good livestock. He usually made enough from his farms to clean up once a year. Most of the farmers here aim to clean up all their loans once a year except those on real estate. Many of them pay a percentage down on tractors and give their notes for the balance either to us or to the dealer who then turns over the notes to us. A tractor is subject to rapid depreciation in the hands of careless or incompetent parties, so the ease with which a farmer can get that kind of a loan depends on his success in previous ventures. The same thing is true in a general way with all loans. If a man has shown that he does not usually succeed in his projects, we do not want to lend to him on the best security there is, because we don't want to have to foreclose on anyone. But if he is a fair-minded, reasonably successful farmer, we feel he is entitled to all the financial help we can give him for profit-making enterprises."

BEAN AND WEED CUTTER.

Beside this was a simple bean and weed cutter for two horses, invented by J. J. Pim of San Joaquin County. This has a single beam with the cutter bars projecting backward and out-

ward from its front end. A wheel with a central flange carries the weight in front and the front end is raised and lowered by a lever. The rear end rests on an eccentric axle and two wheels. It is adjusted for height by another lever. The operator rides.

FUMIGATING GRAIN WEEVILS.

To the Editor: How can we kill weevils in stored grain?—C. W. B., Warm Springs.

Fumigate with carbon bisulphide, 10 to 30 pounds per thousand cubic feet of space in the granary (including the grain). Calk the cracks and holes or it will not be effective. Spread the grain out to as little depth as practicable. Place a shallow pan

on top of the grain or on a shelf above it, pour the carbon bisulphide into it, and get out quickly, closing the door tight. Allow no fire around it. Leave the granary closed as long as convenient, not less than 24 hours.

The grape growers in three hill districts in Napa county have sold their wine grapes to an Eastern buyer for \$28.50 a ton, delivered at shipping point—lug boxes furnished by buyers. The contract is for 1,000 tons.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILDews or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the finest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste—(Atomic Sulphur).

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this Sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out in labor for spraying your orchard, even if you pay your men \$4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR, 100% pure. This has increased various crops up to 500%.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dry Bordeaux, Dusting Sulphur Mixtures, etc. And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 deg. Be., Sulphur Paste, Nicotine, Black Leaf 40, etc. Fungicides and Insecticides. Carried in stock and mixed to order.

SAN FRANCISCO SULPHUR CO.

THE CALIFORNIA WALNUT GROWERS' ASSOCIATION.

(Written for Pacific Rural Press.)

The circular report of the Association dated August 20 gives the estimated crop for this season from present conditions as 46,000,000 pounds as against 39,000,000 last year. Within 90 days "the Association has been offered much business it felt necessary to decline, as its estimated output of No. 1 Soft Shells and Budded has been long since contracted for." The Association is still in position to accept orders for a limited quality of No. 2's. It is expected that the price put on No. 2 walnuts will be so comparatively low as to greatly stimulate their sale. The heavy percentage of No. 2's is attributed to insufficient rains where no artificial irrigation was available—only 9 inches instead of 17 in the walnut sections. "However, 80 per cent of the walnut groves are under irrigation and most of these will return excellent crops." Three times the normal amount of water has been used, trebling the irrigation costs of production.

To the new acreage coming into bearing together with improved cultural methods may be attributed the large crop in sight. "There are now 77,000 acres of walnuts in California. The crop will show about 17 per cent No. 2's and the No. 1's will not be as large as in 1918."

Budded Nuts Take the Lead.

"Practically the entire increase in production will be of the Budded variety, which will be of the usual fine size, as most of the plantings for the last ten years have been Buds and young trees always produce the largest nuts. The Budded is the coming California walnut. It is larger, has a smoother shell, a plumper, heavier meat and a more exquisite flavor than the soft-shell. Some day there will be ten pounds of Buds produced to one pound of Soft-Shells."

Brands and Prices.

"We are putting 'Diamond Brand' in a class by itself. It will be the Association's policy to pack nothing but the highest grades of nuts under this nationally advertised brand. Goods of only standard grade will be sold in unbranded bags as formerly. Our standards and inspection will this year be more thorough than ever. Goods that are below standard quality will be cracked and sold as walnut meats. Each of our 26 packing houses will this season be either new or remodeled and enlarged, and have sufficient capacity to clean, grade and pack all the walnuts gathered in its section each day—even at the very peak of the harvesting season."

"No man living is capable of making an accurate prediction of opening prices at this early date—ideas often change three or four cents a pound within the week preceding the announcing of our opening prices—the price will be justified by supply and demand."

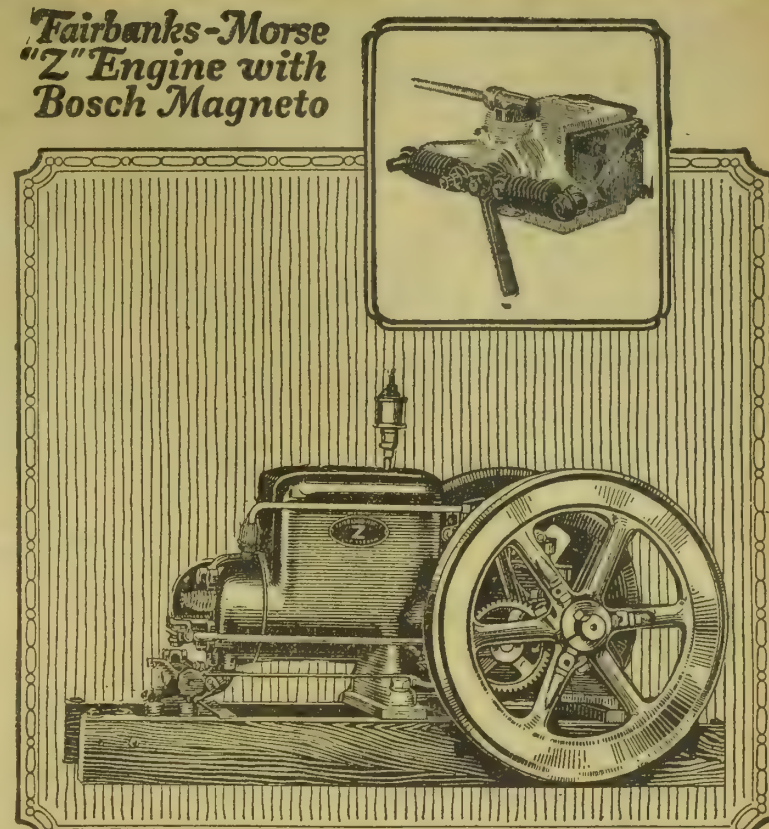

Inflation of Currency.

"The value of a dollar today in purchasing commodities, including labor, is hardly half what it was in normal times. Thus, when one figures a dollar as simply a medium of exchange, prices can hardly be considered higher now than they were during the pre-war period. As a concrete illustration, the farmer today can only exchange a couple of bags of walnuts for the same suit of clothes, set of harness or bill of groceries that he could exchange two bags for in 1914."

The State's Raisin Crop has now dropped to an estimate of 180,000 tons, according to E. E. Kaufman, Bureau of Crop Estimates. The hot spells in July and August were directly responsible for most of the damage by sunburn, and the berries in many districts run smaller than usual. The fine drying season has done much to alleviate the shortness of labor in the field, but the harvesting has proceeded nicely. Growers will have had a stiff season of it though at that, for they are constantly "on the job."

The Greatest Combination

Fairbanks-Morse "Z" Engine with Bosch Magneto

WHEN the full meaning of this "Z" message is realized—mighty few farmers in America will fail to at once call on the nearest "Z" engine dealer. ¶ This example of master engine-building must be seen. ¶ Type and pictures can but suggest this value establishing achievement. ¶ By adding this one possible betterment—Bosch high tension, oscillating magneto—we complete a rare engine service, fully maintained by over 200 Bosch Service Stations in co-operation with every "Z" engine dealer—for all "Z" engine owners. ¶ Prices—1½ H. P. \$75.00—3 H. P. \$125.00—6 H. P. \$200.00—All F.O.B. Factory.

The Odorous Onion and Its High Price

(By Albert Lindley, Chairman of the State Organization, Farm Owners' and Operators' Association.)

Having shown in previous articles, based on actual investigation, that the farmer received, under contract dated August 4, 1919, after deducting 16 cents paid to him for the sack container, only \$1.91 per hundred pounds for potatoes, for which the housewife of San Francisco was paying at the rate of \$4.16, the patron of the cheaper restaurants \$11.40, and the cafes and hotels as high as \$40 per hundred, the agents of the Farm Owners' and Operators' Association then took up the onion as their next subject. They secured original contracts, bills and receipts and followed the onion from the delta farmer to the San Joaquin river bank, then down the river by steamer and on until distributed as food to the final consumers in San Francisco.

It was found that the farmer received on a large shipment of onions on August 20, 1919, \$1.75 for each sack to contain not less than 105 pounds of Australian brown onions. These onions he raised and by contract delivered them, sorted and sacked, on the river bank, only 80 miles from San Francisco, and where they lay at his risk until picked up by the river boat to be carried to the San Francisco produce dealer.

Deducting the 16 cents which the farmer pays for the sack container, his return is \$1.59 for a sack of 105 pounds, or \$1.51 per hundredweight. In the case of onions, as with potatoes, the jobber buys by the sack and sells by the one hundred pounds. By this switch he gains 5 pounds on every sack, the opening wedge in the advance of price from the farmer to the consumer.

The jobbers' selling price for the 105 pounds of onions, for which he paid the farmer \$1.75, was \$2.50 the hundredweight, showing an advance of 75 cents over the price paid the farmer, with 5 pounds acquired, or added, for which he paid the farmer nothing and sold at 2½ cents a pound, or 12½ cents, making his actual advance per hundred 87½ cents, or 50 per cent gross on his investment. The price, like the onion, grows stronger as the product advances to the consumer.

The retailer then purchased these onions from the wholesaler at \$2.50 per hundred. He distributed them to his customers at the rate of six pounds for 25 cents, or \$4.16 per hundredweight, or a gross advance of \$1.66. It will be observed that the retailer's advance alone is more than the gross price per hundred actually received by the farmer, who provided the land, seed, labor, and all other expenses, to which must be added occasional hazard of crop failures and a glutted market.

The farmer's \$1.51 onions have now first touched the consumer with the price of \$4.16 per hundredweight when sold in household quantities. When served in the cheaper restaurants, even raw or sliced, these onions bought at the low average of 10 cents a portion of one onion, bring an aggregate of about \$20 the hundred pounds. When served raw in the better class of hotels the portions served aggregate in price about \$30 per hundredweight. The patrons served in these fine places are eating onions at a cost to them of 1900 per cent over and above the price paid the farmer.

Mariout Barley Not for Wet Locations

The article on Mariout barley written by Prof. G. W. Hendry of University Farm and published in our issue of August 9, has occasioned some embarrassment because so many of our readers have asked for seed and the seed is hardly to be obtained. A letter addressed to Prof. Hendry from a Stockton grain dealer asks whether this barley has been tried on black adobe or on peat soils such as characterize the Delta Islands. Several farmers had asked the dealer for seed. Prof. Hendry gives the following advice:

"Our 14 years of experience with Mariout barley have shown it to have the greatest advantage over common barley on dry soils, in dry seasons, and especially when late planting is practiced. Under such circumstances it generally has produced 5 to 10 sacks per acre above the common sort. Last year we had light spring rains in this section, and Mariout was much superior in yield, both on fall and spring planted land and on both heavy and light soil types. We should say that it will outyield the common variety on either a heavy or light soil under dry conditions, but that on low-

lying heavy soils, on which the water stands during the winter, it is not so good as the common variety.

"Regarding peat soils, we have no data upon which to form an opinion, but would think that if plenty of moisture were available that common barley could not be improved upon, but if the peat is apt to dry out early in the spring, we should prefer Mariout. Again, if a summer crop, such as corn or beans, is to follow barley, we should choose Mariout because it will ripen about 2 weeks ahead of common barley sown at the same time. Mariout is essentially an arid hot-climate crop, and succeeds with less rain than common barley.

"Summing up, I would advise Mariout for: (1) Dry upland soils, either heavy or light; (2) dry peat soils, either early or late planting; (3) moist peat soils, late planting; (4) any peat soils where double cropping is used.

"I would not advise Mariout for: (1) Low heavy soils, fall seeding, where water stands; (2) moist peat soil, fall seeding, no summer crop; (3) cool, moist climate near coast or at high elevations in North."

MOST WHEAT WITH LEAST RAIN.

The best wheat crop ever raised in recent years in the Annette district of Kern county, and northern San Luis Obispo grain districts grew this season on the light rainfall of four inches at Annette and about seven inches at Linne, according to Ben Quigley, a rancher of the latter district. Better cultural methods explain this unexpectedly good crop, according to Mr. Quigley, who points to the better working of summer fallow and getting seedbeds refined in time for earlier sowing. But last winter's moisture did not get down to that of the previous year, so if we don't get good soaking rains this winter, look out for a short crop next season!

EGYPTIAN COTTON GINS READY.

Arizonans have a tremendous cotton acreage this year, according to F. M. Blake, who has the Oliver implement agency at Phoenix. It is mostly the Egyptian variety, and this year the people will not be caught short of ginning facilities as they were last year. A large number of the most up-to-date Egyptian cotton gins have been installed this season. Alfalfa acreage has been shortened by the cotton craze. There is plenty of water for all crops and the country is exceptionally prosperous.

The whole world is looking to California for fruit—fresh, dried and canned. All right—they shall have it.

Fine Progress in Alfalfa Association

(Written for Pacific Rural Press.)

As alfalfa is marketed now, many a district which ships hay to the markets during the heavy-tonnage season pays freight on hay to be shipped back at higher prices, which cover transportation and middlemen's commissions, but represent no profits to the producers.

"But," says Manager G. H. Emery of the Alfalfa Growers of California, Inc., "the day is about past when independent buyers can beat down the price and stock up when hay is most plentiful to warehouse it and sell at high prices later in the season."

The alfalfa association is aiming first to develop and supply fully all that each local market needs from the local supply if there is enough of it. The direct route from producer to consumer will be worked as thoroughly as possible.

To accomplish this, a mild sort of reorganization is going on. Heretofore, its business has been conducted from the Los Angeles and Oakland offices. But the Association is now opening branch offices at El Centro, Bakersfield, Fresno, and Orland, which will handle the business of their districts direct without consultation with the home office at Los Angeles, except for guidance with reference to market conditions and policies of the Association.

Each branch office is to be supported by a local center of information in each alfalfa-growing community. This will put the head office in touch with local conditions all over the State at all times. Field men also will help along this line, for the Association has lately increased its field force, which renders personal service to members in the way of handling their crops, local sales, and general information.

There are about 1,500 members controlling 60,000 acres already, and new members are steadily volunteering as they see the benefits of the Association and its influence in holding prices at a point where growers receive fair compensation for their labor, capital, and risk. The most modern business methods are being adopted by the Association in order to give prompt attention to all of its business.

Marketing Milo Co-operatively.

A departure of considerable value is

the organization of a department to market the milo and other grain sorghums grown by members of the Alfalfa Growers of California, Inc. (the "Association"). The day this department was organized in Imperial Valley, milo was selling at \$41 as Mr. Emery remembers it. The next day it was up to \$50. But while all of the milo which has been sold by the Association for its members has brought better prices than were paid to outsiders, the idea is not to boost prices beyond what growers are entitled to receive for services performed. The chief value of organized marketing of grain sorghums, as well as alfalfa, is to eliminate fluctuations of the market due to manipulation by middlemen for their own gain.

WHAT ARE DISTINGUISHING MARKS OF ROOT STOCKS?

To the Editor: Can you tell me how to tell the difference between peach, almond and Myrobolan roots on prune nursery stock, at planting time? Also, can you inform me how to keep the little "flat-head borers" from young prune trees?—A. T. Porterville.

Myrobolan roots are the darkest in color of the tree and have a denser bark. The peach root is reddish in color when washed—redder still if you chop a little off, while washed almond roots have a yellowish appearance. You will see the most fibre on your Myrobolans, but this need be no criterion of the value of the tree, as it has to be renewed. The peach root has a bitter taste; the others are bland.

You can keep the flat-headed borer from young prune trees by protecting them from sunburn or other injury, though the borer occasionally enters at the cut made at the bud union. A little wax will stop this. The flat-headed borer does not enter healthy fresh bark.

New Zealand Fruit Growers are organized voluntarily for the purpose of standardization and inspection. Each orchardist is assessed 24 cents an acre and this provides a fund of \$20,000 to carry out the work. They have a large South American trade.

Calco Wagon Tanks

will stand the strain—no matter how hard or rough the road.

They are built to give long life under severe usage on either horse drawn wagons or on tractor trailers.

Made of heavy Armco iron, riveted and soldered and with baffle plates to prevent wash of contents from one end to the other.

Made in three types with capacities from 260 to 1300 gallons.

Greater Economy for Any Country-Driven Car

Whether it's a suit of clothes, a pair of shoes, an automobile, a tractor, or a tire—*quality* is the thing that insures lastingly satisfactory service.

It is Mohawk *quality* that has made Mohawk Tires so popular among the farm communities.

In most sizes of Mohawk Tires, you will find an *extra ply of fabric*. That means longer wear.

In every Mohawk Tire you will find *nothing but pure rubber and pure materials*—no shoddy,

no reclaimed rubber, no "fillers". That means that you get more tire for your money when you buy a Mohawk—the Mohawk Cord, for example, weighs from eight to ten pounds more than any other Cord, size for size.

Add to these advantages a hand-made tire, produced by expert tire builders and you will understand why 85% of the motorists who buy their first Mohawk Tire continue to use Mohawks exclusively.

Cord or fabric, in ribbed and non-skid treads, and there's an extra ply, hand-made, Ford size Mohawk, too. Good dealers everywhere handle them

AGRICULTURAL NOTES.

From \$3 to \$7 a day and board are prices paid for hands at rice harvesting.

The northwest winds have blanched 3 per cent of the rice crop in the vicinity of Winters.

A short crop of onions in nearly all the producing sections this year assures a rapid sale at profitable prices.

California warehouses are still carrying a large supply of beans from the 1918 crop, and the market is quiet.

The people of Fall River and Hat Creek valleys have one of the largest hay crops ever known hereabouts to dispose of.

Mustard Farmers at Lompoc (Ventura county) have been getting 15 cents a pound for red mustard and 20 cents for yellow.

The first California motor truck train, composed of fifteen heavily laden trucks of various makes, arrived safely in Los Angeles.

Loose alfalfa is selling in the Fresno district at \$25 a ton and \$28 for baled. These prices are attributed to shortness of water-reducing crops.

With the required number of farmers signed for loans from the Federal Land Bank, the Yuba-Sutter Farm Loan Society organization was assured.

It is estimated that one ton of fresh tomatoes will yield 8 pounds of seed. Large quantities of seed were shipped abroad last year by the Havens Seed Farm in Santa Ana.

Rice harvest is general in Yuba, Yolo, and Sutter counties. The average yield is expected to reach 45 sacks to the acre. Contracts for \$5.50 per cental are the rule.

Michigan reports the sale there of new crop of white beans at \$8.50 per cental for October delivery. A few sales have been made at \$8.90—equal to \$8 for California white beans.

Libby, McNeil & Libby Co. have just completed surveys for a new cannery at Gridley (Butte county), to be erected and operated next season. This is a rich and growing section.

The recent rain started work preparing summer fallow for the seeding of one of Fall River's most extensive wheat crops. The average yield for the past season was about twelve sacks.

Several thousand men are needed in the rice fields for the harvest, rice growers estimated today. Men now employed are threatening a strike, saying they are dissatisfied with the wage scale.

According to data collected by the Department of Commerce the country's cotton crop is the smallest in ten years. But the growers are getting more money for the crop than in any previous year.

William G. McAdoo was appointed today special assistant to the Attorney-General in defending the constitutionality of the Federal farm loan act, which had been attacked in suit brought in Kansas City.

Private estimates of Washington's 1919 wheat crop have fixed the total at 55,250,000 bushels, or about 10,000,000 more bushels than was ever produced in the State. The estimated value is well over \$1,000,000,000.

A hundred pounds of superphosphate to the acre has been found very effective for alfalfa in Australia. It is applied right after the first cut is off and on successive cuttings in hot sections while vigorous growth is made.

Salem, Ore., will produce approximately 45,000 bales of hops this season, according to the latest estimates by leading growers of the Willamette valley. It is believed that most of the yards will produce an average of 1,200 pounds to the acre.

"Within five years California will be producing one-half the rice crop of the entire county," says J. R. Leguene, chief of the Rice Division, U. S. Food Administration. The 140,000 acres planted to rice in the Sacramento valley this season will yield 50 per cent more this year than the acreage of any Southern State.

Harvesting of the Sacramento Valley's \$25,000,000 rice crop is in full swing and many discharged soldiers

are finding employment in the rice fields, according to the war camp community placement bureau. Wages are said to range from \$6 a day up.

The value of the rice crop in the Chico district of Butte county, comprising some 12,000 acres, is placed at \$3,000,000. The value of the total crop for the county, including the Gridley and Biggs districts, is placed at \$7,000,000.

Imperial Valley, comprising 413,000 acres under cultivation on the American side of the border and 80,000 acres on the Mexican side, produced crops worth a total of \$47,832,292 during 1918, according to data just completed by the Southern Pacific Railway. It required 18,682 cars to move this corn.

Before the war most of the beet, carrot, radish and spinach seed came from Great Britain and France, but now we export those seeds. There are about 21,537 acres of vegetable seed alone this year in this State, and as we have a monopoly on certain seeds through our climate, the industry of seed growing is a coming one.

Striking Chinese at Dayside cannery near Mayfield were discharged this morning by the company, following the volunteering of the other employees for double duty until new men can be employed. The Chinese truckers went out on a demand for a raise of 10 cents an hour in wages. They had been getting 35 cents and 40 cents an hour.

Last year the State of Virginia condemned crimson clover seed, which showed a germination test only between 15 and 30 per cent. Usually old crimson clover seed has a dark brownish color, readily distinguishable from the bright color of the new crop seed. If there is an abundance of dark seed, the buyer may well become suspicious and submit samples to the laboratory for a germination test.

Cotton grown in the San Joaquin Valley is now finding a market in the California Products Company of Fresno. According to word received from Manager Hulme the company has sold 78 bales of cotton, representing the total production of cotton lint from last year's cotton crop in the San Joaquin Valley, to the Simon Mattress Company of San Francisco. These linters will be made into mattresses. This is the first time that these mattresses will be made from linters grown in the San Joaquin valley.

BUNYIP WHEAT IN MADERA CO.

Almost double the yield per acre was the gratifying result obtained by W. D. Cardwell, of Chowchilla, Madera county, in a comparison between Bunyip (Sperry No. 1) wheat and Club. Fifty acres seeded in Bunyip produced 459 sacks at an average weight of 143 lbs. per sack of wheat, weighing 61½ lbs. to the measured bushel. Having heard this wheat well recommended when he put in his grain for the present year, Mr. Cardwell decided to give it a tryout. He secured enough seed for 50 acres and sowed it in the center of 800 acres. The surrounding 750 acres were seeded with Club wheat. None of the land is under irrigation and it all was prepared alike.

A SQUIRREL TRAP.

To the Editor: We have a dry gulch at the edge of a bean field where the squirrels are very destructive, and it is too dry to get them with gas. We buried a barrel in the bank about three weeks ago and put water in it and since then have thrown 55 dead squirrels out of the barrel.

If it is too much trouble to bury the barrel, lean a board up against the side of it at a slant of 30 or 40 degrees and nail it to the top. The water level should be kept so the squirrels try to reach the water but cannot quite do so. Ten inches down from the top is about right. This probably could not work where there is other water near, but in a dry place it gets them all right.—John A. Wood, Walnut, Los Angeles county.

A steady, even-tempered feeder makes tame cattle.

Lazzari stands beside the New Edison and sings "Mon coeur s'ouvre à ta voix"

Lazzari has now ceased to sing, and the New Edison is singing the same song alone

The pictures above are drawn from actual photographs. They show Lazzari in the act of comparing her voice with its RE-CREATION by the New Edison. She sang. Suddenly she ceased to sing, and the New Edison took up the same song alone. There was *no difference*. It was only by watching Lazzari's lips that the audience could tell when she had ceased to sing.

Lazzari has made this test before more than ten thousand music-lovers and representative music critics. This test proves beyond all question that the voice of Lazzari, as RE-CREATED by the New Edison, is absolutely indistinguishable from her voice as heard on the stage of the Metropolitan Opera House in New York.

THE voice of the decade has appeared. A transcendent artist has flashed into operatic glory.

Twenty-two months ago, Carolina Lazzari joined the Chicago Opera,—unknown, unheralded.

Today, three continents clamor to hear her.

This fall, the Metropolitan Opera Company brings her to New York,—its new prima donna contralto.

While the golden horseshoe of the Metropolitan sits enthralled by the spell of her magnificent voice, you in your own home can hear that self-same voice. For the New Edison brings you the real voices of the world's

great artists, wherever you may be. Not strident and mechanical travesties on their art, but literal RE-CREATIONS, indistinguishable from their living voices. The New Edison's life-like Re-Creation of music in all its forms is the amazement of the music critics of the country.

The entire genius of Edison, the wizard, is summed up in this marvelous phonograph—his Official Laboratory Model. It cost him three million dollars to perfect. Yet all the musical world counts every penny of those millions well spent. For, he thus perpetuated the priceless art of great artists, and introduced the wondrous cultural benefits of good music to discriminating homes everywhere.

The NEW EDISON

"The Phonograph with a Soul"

Our new book, "Edison and Music," is the most interesting phonograph story of the year. Free. Write for it. Thomas A. Edison, Inc., Orange, N. J.

THREE BIG REASONS WHY

you should buy a

MONARCH TRACTOR

1. It is a Tracklayer.
2. The size is neither too large nor too small. You have four models to choose from ranging from as large as you need to as small as you need.
3. MONARCH means, Monarch wear resisting Manganese Steel Tracks, heat-treated steel-cut Gearing, mounted on Hyatt Heavy-Duty shock-absorbing roller bearings. Valve in the Head, Slow-Speed, Heavy-Duty Monarch Beaver Motor—the greatest power and absolutely the most efficient tractor for the money.

After nearly two years of severe use in the cutting sands and most trying conditions, there isn't a Monarch Manganese Steel Track Shoe but what is apparently as good as new. No other tractor can boast of such a record.

YOU CAN'T BEAT IT!

Write for literature. Some good dealers wanted.
We may be looking for a man in your territory.

MONARCH TRACTOR SALES COMPANY

PHONE 2800

121 AURORA STREET,
STOCKTON, CAL.

Monarch Lightfoot Tractor pulling 3-14 inch bottoms 8 inches deep. 2 1/3 miles per hour.

HERE is the tractor of utmost economy, the tractor that gets most from every gallon of fuel because the direct drive from motor to both rear axle and belt pulley saves power.

THE HUBER Light Four

is the right sized tractor for every sized farm. It is powerful enough to pull three 14-inch bottoms and turn an acre an hour, and light enough to work on plowed ground without packing it down.

Thousands of Huber Light Fours are in successful use. It is the tried and proved tractor. Huber owners are Huber boosters. For 40 years Huber has built steam tractors; and for 20 years gas tractors. The Huber Light Four is the best tractor Huber ever built.

It plows, harrows, drills, pulls a binder—does every type of heavy field and belt work economically. So simple a boy can run it, and anyone who knows an automobile can keep it in repair.

Every one interested in tractors should read the "Tractor in the Making," a reprint in booklet form. Tells vitally interesting facts about tractors. It is free for the asking. Write for your copy today.

THE HUBER MFG. CO., Marion, Ohio

THE HUBER TRACTOR SALES CO.

1012-14 So. Los Angeles St.

Los Angeles, Cal.

Some territory open for live dealers.

Weight 5,000 pounds; pulls three 14" bottom plows; 12 h.p. delivered to the drawbar; 25 h.p. at the belt; Wauke-sha, four-cylinder motor; Perflex Radiator; Hyatt Roller Bearings; burns gasoline, kerosene or distillate; center draft; two speeds, 2 1/2 and 4 miles per hour.

Mechanical Power on the Farm

IMPLEMENTS AT LOS ANGELES DEMONSTRATION.

(Written for Pacific Rural Press.)

As this is written after the Los Angeles implement and tractor demonstration is all over, the dealers say it was the most successful event of its kind ever held. This demonstration marked a curious reversal in the farm machinery trade which has been developing mostly during the past year. Farmers have generally come to realize through experience that tractors are not so fully economical unless they have proper implements to work with. It was a rather common saying at this event that the implements sold the tractors. So soon as the visitor at this demonstration found implements that suited him, it was easy to sell him a tractor that would fit his conditions. And there was a wonderful array of implements to choose from—implements designed for tractor service and for the hardest conditions of soil.

Subsoilers, Disks, Land Levelers.

Deep cultivation, especially subsoiling, received more attention from visitors and exhibitors at this demonstration than heretofore. One of the three makes of big tractors was usually operating the biggest subsoilers or chisels with a crowd following. Most of the smaller tractors borrowed smaller subsoilers and chisels, which were found all over the tractor field. A new heavy subsoiler made in San Bernardino county was on exhibit in one tent and a powerful tractor beet digger invented in Ventura county was shown in another. In tents and all over the field could be seen the McKay tractor gang disk plows, each bottom of which was followed by a subsoil point which could be adjusted to dig one to eight or ten inches below what the disk-plows cut.

The Killefer Mfg. Co., who had a large section of land for their subsoilers and tractor "chisels," sold a great many of these during the demonstration in addition to 125 or more of their automatic double disk harrows. They had on exhibit and for use some of their four-row automatic-lift beet diggers, four-row bean cultivators and four-row beet cultivators, the heaviest crosshill clodmashers made, tractor-pulled weeders and mulchers, heavy duty orchard cultivators, etc.

Schmeiser and Caterpillar power-lift land levelers were operated by tractors. Barney Sandstrom did some much-needed land leveling around the tents with his scraper. The tractor people hesitated to let him operate both the tractor and the leveler by himself, but he soon showed how easy it is and how desirable a fast-speed tractor is for land leveling.

The most prominent plows and disk harrows and corrugated rollers on the field were the Olivers, which were universally seen here as well as in one of the implement tents.

Tents Full of Many Implements.

Nowhere else have we seen so complete an array of all the implements needed on any farm as we saw in the International Harvester Co. tent at this demonstration. The tent covered about 11,200 square feet and was fronted on the outside with tractors labeled to tell of their best characteristics. I. H. C. motor trucks, hay making and pressing machinery, Deering combined harvester operated by its own engine for an eight-foot cut, corn binders, grinders, and shellers, silage cutters, cream separators, grain drills, four-row beet seeders, and all the implements for plowing and refining and packing the seed bed.

For completeness in showing all lines of farm machinery, E. P. Bosbyshell's tent could hardly be excelled. You wouldn't think of so many machines being operated by tractors in one tent, with so much of other machinery besides. New and important features of machines shown here are the Rock Island quick-detachable plowshares, and the Brenneis leverless disk harrows. The plowshares are loosened by kicking a lever and are tightened beautifully in place by pulling the same lever. The disk harrow is adjusted by hooking its main

drawbar onto one of the two secondary drawbars which either angle or straighten the disk when pulled. The tractor driver makes the change from his seat. A Knapp orchard disk gang plow was so low and narrow that it escaped attention from many of the folks who would have been most interested. Another tent showing most complete lines of farm machinery was that of the B. Hayman Co. Here we saw a full line of Oliver implements, wide Black Hawk manure spreaders, spring tooth harrows, Forkner tractor tillers, R. M. Wade pea and bean threshers, Star dairy barn equipment, tomato and sweet potato transplanters, alfalfa cutters, silage cutters, grain graders, side delivery rakes, etc.

The only ball-bearing disk plow noted on the field was the Yuba shown by the A. F. George Co. at their tent along with Yuba tractors, for which this company has the agency in Southern California. John Deere implements were featured in this tent, and a tractor was running a Deere hay press outside. Plows, cultivating machines, grain drills, Deere manure spreaders, fruit sprayers, concrete mixers, potato planters and diggers, grain fanning mills, etc., made this a specially good exhibit.

The great number of implements specially built to be easily attached to Moline tractors so as to become a part of the tractor located under the driver made a show by itself. A Moline tractor with an eight or ten-foot mower was turned loose to run in circles forward part of the time and backward part of the time. One was hitched over a Fresno scraper.

What You Get for Asking.

A good instance of what demonstration visitors can get by appearing interested in such commonplace things as plows was that afforded the writer at the Moline tent. The dynamometer had shown that where the surface was not trashy, three ten-inch moldboards required about the same power as two

welves. The forward half of the share does all of the cutting in dry adobe. The rest of the furrow simply breaks off and the rear half of the share only rides. For this reason it is economical to put ten-inch bottoms on twelve-inch gangs.

TRUCKS AND TRAILERS AT DEMONSTRATION.

Motor trucks and trailers have a definite and necessary part in motorized farming. They were welcomed at the Los Angeles Tractor and Implement Demonstration. But as usual there was no co-ordination in their exhibit and it made no particular impression on the visitors. A truck tent was put up and occupied by two different makes. The accessories tent sheltered fourteen different makes of trucks, while the implement and tractor tents sheltered several more. Two different makes of trailers were shown. Thus there was a respectable and valuable exhibit of trucks and trailers, but very few people realized that fact. What is needed is more co-operation between dealers handling these lines and a unified exhibit, such as we have not yet seen in California. It is worthy the effort and the industry is of enough importance to farmers and others to justify a comprehensive show of trucks and trailers.

TRACTORS NEW TO CALIFORNIA.

The fact that a tractor has not been offered previously in this State does not mean that it is untried. Most of such machines have long been used in the East and many of them are built by implement companies who have been in business several decades. These tractors are likely to give good service, but the farmer investing in one of them may well look into several features, which have in the past made some Eastern tractors unsatisfactory in California. The Eastern people have a different dust from ours. It does not seek every entrance to the inwards of the machine as our dust does; and if it gets there it does not cut the bearings as our dust does. Some Eastern companies have not realized this and have sent out tractors which either had no air-cleaners or had air-cleaners inefficient for our conditions. Practically all of these up to date have either disappointed from our market or have remedied this defect. The rancher who uses a tractor in California without an efficient air-cleaner will soon be buying horses and will unjustly condemn tractors. For the same reason, working parts must be dust-proof.

"It is a fact that California soil requires a great deal more power to plow than average Eastern soil. The tractor which will pull three bottoms in the East should be bought here as a two-bottom plow.

Some of the Eastern companies have looked to California as an inviting field for the surplus which they are able to make now with the facilities which were increased for war purposes but are not needed in that direction now. Some of these may rush to sell before they provide adequate nearby service facilities or nearby complete stocks of repair parts. Assure yourself that you can get prompt expert service and repair parts without delay, before you buy any tractor. Also find out as certainly as possible whether you are being asked to help find the weak places for the manufacturers at your own expense and whether agencies for the tractor are likely to remain permanently in this field.

Clean up and look over your motor in detail every thirty days, and it won't go to pieces so fast, says a man who takes care of seven tractors.

A bean intercrop in a young orchard of San Joaquin county was planted four rows at a time by a tractor.

The Lauson tractor has recently adopted a water-cleaner for air that is to be used in the carbureter.

A 60-horsepower Best tractor was shown as a new model at the State Fair this year.

Studebaker

THE LIGHT-SIX

A BEAUTIFUL, clean-cut car of 119-inch wheelbase with plenty of room for five passengers, and a 50-horsepower motor that takes you over country roads at top speed and climbs the steepest grades without effort.

On its mahogany-finished instrument board are conveniently grouped a speedometer, oil pressure gauge, ammeter, lighting and ignition switches; upholstery is genuine leather. Gypsy-type top with plate glass windows in the back.

Its power and staying qualities have been extraordinarily demonstrated in the hands of thousands of enthusiastic owners.

Studebaker builds complete in its own factories practically every vital part of this beautiful LIGHT-SIX, thus reducing middlemen's profits to a minimum and making possible such sterling high quality at its unusually low price.

ROAD WEAR OF MOTOR TRUCK TRAFFIC.

To determine the destructive effect of heavily loaded auto trucks on highways and streets, and to meet the demand for data on the design of road surfaces and foundations to withstand such heavy traffic, a series of experiments is being conducted by the Bureau of Public Roads, United States Department of Agriculture, at the Arlington Experimental Farm to determine the impact of auto trucks on roads.

The most striking single development in the highway field in 1918 was the tremendous increase in motor

truck traffic. Five years ago heavy motor trucks were few in number and limited practically entirely to the paved streets of larger cities. These vehicles now comprise probably 4 to 5 per cent of the grand total of all motor vehicles and are to be found wherever traffic conditions permit profitable use. But very few roads were designed to carry any large volume of this class of traffic. Consequently, the cost of adequate maintenance was increased greatly during the year. In many places the damage due to the incessant pounding of these fast and heavy vehicles was so great as to require complete reconstruction.

The Gasoline of Quality

Home of Tilly Alcartra

(Written for Pacific Rural Press.)

The above is the title or phrase under which A. W. Morris & Sons Corporation of Woodland sometimes advertise their business, and rightly so, as this great cow so far is without peer in performance, although they have others that closely approach her record or records.

Are Long-Distance Records Injurious?

Without going into the detail of this cow's performance, as her records are too well-known to really need further exploitation, there is about her that is well worth taking into consideration. It was argued by some authorities at one time that the long-distance records of the great producers among dairy cows were injurious and that the year following the record long distance period would be one of depression and swinging of the pendulum the other way towards a year of low production. This does not seem to be the case with Tilly, however, as she came back the second year with a greater record than the first year of record breaking, and she also has a record of over 1,000 pounds average yearly for 6 years. More than this, Frank Morris told the writer that Tilly is a cow that is a very regular breeder and that everything about this great animal would indicate that she always was in the pink of condition.

Attention to Detail Tells.

Another cow has a two-year butter record of 2426.88 pounds made in consecutive years, and as one goes through this herd it is brought definitely home that here is a business of breeding great producing dairy cows, and that the attention necessary for success in any great business is here given to milk production. It is not only the selection of the animals, but it is the care of the animals all the time in every way, or in other words attention to detail. Detail of selection of the animals, detail of breeding, detail of feeding and detail everywhere. Of course this has brought success.

Selecting the Prepotent Bull.

We have been told by many breeders of not only dairy cows, but other animals as well, that the sire is one-half the herd, and some go even further and say the sire is 75 per cent

of the herd. Be that as it may, Morris & Sons certainly pay a good deal of attention to the bulls and have some wonderful animals, both in conformation and breeding. Perhaps especial stress should be laid on their breeding as they have been selected with particular attention to the production of their nearest dams and from that to those further away. They first select the bull with a dam and grandams of greatest performance and then great-grandams as many as possible with great records. With such breeding milk production becomes a dominant characteristic and is transmitted with certainty, and this is what the A. W. Morris & Sons Corporation are doing and have been doing until they have reduced the breeding of Holstein-Friesians for milk and butter production to as near a science as any firm in the world today.

Calf-Raising Troubles.

The calf-raising question was discussed with Mr. Frank Morris in some of its phases. Treatment and prevention of calf scours was one of the subjects broached and the results from the use of serum seemed to indicate much benefit from its use, although Mr. Morris does not as yet consider it a specific. He injects from 10 to 15 c. c. of serum for prevention of calf scours subcutaneously in each calf as soon as dropped, and has not had much trouble from scours since doing this.

Mr. Morris believes in fastening calves in stanchions at the time of feeding milk and keeping them there after feeding until the desire of the calf to suck something had passed off. He is well satisfied that malformed udders on some heifers could be traced to the sucking habit in these young calves after feeding milk.

Volunteer Silage.

In talking about silage a sample of burr clover and barley silage was inspected and it looked fine and the cattle eat it freely and produce well. It was a volunteer crop, and while Mr. Morris would hardly recommend sowing it for a silage crop, this season's growth has certainly been a profitable one.

Viewpoint of a Fresno Co. Dairyman

(Written for Pacific Rural Press.)

Phil B. Thornton of the widely known Minor & Thornton Co., Fresno breeders of Holstein-Friesian cattle, judged the dairy cattle at the Kings County Fair this year. Mr. Thornton is an attorney in Fresno, and if he is as good a lawyer as he is a judge of dairy cattle, the Fresno bar is to be congratulated. Judging dairy cattle seems to be a second nature with Mr. Thornton and it is a pleasure for him to inspect good pure-bred dairy cattle of any breed at any time.

Minor & Thornton Co. are not new in the dairy business either, as they are one of the oldest milk-producing firms in California, having started in the business in 1903. They have sold butterfat as low as 17 cents per pound, but did not make much money at it then, although the price of feed and labor was very much less at that time. Perhaps the percentage of profit was not much less then than now, although it would seem less than nothing viewed from the angle of the present overhead cost.

The members of the firm are great believers in the future of the dairy business, as they are investing over \$40,000 in new cattle barns and equipment on their 7,000-acre ranch south of Kearney Park, where they have 200 head of registered Holsteins. Milking machines are used and Mr. Thornton thinks the day of hand-milking is past, as wages are so high that all methods by which the amount of labor is reduced must be employed. He knows this is a necessity, not only on the individual milk ranch, but among dairymen collectively. Therefore, Mr. Thornton is a booster for the co-operative organization known as the Associated Dairymen of California and the auxiliary known as the

San Joaquin Valley Milk Producers' Association, with headquarters in Fresno. This organization, Mr. Thornton says, has for its object the reduction of the cost of milk and its products to the consumer and at the same time a bigger profit for the producer. This is accomplished by the elimination of the duplication of labor in gathering from the producer and distribution to the consumer, concentration of manufacture and the use of all the solid content of the milk in the manufacture and the use of all the solid content of the milk in the manufacture of various by-products from the skim milk, so that all of the nutrient qualities are made use of and sold. Mr. Thornton, as has been said before, is an old-time dairymen, both from the producer's and manufacturer's standpoint and knows whereof he speaks. Nothing, from his viewpoint, can prevent higher prices of milk and butter to the consumer except the ultimate success of the Milk Producers' Association, a non-profit-sharing organization which already includes a majority of the producing dairymen of the State.

E. J. Kelleran of Modesto, owner of the Golden State herd of Holstein-Friesians, reports the sale of 5 heifers to J. Ruddy. One of the heifers is a granddaughter of Prince Gelsche Walker and three of them granddaughters of Adirondac Weirake Dairymaid, 41 pounds of butter in 7 days.

Verne Heath of the Bonita Stock Farm, breeding registered Holsteins, reports six animals on official test, making at the rate of from 20 to 27 pounds of butter in seven days, warm weather hindering still better results.

SOUTHERN CALIFORNIA FAIR AT RIVERSIDE.

(Written for Pacific Rural Press.)

Ten days ahead of the opening of the fair the entries in all departments far exceed the expectations of the officials who are doing everything in their power to provide extra space for the exhibits. Live stock, agriculture, horticulture, women's handiwork, farm bureau exhibit and other departments all promise to crowd even the extra space provided.

In the live stock department the swine are leading in numbers with dairy cattle coming along a close second, and dual purpose cattle, horses and mules and sheep all showing plenty in numbers. All the prominent breeders of Duroc-Jersey swine of Southern California will be on hand and there will be a good showing of Poland-Chinas and Hampshires also. In the dairy cattle, Jerseys, Holsteins and Guernseys will all be represented. Milking Shorthorns, classed as a dual-purpose cattle, will be shown. Draft horses will seem to be "coming back" when the exhibits are given the "once over" at this fair, for some of the large breeders will have the barns full of the massive beauties, all fitted to "the minute." Sheep of the Shropshire breed, "woolled from the nose to the toes," are entered by three breeders and will make a good exhibit. In the goat (milk) department, 101 were shown last year, but this year 300 and over will tax the ingenuity of the officials to keep them within bounds.

One tent, covering 34,000 square feet of space, was provided for the agricultural, horticultural and women's handiwork, but long before opening day an S. O. S. signal went out for more space, and another tent 100 feet long was provided, which will be filled to overflowing.

REGISTERED HOLSTEINS

HOLMES STOCK FARM

WATERFORD RD., MODESTO, CALIF.
Registered Holstein Friesians.
YOUNG SERVICE BULL FOR SALE
Prince Abbecker Aralia Walker,
No. 204267—Three-quarters white.
Write for pedigree and price. Inspection invited and satisfaction guaranteed.

The Farm Bureau exhibit includes various phases of farm work. Scrub dairy cows with calves at foot, sired by purebred bulls, showing the influence of good blood; boy's pig clubs will show what they have done and are doing in the way of proper feeding; trees properly and commonly pruned; treatment of grains to prevent smut and many other things which lack of space forbids telling about; but rest assured that when the fair opens all and everything will be in place and ready for everyone that can possibly get there to give it not only the "once over," but as many times over as they can because all this good stock, improved methods and improved machinery will bear the very closest inspection, and people are beginning to learn that while the old ways were good ways in their time, that we have to keep up with the times in order to make "both ends meet" nowadays.

SHORTHORN SALE AT SAN FRANCISCO.

The third sale of Shorthorns under the auspices of California Shorthorn Breeders' Association will be held at San Francisco in conjunction with the San Francisco Livestock Show on Thursday, November 6, 1919, at 1:30 p. m. A splendid sale arena is under construction in the California Building and ample seating facilities are being provided to accommodate a large attendance.

Special committees of merit have selected the Shorthorns entered in the sale and have approved only animals possessing outstanding conformation and individuality as well as high-class breeding.

But forty animals will be entered in the sale, comprising thirty head of cows and heifers and ten bulls, all registered and tubercular tested.

Auctioneer Earl Gartin of Greensburg, Indiana, will cry the sale. Mr. Gartin handled the big Calgary sale in 1917, and is himself a breeder of no little distinction.

BERKSHIRE SALE AT LOS ANGELES LIVESTOCK SHOW.

The Berkshire breeders of California will hold a bred sow and gilt sale at the Los Angeles Livestock Show on October 22d at 1:30 p. m. A typical lot of Berkshires are consigned from all the good herds of the State and breeders of Southern California have a most excellent opportunity of securing as good animals of the breed as are to be found anywhere in the United States at their own price. Among others is the junior champion gilt, Castleview Premier Belle, consigned by J. Francis O'Connor of Santa Rosa. Col. Ord. L. Leachman of Sacramento will cry the sale.

What about shooting that hardpan ready for planting?

Immunization of Swine Against Cholera

(Written for Pacific Rural Press by Thos. F. McConnell.)

This subject is one often discussed among swine men at present, with some difference of opinion as to whether it is best or not. In traveling through the country the question has been often asked the writer as to the efficacy of the treatment. When the breeder would be questioned as to his objection or reason for not having his animals safeguarded from cholera attacks, he would give little reason, except that someone whose opinion he valued had advised against it, the basis of that opinion extending back to "before the flood," or to the time when serum treatment first began.

The Infection Deadly in Former Days.

The writer remembers the time "back East" when a rumor of cholera, even in a distant locality, gave the swine-breeder, be he purebred or market hog man, a feeling of helplessness and fear akin to that of a person who could not swim wrecked in midocean. If the disease attacked his herd it meant the destruction of practically all of them, and sometimes financial ruin. The only recourse as soon as the disease was discovered was to rush the herd to market and get for them what he could. Sometimes he would reserve a few good ones, hoping they would escape infection—only to wish in the end that he had sent them all to the block. Whole townships would lose 90 per cent of the hogs, particularly those contiguous to the most public highways, on the borders of running streams, or where the infection would be most apt to be carried. It was found that tame doves, dogs, cats and turkey buzzards were carriers of the infection, as well as the people themselves.

Persistence of the Infection.

The writer recalls one instance that happened about 35 years ago in Wisconsin, when cholera first appeared in that section and people were curious about it. One man, a great news-monger, visited a large herd that was badly infected and dying rapidly. After walking about the place and absorbing, both mentally and physically, all the filth he could carry, he started for home in a roundabout way to carry the news, and incidentally the cholera as well. His trail was as distinct and easily traced by the disease he left behind him as any blazed trail ever was, and extended even to his own sty, for in a very short time the only two hogs he had died with the cholera.

We would be in just as serious a situation today here as obtained in that far-off land were it not for the serum treatment, either double or single—even more so, because the methods of communication were not as rapid at that time as now, and when anyone made a journey of fifty miles or more then, they traveled by train and usually made a complete change of apparel before starting on a journey, and also a complete change upon return, in this way reducing somewhat the danger of carrying the infection.

Isolation Not Absolute Protection.

If a person lives in an isolated locality and is raising only market hogs, his herd may escape infection for years, and it may seem like an unwarranted expense to vaccinate. However, any visitor, human, animal or feathered, may bring infection into his swine at any moment. It is impossible to even guess how it may come, or when, and a herd is not really safe for one moment from infection. An automobile coming for miles away may drive in, and a little of the deadly virus be left to be carried by the feet of humans, or dogs, cats, rats, gophers, mice or even insects from the track of the machine to the hog lot. Owners of Purebred Herds Should

Be Especially Careful.

We have considered the danger of infection in the isolated herd and shown how it would be possible—yes, probable—that it would find its insidious way into the herd and destroy the animals. Then how much more probable is it in a purebred herd where visitors are coming and going all the time! Of course, hundreds of visitors may come and go and no disease come with them, but the next one may be carrying the deadly germ. The purebred herd may be safe from almost every direction, but a crate is returned perhaps in which was shipped one of the good ones sold for a long price to some customer in a far-distant locality, which comes back with a bit of infection attached and the mischief is done.

So it goes, no herd no matter how far away, no matter how carefully protected, is really safe unless immunized—and immunized by the double treatment. The single treatment carries the hogs through a short period only, and it would have to be repeated at regular intervals in order to afford continuous protection.

This does not purport to be a scientific treatise on the subject of immunization, but simply the relation of what has happened in the past, is happening now, and probably will happen for some years to come, or until immunity is secured by universal vaccination.

Does the Vaccination Protect?

Yes, it does. The authorities of all the principal fairs and livestock shows require vaccination, either by the single or double treatment, before swine will be admitted to the grounds. They believe in its efficacy, certainly, or they would not require it. A year ago a certain breeder wished to exhibit hogs at the State Fair. He was compelled to immunize and he had the ones treated with the double treatment that he expected to take to Sacramento, and some time after returning from the fair cholera broke out

in the neighborhood, and in due time this man's hogs that had not been immunized became sick and every one he had, except those he had vaccinated, died with the cholera. This man certainly believes in immunization now. A few dollars, not more than \$10 at most, would have saved the rest of his herd if he had had them all treated at the same time.

Some say it brings cholera into the herd when the double treatment is used. That is certainly true, as the hogs are given a subcutaneous injection of hog-cholera virus and at the same time a dose of serum to prevent the attack of cholera so caused from being fatal.

Effect of Serum Treatment on Pregnancy.

Again, it is said that if pregnant sows are treated the pigs will be still-born in the herd. All or part of these things may occur—but probably not. The writer knows of a herd of fifteen sows and gilts that were all pregnant when they received the simultaneous treatment, and not a sow aborted nor was the mortality in the pigs higher at farrowing time than usual. In fact, it was lower than usual. However, it is not considered wise to vaccinate pregnant sows unless there is immediate danger of an outbreak of cholera in the herd, when

by all means give them the treatment; but use care in handling the animals, as rough treatment would be more apt to cause abortion or still-born young than would the constitutional disturbances caused by the administration of even the double treatment.

It is not a very pleasant thing to think and say, "If I had known my hogs were going to have cholera, I would have had them immunized." It is better "to lock the barn before the horse is stolen." It is for the owner of the hogs to decide for himself, however. Protection is reasonably sure and the serum laboratories are improving the serums all the time. It is hinted that a great improvement in the treatment is probable in the near future, but it is not wise to wait for perfection to appear, or we would never get anywhere or do anything as we should, or use improved methods. Single or Double Treatment—Which?

The administration of the treatment or the virus and serum in the double in the single treatment, or the virus and serum in the double treatment, should be done by some person especially qualified, preferably your regular veterinarian. If you have your veterinarian do the work he will advise you where to get the material and also as to the amount

Tulare Durocs Go "Over the Top"

(Written for Pacific Rural Press.)

Tulare, September 22.—By the closing on Saturday of the largest single private deal for Duroc-Jersey purebred hogs ever consummated in the State, Tulare county makes a new record for being one of the great hog-producing sections of California. In the deal just closed here 231 purebred and 7 grade swine were sold for a total of over \$15,000 to one buyer, Fred Stegmeyer, of West Haven, near Coalinga. The swine will be used in

swine were pigs less than three weeks old. The stock came from the following well-known breeders: Allen Thompson, Tulare, 97; D. G. Cummins, Visalia, 93; S. A. Williamson, Visalia, 13; W. J. Stewart, Visalia, 13; W. J. Higdon, Visalia, 12; R. C. Sturgeon, Tulare, 3; with the 7 grades coming from C. G. McFarland of Tulare.

Mr. Steigmeyer placed the selection unreservedly in the hands of Mr. Sturgeon, and after correspondence

Nine January Poland-China gilts, consigned by H. C. Shinn, Tulare, to the Tulare Co. Breeders' Consignment Sale.

the development of a great herd on the property of the Boston Land Company at West Haven, formerly Henrietta.

The selection of the swine was placed in the hands of R. C. Sturgeon, of Tulare, secretary of the Tulare County Live Stock Association, and a director in the county Duroc-Jersey Association. In some instances the breeders put what they believed were prohibitive prices on their stock, but Mr. Steigmeyer, having investigated the supply and character of the herds in other sections, found the prices reasonable and took practically the entire herd, leaving the former owners only enough animals for future breeding. Ninety head of the

with breeders in all sections of the State regarding their character and quantity of Durocs that might be available and the Tulare breeders are highly elated at the recognition given their section as the State center for purebred Durocs.

Later Mr. Sturgeon sold Mr. Steigmeyer his great boar, Golden Colonel, by Critic B, for \$500. This boar is now 2 years old, right in his prime in fact, and will be remembered as the 700-pound senior yearling of last year.

It must not be inferred from the above that Tulare county is going out of the Duroc business, but will remain on the map as one of the great breeding centers of this kind of swine.

IMMUNIZATION OF SWINE

(Continued from page 460.)

needed. He also will advise you as to the proper method of handling the animals after treatment, especially the double treatment.

The animals should have free access to pure drinking water at all times, particularly after the double treatment, as they will be somewhat feverish for a time. No feed is necessary for 24 hours after inoculation. A reasonable amount of alfalfa pasture is always permissible. Do not chase or handle swine roughly for ten days after treatment. By the end of two weeks after treatment the animals will be practically normal in condition, although any departure from normal under treatment will be noticed by the close observer only.

Cost Not Excessive.

The cost is not excessive, varying slightly with the kind of serum used and the man administering same. The men and serums costing the least money are not always the cheapest in the end. Taken up one side and down the other, serum treatment to prevent hog cholera is cheap insurance against financial disaster.

Community breeding where farmers keep the same breed is advisable. Shipments to markets are more uniform and better prices are paid for uniform lots.

BASSETT-ROSS-CRAWSHAW SALE.

A combination sale of Poland-Chinas that will be a great one in that the hogs consigned are particularly adapted to California's alfalfa pastures and conditions. All the consignors have been breeding Poland-Chinas in California for years and Mr. Bassett is really the dean of swine breeders in this great State. He has developed a type that he calls the "advanced" type of Poland-Chinas in that the hogs he raises have plenty of bone, stand fine on their feet and have a body deep, wide and long. Mr. Bassett took some barrows to the State Fair this year, farrowed in March, that were a surprise to many experienced breeders in that they were large enough for year-old hogs. If you want hogs of this kind you can surely get them at this sale of Mr. Bassett's, Dr. Crawshaw's, or F. D. Ross' breeding. As there are 75 hogs to sell sale will commence promptly at 10 a. m.

PIG-SCOURS PREVENTED.

To the Editor: When I began raising hogs on my Kern County ranch the neighbors all informed me that it could not be done, for all pigs died of the scours. My foreman, Mr. Brakebill, the best land and livestock man I ever knew, said, "All right. We will raise hogs." And this was the way he did it. The sows were put in the farrowing pens in advance of their time and fed only dry feed and clear

water, and that was their feed until the pigs were big enough to stick their snouts in the trough and eat rolled barley. This seems to prove that

slopping and swilling sows is a mistake, for in seven years' practice we never had a scouring pig.—Jno. P. Irish, Oakland.

 April 17—Butte City Ranch. Semi-annual sale of Shorthorns, Berkshires, Shropshires and Shetlands at Butte City.

Dairy.

Prof. Major of the Animal Industry Division of the University Farm will attend the National Dairy Show to be held at Chicago, October 6-12.

The Empire Cream Separator Company has opened a branch office in San Francisco with J. M. Cavanagh, formerly of the Portland office, in charge.

A grade Guernsey cow in Iowa has just completed a record of 725.3 pounds of butterfat and 14,858 pounds of milk in one year and carried a calf during 8 months of the period. This is the second highest record in the United States of a grade Guernsey.

L. Dee Smith, the Guernsey breeder of Berkeley, has added one more record to the herd honor roll from the junior four-year-old cow, Mysie's Lady of Claremont, finishing with 666.93 pounds fat and close to 15,000 pounds milk, a world record for class D. D.

In the detail of awards in the Shorthorn classes at the State Fair this year, the two-year-old bull, Pacheco Marshal, owned by the Pacheco Cattle Co., is given credit for the senior championship when it should have been given to Hallwood Flash, aged bull owned by the Dibblee Estate at Lompoc.

Beef.

It was inadvertently omitted last week, in our mention of the grand champion Shorthorn female, that she was sired by Golden Goods Jr., that great senior herd sire of the Ormondale Ranch. It might be stated also that a full sister of Little Sweetheart is still owned by Ormondale Ranch, and is full as promising a heifer as the grand champion was a year ago. Golden Goods Jr. also sired Ormondale Maid 2nd, exhibited by Wm. Bond, that was second in the junior yearling heifer class.

Shorthorn exhibitors at the Southern California Fair at Riverside will find

F. S. & L. S. Hall will have a good one in the senior calf class. He is a blocky white roan, with a real masculine head, straight top line and a dandy rear end.

F. A. Langdon of Perris has just received the nucleus of a herd of red Milking Shorthorns, from what he considered the best herd in the United States, owned in Arizona. Mr. Langdon's herd consists of 4 cows and calf and herd sire, Glenside Sequel.

Ed T. Morgan of Northam, Nevada, has recently gone into the purebred Hereford cattle business and become a member of the Pacific Coast Hereford Cattle Breeders' Association. Mr. Morgan for many years was with the Alamo Herd of Herefords, owned by the late Governor Sparks of Nevada.

No action has been taken by the San Bernardino county stockmen to put themselves under the provisions of the King Estray law. It was designed to benefit cattlemen in this county, but it provided that before it should become effective in any locality in the State the people of that locality would have to accept it by a majority vote.

In the State Fair report an error was made in announcing the awards in the Hereford senior heifer class. Mr. J. A. Bunting's Mission Lass was first instead of second, and Mr. Bunting won eight firsts and one second in nine classes shown. It is not often that a breeder only three years in the business has the good fortune to breed a grand champion, and Mr. Bunting has a right to feel elated over the fact that he bred and raised Mission Chief, an eight-months-old calf, and that he won over a good aged bull.

Sheep.

A recent bulletin to hand from the Nevada Agricultural Experiment Station entitled, "Don't Feed Fox-Tail Hay to Lambing Ewes," is certainly a very clear statement of reasons for not feeding this miserable excuse for hay. It would seem as though they might have gone several steps further and simply entitled their bulletin "Burn All Fox-Tail Hay."

Chas. Kimble of Hanford, one of the original breeders of Rambouillet sheep in California, recently made two large shipments to Del Rio, Texas. Fifteen hundred and forty-two ewes and 750 rams comprised the first consignment, and 1,058 ewes in the second, making 3,350 head all together. The ewes went to Whitehead & Son and Geo. Miers of Del Rio, with the bucks going to several different breeders in the same locality.

The Glenn County Shropshire Sheep Breeders' Association was organized September 22 at the Glenn County Fair. There are more individual flocks of Shropshires in Glenn county than in any other county of the State, and the interest in registered sheep is rapidly increasing. The new association starts out with a membership of 20 or more, with the following officers: W. S. Guilford, president; W. W. Foster, first vice-president; Morris Merrill, second vice-president; Frank Glenn, third vice-president; R. B. Moore, fourth vice-president; O. L. Raper, secretary; A. J. Morey, treasurer, with an executive committee composed of practically the rest of the members. A publicity campaign and auction sales are among the plans of the new association.

Swine.

Jack London Ranch has added a very fine Pathfinder boar to their Duroc-Jersey herd.

Ireland's Orion Defender will be the leader of the Ireland Ranch exhibit at the Riverside Fair.

Geo. T. Lytle of Perris, who started a Hampshire swine herd with stock from the Llano Vista Ranch, now has over 100 head and will show a strong lot at the Riverside Fair.

C. G. De Raad and Dimmick Bros. of Lemoore recently sold their herds of Poland-Chinas that they had advertised for public sale to the Boston

Land Co. of West Haven. The price is not made public, but Mr. De Raad received \$500 for a young Eastern sow that farrowed 10 pigs, her first litter.

H. C. Shinn of Tulare reports the sale of a boar pig sired by Giant Bob, to C. A. Philbrick, Heber; one boar pig, sired by The Californian and out of Bridge's Bobby, to F. E. Fay, owner of the Oxbone herd at Tipton.

Marsh & McCracken will offer in their sale at Modesto, October 4th, four gilts that they bought from McCarty & Starkweather, sired by Kansas King, from a sow bred exactly as Miss Nebraska 2nd; the dam of the senior pig litter at the State Fair, which kept the latter herd strongly in the money.

Anchorage Farm with Berkshire swine at the Glenn County Fair attracted considerable attention with their miniature hog exhibit. They featured an excellent display of Star Leader offspring and the new \$1,000 herd sire, Natomas Baron Duke, together with other animals that warranted observation, being attractively arranged in pens shaded by palm leaves, making a creditable feature to the livestock show. School spirit and public enthusiasm were plainly shown in the high-school exhibits between several county schools. A beautiful trophy offered by the Anchorage Farm aided in bringing out unlimited interest.

B. H. Wilkinson of Perris expects to fill the Duroc sow classes and show his new \$2,000 herd boar, Great Orion Sensation Jr. This is a smooth, strongly built animal, claimed by his Eastern breeder to be a better individual than his litter mate, which won the championship at the recent Missouri State Fair.

W. F. Dolcini of Davis, during the State Fair, purchased from Slocum & Son of Willows, Unecda Model Queen,

FOR SALE 100 HEAD FINE HEREFORD HEIFERS

Combination

Big-Type Poland-China Sale

The Cream of California Production.
Tops from three great herds.

Sells October 18, 1919, at Hanford, Calif.

W. D. TREWHITT'S consignment will consist of 40 head, 20 of them fall sows, nearly all sired by MY CHOICE, a son of Big Ben, out of Pfander's Grants bred by King of Wonders. The modern type and just the kind you are looking for; also a few by JUMBO EQUAL 20, prize bred boar at the Panama Pacific Exposition, defeated only by the undefeated grand champion Superba. These are real toppers.

Litters of 5 fall gilts by MY CHOICE, out of Armona Wonder, a granddaughter of King of Wonders and Big Orange. A litter like this will put California in the foreground as Big Type headquarters. The balance of the offering will be big and growthy and equal to the best.

C. A. VAUGHN consignment will consist of A-1 bunch of Eastern bred gilts, bred to the Great Boar MODEL JUMBO, bred by H. B. Walters and sired by his great boar, WALTERS JUMBO TIMON, out of a Big Bob Wonder sow.

As special attractions Mr. Vaughn will consign 3 August yearlings out of a Moor's Halvor dam and sired by Orphan Bob. These and the 4 gilts from the Frazier herd sired by Giant Jones will take the eye of visiting breeders.

GEO. NEHLS will have a select lot of open gilts sired by such boars as Long Nelson 2d, Hanford Boy and Kings Model Longfellow, out of large, big-boned sows. Just the kind to start your herd or improve the ones you have. These gilts can be bred to Nehls Bob Wonder by Big Bob Wonder free of charge.

Our catalogue will be of interest to all breeders of Big Type, but we especially urge breeders and farmers on the Pacific Coast to send for a copy. Express charges from the East are high and you can make a substantial saving by buying at home. Mention Pacific Rural Press.

W. D. TREWHITT, C. A. VAUGHN, or GEO. NEHLS
Hanford, California

JOHNSON'S DEFENDER JR.

Owned by GREENWOOD FARM, Live Oak, Cal.

Is California's greatest representative of Defenders, the greatest Duroc family. At the State Fair he was the smoothest boar shown, weighing 700 pounds at 17 months and carrying it on a perfect set of feet and legs. He won second in the strongest class of boars ever shown on the Coast and was a popular favorite. Three of his brothers won ribbons in the same class, showing the strength of this line of breeding.

Five Ribbons Won on Five Entries.

H. C. WITHEROW, Mgr.

LIVE OAK, Sutter Co., Cal.

the grand champion sow in 1918. She has since farrowed 11 fine pigs sired by Experimental Defender, and is proving a very careful mother. Mr. Dolcini, during the past week, has had two Golden Model sows farrow 11 and 15 pigs respectively, making 37 pigs farrowed by three sows, or over 12 pigs to the litter.

A fat hog auction, held at Le Grand (Merced county) by the Farm Bureau, September 11, yielded \$2,700 for 78 hogs, an average of \$15.20 per hundred weight. Another auction is planned for October 21. At Tegner, at its last regular sale, 315 hogs sold for \$9,564, or \$15 a hundred weight. The next sale here is October 7.

J. H. Ware of Eldersly Farm, Live Oak, just marketed a carload of 230-pound hogs last week, topping the market by half a cent on the day sold, receiving 16½ cents per hundred pounds for them. Mr. Ware is quite positive that at the present price of barley market hogs are not making much money for the grower and that the registered game is the best.

Cummins & Son of Visalia sold to the Boston Land Co. of West Haven \$5,000 worth of Duroc-Jerseys, and it didn't take so very many either to bring that amount. Three boars, one year and under, for \$1,000; 3 bred sows for \$300 each; 26 gilts for \$2,400 and 6 boars for enough to bring it up to the \$5,000. Rest assured, though, that the Boston Land Co. received their money's worth.

In the issue of September 20th an error and omission was made in discussing the Berkshire awards. A. B. Humphrey was credited with having the champion barrow when the credit should have been given to Castlevue Ranch, as they won it "hands down." Castlevue Ranch also won the junior championship on sows with Castlevue Premier Belle. Our apologies are due Mr. O'Connor for this mistake.

H. D. McCune breeds such good ones in the Poland-China line that he always has some sales, to report—just lately 3 bred gilts to Lewis C. Story of Anderson. These gilts were bred to McCune's Buster and Mr. McCune received a letter from Mr. Story that he was very much pleased with the gilts. Also, 3 gilts to Tettlers Bros., Stratford. These young men had to sell out and go to war, but are getting into the Poland-China game again. Then, one boar pig to Bailey & Son, Lemoore.

Sandercock Land Company have recently sold to the Italian Vineyard of Guasti, 4 top Berkshire sows of excellent type and finest breeding. Their names follow: Wilsonia Princess Laurel, a litter mate to Real Type; Duke's Natamas Princess, reserve grand champion at the State Fair, 1919; Duke's Princess 11th and Duke's Natamas Rio Rookwood. Consideration, \$2,000. The first three sows, together with Natamas Baron Duke, 1919 grand champion, won first prize, aged herd, at the State Fair, 1919, and the last three with the same boar won first prize, get of sire.

Kings County Fair a Great Success

(Written for Pacific Rural Press.)

An old county fair organization, but it must not be inferred from that that it has fallen into a rut and is getting behind the times. Instead, they are surely a bunch of progressive business and livestock men in the county as ever came "down the pike." They saw the need for more ground and better buildings and went right after them all. The result was a great show and a great place to hold it.

In the livestock department swine and dairy cattle were the leaders with a good lot of horses and mules. Poultry also was shown in large numbers.

Holsteins were shown by several different breeders, with W. J. Higdon of Tulare leading in the number of entries and winning all firsts and grand championships. F. D. Ross of Hanford won a number of seconds with cattle in not as fine show shape as Mr. Higdon's. Mr. Comfort and G. W. Clark also had herds on exhibition.

Jerseys were represented by one herd only, but that herd was a show in itself. Owned and most of them bred by J. E. Thorpe of Lockeford, they are surely a beautiful lot, and more than that they have the quality

of turning the feed they consume into milk and butterfat very economically. It is too bad that he did not have some competition, but it would have to be strong if Mr. Thorpe did not win a majority of the ribbons.

The Poland-Chinas were a show in themselves and equal in numbers and quality to the show at the State Fair this year. The showing was all by local herds with the exception of that of A. Buckland & Son of Fresno county. The breeders showing were M. Bassett & Son, John M. Bernstein, Wm. Bernstein, Wm. L. Haag & Son, C. A. Vaughan, Mrs. C. A. Vaughan, W. D. Trewitt, F. D. Ross, W. T. Dice, H. D. McCune; A. Buckland & Son, with M. Bassett & Son winning more firsts than any other exhibitor and grand champion boar and sow.

Duroc-Jerseys were represented by only one herd and this certainly was a representative herd owned by J. E. Thorpe of Lockeford.

No beef cattle were on exhibition, but none are owned in this locality, which is devoted in the livestock line to swine raising, dairying, horses and mules.

California International Livestock Show

(Written for Pacific Rural Press.)

As a special attraction in the big dairy division of the California International Livestock Show at San Francisco, November 1st to 8th, will be the exhibit of the U. S. Department of Agriculture, which will be shipped to the California Building at the Panama-Pacific Exposition grounds upon the close of the National Dairy Show at Chicago.

This exhibit will be sent to the California International upon the direction of F. Lamson Scribner, expert on exhibits of the Department of Agriculture at Washington, which we understand will be the first time that the federal government has shipped such an important exhibit to a Western show.

The dairy department of this show will be, perhaps, the most complete showing of its kind ever assembled on the Coast. Early entries indicate a strong exhibit in the various breeds,

and the interest in the showing of milk and its products has been gratifying.

More than usual attention is being given the assembling of the dairy products show, which will be of particular interest to city people, who will make up the large proportion of attendance. Dr. C. L. Roadhouse and Sam H. Greene of the Dairy Council held a conference with a number of milk distributors and health officers about San Francisco bay cities last week, at which the milk and cream features of the show were discussed. Dr. William C. Hassler, of the San Francisco Board of Health, will place his laboratory at the disposal of the show management for the examination of milk and cream, and with the existing rivalry between various milk distributors, they will go after the prize awards with as much, if not more, vigor than the exhibitors of cattle.

Epidemic of Anthrax in Butte

(Written for Pacific Rural Press.)

An epidemic of anthrax is prevalent in certain sections of Butte county. Dr. J. P. Iverson, Chief of the Division of Animal Industry of the State Department of Agriculture, has taken charge of the work of exterminating the disease and has a number of deputy State Veterinarians engaged to assist him.

It was discovered that some butchers and others were taking off the hides of cattle that had died from the disease and selling the same to hide buyers, contrary to the law which provides that the carcass of such animals, hides inclusive, must be destroyed at once. This law was passed for the purpose of protecting all persons engaged in the transportation, drying, salting and tanning of hides, from this highly infectious dis-

ease. The Office of Cattle Protection was notified that certain shipments of hides had been made to San Francisco which contained hides from some of the animals that had died from anthrax, and the assistance of that office was requested to trace up these hides in order that the same might be destroyed, thereby preventing innocent people, engaged in handling the same, from becoming infected and to assist the State in causing the arrest of the guilty person that caused the hides to be shipped.

Mr. J. B. Newsom, the secretary of the Office of Cattle Protection, was successful in locating the hides, and having the same placed in quarantine, to be used against one S. Peterson of Chico, a meat peddler, who has been arrested, and other arrests will follow.

IMPORTANT NOTICE

The closing entry dates of the Ninth Annual Pacific International, Portland, Ore., are:

BREEDING CLASSES, OCTOBER 15, 1919
FAT CLASSES, NOVEMBER 1, 1919

POSITIVELY no entries will receive consideration unless in our office at 431 Northwestern Bank Building, Portland, on or before noon of the above closing dates.

GLENN COUNTY FAIR A TOP-NOTCHER.

The Glen County or Orland Fair this year, according to all reports, was a topnotcher, both from the standpoint of exhibits and attendance. The push and get-together spirit of that locality can do almost anything in the way of carrying out any community project, and it was applied to the fair with a pronounced success as the result. Every account that comes in places emphasis on the livestock exhibit, which included a showing in all classes Beef cattle, dairy cattle, swine, sheep and goats all were represented, many by high-class herds as well.

Jerseys.

Orland being quite a Jersey center it was to be expected they would have a great exhibit. Dr. Hand's Keep On Herd, M. Fortini, Hugh Dodd, G. W. Gurnett, Arthur Erickson, C. A. Whitsett, J. N. Cook, N. S. Nelson, John A. Button, all had exhibits and all won their share. The feature, perhaps of the Jersey show was the winning by M. Fortini, with two females, mother and daughter, all available prizes; senior champion cow, junior champion female, grand champion cow and reserve grand champion with first places in class. It is well to remember, too, that the grand championship was won over Dr. Hand's Brilliant Jersey Queen, grand champion at the State Fair this year. This takes nothing from Dr. Hand's cow, but shows what a wonderful individual Noble's Peer's Jewel really is to be able to win in such company. Surely a great exhibit of this beautiful breed.

Holstein-Friesians.

In the Holstein-Friesian class there was not so large an exhibit, but the quality was fine in that the J. S. Gibson Co. had a very fine herd and captured all the prizes, except on bulls two years old and under three, when G. O. Williams won.

Shorthorns, Etc.

This is the first year that the Shorthorns had an exhibit at the fair, but were well represented by the herds of O. L. Raper, Butte City Ranch, and Theodore T. Purkett, with premiums about equally divided.

Dual purpose cattle were represented by a herd of Red Polls owned by Geo. Clark.

Swine Exhibits.

Berkshire swine were exceedingly well represented in the exhibit from Anchorage Farms, to which all prizes were awarded. Their exhibit deserves special mention, which will be found on another page. The great red hog, the Duroc-Jersey, was represented by the three herds of W. T. Hollingshead & Sons, F. D. Burr Co. and C. D. Bright. All won their share of the prizes with the grand championship on boars and grand championship on sows going to W. T. Hollingshead & Sons. Poland-Chinas were there in large numbers, R. J. Yates exhibiting, but not for prizes. Ferguson & McKaig, W. G. Gurnett, R. W. Rankin, Frank Reiman, D. H. Ward and Penfield & Penfield, all making exhibits and taking prizes. The grand championship boar shown by W. G. Gurnett and Ferguson & McKaig having grand champion female on the senior sow pig, Big Orphan Pet. Hampshires and Chester Whites in small numbers were shown by Wm. Haskins and W. J. Beck.

Sheep and Goats.

Bullard Bros. of Woodland had a very fine exhibit of Rambouillets and captured the prizes in most of the classes. Alfred Kuhn of Henley also showed Rambouillets.

Shropshires were shown by Butte City Ranch and walked off with the prizes.

Karakul or Persian sheep, grown in their native country for their hides, were on exhibition by W. R. Graves.

Angora goats were shown by the two firms of J. J. Hall & Sons and A. R. Gearhart.

Milk goats were there, owned by J. A. Trobee, Mrs. L. S. Rankin and Edith Grout. Both the Toggenburg and Saanen breeds were shown.

Altogether, the exhibit was large and diversified and equal to much larger and better known places.

RU-BER-OID and MALTHOID READY ROOFINGS

This picture shows the "dry end" of a huge felt-making machine in one of our mills.

Felt is the "base" or body of ready roofing. Quality in roofing depends so much on the quality of this felt foundation that we manufacture in our own mills all of the felt used in making Ru-ber-oid and Malthoid Roofings.

In this way only can we be assured of securing the extra-tough, long-fibre wool-and-cotton felt necessary for building long-lasting qualities into Ru-ber-oid and Malthoid.

Ru-ber-oid and Malthoid Roofings are made by saturating this extra-quality felt with a highly waterproof asphaltic compound, after which the saturated felt is coated with a long-lived, weather-resisting compound. Both the saturating and coating compounds are refined in our own plant for this special purpose.

From rags to wrapper, Ru-ber-oid and Malthoid Roofings are made within our own organization—made to give lasting service. We have been making ready roofings for 35 years. During this time Ru-ber-oid and Malthoid have proved their quality under all sorts of trying conditions. They are sun, rain and fire resistant. The price is higher, but the cost is less, because they last longer and need fewer repairs. When you buy roofing, buy real protection.

Poultry and Rabbits for Profit

POULTRY, PIGEONS, AND RABBITS AT CALIFORNIA LAND SHOW.

To Poultry, Pigeon and Rabbit Breeders: The California Industries and Land Show, to be held in the Exposition Auditorium, San Francisco, on October 4 to 19, inclusive, is intended to be a comprehensive exhibit of the resources of the entire State. It would not be complete without an exhibit of poultry, pigeons and rabbits. It is therefore planned to include a small but select exhibit of poultry, pigeons and rabbits at the California Industries and Land Show, upon the following conditions:

1. No entry fee will be charged.
2. Exhibits will not be judged nor receive any prizes.
3. Entries will be limited as follows: Poultry: One cock, hen, cockerel, pullet and breeding pen of each variety to each breeder. Pigeons: One old cock, old hen, young cock, young hen and display pen of each variety. Rabbits: One senior buck, senior doe, junior buck, junior doe and doe with litter of each variety.
4. As the Land Show extends from October 4 to 19 it is planned to divide the show in two divisions: First to run from October 4 to 11 and the second run from October 12 to 19.
5. Exhibits will be limited to prize-winners. No exhibits will be received excepting those that have received awards at other shows. It is desired to exhibit only specimens that are worthy of special newspaper articles. Exhibitors are requested to furnish our press department with written articles regarding their exhibits.
6. Exhibits for first division (Oct. 4 to Oct. 11) must reach the Show on October 3rd and exhibits for the second division (October 12 to October 19) must reach the Show on October 11.
7. Exhibits will be cooped, fed, watered and cared for by the Land Show with competent superintendents, who, however, assume no responsibility therefor.

AMOUNT OF GRAIN AT FEEDING

To the Editor: Can you tell me how many pounds of wheat I should feed to about 200 hens at each feeding? They have alfalfa to range on, I feed mill stuff for dry mash, and wheat but get no eggs.—W. G. C., Tranquility.

It may help in a small measure if one pound of wheat is fed for each two pounds of mill stuff the hens eat. Do not feed the wheat until evening when the amount of mill stuff, consumed during the day can be determined. However, hens can not lay many eggs at this time of year unless they are provided with certain materials in addition to wheat, mill stuff and alfalfa range. In this case bone, meat scrap or fish meal are most needed. In the spring, hens that are naturally good egg-producers can lay a satisfactory number of eggs with only the feeds and range mentioned, but at other seasons a very carefully prepared balanced ration must be furnished or the hens can not continue to lay more than an occasional egg.

POULTRY STOCKS CUT BY LOSS OF 4,000,000 CHICKS.

What is a good average price for spring chicken? Whatever you think it is, multiply it by 4,000,000, says D. H. Reid, poultryman at the Wisconsin Experiment station, and you will approximate the amount the state loses each year from failure to raise the chicks that are hatched.

In a report received from owners of flocks in all parts of the state it was found that 14 per cent of the 22,000,000 chicks hatched died. At least half of these died from exposure and neglect, according to the figures given, and the next biggest loss was from "leg weakness," which is largely avoided by careful feeding and plenty

of exercise. This ailment, which causes the loss of 700,000 chicks in Wisconsin, is being studied by scientists to determine the cause and remedy.

That rats, cats, skunks, crows and hawks kill 500,000 chicks in this state seems scarcely possible, says Mr. Reid, but this is a third largely avoidable loss. In the southwestern section, along the river, losses from rats are greatest, and in the sandy soils counties of central Wisconsin the hawks are the great enemies of young chicks. Lice and mites take toll of about 200,000 chicks each year, and 100,000 die as the result of accident.

BLACK EYES AS HEN RATION.

To the Editor: Kindly tell me the maximum proportion of cracked black-eyes that can be fed to chickens when mixing Gyp. corn, wheat, and black-eyes for grain feed. I also feed Surelay (as a dry mash), sour milk and greens, but the hens do not eat so much as they should and are not laying so well. Also give directions for supplying hens with sulphate of iron as a tonic.—C. W., Modesto.

It depends on what is fed for greens and whether the hens get all of the greens they wish to eat as to the proportion of black-eyes it is advisable to feed in an effort to supply a balanced ration for egg production, particularly at this season of the year in the warm valleys. If alfalfa is the green feed, or is a very large part of the green stuff, less black-eyes should be used because both are very rich in protein. If the green stuff is abundant and does not consist mostly of alfalfa a mixture of about one-third each of wheat, corn, and black-eyes would be about correct assuming that the amount of dry mash eaten by the hens about equals the weight of grains supplied them. Sulphate of iron is most easily and correctly administered in the form of Improved Douglas Mixture which is made by mixing two ounces sulphate of iron in one-half ounce diluted sulphuric acid. Stir with a stick and at same time add hot water until dissolved. When cold add enough cold water to make a gallon. Keep in a glass or earthenware container. One teaspoonful of this solution in one quart of drinking water makes a strong tonic. Less should be used if the fowls are not urgently in need of assistance.

LOAFER HENS STARTING TO MARKET.

Poultry culling campaigns, under the direction of the extension service of the University of Missouri College of Agriculture, are heading many hens toward the market. If hens are not laying eggs they are fit only for food, and the quicker they are marketed the smaller will be the feed bill for the flock. In Perry county, 736 non-laying hens were culled from 1,608 fowls examined the first week of the campaign. At one farm, 41 hens were culled from a flock of 49. The owner was pleased with the work, says County Agent Raut, as she had been getting only 4 to 6 eggs a day, and was satisfied the laying birds were among the eight retained. In the second week, 31 farms were visited. Of the 1,082 fowls examined, 542 were culled as non-layers. The percentage of culls seems to run about the same in all farm flocks. In Vernon county, out of 1,353 hens examined in 21 demonstrations, 664 were culled.

RATION OUT OF BALANCE.

To the Editor: Will you tell me what I can do for a Plymouth Rock pullet that has a sore under its tongue that looks like a canker?—A. B., Greenville.

In nearly every instance mouth canker is caused by a ration that is

very much out of balance. Usually it is due to an excess of heating material in the feed—starch, sugar, fats, etc. To remove the cause feed a larger proportion of nitrogenous stuff, such as bran, shorts, bone, meat scrap, etc. To heal the sore spot paint it with a mixture composed of ten drops tincture of iron in one ounce of glycerine.

Poultry Breeders' Directory

Rate 3½ cents per word each issue.

BOOKING FOR WINTER, SPRING DELIVERY.—Thousands chicks off weekly now, open most weeks till March, reduced. Leghorns, Anconas, Reds, Rocks, Minorcas, Wyandottes, Orpingtons, ducks, turkeys—cleaning customers \$5 yearly. Bred 20 generations back to lay winters, 200-250 eggs yearly. Half go to former customers. Doubling over 70,000 hatching capacity. Returned thousands dollars for chicks we couldn't supply. **Hundreds Breeders, Laying, Younger Pullets, reduced.** Circular with proof free. J. Beeson, Pasadena, Calif.

WARDS' S. C. RHODE ISLAND REDS caused a sensation at Sacramento by winning: 2nd cock, 1st and 3rd hens, 1st and 3rd cockerels, 1st and 3rd pullets, special for best-colored female. Cockerels, pens, trios, Hatchling eggs. Write for circular. Wards' Poultry Farm, 39C South Lincoln Avenue, San Jose, California.

ORDER BABY CHICKS NOW.—For immediate or spring delivery. Several varieties. Safe arrival guaranteed. Write for free circular. R. I. Red, Buff Orpington and White Rock cockerels now ready for shipment. Stubbe Poultry Ranch and Hatchery, Box 67, Palo Alto, Cal.

YOU WILL MAKE PROFIT in the poultry industry when you make Capons of your cockerels; learn how and learn right. If interested, send inquiries to Perkins & Co., M-St. Store, Sacramento, for Mrs. H. Ament, Capon Specialist.

S. C. WHITE LEGHORN CHICKS—by the 100 or 1000 from A-1 Hockanized and Trapped stock. Won 1st, 2nd and Special (Utility Class), Oakland and Modesto. Order early for Fall and Spring delivery. A. O. & P. M. Forster, 2918 Otis St., Berkeley, Cal.

ANDERSON'S PEERLESS ANCONAS lay more and eat less than other breeds. 50 big husky cockerels \$5 and up, 200 pullets, trios and pens for sale. Hatching eggs. Catalogue free. J. W. Atkinson, Box B, 130 Willard Street, San Jose, Cal.

FEBRUARY PULLETS from selected pens of Barred Rock hens weighing eight and nine pounds and laying form 16 to 24 eggs per month from October to February last season. Prices very reasonable. Geo. L. Horne, Winton, Cal.

PETALUMA HATCHERY. Can ship day-old chicks to points reached in three days. Four varieties. We challenge the hen, or anybody else. Free fall circular. L. W. Clark, Petaluma, Calif.

S. C. RHODE ISLAND RED cockerels, February hatch, breeding pens. Hatching eggs. Improve your color and egg capacity. Wm. Larm, 3915 39th Ave., Fruitvale, Cal.

"EASTMAN'S BRED-TO-LAY." Hockanized and trapped Barred Rocks. Fall chicks, eggs, cockerels. Fairmead Poultry Farm, Fairmead, Calif.

FALL BABY CHICKS—Rocks, Reds, and White Leghorns; choice stock. Place your order in advance to insure prompt attention. Santa Clara Valley Hatchery, San Jose, Cal.

BARRED PLYMOUTH ROCKS—Nothing better in poultry. Prize-winners and wonderful layers. Choice stock for sale. Chas. H. Vadden, Box 3, Los Gatos, Calif.

FALL BABY CHICKS from our large heavy-laying S. C. White Leghorns. Send for prices. Tupman Poultry Farm, Box 7A, Ceres, Calif.

ROCK, RED OR LEGHORN baby chicks—large or small lots. Right prices. Madera Hatchery, Madera, Cal.

BUFF ORPINGTONS, BUFF DUCKS, ROUBON RED TURKEYS—The Ferris Ranch, Rt. 2, Box 144D, Pomona, California.

GOLDCROFT BUFF ORPINGTONS—Winners San Jose show. Choice stock for sale. Samuel Abrams, Los Altos, Calif.

CHICKENS, DUCKS, GEES, GUINEAS, Pea Fowl, Pigeons. Wm. A. French, 545 W. Park St., Stockton, California, Stamps.

BRONZE TURKEYS—Albert M. Hart, Clements, Calif.

RABBITS.

FOR SALE—Flemish Giant Rabbits. Both sexes. Prices reasonable. Mrs. J. T. Ramsey, Rescue, Calif.

For Sick Chickens

Preventive and curative of colds, roup, canker, swollen head, sorehead, chicken pox, limber neck, sour crop, cholera, bowel trouble, etc. Mrs. T. A. Morley of Galien, Mich., says: "Have used Germozone 17 yrs. for chickens and could not get along without it." Gen. F. Vickerman, Rockdale, Ill., says: "Have used Germozone 12 years; the best for bowel troubles I ever found." Frank Stuka, Chicago, Ill., writes: "Have lost but 1 pigeon and no chickens in the 3 yrs. I have been using Germozone." C. O. Petrain, Moline, Ill., says: "I never had a sick chick all last season." Bernard Hornig, Kirksville, Mo., says: "Cured my puniest chicks this spring." Ralph Wurst, Erie, Pa., says: "Not a case of white diarrhea in 3 yrs. I raise over a thousand a year." Good also for rabbits, birds, pet stock.

GERMOZONE is sold generally at drug and seed stores. Don't risk a substitute. We mail from Omaha postpaid in new 25c, 75c and \$1.50 sizes. Poultry books free.

THE HOME CIRCLE

THE DEBT.

For the youth they gave and the blood they gave,
For the strength that was our stay,
For every marked or nameless grave
On the steel-torn Flanders way—
We who are whole of body and soul
We have a debt to pay.

When we have justly given back again
To the maimed body and bewildered brain,
New strength and light and will to take one's part
In the world's work at field or desk or mart,
When this old joy of living we restore,
We shall have paid a little of our score.

When we have given to earth's stricken lands
The service of our minds and hearts and hands,
When we have made the blackened orchards bright,
And brought the homeless ones to warmth and light,
When we have made these desolate forget,
We shall have paid a little of our debt.

For the youth they gave and the blood they gave
We must render back the due;
For every marked or nameless grave
We must pay with a service true;
Till the scales stand straight with even weight
And the world is a world made new.

—Theodosia Garrison.

BRIN.

The following story, told by Dr. Wilfred T. Grenfell, the Labrador medical missionary, in St. Nicholas, is a striking illustration of the instinct of northern dogs for following the trail.

One evening, as he was feeding his dogs, there came upon them suddenly another team driven by Joe, who had come to call the doctor to Island Harbor, where there was a case of sickness, and "they doesn't know what t' sickness." It was sixty miles across the country, and twice that distance around the shore; but there was no trail over the cross-country route.

Around the fire that night they were discussing the cross-country trip, when Harry, an old acquaintance, came in, beating the snow off himself as he entered. Harry, who was familiar with the route, had an errand over part of the route to bring in two stags that he had killed, and so it was agreed to make the attempt to go that way.

Dr. Grenfell and his fellow-doctor had left their experienced dogs at the hospital, and were breaking in a new team. The only dog of their last year's team was a yellowish brown animal, with black-striped markings somewhat like a tiger. These lent to his face the suggestion that he was eternally grinning, an impression intensified by an odd way he had of turning up the corners of his mouth when he caught one's eye. The dog was named "Brin."

Long before daylight the next morning they were astir, for it would require all the day to drive the sixty or seventy miles. Harry, with his good team and knowing the route well, led the way until about ten o'clock, when he had to turn aside to bring in his game. Before they parted all halted under some spruce-trees to boil "a mug of tea."

Then the doctor and his companion

set out on an unmarked trail. Their only assets were their pocket compasses, giving the general direction; their axes to clear a path when they should get stalled; a hopeful disposition which never spoiled for troubles until they should come along; and—Brin. A trackless marsh lay before them. Dr. Grenfell's companion said:—

"Don't say a word. Let's see if Brin will head right—across the marsh, anyhow."
"All right," replied the doctor. "Mum is the word. Go!" Brin, with his good team, led off in a gallop in the direction the compass indicated should be the course.

Their friend Harry had told them of certain landmarks—a tall, lone spruce at one place; at another, a forked juniper-tree from which the top boughs had been stripped and the skull and antlers of an old caribou placed in the forks. As the galloping dogs ran on, Brin led them by the lone spruce. Some ten miles farther the doctor's companion shouted, "There she is!" There is what? exclaimed the doctor. "Why, the skull in the tree," he responded. As they passed this, they both thought that Brin looked around and grinned; but, if the dog did not the doctor did, for their spirits were high that another ten miles lay behind them.

The shadows of even were now falling, and between them and their goal were miles of rolling forest. How much longer could they trust Brin? At one point he swung off almost at right angles from the direction in which they had been traveling. Passing down a long slope, they came to a long lake onto which they ran at right angles. Facing them was a steep bluff, and the lake seemed to end in a narrow defile, through which they supposed the river had escaped, and toward which they expected to turn, but no such notion entered Brin's head. He made exactly for the opposite direction, and then, crossing a narrow portion of the lake, he started to climb the hill in front of them. The travellers had hoped before this to come upon the snow-shoe tracks of hunters, but nothing of the kind could be seen.

As they swung around a big drift of snow, a fresh fox track ran directly down a bluff. Without looking back, Brin jumped right into the track and followed it. The men found it hard not to "butt in" and tell a mere dog that he was probably foolish in following a fox track; but the men did not know just which way they did want to go, and on they went.

It was now almost dark; and, if they meant to make a camp for the night, it had to be done. The team was stopped, and they were about to rather wood for a fire, when the doctor's companion said, "I am for giving Brin another chance." "All right," replied Grenfell, and Brin was given the signal to go. It was now dark. Running into a tree, they were compelled to stop. Getting out of the sledge, Dr. Grenfell found they were in a well-cut path. Taking this trail, they were soon at the Gray Cove, and by eight o'clock had reached the patient's house.

Before turning in that night, Dr. Grenfell went out to see if the dogs were all safe, and as he was about to re-enter the cottage door, something warm and furry rubbed against his leg. By the light that streamed from the open door he found himself looking into Brin's eyes. They were

asking, "How did I please you today, Master?"

"I could not help putting my arms around his neck and hugging him," says Dr. Grenfell. "Then we both went off to our beds the happier for it."

MACHINE HEMSTITCHING.

The home dressmaker can give her work quite the air of ready-made garments by the use of hemstitching or picot-edge work. This work must be done at a shop, but the charges are moderate and goods may be sent in and returned parcel post.

Fancy designs on a blouse may be outlined with basting thread and tucks and seams may be hemstitched if indicated.

Hemstitching on wash satin makes very pretty tailored underwear and more durable than lace trimming.

To make beading for lingerie make a line of hemstitching the right length for the ribbon, then cut the hemstitching apart and you have a beading with a picot edge.

To Make Homes Better and Housework Lighter

is considered the most important duty of this great Home-Making Institution. For over 39 years we have enjoyed active, sincere participation and co-operation in the planning and creating of better and more beautiful homes in California and the West generally.

Through our experience we have created a great reserve of Home-making Ideas and Plans. To make these Ideas and Plans available in usable, enjoyable form we print each year literally scores of Folders, Booklets and Catalogs (as well as several distinctive Magazines), any and all of which are sent anywhere, free and without obligation, on request.

Practically every important subject influencing the planning of a better home has been met and dealt with in some special piece of printed matter issued by this store.

To enjoy reading the Ideas and Suggestions of others as well as descriptions of the newest things for making Homes better and Housework lighter, simply send us a postal, saying:

"Put my name on your mailing list."

ESTABLISHED 1880

Complete Home Furnishings
734 South Broadway,
Los Angeles, Calif.

When you make your tea, the tea-flavor develops first—and that's what you want: tea-flavor, not tannin. Tannin then comes along and smothers the tea-flavor.

Common tea is older leaves with lots of tannin and very little tea-flavor.

Good tea is young tender leaves with abundance of fine tea-flavor and very little tannin.

That's why a pound of fine tea makes more cups of real tea-flavor than common tea does. And the flavor is infinitely better.

Schilling Tea costs 1/4 cent per cup for rich fine invigorating tea.

There are four flavors of Schilling Tea—Japan, Ceylon-India, Oolong, English Breakfast. All one quality. In parchment-lined moisture-proof packages. At grocers everywhere.

A Schilling & Co. San Francisco

Mail us your exposed Film Pack. We develop twelve exposures, size 2 1/4 x 3 1/4, 25c; 2 1/2 x 4 1/4, 30c; 4 x 5, 35c. Prints on Velox Paper at reasonable prices if desired. The best grade of work.

DREADNAUGHT
BLAZING-AWAY-IN-COST-DEFENCE!

What's an Ash Pile?

An ash pile is a back yard monument to the memory of good money paid for unconsumed fuel. Then it takes additional good money to properly decorate the surrounding scenery a memorial hue with smoke and soot, via the chimney. Then in the spring, if there is not a convenient hole, more money is spent to have said "monument" removed.

Foolishness?—Yes, absolute nonsense, when there is a cleaner, cheaper way for almost the asking. Just think—all of the heat from all of the fuel, for less money, minus the drudgery.

Investigate and try the Dreadnaught way. The same stove becomes the means of a clean gas fire—dry gas, full in heat units and perfectly clean.

Oil, properly used, is the most wonderful fuel of the age. Its real value in gas making was not appreciated until the perfection of the Dreadnaught Burners—burners for stoves, heaters, furnaces and boilers. Write for our circular regarding the little Burner for the home stove.

PRIZE RECIPE FOR RABBIT.

Place a rabbit—preferably a young one—in salted water to draw the blood over night, after dismembering and cleaning it. In a saucepan, brown a kernel of garlic in two heaping teaspoons of shortening, removing it when sufficiently browned. Add to the shortening, six moderately sized onions, chopped fine, with a handful of parsley and a sprig of mint. When a little browned, add a can of tomato soup, or a like quantity of fresh chopped tomatoes, a little water, enough to cover the rabbit, chili pepper and salt to taste. Add the rabbit, cook slowly for an hour and a half, or until the rabbit is tender. Thicken the gravy with flour before serving and serve with rice and currant jelly. One rabbit will serve five people.

A SUNSHINE CREED.

Frederic A. Whiting.

Be of good cheer!
Be not afraid!
God's ever here
With His true aid.
No cloud is there
To dim the blue,
But a sunny smile
For a happy while
Will make all fair
And bright for you.
And so, my dear,
Banish all fear
and
Be of good cheer.

ELECTRIC LIGHT IN THE FARM HOME.

The farmer's wife, after generations of irksome toil, is coming into her own. With the universal adoption of the automobile and the more recent perfection of individual electric lighting and power plants, her home-life has undergone an epochal change.

The toil and monotony which attached itself to woman's place in rural life, long has been proverbial. Removed from the city the country woman for the most part was without the scope of those many advantages which, during the last century, have come through invention and development.

While engineering science was developing the reaper and binder, the gasoline engine, the tractor, the truck and other machinery to aid the farmer in increasing the acreage and production of his land, it did nothing of vital importance to relieve the work of the Farmer's wife. She still was forced to adhere to methods which came into vogue in the time of her grandmother. For the most part she churned by hand, washed by hand, swept by hand and sewed by uncertain light. The result was that she grew old before her time and enjoyed none of the pleasures to which she rightfully was entitled.

No development of the era has done quite so much to better her condition as the modern electric lighting and power plants. With the perfection of these a decided change has been

wrought in her daily life. Where once she bent over a tub she now has a power washer. The hand churn she has discarded for one operated by an electric motor. The old broom has been supplanted by a vacuum cleaner. The smoking oil lamp has been replaced by an electric portable. The sewing machine and milk separator are now equipped with motors. The ironing is done by electricity. There is modern sanitary plumbing and running water in the house—improvements which may be traced directly to the new plants which furnish the necessary power for pumping. For the first time the women folks of the farm are living like their city cousins.

A COLLEGE EDUCATION.

The United States Department of Education is authority for the following statement: "Less than one per cent of American men are college graduates, and yet this one per cent has furnished fifty per cent of the constitutional conventions, fifty-five per cent of all the presidents, thirty-six per cent of all the members of congress, forty-seven per cent of all the speakers of the house of representatives, fifty-four per cent of all the vice-presidents, sixty-two per cent of all the secretaries of state, fifty per cent of the secretaries of the treasury, sixty-seven per cent of the attorneys-general, sixty-nine per cent of the justices of the supreme court."

It is not intended to hold up public office as the highest form of success; but the fact that the one per cent of college graduates have had such a conspicuous part in our public activities is significant as indicating the value of college education. If the truth could be gotten at, the value of this education would be demonstrated with the same force in most lines of activity. It is estimated that the man who has had no schooling has about one chance in 150,000 of performing distinguished service. The man who has an elementary education has four times the chance of the man who has no schooling. The high school graduate has eighty-seven times the chance of the uneducated man, and the college man has four hundred times the chance. And this proportion will apply with just as much force to farming as to any other line of activity.

As time goes on, the uneducated farmer will be at an increasingly great disadvantage. And by education in this line is meant not alone a technical and scientific knowledge of agriculture, but the sort of training a man gets from going through high school and college, just as much as the knowledge acquired. If success is measured simply by financial reward, then it is very much more important that a man be able to think clearly and to the purpose than that he be able to work hard with his hands only; and this is true also if we measure success by service in the community or by the ability to live a happy, well-rounded, useful life.

THRIFT IN SAVING FOR CHILDREN.

The boy or girl who is wise saves money for a definite goal—for a better education and for the start in life on the farm or in business.

The rule of successful saving is to save regularly and systematically; to save part of all the money you receive, by gift or earning.

Place your savings at once where they are safe from spending and from loss. A United States Thrift stamp will guard every quarter saved.

THRIFT DECLARATION.

I owe to my country and to my own future the development of intelligent thrift and economy through the cultivation of habits of saving and the elimination of waste of all kinds.

TAKING A CHANCE.

He wed a working girl, although
He doubted he ought to risk it;
For a girl you know, can make the dough
Who cannot make a biscuit.

PURE FRESH CANDIES DAINTY DELICIOUS

Right at your own door. Try a box of Mexican Ransoms (Bitter Sweets) or Fancy Mixed. Full half-pound, 45c, postage prepaid.

LYNN-BART'S CANDY SPECIALTIES,
P. O. Box 54, Alameda, Calif.

CANNED APPLES FOR PIE.

Windfall and cull apples can be transformed into valuable and palatable food, available for consumption the entire year, if handled correctly. Windfalls, if taken when whole and reasonably sound and not over ripe, may be canned and used for a breakfast dish with cream and sugar, or baked like a fresh apple, or served in an apple salad, made into dumpings or pie, used as a relish with pork or fried with bacon, and the sirup may be used for pudding sauces and fruit drinks; even the core may be used, if cooked with roast pork, to give it flavoring.

To can apples whole select firm ones. Wash, remove core and blemishes. Place on a blanching cloth or tray and blanch in boiling water for two minutes. Then plunge quickly into cold water. Pack in large glass jars or gallon tin cans. Fill the receptacle with a thin sirup, place the rubbers and tops in place, partially seal (if using tin cans, cap and tip completely). Process half-gallon or gallon containers 20 minutes in boiling water, or in a hot-water bath 15 minutes in water-seal; 10 minutes in steam pressure with 5 pounds of steam pressure; 5 minutes in aluminum pressure cooker under 15 pounds of steam pressure. Remove jars, tighten covers, invert to cool, and test joints. Wrap in paper and store. The length of heating will vary with the ripeness of the fruit, sterilize perfectly, but do not change the color or reduce the pulp to sauce. Firm and tart apples may be cored and peeled first.

Culls must have decayed and injured spots removed. Slice the apples quickly into a basin containing slightly salted cold water (to prevent discoloration). About a cupful of sirup to a quart of fruit will be enough juice. Pack and sterilize about half the time given above. This filling may be used for pies just as fresh fruit, but with less sugar and sirup. Pies may be cooked in 7 minutes. Housekeepers like the time saved as much as apple pies the year around.

FASHION NOTES.

Many new blouses are made with high necks.

Ostrich fringe is used to trim dinner frocks.

Coat dresses of serge or other serviceable fabrics, are practical and smart—they answer for both the purpose of a dress and a suit.

Fringe is used for trimming on collars, cuffs and skirts.

Braiding or embroidery are the popular trimmings on the fall garments.

Squirrel is a very popular fur—it is shown in coats, long scarfs with pockets and small choker collars.

Necks of blouses and dresses continue very severe and untrimmed.

Georgette is just as popular as ever for the fall suit blouses.

The russet shades, like turning leaves, are gaining in popularity for all fall garments.

Plushes in imitation of fine furs are being shown for coats, stoles and capes. These are all 50 inches wide.

Little girl's separate skirts of novelty plaids, blue serge and mohair come on bands or waists and are fine for school wear with a middy blouse.

Casques or the new chemise blouse are becoming more and more popular. The materials used for them range from sheepest Georgette to tricolette.

Stunning hand bags are made of heavy satin or brocaded ribbon set on celluloid frames.

Beaver in soft brown shades is very popular in combination with velvet or satin for winter hats.

AIDS TO COOKING.

To make crumbs for covering croquettes and similar articles, dry stale bread in the oven and put through the meat chopper. They are better to use in frying in deep fat than cracker crumbs as they do not absorb the grease so readily.

When frosting a cake, first sprinkle lightly with cornstarch in order to prevent the frosting from spreading rapidly and running off.

HOUSEHOLD HELPS.

Keep hot-water bottles and bags hanging upside down when not in use and they will last much longer.

A wire draining basket can be utilized to hold the dishes after they have been rinsed in hot water—this to save wiping them.

Delicate white laces may be cleaned by laying them smooth on white wrapping paper and covering them with magnesia. Put on other paper over this and weight down for several days. Brush out the powder and the lace will be found much freshened.

Furs will look much improved if they are cleansed with bran heated in the oven. Rub the hot bran well into the fur with a piece of flannel, then shake the fur to remove all particles and brush thoroughly. Fur collars that have become soiled from rubbing against the hair may be made

to look like new by using hot bran on them. Apply the bran the second time if the fur is badly soiled.

To prevent the juice from fruit pies from running over, pinch the crust together in the usual manner and then bind with a strip of white cotton cloth, wrung out of cold water. Press it lightly over the edge of the crust, letting the lower edge hang over the side of the tin. It can be easily taken off when the pie is baked.

THE PREMIER BURNER

MAKES GAS FROM KEROSENE (common coal oil)
There are probably more PREMIERS in use than all other Kerosene Oil Burners combined.

How your tea-kettle illustrates an exclusive Mueller feature

YOU know how steam fairly shoots out of the spout of your tea-kettle when the water is boiling and the cover is on. Travels fast in a narrow path and is scorching hot. But when you raise the cover, the steam rises slower through the larger opening and heats a greater volume of air although not so intensely.

The heat coming out of a pipeless furnace with a small register face may be compared to the steam rushing out of the tea-kettle spout. It is inefficient heat. Wasteful, doesn't heat the house comfortably, causes cold drafts across the floor.

The large register face of the Mueller Pipeless Furnace delivers heat on the other principle—a large volume of warm, moist, healthful air rising slowly, the safest, most economical and efficient method.

MUELLER PIPELESS FURNACE

Mueller heating engineers have worked out the design of this pipeless furnace in a scientific way from start to finish. It is built so well that users in every part of the country are glad to recommend it. Thousands have been installed. It is guaranteed to heat every room in the house comfortably. Eight sizes—there's one the right size for your home.

Easily and Inexpensively Installed

No floors or walls to tear up for pipes—your dealer can quickly install it without any inconvenience to you. It can be put in any home—whether you

have a large cellar, a small one, or no cellar at all.

Burns hard or soft coal, coke, wood, lignite, gas or oil. Saves from 1/3 to 1/2 on fuel. No heat wasted in the cellar.

Market Comment

Must Deliver Prunes Under Contract.

Judge Sewell's decision in favor of the plaintiff in the case of the California Prune and Apricot Growers, Inc., vs. Guy W. Young, upholds absolutely the legal status of the California Prune and Apricot Growers' contracts with grower members.

Michigan White Beans, \$8.90.

Reports from Michigan announce the sale there of the new crop of white beans at \$8.90 per cental, October delivery. This price is equivalent to \$8 for California white beans. San Francisco dealers continue to report a quiet market for all varieties, with prices showing little, if any, improvement.

To Stay the Slump in Livestock.

Only the buying of more dressed meat by the public will revive the livestock market, according to stockyards officials. The consumer will not receive the benefit of the lower figures, it has been pointed out, until meat purchased during the decline is released for sale, which will be shortly, it is said.

First Payment on Prune Crop.

H. C. Dunlap, department manager of the California Prune and Apricot Growers' Association, has distributed \$10,200,000 as first payment to association prune growers for the 1919 crop. This sum represents about one-third of the total. It represents the highest-priced prune crop in history.

Demand for New Rice Crop.

Inquiries for California rice have been coming in from outside countries and there has been a small quantity of the new crop sold to European nations. Spot stocks of good grades of California rice are now exhausted, and there remains on hand only a small quantity of damaged stock. It is estimated California will produce this year about 4,200,000 one-hundred-pound bags of paddy rice.

\$1,212,631.32 for Tulare Oranges.

Members of the Tulare County Citrus Fruit Exchange received \$1,212,631.32 for their 1918 crop, the largest sum ever paid out through organization channels, despite the comparatively short crop of Washington navels last season. The grand average price paid for oranges was \$3.536 per box, comparing with \$3.46 for the 1917 crop, and \$1.81 for the 1916.

Contra Costa's Pear Crop, \$400,000.

According to Frank Swett, County Horticultural Commissioner and Secretary of the California Pear Growers, Inc., the pear growers of Contra Costa county received \$400,000 for their crop this year. The crop in the State is estimated at about \$7,000,000. Of the present year's crop about 60 per cent was sold to the canneries, as against 20 per cent for previous years. The growers received \$85 a ton for No. 1 pears and \$50 for No. 2 grade.

Britain Again Receives Danish Butter.

During the fiscal year of 1914 the United States exported to the United Kingdom 721,520 lbs. of butter. During the fiscal year 1918 our exports of butter had increased to 13,982,559 lbs. For the first six months of the present year 17,347,666 lbs. of butter have been exported to the United Kingdom. After a considerable period Denmark has resumed exportation of butter to Great Britain, which will reduce our own exports moving in the same direction.

Hops in Strong Demand.

Buyers of hops in "wet" countries have contracted for 50 per cent of California's hop crop with the first shipments, bringing 50 cents a pound. Brewers throughout the United States are still buying hops as they are needed as much in the manufacture of near-beers as in the production of beverages of higher alcoholic percentage. The total hop crop of Sacramento valley will be 40,000 bales, or 8,000,000 pounds, at a total valuation of \$4,000,000. The rest of the State will produce probably 30,000 bales.

THE MARKET REPORTS

Figures Given Are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO.

San Francisco, October 1, 1919.

WHEAT.

The supply of wheat seems ample for all demands in San Francisco, although it is stated that arrivals are slow. All grain markets are dull.

Per bushel—	
No. 1 hard	\$2.20
No. 2	2.17
No. 3	2.13
No. 1 soft	2.18
No. 2	2.15
No. 3	2.11
Club or Sonora, No. 1	2.16
do, No. 2	2.13
do, No. 3	2.09
California, per cbl	\$3.65 @ 3.70

BARLEY.

In the local market there was a general apathy regarding all the grains this week. Barley quotations are nominally unchanged, but sales are of such small quantities that each sale is likely to show some variation from the reported market price.

Feed	\$3.00 @ 3.05
Shipping	\$3.20 @ 3.30

OATS.

The oat market continues dead and practically all inquiry is on a basis of a few sacks at a time.

Red feed, per cbl	\$2.90 @ 3.10
Red for seed	Nominal
Black for seed	Nominal
Reclaimed Red or Black for seed	Nominal

CORN.

Like the other grains the movement of corn is slow and the market is heavy. Apparently all users of grain are waiting for more settled labor conditions before attempting much business in grain.

California	\$3.80 @ 3.90
Egyptian, choice	\$3.70 @ 3.80

Milo Nominal

HAY.

The receipts of hay for the past week were 2,189 tons compared with 2,893 the previous week. Whether this decrease is due to the lack of ears or is on account of the fields being fairly well cleaned up, is a question. It is probably due to both causes. As has been the case for many weeks nearly all the receipts are by boat from the bay and river districts. Heavy receipts of alfalfa have had a tendency to weaken the market, and in many cases concessions have been made to effect sales. The effect of the rains on the market is not yet known here, but it is believed that most of the hay in the country is under cover.

No. 1 Wheat, or Wheat & Oat	\$15.00 @ 18.00
No. 2 Wheat, or Wheat & Oat	\$12.00 @ 15.00
Choice Tame Oat Hay	\$15.00 @ 18.00
Wild Oat Hay	\$10.00 @ 14.00
Barley Hay	\$12.00 @ 16.00
No. 1 Alfalfa Hay	\$17.00 @ 22.00
Stock Hay	\$ 8.00 @ 12.00
No. 1 Barley Straw, per bale50 @ .80

FEEDSTUFFS.

Feedstuffs reflected the general apathy of the grains; and for rolled barley, rolled oats and cracked corn, the prices were lowered to attract buyers. The market is bare of coconut meal, and no quotations can be made. Alfalfa products are unchanged, although the alfalfa molasses is very scarce and would bring higher price if it were available.

Roller Barley	\$9.00 @ 13.00
Roller Oats	\$6.00 @ 12.00
Coconut Meal	None
Cracked Corn	\$7.00 @ 7.00
Alfalfa Products	\$38.00 @ 45.00

POTATOES, ONIONS, ETC.

The potato and onion market is in a peculiar condition. Generally speaking, it is weaker, but prices are maintained because the continuance of the waterfront strike prevents much of the movement to the local buyers. The demand is reported to be somewhat sub-

normal, but as yet no concessions in price are made because the receipts are not sufficient to break the market. River tomatoes are practically off the market at present. The rain of Wednesday slowed down the entire vegetable market.

String Beans	3 @ 4
Peas	8 @ 9

BEANS.

With the exception of the southern lima there were no changes in quotations this week. The local market is cleaned of limas and a yet the new crop is not ready. It was intended to put these on the market October 1 and the price was to be named at that time but the rains of Saturday and Sunday have delayed this for another week. It is stated that new prices on limas will be named on October 7.

Rayos, per cbl	\$6.25 @ 6.50
Blackeyes	\$5.50 @ 5.75
Cranberry beans	\$6.20 @ 6.50

Garbanzos	\$10.00 @ 10.50
Large whites	\$6.50 @ 6.90
Small whites	\$7.25 @ 7.50

POULTRY.

The poultry market is getting down to a more normal condition. The accumulation due to the pickers' strike have been fairly well cleaned up, and new stock is coming in in ample quantities for the trade. Another Jewish holiday this week was the only feature of strength to the market. Dressed turkeys coming in at present are not in first-class condition and 50 cents is the highest price for the best of the receipts.

Turkeys, dressed, young spring, lb.	50
Broilers, 1 1/2 lbs. and under	32 @ 34

do, old, per lb.	20
Belgian hares	17 @ 18
Jack rabbits	\$1.50 @ 3.50
Old roosters, colored, per lb.	22 @ 23

BUTTER.

Receipts of butter this week have shown a decided decline and the demand has taken care of all offerings. Considerable quantities of butter are being withdrawn from storage as the price moves. During the month of September butter ran from 55 1/2 to 64 1/2 c, allowing for the regular discount or commission charged against the producer. This makes the high of September the high price of the year.

Thu. Fri. Sat. Mon. Tu. Wed.	
Extra	60 1/2 61 1/2 62 1/2 64 1/2 64 1/2

EGGS.

The receipts of eggs this week have been light and as a consequence prices of extras jumped to the record price of the year. Last November eggs sold, less commission, at 82c and in October at 81 1/2 c. In September, 1918, 60 1/2 c was the high point, and if the same difference between September and October prices prevails this year eggs will pay the producer 93 cents, will sell at wholesale at close to a dollar, and the consumer will pay about ten cents apiece. There arrived this week from Australia 974 cases of eggs—twenty of which were egg pulp and the balance shell eggs. While interesting, the arrival had no effect on the market whatever. The continued increase in the price of extras caused a turning to the undersized and these eggs jumped to the highest price they have sold at since the exchange began to quote them. The drop of two cents in extras on October 1, is regarded simply as a reaction after the stiff advance of the week and the upward trend of prices is expected to continue during the greater part of the present month.

Thu. Fri. Sat. Mon. Tu. Wed.	
Extras	68 67 1/2 70 1/2 73 71 1/2
Ex. pullets 67	58 59 59
Undersized 39 1/2 40 1/2	43 45 46

CHEESE.

There is very little interest in the cheese market and receipts are below normal. California flats and Oregon Y. A. are both lower while Oregon triplets remain unchanged. No sales of California Y. A. during the week.

do, Y. A.	31 1/2 c

FRESH FRUITS.

The fresh fruit market was quiet this week, as the rains seemed to lessen the demand and at the same time threatened the future of certain descriptions. Berries are still coming on the market, but they are not in first-class condition. The apple market is in good shape, with continued demand for nearly all varieties. Gravensteins are now at about the end of their season.

Apples—Gravensteins	None

Special Deciduous Market Report

(Written for Pacific Rural Press by J. L. Nagle.)

Sacramento, Cal., September 30, 1919.

The movement of fruit for Eastern shipment continues light, on account of the prevailing car shortage. Fruit in several districts has suffered on account of the recent hot spell and inability of the packers to secure refrigerator cars. As a result of the light supply, the demand has been very active, at correspondingly high prices, low prices prevailing only in instances where the fruit arrives, showing weakness. Practically all of the deciduous fruits, with the exception of apples and late pears, have been shipped, the season in all districts having been very satisfactory, with prices considerably higher than the year previous.

About 70 per cent of the Malaga crop has been moved, but hardly more than 40 per cent of the Tokays. The recent rains have done little or no damage in the upper section of the State, but as under normal conditions 60 per cent of the Tokays should be harvested by this time, considerable of the fruit is showing weakness and it is very doubtful as to whether hardly more than 75 per cent of the Tokay crop will be shipped West, and this only under favorable weather conditions.

Emperor Grapes are moving in light supply, at prices considerably higher than last season. The demand is very active, stimulated considerably by the uncertainty as to the amount of the importations of Spanish Almerias. Shipments of sawdust-pack Emperors, however, will not be as heavy as originally anticipated, but if the weather conditions remain favorable for the next thirty days, and the car supply is adequate, most of the Emperor crop can be shipped.

Averages for the week:

NEW YORK: Salway Peaches, \$1.20; Levi Clings, \$1.62; Phillips, \$1.37; B. Hardy Pears, \$3.45; B. Clairgean, \$3.25; Bartlett, \$4.50; Comice H. B., \$3.07; Hungarian Plums, \$1.50; Grand Duke, \$1.88; Malaga Grapes, \$1.83; Tokays, \$2.12; Thompson Seedless, \$1.85; Zinfandel, \$1.60; Alicante Bouschet, \$2.18; Muscats, \$1.30.

BOSTON: Tokay Grapes, \$2.20; Malagas, \$1.90; Black Prince, \$1.85; Alicante Bouschet, \$1.90; Zinfandel, \$1.70; Muscats, \$2.00; Cornichon, \$1.80.

CHICAGO: Tokay Grapes, \$1.85; Malagas, \$1.80; Muscats, \$1.40; Thompson Seedless, \$1.75; Cornichon, \$2.15; Bartlett Pears, \$4.08; Salway Peaches, \$1.22.

Special Livestock Market Report

San Francisco, Oct. 1, 1919.

CATTLE—The local cattle market is steady. About two-thirds of the receipts are from Nevada and Oregon, and the remainder from California points. The quality is fair to good. Ample supplies are arriving, cows coming in very freely.

Steers, No. 1, 950-1100 lbs.	10 @ 10 1/2 c
do, No. 1, 1100-1300 lbs.	9 1/2 @ 10 c
do, 2nd quality	8 @ 8 1/2 c
do, thin	6 @ 7 c
Cows and Heifers, No. 1	8 @ 8 1/2 c
do, 2nd quality	6 1/2 @ 7 1/2 c
do, common to thin	4 @ 5 c
Bulls and Stags, good	5 1/2 @ 6 1/2 c
do, fair	4 1/2 @ 5 1/2 c
do, thin	3 1/2 @ 4 1/2 c
Calves, lightweight	12 @ 12 1/2 c
do, medium	11 @ 11 1/2 c
do, heavy	8 @ 9 c

SHEEP—The lamb market is steady, with a tendency to stronger prices. It is reported that fat lamb stock in the East has touched the low point for the season.

Lambs, Yearling	10c
do, Milk	12 @ 12 1/2 c
Sheep, wethers	8 1/2 @ 9 c
do, ewes	6 1/2 @ 7 c

HOGS—Notwithstanding the late sharp declines in quotations, hogs are coming on this market very freely. The quality is somewhat mixed, and many of the animals are not well finished.

Hogs, hard, grain-fed, 100-150	15c
do, 150-225	15 1/2 c
do, 225-300	15c
do, 300-400	14c

Los Angeles, Sept. 30, 1919.

CATTLE—Not many steers coming in. Demand good and market steady. Cows are offered freely, but are dull and weak.

Per cwt. f. o. b. Los Angeles:	
Beef steers, 1000 @ 1100 lbs.	\$9.50 @ 11.00
Prime cows and heifers	\$8.00 @ 9.00
Good cows and heifers	\$7.50 @ 8.00
Canners	\$5.00 @ 5.50
Calves	\$10.50 @ 13.00

HOGS—Receipts only fair and market steady at last week's prices. Demand fair and what are coming in are readily placed.

Per cwt. f. o. b. Los Angeles:

Heavy average 275 @ 350 lbs.	\$12.50 @ 14.00
Heavy average 225 @ 275 lbs.	\$14.50 @ 15.50
Light	\$15.50 @ 16.00

Rough docked 20 lbs. piggy sows 40 lbs. and stags, 40 per cent.

SHEEP—Market steady and lambs and yearlings are in very good demand. Ewes and weathers slow of sale.

Prime wethers	\$8.50 @ 9.50
Yearlings	\$8.50 @ 9.50
Prime ewes	\$8.00 @ 8.50
Lambs	\$12.50 @ 13.50

PORTLAND LIVE STOCK.

Portland, Ore., Sept. 30, 1919.

CATTLE—Weak; receipts, seven. Steers, best, \$9.75 @ 10.75; good to choice, \$9.25 @ 9.75; medium to good, \$8.25 @ 9.25; fair to good, \$7.25 @ 8.25; common to fair, \$6.75 @ 7.75; choice cows and heifers, \$7.75 @ 8.25; good to choice, \$7 @ 7.75; medium to good, \$6 @ 7; fair to medium, \$5 @ 6; canners, \$3 @ 4.50; bulls, \$5 @ 7; prime light calves, \$14 @ 16; heavy calves, \$8 @ 14; stockers and feeders, \$7.50 @ 8.25.

HOGS—Strong; receipts, 26. Prime mixed, \$17.50 @ 18; medium, \$17 @ 17.50; rough heavies, \$15.75 @ 16; pigs, \$15.75 @ 16.

SHEEP—Easier; receipts, 87. Prime lambs, \$11.50 @ 12.50; fair to medium, \$10.50 @ 11; yearlings, \$7.50 @ 8.50; wethers, \$7.50 @ 8; ewes, \$5 @ 7.

DRESSED MEATS.

Steers, No. 1	14 1/2 @ 15c
do, 2nd quality	13 1/2 @ 14c

Persian, lb.	Nominal
Watermelon, lb.	1@1 1/4 c
Citrus	\$1.00@1.25

CITRUS FRUITS.

Grapefruit are in greater demand than the other citrus fruit. Otherwise the citrus market shows no changes. Oranges and lemons are both firm, but the supply is ample to care of all demands.

Oranges, Valencia	\$4.25@5.50
Oranges, fancy	\$6.50@7.50
Oranges, choice	\$5.50@6.50
Oranges, standard	\$4.50@5.50
Oranges, small	\$3.50@4.50
Oranges, fruit	\$4.00@6.00

DRIED FRUITS.

Most of the drying of fruits in the open air over before the recent rains came, and it is said that very little damage has been done. If the wet weather continues in the Joaquin Valley it will be detrimental to raisins, but so far no harm has been done. There is nothing in the dried fruit market itself to change the situation.

Raisins	17@20c
Almonds	18@18 1/2 c
Almonds	17@18 1/2 c
Almonds	21@28c
Almonds	12@13 1/2 c
Almonds, Adriatic	14@20c
Almonds, Calimyrna	16@23c

HONEY.

The honey situation shows no change as yet. The continued shortage of sugar and reports that it may not be alleviated for some time gives an undercurrent of strength to honey, but no buying is said to have resulted as yet from this situation.

RICE.

The trend of the rice market in San Francisco is difficult to decipher. Rough rice for delivery is being held at 6 cents in view of the unusual and unexpected sluggishness in the clean rice market. So far the American jobber is not in sight in the market. Clean rice has dropped from \$11.85 to \$10.50 for Fancy for November shipment; but October rice still being held at \$11.50.

LOS ANGELES.

Los Angeles, Sept. 30, 1919.

BUTTER.

Receipts for the week, 354,000 pounds. Market again higher and demand good. Prices a cent since last week in sympathy with other markets East. We quote:

Extra California creamery	.67c
First prime first	.65c
First	.63c

EGGS.

Receipts a little better the past week, but not of the demand, and market higher all around. Receipts for the week by rail, 511 cases.

Extra ranch, extra	.68c
Case count	.60c
Pullets	.55c

POULTRY.

Demand good for most offerings, and prices in at quotations.

Cheekens, 1 to 1 1/2 lbs.	.38c
Cheekens, 1 1/2 to 1 3/4 lbs.	.38c
Cheekens, 2 to 3 lbs.	.33c
Cheekens (soft bone) 3 lbs. and up	.33c

FRUITS.

There is little new in this market from a recent ago. Apples and grapes made up most of the offerings and both sold very well the past week and brought steady prices. Plums are pretty much out of season. The same may be said of berries. What few came in brought steady prices. Pears firm and in good demand, and peaches are selling fairly at steady prices. Only a few late are arriving.

Raspberries	5@6c
30 basket crates, fancy	\$5.00@5.50
Poor to choice	\$3.00@3.25
Blackberries, case 30 boxes	\$2.25@2.75

OLIVE PRICES FOR 1919.

(Written for Pacific Rural Press.)

The opening price for olives is \$175 a ton "orchard run," according to Wm. H. Gould, Horticultural Commissioner of Yolo county. The fruit is of excellent quality—a better crop than last year's and in steady demand. The East is only just beginning to realize that California ripe olives, with their rich, nutlike flavor, are also a very complete ration without anything else. Most Easterners have the green pickled olive in mind, and the California ripe, firm, finished article comes as a revelation.

Raspberries, case 30 boxes	\$5.00@5.25

BEANS.

Limas the past week were in very fair demand and so were blackeyes, and both sold a little higher. Other varieties slow sale at old prices.

Limas, per cwt.	\$11.00@11.50
Large white, per cwt.	\$6.25
Small white per cwt	\$6.50
Blackeyes, per cwt.	\$5.00@5.25
Tepary, per cwt.	\$3.00@3.25
Pink, per cwt.	\$8.25

HAY.

The market continues dull. Buyers hold back. Holders, however, continue to ask old prices. Most of the receipts going into store.

F. O. B. Los Angeles, per ton—	
Barley hay, per ton	\$18.50@21.50
Oat hay, per ton	\$22.00@25.00
Alfalfa, Northern, per ton	\$24.00@25.00
Alfalfa, local, per ton	\$25.00@27.00
Straw, per ton	\$ 9.00@10.00

ADDRESS BY U. S. WHEAT DIRECTOR.

Julius H. Barnes, U. S. Wheat Director, will address members of the Grain Trade in various cities, including Chicago, Omaha, Kansas City, San Francisco, Portland, Oregon, and St. Louis. Mr. Barnes will speak in San Francisco to California grain men at the Assembly room, Chamber of Commerce, 11:30 a. m., Tuesday, October 7. Grain Growers will be welcome.

RECORD RICE SALE.

The Shasta Rice Company has closed a deal with a Japanese company of San Francisco for its entire crop of rice now being harvested. The price paid is set at \$6.05 a hundred, which is reported as being the highest price ever paid in the State.

MISCELLANEOUS.

WANT RESPONSIBLE AND EXPERIENCED fruit alfalfa or grain irrigation farmers to work on crop share basis. Land is river bottom tule land, plenty of water, good living conditions and good markets. Will enter into one or two years' contract with right men and might extend same into option of purchase. Party should have some implements, live stock, or money with which to buy them. Please state age, farming experience, from whom you have rented amount of livestock and implements you own, financial condition, and size and age of family. State when your services will be available and amount of land you can handle. Address: Herman Janss, San Joaquin, Fresno county, California.

RANCH SUPERINTENDENT open for engagement, thoroughly experienced with tractor farming, cattle sheep and hogs. A-1 construction ability and maintained. No small proposition considered. References, J. H. Cochran, 1747 Webster St., Oakland, Cal.

REMANUFACTURED PIPE.

All sizes standard pipe and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices. Weissbaum Pipe Works, 160 Eleventh street, San Francisco.

CROLEY'S BALANCED HOG FEED—The cheapest feed to fatten hogs. Write Geo. H. Croley, Townsend St., San Francisco, Calif.

ROGER BEAN THRESHER—Buy the best thresher, small power to operate, no cracked beans. Write for circular. C. W. Vannote, Gridley, Cal., California Agent.

SWEET CLOVER SEED for sale.—Buy direct from the producer and save money. Fine, clean seed, 25 cents per pound. Write Geo. D. Forest Jr., Standish, Calif.

WANTED TO BUY—Second-hand hog wire, 34 to 36 inches high. Enough to fence 20 acres. Must be in good shape. W. J. Cardia, Blythe, Riverside Co., Cal.

ALL SIZES OF PIPE and screw casing, both new and second-hand, dipped and undipped. Guaranteed. Prices right. Shecter Pipe Works, 304 Howard St., San Francisco.

MADE OF REDWOOD, Hawley's Perforated wooden well casing, the best and cheapest well screen made. Send for descriptive circular. G. M. Hawley, La Mesa, California.

12-20 YUBA TRACTOR, used very little. P. M. Pederson, Oakland, Cal.

A NEW ALFALFA—Investigate now. Our great "Hardy Hybrid" alfalfa. For facts, write J. L. Lawson, San Jose.

COUNTRY LANDS.

140-ACRE MONEY-MAKER \$2800; 4 Extra Good Cows. Poultry, wagons, walking and sulky plows, mowing machine, full line machinery, quantity wheat, corn, hay, other crops included for quick sale. Stores, churches, creamery near, convenient railroad town. 70 acres heavy loam tillage, clay subsoil; wire-fenced pasture; estimated 1000 cords wood for near market, much timber, fruit. Excellent 12-room house alone worth more than whole price, 26-cow basement barn, etc. \$2,800, easy terms, gets all. Details, page 25, Fall Catalog, just out, farm bargains Maine to Florida and west to Nebraska; copy free. **STROUT FARM AGENCY**, 831AF, New York Bldg., Kansas City, Mo.

FOR SALE—20 acre ranch, 5 miles from Oakland, 1/2 mile from S. P. Flag Station, 1 1/2 mile from Valley Home Railroad Station. 1/2 mile from Highway; under Oakdale Irrigation System, plenty of water; property all checked for alfalfa with laterals for irrigating every part of ranch; land ready for re-seeding to alfalfa; good sandy soil of A-No. 1 quality; good barn; enclosed tank house; good tank and windmill; family orchard around the house; four-room house covered with vines. Price \$5,000 gross. If bought direct from owner real estate agents' commission will be thrown off. Owner, **BERKELEY SECURITIES COMPANY**, 218 First National Bank Bldg., Berkeley, California.

WANTED TO BUY in Santa Clara county, in the hills, between Mayfield and Saratoga, about six productive acres and a house, or a good home-site, the same being part of a large, modernly-equipped orchard or dairy farm. The seller to continue, by yearly agreement, to work the six acres, in addition to his own land. Trees, water and view necessary. No agents. Address, Room 324, Merchants Exchange Building, San Francisco.

FOR SALE—Eighty-acre alfalfa dairy ranch in heart of orchard district, two miles from Hollister, including forty milk cows, 28 heifers, four work horses, 150 tons alfalfa hay, 6-inch centrifugal motor-driven irrigation plant, 60x90 barn, modern house, machine shop and other buildings. Address, Owner, Geo. P. Merritt, Hollister, Calif.

RANCH FOR SALE—240 acres, 6 miles E. Santa Margarita, Calif. 25 acres orchard—apples, pears, prunes, peaches; 50 acres cleared; 50 acres level. Live oak on hills. 4-room house and bath; outbuildings, 8 tons hay, machinery, buggy, wagon, harness, cow, horses, bees; School on place. Write Mrs. Bertha Boomer, Santa Margarita, Cal.

STOCK RANCH for sale—about four thousand acres. A good sheep ranch—plenty of water and wood. Good buildings. Most of ranch fenced. Terms, if wanted. Address Box 139, Middleton, Lake co., Calif.

FOR SALE—Beautiful Sonoma County fruit ranch, 150 acres, deep sandy loam soil. Good income; good buildings; two miles to town. \$280 an acre for whole or part. Owner, Route 1, Box 109, Sebastopol, Cal.

FOR SALE—Ranch, Contra Costa County, 22 miles southwest Brentwood. 36 acres alfalfa, 5 acres orchard. Improved. John E. Davis, 3221 Illinois Ave., Fresno, Calif.

FOR SALE—Ten cow dairy, fully equipped; team, 8 head young stock, 40 head hogs, 50 ton alfalfa in stock. 20-acre ranch for lease; modern buildings. P. O. Box 374, Porterville.

LOS ANGELES

Los Angeles Prepares for Big Stock Show

Written for Pacific Rural Press.

LAST FALL when the influenza kept so many visitors from the Liberty Fair at Los Angeles that it did not make expenses, there was some question about its repetition. It is, however, to be repeated and repeated with a "hurrah, boys, altogether now!" effort that will make it irresistible this year, on October 18-26, at the Exposition Park in Los Angeles, as the "Los Angeles Live Stock Show." The justification for such a show impresses itself unavoidably upon the traveler in Southern California, where he cannot help but see a great awakening to purebred stock and a multiplication of such herds.

Last fall it was a southern-end-of-the-State Fair, or affair, aiming to show agricultural, horticultural, mechanical and livestock resources. This year it concentrates on livestock and greatly expands the territory from which it draws exhibits.

When we visited the wide-awake and hustling manager, C. R. Thomas, September 27, three weeks before the opening date, he told us that every pen had been sold, and it was yet to be decided whether additional buildings would be erected.

The buildings used by livestock last year were torn down and all livestock buildings this year are new, except possibly the race-horse quarters. The new exhibition sheds are about 150 feet long. Each one consists of two lines of stalls, separated by a broad alleyway. Four such buildings include 88 double stalls for the draft horses. Electric lights have already been installed. Eleven other barns of equal size have been put up for cattle, hogs, sheep and goats.

With all of these full of the best animals found at the earlier fairs, it will be perhaps the finest livestock show ever held in the West. Entries of cattle have been made from Missouri, Colorado, Washington, Wyoming and Arizona, besides California, and include a large number of each breed.

Besides three carloads of fat cattle, registered Shorthorns, Herefords and Angus will represent the beef breeds. Jerseys, Guernseys, Ayrshires, Dutch Belted, Milking Shorthorns and Holsteins will vie for dairymen's favor in great numbers.

Duroc hogs will be the most numerous of the aristocratic porkers, and Hampshires have assumed a place of long-merited importance. Berkshires and Poland-Chinas will not lack competition. Most of the hog exhibits come from California.

Percheron and Clydesdale horses will represent the draft breeds. Jacks and jennets are also entered for exhibition. Light horses will be featured not only in the exhibits of Arabians, thoroughbreds and ponies, but also in the races, of which an exceptionally fine program is being prepared. They have a splendid track and perhaps the best grandstand in the State on the Exposition grounds. Mr. Thomas says the saddle and driving horse show

will be the best ever held in the West. About ninety trotters, pacers and runners are entered for the money and are coming from Canada, Washington, Oregon, Kentucky, Nevada, Arizona and California. The race money amounts to \$20,000.

Half a dozen breeds of sheep from Oregon and California are entered. The goat show will be of bigger proportions than any previously held, except the one at Riverside this fall. Toggenburg, Nubian, Saanen and Anglo-Nubian breeds have been entered, and will be well represented.

The poultry exhibit will be the best ever in Southern California. It, of course, includes fancy rabbits and pigeons.

The University Farm at Davis will send its unusually fine exhibit of breeds, arranged as usual to show the effect of various progressive practices to increase the profits of stock raising. Livestock has been entered from Inyo, San Joaquin, Sonoma, San Francisco, Santa Cruz, Tulare and Kings counties, besides all of the counties of Southern California.

All but three of the judges had been appointed when we saw Mr. Thomas, but not one of them lives in California. They will come from Illinois, Indiana, Missouri, Oregon, Nevada and probably one from Arizona, but one of those not yet appointed is likely to be a Californian.

Manager Thomas has been untiring in his efforts to make this the biggest, best and most typical livestock show ever held west of the Rocky Mountains, and all indications point to unparalleled success following his efforts. Southern California has always been looked upon as a huge citrus grove, but those who are really acquainted with it know there are herds and herds of purebred livestock there. Then, too, this is a livestock show of the great Southwest, where many ranges and deserts are being irrigated, and where it is favorable for breeding livestock.

Those who are contemplating a trip to Los Angeles in the near future should see to it that they time their visit so as to visit this great show, for there will be both instructive and amusing features in plenty and of the kinds that really count. Los Angeles is a wonderful place to visit, with its beaches and varied attractions, but it will be doubly so at this time, with these added instructive and amusing features.

Campaign Inspection of Slaughtered Animals.

Dr. J. P. Iverson, chief of the Division of Animal Industry, has started a campaign for inspection of all animals slaughtered for human consumption within the State. The department under Dr. Iverson's supervision is making exhibits at the leading fairs of the State this fall, demonstrating the necessity for such inspection, and at our recent State Fair was kept busy.

The Livestock Resources of California are varied and unsurpassable.

LIVE STOCK IN SOUTHERN CALIFORNIA.

PROBABLY most of those who have pictured to themselves the peaceful invasion of California in the name of Christian civilization have allowed their fancy to play around a most picturesque procession, headed by the much-enduring Junipero Serra with uplifted eyes pointing his cross northward between the ears of his patient mule, and all the temporalities of his expedition following in due order. Such was not a true picture of the event.

Worldly, as well as heavenly, wise Junipero naturally shrank from displaying his sacred emblems in a cloud of bovine dust, and from diluting his sacred incense with volumes of ovine odors. And so Captain Rivera started northward from Lower California in March, 1769, with his cowboys and 200 head of cattle, sheep and goats, arrived in San Diego in May, and the weary beasts filled and groomed themselves in the flower-decked spring-time pastures, and were lowing and bleating contentedly over their abundance of creature comforts when Portola arrived in July with his royal seals and muskets for the conquest of a new country, escorting Serra with his regalia and other insignia for the rescue of souls steeped in barbarism. And thus it was that the actual pioneers, who brought to California the first tokens and agencies for the establishment of a higher civilization, were the cowboys of the spring of 1769.

RELATIVE RATES OF DELIVERANCE.

Fortunately man is eternally enjoined from the irreverence of calculation of relative efficiency between the two great subdivisions of Spanish motive in the occupation of California, because God alone knows how many souls were actually saved. And yet it is perhaps not impious for us to resort to the statistical method which the padres themselves employed, and whose records show that at the close of 1802 they had enrolled 15,562 converts at their eighteen missions, and in 1834 30,650 converts at twenty-one missions. Their inventories also show that in the same year the missions owned 424,000 horned cattle; 62,500 horses, mules and asses; 321,500 sheep, goats and swine. And it is perhaps pardonable for us to conclude that the padres were better farmers than sky-pilots, because that was the conclusion of their secular rulers and fellow-citizens who collected political force enough to dispossess them of their temporalities and put them out of the running for the material development of California. We do not judge the act nor the actors, nor estimate the greed and impiety involved in it. The fact seems to be that not only were the quadrupedal live stock undertakings of the missions first to arrive on California soil, as already noted, but in the judgment of the time attained a greater and more valuable development than their incursions into bipedal psychology—or, in other words, they did more for the soles of distant people, in the hides which they slid down the ocean cliffs of Southern California to the waiting Yankee skippers, than they were permitted

to do for the ethereal parts of their aboriginal proteges. We are not writing controversially of an issue which has been dead for a century, nor are we comparing spiritual affairs with temporal. We are simply trying to emphasize the fact that in laying the foundations in California for a commonwealth of prosperous and contented Americans, the old padres builded better than they knew.

BEYOND A COW-BOY'S DREAM.

It is fair to presume that none of Rivera's cowboys of 1769 had even the faintest dream of the outcome of the enterprise which was in part entrusted to him. Even the lush meadows and hill-sides of San Diego in May probably did not suggest to him the full capacity for the animal industry of the new country to which he had driven his flocks and herds. Even if he had seen but a little way into the future, the vision would have appalled him, for he would have seen his 200 animals of 1769 multiplied to 170,000 in 1739 to minister to most wanton, but still unavoidable waste. For nearly half a century the natural increase of the little bunch he had convoyed to such rich pastureage and favoring salubrity had to be slain for hides and pelts until the whole landscape stank with the residues, for which the fragment of humanity then resident had no possible use. Such a vision would surely have vexed him sorely, and it was mercifully denied to his mental sight. But if he was spared this suffering, he also lost the farther sight which would have revealed his effort as a providential provision for the development of California as we now possess and are proud of it! The services of the padres in the preparation of California for American occupation is inestimable. Suppose they had not brought their live stock and multiplied it as we have indicated, and if the ranchers away from the missions had not had the materials for their own extension, it is impossible to measure how the enterprise of the gold-seeking Americans of 1849 might have been slowed down. It is very sure that the people who made California a State in 1850 could never have accomplished it on a menu of acorn-cakes and clam-chowder upon which the barbaric aborigines subsisted. It required plenty of roasted and boiled beef to start California on her wonderful career and the padres made such munitions available—and thus they led in a Christian civilization, though not in the way they planned to do it.

ESCAPING THE APPETITES OF THE ARGONAUTS.

Of course the animal supply did not hold out against the hunger of the gold-seekers much longer than the wines of the missions appeased their thirst, but it gave them a start and kept them going until beef could be brought on foot from New Mexico and Texas, and it also started something else which lasted longer. The American farmers who came with the gold-seekers rescued from the appetite of the Argonauts animals to start their own grazing enterprises, and they made good use of the favoring climate and unlimited pasturage. In 1856 Governor Bigler declared that California stood as high as eighth in the list of States in the census of farm animals, and the multiplication advanced so rapidly that it was estimated that not less than a million head perished in the drouth of 1864. After that the repopulation of the ranges, through the multiplication of pure-breds became notably better than the mission stock, but the latter was still in the foundation, in which it may be discerned, though dimly, to the present day. Upon this foundation, ennobled by the pure-breds, arose the herds and flocks which contributed to the establishment of the range interests of the interior mountain States—especially in the line of grade merinos, which were the chief foundation stock of the great interior wool-growing States, like Nevada, Utah, Idaho and Montana. Thus it was that California passed onward to the development of the whole Pacific slope the offspring of the few hundreds which Rivera brought across our southern boundary in 1769.

SOUTHERN CALIFORNIA'S CONTRIBUTION.

To this development of the whole State and beyond, which we are merely hitting here and there

as our space permits, the contribution of Southern California was most interesting and important. Not only was the upbuilding of the livestock industry at the south first in point of time. The Southern California coast and interior valleys were alive with cattle and sheep while the Sacramento valley was largely the hunting grounds of grizzlies after herds of antelope and the San Joaquin Valley a desolate ocean of land. Southern California hides were gliding over the bluffs to be roped to the decks of trading ships for decades before a foot of redwood had struck the waves of the upper coast, and Southern California was first swept clean of edibles to serve San Francisco and the mines. Under this stimulus Southern California teemed with cattle and sheep and great pastoral establishments were built up by early-coming Americans, who attached themselves by purchase or marriage to the land and established families whose names are still prominent in the blue-book of Southern California society. While this development was slowly proceeding the great rush for the development in central and northern California set in and, in contrast thereto, Southern California became the synonym for dolce far niente in the annals of the State. Then came the southern rush of the latter '70's and the '80's and, though its main objective was the gold of the orange, the ancestral glory of the south in animal husbandry was not forgotten, and the fame of Southern California stables for speed, of her pure-bred herds for beef and dairy production, and her flocks for fineness and volume of wool production went abroad throughout the country and the world. This, too, would have been a happy dream if they could have imagined that they were really doing things greater than their conscientious duty revealed—the feeding of a few good padres and a better race of Indians.

TIME, THE GREAT REVELATOR.

It becomes us to honor the memory of those who did their duty well, according to the light they had of the needs of the country, though they could see none of the glory of a great State to which they unconsciously ministered. To such service is this issue of our journal largely devoted, for we count it a tribute to the devotion of the padres and the faithfulness of their cowboys that the great Live Stock Show in Exposition Park, Los Angeles, on October 18 to 26, becomes possible and pertinent. Seven years before the Declaration of Independence set the country free to plan and to achieve an America for a world to conjure with, this far southwestern corner of American geography caught its first ray of light sublime and felt its first touch of industry—the twin forces in the attainment of human civilization. And though, of course, as other writers in other columns of this issue amply set forth, the coming exposition in Los Angeles will be concretely suggestive of industrial achievements and educative in the ways and means of such achievement, we enjoy the thought of possibly suggesting to some reader that the event as wisely planned and generously carried out will have a significant place in the history of an industry which has served California well from the beginning, and has the potentiality of much greater service in the future of the State.

OPPORTUNITY IN SOUTHERN CALIFORNIA.

The great stock show in Los Angeles is the second of the trio of such events of the first magnitude which will be held within the borders of California this year: the first was the State Fair at Sacramento; the second at Los Angeles as dated above; the third will be the California Land Show in San Francisco.

Besides these three primary events, which we believe no other State excels either in number or in total achievement, we have a number of secondary events in districts and counties which are notable. The purposes of all these enterprises are several: First to make known and promote our animal industries; second, to round out our agricultural interests by the widely diversified production which all California conditions favor; third, to reinforce our soils for all crops which tend toward depletion by a basic industry which makes for soil-restoration and thus renders all

other lines of production secure. All these purposes are state-wide and their attainment will benefit all the industrial, commercial, social and intellectual undertakings for which California is famous, and which are contributing increasingly each year to the greatness and perpetuity of our commonwealth.

Southern California is a splendid example of diversified production and symmetrical development. In the particular lines of the animal industries the position of the counties south of Tehachapi and east of the great turn in our coast line at Point Conception, has been shown to be one of historical leadership. At the present time the position of Southern California is one of supreme potential leadership. Southern California of today is the same as that of the padres and the pioneers only in one particular and that is geography. In the matter of possible production, Southern California is so changed that neither padre nor pioneer would recognize the field of their early undertakings. Her valleys have been certified, and great areas of her deserts transformed into certified valleys by irrigation. Her hillsides have had their rainfall-effectiveness certified by dry farming. Her wild pasturage has been rendered a safe recourse by association with small areas here and there reclaimed by wells. Her populous towns afford home markets for a considerable increase in animal products, and this animal increase calls for corresponding increase in field and forage crop production. Then, too, neither padre nor pioneer would recognize the animals they introduced, and developed in the improved forms and heightened production of the pure-breds and their grades which now constitute so largely the live stock of the country which has displaced the long-legged, cat-hammed cattle, the gothic sheep, and the razor-backed hogs and circus-poster goats of the old regime. Southern California has advanced splendidly in the new standards of desirability in all the kinds and breeds, and will delight in showing them at the exposition of October 18 to 25. People from all parts of the State should be running down the State Highways to Los Angeles or filling the trains in that direction. It is, of course, not a Southern California exposition in its broadest sense, for herds from all parts of the State and beyond will be represented and people from everywhere will participate in it, but still we count it an undertaking for which Southern California should have full credit, and in the profit and enjoyment of it every lover of Southern California, no matter where he may reside, should eagerly take part.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Cracking-in Alfalfa!

To the Editor: I have been advised to sow wheat on the land that I have checked and leveled for alfalfa. Then in March, or early in April, when the ground has begun to check and crack on the surface, to sow my alfalfa seed broadcast in the wheat and immediately irrigate. It is claimed that the water will carry the seed into the cracks and it will soon sprout. Is this system practical? It is the common practice in Idaho, I understand.—D. L. S., Antioch.

It might work as your irrigation supply, might keep the growing wheat from drying out the sprouting alfalfa, which it surely would otherwise do. If you wish to try it you must, however, study out a California time schedule. In a California wheat field in March or April much of the fine alfalfa seed you broadcast would be hung up on the sheathes of the heading wheat plants and never get to the ground. In Idaho at that time of the year the wheat plant has probably not shot any seed stems at all and more of the seed would get to the ground. Whether the alfalfa would ever come from the cracks would depend on how wide and deep the cracks were. In a dry spring on a heavy soil the alfalfa would have a better chance of showing up in Shantung than in California. We have often heard of these wonderful short-cuts in getting a stand of alfalfa as practiced in Idaho and other progressive States, but in California you had better stick to the good old-fashioned California way of putting in the seed just as well as you know how,

and giving it the sole use of the land if you wish to get a good full stand.

The Quince Stands Pat.

To the Editor: What are the present marketing possibilities of the quince? I have the Seventh Edition of your "California Fruits," but as this was published in 1914 perhaps conditions have changed since that time. Would it be advisable to plant out an acre or two of quinces; that is, could the fruit be marketed at a fairly good profit to the grower? I have an acre or two of rather low, moist soil which may be best adapted to the quince, but I would like to know market conditions before planting.—R. S., Visalia.

The quince is the least progressive of all our fruits—even the pucky persimmon has a more open countenance. It has never been possible to develop a demand for the quince in the distant markets where we are selling other fresh fruits. It has been expected for several years that such a demand could be aroused for such a large, handsome and quincely flavored fruit as a California grown quince is, but such expectation has not been realized and profitable shipments are strictly limited. Californians use very few quinces, and eastern people are able to supply themselves and do not need our help. However, sometimes the fruit sells very well and you might strike it all right with an acre, but that would be the limit to our notion of planting. You are right that the quince will stand wet feet better than other fruits except perhaps the pomegranate.

What Prune in a New Place?

To the Editor: I am thinking of planting prunes in a section of dry air. I am unable to get the improved French prune, and I am advised to plant Imperial with a Robe de Sergeant every fifth tree for pollination. Do you consider this advisable, or is the improved French prune better?—N. E., San Luis Obispo.

We consider the old French prune, which is now making most of our great prune crop, much safer to plant in a new place than the Imperial or Robe, either alone or together. We know by experience that the old French prune is one of the most adaptable and productive of the whole plum family—therefore, safest to plant in untried places. There is pretty good evidence to believe that Imperial and Robe do better together than separately, but this is not of prime importance until we know by experience that they do well in the place where it is intended to plant. The several improved French prunes are promising to be better worth planting than the old French, but we are not sure yet that they will have the wonderful adaptability of the old variety, although presumably they will. As to the suitability of the conditions you mention, we would not care to plant prunes unless you have a rainfall of about 20 inches and a deep, retentive soil or an irrigation supply to be used as needed.

Nursery Stock in Orchard.

To the Editor: Would it be advisable to plant nursery rows of pear trees between a three-year-old pear orchard as an intercrop? I wish to grow a sufficient number to plant 80 acres of pears. Could they be grown on a commercial basis as an intercrop? The soil is a slightly heavy loam which gets fairly wet in winter. Would the digging of the trees during their dormant stage have a detrimental effect on the ground?—H. W., Oroville.

One or two rows of seedlings between tree rows could be set this winter and budded next summer to be removed for planting out in 1921—without particular injury to the young orchard trees if you cultivate well and irrigate as needed. Of course, you can plant them or sell them as you see fit, but to do a continuous nursery business in an orchard will be bad for both. It will not hurt the ground to dig the trees and it will not hurt the trees to dig the ground unless you crowd the rows so closely that you dis-root the old trees in getting out the young ones. At the same time if we had ground available, we would not try to grow two crops on the same piece at the same time.

Grain Silage.

To the Editor: Does barley or rye make good silage? If so, when should they be cut for best results. A. M., Hanford.

Yes: if put into the silo right—so as to exclude excess of air which will carry fermentation into decay. The safest way to do this is to cut into

half-inch lengths and pack down thoroughly. It should be cut when the grain is between the milk and the dough. Rye should go in a little greener than barley needs to.

More About the Peach-Almond.

To the Editor: Noting Mr. Bergholdt's inquiry in issue of September 27th, in regard to the peach-almond, I have grown this and used it as nursery stock whenever I could get the seed for a good many years. We have stock in the nursery now on this root and also have grafted over a number of large almond trees in our orchard for the purpose of producing seed. The stock roots similarly to the peach—the only apparent difference being its increased vigor. The fact is, I raised nursery trees on this stock in Napa Valley in the early 80's. Apparently the only reason why it has not been more generally used is its scarcity.—Leonard Coates, Morganhill.

To the Editor: I am thankful for your very interesting historical data of the peach-almond in your issue of September 27. It occurred to me that if there were no demerits and if the peach-almond were better as a root stock than either the bitter almond or the peach, such experiments as you mention would, in the course of these years, have demonstrated it. Mr. Reinecke, foreman of our nursery, who is an old-timer, advises that 25 or 30 years ago he observed a block of peaches that were propagated on peach-almond on which the peach trees were dwarfed. However, we will try the matter out ourselves for several years until we are able to demonstrate whether it is suitable or otherwise.—J. E. Bergholdt, Newcastle.

These notes are interesting and valuable. It is possible that Mr. Reinecke's observation may present one aspect of the fact that the peach-almond has never prevailed. Dwarfing effect has cast out many stocks from California use—including all the seedlings of our wild fruits except the Central California species of the native black walnut. Your conclusions will be watched for.

Manure from Different Animals.

To the Editor: Please tell through your valuable paper what is the value of chicken manure on peach, pear and prunes. Which is better—chicken manure or ground sheep manure?—F. C. R., Geyerville.

Before the war, when all fertilizing substances were cheaper than they are now, Cornell University, chemists figured out the values of the plant foods contained in a ton of the average manure from different animals, as follows: Cows, \$2.37; horses, \$2.79; sheep, \$4.19; hogs, \$3.18; hens, \$4.22. These figures are valuable as showing relative value. They show that sheep and poultry are practically equal in fertilizing contents: that both are 25 per cent more valuable than hog manure and a little less than 50 per cent more valuable than manure from cows or horses. This is true, providing all the manures are free from excess of dirt or moisture. If so, the stimulation of plant growth when they are reasonably applied to the soil, may be about in the proportion indicated. As hog and hen manure are relatively so much stronger, they must be more cautiously applied.

Subduing Malva.

To the Editor: Will you kindly tell what is the best means in your opinion to destroy the weed commonly known as "white malva," or as some call it "round-leaf malva," where it is growing in walnut orchards?—H. E. C., Santa Barbara.

We should keep plowing it under as a cover crop just as often as it gets high enough to do that conveniently and completely. Unfortunately this will kill it out, for it will have no chance to make seed. We should prefer to have it keep on coming just for the sake of plowing in for the enrichment and mellowing of the soil, but of course do not let it stand too long for that will waste valuable moisture.

California Weather Record.

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending October 7, 1919.

Vegetable Growers Assn. on Better Basis

Written for Pacific Rural Press by R. E. Hodges.

Out of chaos comes order. Out of mistakes will come perfection. Out of loss comes wisdom. So it seems in the case of the "Vegetable Growers of California Inc." This association is the outgrowth of the California Tomato Growers' Assn., whose one year of operations proved to be a rather expensive mixture of unavoidable misfortune and possible abominable mismanagement.

It is our belief that no one embezzled money belonging to growers; but much censure of the business management is due, not only because of individual losses but also because of the bad reputation it tends to give co-operative concerns. The affairs of the Tomato Association are still in a mess and many growers who delivered tomatoes last season are still waiting for part of their money which is acknowledged to be due them. Several lawsuits are still dragging on. Some have been settled in favor of the Association. The latter's bank accounts were attached a while back, and \$7500 is in the hands of the Superior Court as a cash bond in one case. The Association last year built a cannery in Orange county at a cost beyond its commercial value. They have been trying for months to sell this factory. The Vegetable Growers' Ass'n has taken it over at a valuation of \$25,000, which is a great deal less than it cost, but they would like to sell it for still less.

In the financial report of the Association are items of \$4,304.94 loss on spinach seed and \$1,260.97 loss on tomato seed. Salaries and expenses for organization, executives, branch managers, stenographic help, accounting department, and field men totaled \$39,458.77 on one year's operations in which 30,102 tons of tomatoes were delivered to canners. Attorneys' fees totaled \$10,878.70, due not only to attacks of packers and others on the Association, but also to some litigation originated by the Association. Commenting on this latter item, President Mark Grimes says: "When the Association was threatened with disaster, it had to defend itself legally; and when such defenses cost more than the percentage allowed, it was right that we should pool this expense against all growers."

Basis for the Unusual Expenditures.

The Association contract with growers provided that the grower authorized the Association "to pay on his account all freight, cartage, loading, and any other proper charges, and in addition authorizes said Association to deduct an Association charge . . . not to exceed two per cent of the gross selling price." It is on the basis of "any other proper charges," above mentioned, that the Association justifies itself for spending \$64,061.30 on its operations account, while it collected membership fees and two per cent Association charges totaling \$14,068.94, leaving a deficit on operations of \$49,992.36 to be charged as "any other proper charges" in addition to loss accounts totaling \$16,615.81. Some disputed items are also figured with the losses, making a total net deficit of \$69,197.07 for organization and operation. This deficit has been charged against the total tonnage, making \$2.30 per ton to be deducted from the growers' prices besides the two per cent charge. The Association has assets in process of liquidation amounting to \$1.14 per ton which, if completely collectible, will make the final settlement with members total \$15.34 per ton for tomatoes delivered last season.

About a year ago the tomato association began to market the crop from 9500 acres. They set a price of \$18 per ton to growers f. o. b. shipping point. Opposition of course developed, but for a few weeks growers got their \$18 less two per cent Association charge; and settlements were made weekly at \$17.64. As this is more than the final settlement price later found necessary, an effort is being made to get growers to refund the excess so it may be distributed to

FAVORABLE CONTRACTS BEING MADE WITH CANNERS.

The Vegetable Growers of California, Inc., are not aiming to operate canneries of their own, but are seeking and obtaining agreements with canneries whereby the growers assure the canneries a plentiful raw supply and the canneries assure the growers of a certain market for their vegetables of all kinds at stabilized prices. Certain negotiations to this end are still pending, but the Association already has splendid contracts with several canneries in Southern California, according to Secretary J. M. Rittigstein. Southern California growers received about \$14 a ton for their Earlianas and \$15.50 to \$16 for the later varieties. Santa Clara growers are receiving about \$15, San Joaquin \$16, Alameda and Contra Costa \$15 to \$16, and Sonoma \$11. The policy of permitting each district to make its own contracts and prices has been carried out. Reasons for the low Sonoma price are the poor financial condition or small size of many of the canneries there, and the fact that the growers approved this price when the markets looked anything but promising early in the season. Contract prices in full are paid by all canneries direct to the growers each week for tomatoes delivered the preceding week, deducting only the Association percentage.

Two suits involving \$10,000 will be tried in Los Angeles county next month, and if they result favorably growers who delivered crops last year will receive a substantial addition to what has already been paid. Membership in the Vegetable Association is increasing steadily as growers realize that in co-operative marketing is greatest protection for the individuals.

growers who otherwise will have received less than the \$15.34 mentioned above. Feeling against the policy of one price for tomatoes from all districts is preventing prompt return of the excess.

Unavoidable Difficulties Encountered.

Unavoidable hard luck almost from the beginning added its burdens to those of poor management. Food Administration officials, with a California packer in a leading position, discriminated against California growers by trying to beat them down to \$15. It was only by vigorous fighting and the aid of a Senator not from California that the \$18 price was finally allowed. Then local packers in violation of the spirit of certain Food Administration rulings offered members of the Association as high as \$20 for crops already agreed to be sold through the Association. It cost something to keep those members in line. The Association had contracted with canners to deliver a certain tonnage of tomatoes. But the weather was dry and in two principal districts the acreage was reduced as much as 55 per cent. Total delivery was made from only 60 per cent of the original 9500 acres. The crop was shorter than had been considered in the contracts with canneries. Then as a climax came the September rains, which spoiled a great tonnage. This involved the Association in litigation for non-delivery.

Meanwhile, the Food Administration one day commandeered all of the solid pack of the California canneries and enough of the other grades to include 45 per cent of the total pack. But the Government would not pay until the goods were inspected and there was no hurry about inspection. Canneries could not make payments to growers and the latter became discontented. Due to urgent requests of the Food Administration the Association advised its members to keep on delivering tomatoes and wait for their pay until the Government should pay for the canned goods. After deliveries were completed, came the armistice and the Government turned most of the tomatoes back onto the canners without pay! Prices at once dropped from \$1.65 per dozen for California standards in San Francisco to \$1.30, and no buyers wanted them at that price. Banks had financed the canners and there was no way for the Association to get the money due its growers except to take over the canned tomatoes which nobody wanted. Several canneries became bankrupt with the Association holding their notes. Others are still trying to finance themselves and make payment. Still others refused to pay and the Association sued them. Some of these suits have compelled payment by the cannery involved. Others are pending, and important adjustments are being made such as those noted in the panel on this page.

Lessons from Hard Experience.

The year's experience, aside from the unavoidable hard luck, showed several lessons clearly. (1) An Association, organized to handle tomatoes only, could never succeed because there are too many fixed overhead expenses to be borne economically by that crop in California even under normal conditions. (2) The same price to growers all over the State is unfair because in one district a greater percentage of the crop gives a solid pack and buyers pay more for such tomatoes. The number of canneries and competing buyers in a district influences the price offered there. Less fortunate districts must sell at a price which considers greater transportation and handling costs. (3) The Tomato Association contract permitted growers to ship all the tomatoes they wished to fresh fruit markets. This made the total amount available for canneries very undependable and got the Association into trouble because it agreed to sell more than it could deliver under conditions which developed. This was made worse because no acreage was stipulated in the contracts. Last season, shipping tomatoes brought \$45 while the Food Administration was trying to beat the growers of cannery tomatoes down to \$15. Extra men had to be put into the field to convince growers that they should ship to canneries in fulfillment of Association contracts rather than to fresh markets. (4) The Association had no capital fund, yet it had to deposit with canneries 25 cents per box for every lug which canneries loaned to Association members. Many of these boxes were broken, lost, or kept, and the Association could obtain no refund for such.

Association Expanded—Better System.

Out of these and other mistakes came the wisdom which led to the formation of the "Vegetable Growers of Cal. Inc." Members of the Tomato Growers Ass'n are released from their old contracts when they join the new organization. This is built on different lines from the old Tomato Growers Association, safeguarding growers in their rights and enabling the new association to know what it may do, how much of each crop it will have to sell, and how much the minimum price will be. It will do enough business so the overhead will be reduced to proper proportions.

Local Committees Control Each District.

The most radical change lies in the provision that an Advisory Committee of nine or more growers in each separate district shall name prices for vegetables in its own district, select the canneries or markets to which they are to be delivered, the manner and method of delivery, and the manner and method of paying growers for the vegetables. All of the Advisory Boards to date have determined that the canners will pay the growers

directly on delivery, retaining and remitting to the Association only the Association charges, which will be three per cent. They have in some cases already agreed in writing with the canners on these points. This change was made largely at the suggestion of Secretary Takimoto of the Japanese Association of America, who said that without such local management he would advise all Japanese to withdraw. The local Advisory Committees are selected by the Association Board of Directors and perform whatever functions the Board of Directors decides. The latter body as provided in the by-laws consists of seventeen members. The first Board which includes all of the incorporators stands as follows: Mark Grimes, Santa Clara; Geo. Irwin, Santa Rosa; P. W. Bussman, Windsor; W. W. Walton, Centerville; Lew Smith, Manteca; F. D. Roberts, Manteca; Geo. R. Scott, Manteca; Oscar Benson, Los Gatos; Sumito Fugli, Berkeley; H. Nishikawa, San Jose; K. Yano, Milpitas; F. M. Funabiki, Mountain View; G. T. Nakamura, Mountain View; Geo. P. Lowrie, Centerville; J. D. Norris, Centerville; Walter M. Stevens, San Jose; N. B. Galbraith, San Jose.

Directors Almost Omnipotent.

The form and personnel of the new organization appear in general to be safe and of great advantage to growers. There may, however, be a serious objection to the omnipotence of the directors as revealed in Articles of Incorporation and By-laws. This seems to be properly safeguarded in the articles of incorporation, which provide that each member of the Association has one vote and only one, and that Directors shall be elected by and from the membership annually. The articles of incorporation also provide that "all activities of this Association shall be non-profit and co-operative in character and shall be limited to activities arising out of the financing of its members, or the production, preserving, canning, drying, packing, processing, shipping, storing, warehousing, handling, and marketing of their agricultural or horticultural products or any of them." Notwithstanding these universal possibilities covering the entire field of farm production and marketing, it is at present proposed only to market cannery and shipping vegetables. No intention now exists to operate any Association canneries.

Main offices will be maintained in San Francisco and Los Angeles, with eight branch offices in tomato districts. A sales manager and secretary of well known successful commercial experience, J. M. Rittigstein, has been selected to gather statistics and market information and to find new markets so the local Advisory Committees may have an intelligent basis for their operations. Standardized agreements have been made with buyers. Commission men handle Association shipments at a lower charge than individual shipments, and the Association can watch them as individuals cannot. The Association will be able to deal more efficiently with canneries. Financial difficulties and "welching on contracts" will be minimized. Peas and string beans for canning have been handled this season; and tomatoes, cabbages, cantaloupes, sweet corn, potatoes, and all kinds of fresh market vegetables have been marketed. It is designed to be a powerful central agency for correlation of the local districts in the growing, financing and marketing of crops.

A good buyer looking over a shabby property is quick to assume that the seller is badly in need of money, and he dickers accordingly. If the buildings are neatly painted, however, if the yards are planted systematically to grass, flowers, and shrubbery, and if the fences are in good shape, it not only creates a strong desire in the buyer, but it also indicates that the seller is not to be browbeaten. A neat farmstead is worth more than it costs.

Tractor Does It All on 110-Acre Orchard

(Written for Pacific Rural Press by Jno. J. Fox.)

We asked this question of Percy R. Dexter of Gilroy, who takes care of 50 acres of old prunes on his old home place and 60 acres of young orchard of his own. His answer was "You can't compare them. It is no use to figure on the cost, for the tractor does the work so much quicker and makes a better job of it. I would hate to go back to horses again."

This is the second tractor Mr. Dexter has bought and he is well pleased with the way it handles his tools. It is a four-wheel type machine and on his ground he pulls four twelves with it. For heavier land and deeper plowing three would be the right load. He pulls a drag right behind the plows to avoid going over the ground to harrow as a separate operation. This is a great saver of time of course, but it is a still greater saver of "condition" of the soil. He finishes the whole of his plowing in April.

The trees are vigorous in color and carried good fruit and a fair crop. He goes over 20 acres a day with these tools.

Now Let Us Try Horses.

Supposing we were working this 110 acres with horses, what are our requirements? We would need two four-horse teams and two men to begin with. For you skin up too many trees trying to swing eight, especially with fenced headlands. Now we are not going to plow and drag down over four acres a day and do it right—for we have to count in the single plowing. Plowing a grain field is one thing and plowing an orchard is another. If the leaders are permitted, they will pull into every tree they can, especially if the flies are beginning to bother. Their head stalls, hames, and gear carry away fruit twigs and small branches, damaging

This tractor, as can be seen, has plowed up the trees without horse labor. It can also, with this plow, throw away from the trees by an adjustment of the hitch with this plow, using a rolling coulter set deep to avoid chopping roots.

Single Plowing Eliminated.

We asked Mr. Dexter about his single plowing and he said, "I don't need to do any single plowing. I can plow up to my trees quite easily with my outfit. I plow to every alternate row of trees and work clear across to the next row, leaving no dead furrow. There is only half the orchard to plow 'from,' and by setting my hitch over, I can cut the trees out clean in my young orchard, and cut out in the old orchard as close as you can with a horse."

Now this is a very important point. We have heard a number of men say, "Oh, well, I have to keep horses anyway for single plowing and odd work. May as well make them do it all." If one or two horses are kept only for single plowing or running to town with a light load, there are certain cases where this would be far more expensive in time and money than there is any necessity for. The light adaptable orchard motor truck gets away with a lot of odd work in a day and a tractor that eliminates small work is going to throw a good many horses out of a job.

Tools for Cultivating.

In working his mulch Mr. Dexter uses an 8-foot double disk cultivator, the rear gang being cutaway. He runs a ring roller (pulverizer) disk and drag (clod masher) hitched one behind the other and goes over the 110 acres three times—about two weeks apart—no irrigation practiced.

HEAVY CUTTING IN FIG ORCHARD.

(Written for Pacific Rural Press.)

Mrs. B. C. Hatch of Merced has 15 acres of 25-year-old White Adriatic figs that had grown so top-heavy with foliage that many of the trees were laid open to the sun. Also much of the fruit was running small on the old small wood. Mrs. Hatch determined to rehabilitate the orchard and started in last year with a very heavy pruning. Then all the trunks and branches were given a heavy coat of whitewash. The third week in May we saw it after the first irrigation and lots of new vigorous wood from one to two feet long were in evidence. After some years of

renting Mrs. Hatch is now running the place herself. On one side of the orchard she has been blasting through the clay in the middle of the rows and expects the improved drainage to bring results—also liming.

Mrs. Hatch has faith enough in figs to have planted out another 20 acres of figs adjoining the old orchard, and a fine field of barley, which was about ready to harvest, may also later go into figs. She recognizes the importance of the fertilization of fig orchards and intends to experiment along various lines of cover-cropping and top dressing. We saw this orchard last November and think that a good piece of work has been done here.

The **FARMER** says—
"for stumping
genuine **GIANT**
has no equal"

From recent letters of ten farmers who have used Giant Powders for Stumping we make these extracts:

"1. Your Giant Farm Powders shoot the roots. 2. They have wide breaking power and less bad gases than others. 3. I get the same excellent results from them every time. 4. They are always uniform. 5. I used eleven tons and wouldn't have any other make. 6. I want to sell a lot of other powder that I have because Giant does the work much better. 7. Genuine Giant can't be equalled. 8. I don't have to use so much powder when I blast with Giant. 9. You know what we need for stumping. 10. I save money by using Giant Powders."

Write today for our free book, "Better Farming With Giant Farm Powders." It tells how to save money and get better results in stumping, ditching, tree-planting, etc.

Plenty of Labor on the Sespe Ranch

[Written for the Pacific Rural Press by John J. Fox.]

When President Benito Juarez—the George Washington of the Republic of Mexico—was asked for his definition of "Peace," he replied in brief: "El respeto del derecho del tercero."—Respect for the rights of the third party.

If we follow this out it means that those interested in any undertaking who may not be consulted, have nevertheless to be considered. Because our lowliest citizen has the "divine right of kings." This is the root of our Tree of Democracy. Liberty is its trunk, Equality its branches, Fraternity its leaves and Broad Humanity its firmament.

More and more each year is it evident that our farmers and orchardists are applying their thoughts to the care and comfort of the men of the rank and file who assist them in carrying out the active operations in the field. The dignity of labor is more widely recognized year by year. The very men who once moved so actively for cheap Oriental labor now recognize the danger of peaceful occupation of our most fruitful centers by the alien. They perceive the gain to themselves and their communities by an influx of the best class of white labor. In one day recently we saw three different instances of this, but we will mention just one.

At Sespe on the Fillmore road (Ventura County) is an important undertaking. Of its 1,650 acres, 700 acres are in lima beans (irrigated); 350 acres of lemons (Eurekas) and some oranges, 60 acres of walnuts besides grain and pasture. When we were there early in June they were picking nearly a carload of lemons a day and shipping four carloads a week from their own station—for they have a good summer crop. There are 155 men working on the place, and R. A. Graham, the superintendent, said that they have had no trouble in keeping good help. Even during the war they made out all right.

The Reason Why.

We went to look over the ranch buildings. The care devoted to this most important detail on a large ranch was at once apparent. It is not a detail here; it is a department. No detail of the department is overlooked.

The first building we entered had accommodations for 30 unmarried men and another was under construction adjacent to hold 30 more. The commodious and airy reading and recreation room is well screened from flies as is the entire building which is lighted throughout by electricity. The room has ample heating arrangements and contains a billiard table and card tables—is in fact a well kept club-room.

The dining room is well shaded and scrupulously clean. The kitchen with its painted walls, white bins and shining pans is neatly appointed enough for a first-class hotel, while the smiling chef in his white cap and white attire looked a worthy head of this department.

How It Is Done.

We asked Mr. Graham how the neatness in this bachelors' club was managed, for we saw the rooms and found the whole building in keeping. He said: "We keep a Japanese janitor whose duty it is to keep things clean and in order. There is no large dormitory. Every man has a small, outside, well-screened bedroom or cubicle to himself—properly appointed. Blankets and sheets are furnished, and the men's beds are made and their rooms kept clean by the janitor. All sheets and pillow slips

are changed and washed twice a week. There are five bathrooms and the men can have their daily bath of cold water. Hot water is furnished for the baths twice a week. The toilets, washroom towels and everything are looked after by the Japanese janitor."

The Class of Help and Wages.

"We always have a good class of white help, also of Mexican help, because we consider their comfort and they reciprocate. No private blankets are allowed in our club-house. If a man brings his own blankets they are locked up in the barn and stay there—we provide all bedding. We are paying our teamsters \$2.25 a day with room and board and \$2.75 and cottage to married men together with a piece of land—100 by 100 feet—for a garden and water to irrigate—also loan him a team when wanted to haul wood, etc. The best of everything is bought for the men as you see, both meat and other commodities. It is well cooked, well served in a clean, screened room, and the tired man comes to his quarters knowing he will be satisfied and refreshed to as great a degree as any millionaire at his club and without any annoyance of having to give tips for his service—entirely free from anxiety."

Hours of Work at Sespe.

"Our men start to work at 6:45 A. M. and are back to the ranch at 12. Start again at 1 P. M. and are back at 5:30. On Saturdays they quit at 4 P. M., the quarter of an hour each morning making up the time.

This gives them a chance to clean up for Sunday. We have 56 head of mules on the ranch and a "stable buck" looks after cleaning out, bedding and feeding. We also have two track-laying tractors—one 60 and one 30—with machinist and shop. Our pumping plant furnishes 250 inches of water and it takes us about 5 weeks to irrigate the whole place. And then we start again."

The Old Times and the New.

Our thoughts wandered back to the early nineties when teamsters were getting \$15 a month, slept in the barn and darted from the dining-rooms just as quickly as they could bolt their provender; when it was more difficult for the fruit grower to pay that \$15 a month than it is today to pay \$2.25 a day and A-1 grub; when a farm free from mortgage was the exception. Horse shoeing cost \$1 a set (put on) and harness was repaired at home with baling rope and bed springs or pieces of old boot-leg. Work was from 6 A. M. to 6 P. M. and then chores.

Much Educated Labor Used.

Education and organization are to be thanked for the changed conditions. A lot of labor on the farms is educated labor and college or high school boys who wish to gain the experience that only actual field work can teach.

EITHER FINELY GROUND OR SUBLIMED SULPHUR.

The above heading should have been used on page 446 last week. To make this plain we quote from the University Circular No. 204 (Handbook of Plant Disease and Pest Control), as follows:

"Dry sulphur.—For dusting upon plants for the control of surface mildew, red-spider, or other parasites, the fineness of the sulphur is an all-important consideration. Flowers of Sulphur, the finest and fluffiest grade of sublimed sulphur, has been heretofore recommended as an application for a dust. At present, however, there are upon the market several brands of extremely finely ground sulphurs, which are finer than the best grade of sublimed sulphur and no more expensive. Some of these sulphurs, which have been specially prepared for dusting, are ground to pass a 200-mesh bolting cloth. These are apt to cake or to clog the dusting apparatus. If three parts of sulphur are thoroughly mixed with one part of hydrated lime, Kaolin, or other inert powder, these difficulties may be avoided."

Aggeler & Musser Seed Co.

620 S. Spring St., Los Angeles, California

Buy only Melilotus seed that has a quality tag on each sack. It protects you against the low germination seed so general on the market this season. This seed is above 99 per cent pure and above 90 per cent germination.

END OF SEASON FOR PEAR MEN.

The canners have settled up for the season's canning pears, paying them about \$1,000,000, which represents about 12,000 tons of pears, or 11 per cent of the crop. This fine showing has resulted from organization on the part of the growers, especially so as many obstacles had to be overcome, such as shortage of labor, shortage of boxes, telephone strike, etc. The shortage of boxes resulted in the pears remaining on the trees longer than they should. This condition, coupled with some high winds, made a heavy loss from windfalls.

There will probably be about 5,000 tons of dried pears for this season. This represents the equivalent of 25,000 to 30,000 tons of green pears, allowing five or six green to one dry, including windfalls. The speculative age has passed for dried fruits now. A few dried pear men who might have sold in the summer at 22 cents will probably be lucky to get 15 cents now. The fluctuating and low rates of exchange in Europe make it impossible to buy with certainty except from hand to mouth while the high prices on this side are 15 per cent to 20 per cent higher in London on the Exchange alone. Food control, fixed prices and embargoes are all factors in reducing export, and we have heard of exporters who have been trying to sell dried fruit back to the packers.

Quite a loss of pears took place in cold storage, where they were placed to await handling. This was caused by the fluctuating temperatures in the warehouses. One canner lost 15,000 boxes from this cause—perhaps 5 per cent of his total purchase. Others lost large amounts also.

This is a condition which ought to be promptly remedied. It can be done, for a lot of pears were put in cold storage in Los Angeles which held up well and the dealers will sell them at a handsome profit. Last year a lot of pears were put in cold storage at Yakima in August and shipped in December—one car going to Florida. They reached the market in excellent condition and commanded good prices. This year's work, in the face of heavy odds and yet high prices, has proven what organization can achieve. When we make a demand for betterment, one little voice alone is drowned in the turmoil of the world. But the united voices of many can be heard above the uproar and their insistence has to be recognized and met by those in authority.

YOLO'S BOUNTIFUL YIELD.

(Written for Pacific Rural Press.)

The largest yield of raisins ever harvested in Yolo county is the crop of 1919, now safely garnered. We asked George H. Hecke, Director of the State Department of Agriculture, about his own crop. "It was a splendid crop; quality excellent, and the drying weather everything that could be desired. No, there was no harm done by the rains; everything is safe," said Mr. Hecke.

It is estimated that the raisin crop of Yolo county will amount to about 1,500 tons of Thompson Seedless and Sultanas and perhaps 600 tons of Muscats—all safe.

Almonds are all in the warehouse. They are of fine quality and yielded 80 per cent of a crop for the county.

With regard to prunes, almost all except the clean-up shake are cured. As elsewhere, the quality was rather disappointing in size, weight and color, the reason or reasons for which are still mysterious, for the fruit looked exceptionally fine just prior to harvest, but wasted on curing and left the tree immature.

The prospects for the rice crop are excellent. Harvesting is in progress and promises the largest yield the county has yet produced together with excellent prices.

The Monarch Tractor Sales Company have just received a carload of the new Lightfoot Tractors from the factory. The Lightfoot Tractor is built from specifications furnished by the California Branch to meet California requirements and conditions. Its special features are light weight, low build, simplified track, heavy duty,

REMINGTON
UMC

Put Your Trust in Service

MODERN efficiency recognizes no such thing as luck. It prepares for the worst. And simply enough, that is why the modern minded shooter chooses a Remington UMC gun and shells, dependable under all conditions.

Most recent of the many examples of Remington UMC leadership in service to shooters is the wonderful Wetproof improvement in shot shells. No matter what happens, your Remington UMC Wetproof "Arrow" or "Nitro Club" smokeless or "New Club" black powder shot shells can not be injured by wet.

They may be exposed to it for hours, but will not soak through, bulge or scuff. In body, crimp (or turn-over) and top wad they will remain as firm and perfect as when fresh loaded at the factory.

And they will work through your modern Remington UMC autoloading or pump gun just as smoothly, fire just as surely and give the same top speed, best pattern and penetration.

Today, more than 82,700 alert sporting goods and hardware dealers in the United States sell Remington UMC—another example of best service to shooters.

Here and There in the Fruit Business

Planting Trees with Surface Soil.

"I am planting a lot of trees this fall, some among the vines, and intend to haul a lot of soil up from the creek banks to fill the holes with," said F. A. Chester of Fulton. All the heavy soil is cleaned out from a large hole and the tree is planted with good rich free soil so that it has every chance to become well established the first year. Martin Duhig of Fly District (Napa County) lost some 300 young apricot trees last year, which he attributes to planting too early on heavy ground. He expects to replant about January or early in February and will use surface soil only to fill the tree holes with. He ought to get good results, for his hills are adobe of excellent quality underlaid with marl. A small clay streak lies at point of contact, and in digging the hole this inch or two of clay will be thrown out and not put back.

To Dry Wine Grapes.

Clarence Grange of Yountville (Napa County) has installed a large plant for the purpose of drying wine grapes. It has two tunnels 136 feet long by 8 feet 4 inches high and 6½ feet wide, with six furnaces to generate the heat. It has a capacity of 25 tons of fresh grapes. The two Sorocco fans which weigh 1700 pounds each furnish heated air at the rate of 35,000 cubic feet per second and will correspond to a draft of wind blowing 20 miles an hour. The grapes travel through the tunnel on trucks at temperatures between 110 and 150 degrees and not to exceed this. An arrangement of hydrostats and thermometers provides for the regulation of moisture and temperatures. The Johnson burners will consume 840 gallons of distillate a day. Mr. Grange has his own crop sold as soon as it is dried, and will be prepared to handle 1,000 tons besides. The plant will cost \$14,000.

Fruit Exchange Insures Workers Free

"The Valencia crop of 1919 is the change insures the lives of its employees, both men and women, who have been in its service over 60 days, without cost to the insured. A uniform policy of \$3,000 has been taken out for each employee, which is paid to the selected beneficiary in case of death, or to the insured in case of total disability. The Exchange has also offered to re-employ each of its men who entered the army or navy who, on discharge, desire to return to their former employ.

A Bumper Valencia Crop.

"The Valencia chop of 1919 is the bumper Valencia crop of the industry," says G. Harold Powell, general manager of the Fruit Growers' Ex-

change, in his annual report. "The total shipments from California for the crop year will probably reach 8,500,000 boxes, of which the Exchange will ship 6,275,000 boxes. Ten years ago the Exchange shipped 791,788 boxes of this variety; five years ago, 3,054,811 boxes; and in 1917, the last normal year, 4,771,568 boxes. The Valencia problem of the future is one of wider distribution and an increase in the per capita consumption."

More Cannery Plants Projected.

The Pratt-Low Preserving Company of Santa Clara are to build another canning plant at Redwood City to cost over \$200,000, while the Biscaglia Brothers have bought 12½ acres on High street and Tidal Canal, Alameda, where they will erect a large cannery for the 1920 crop—a plant to employ 1,000 workers during the season. From this plant they will be able to put their export stuff direct on shipboard.

The Transportation Problem.

The acute shortage of cars for handling our fruit and other products is explained partly by the fact that practically no extension has been made to deal with increasing production. New cars have not been built during the war to cope with the new business. This year an enormous new demand on cars was made by wine-grape shippers, while each year the amount of fresh fruit, vegetables, melons and citrus fruit increases in volume as new acreage comes into bearing. The car shops will be kept busy getting ready for next year.

Wants to Keep His Squirrels.

An Alameda County man, who was served with a legal notice by the Horticultural Commissioner to clean out the squirrels on his ranch, disregarded the order. When the notice had expired six deputies appeared with poison to go to work in the usual way. They were met by the farmer with a shot-gun and forced to retire from the premises. He was arrested and later released on bail. The majority of property owners are co-operating with State and county officers in carrying out this important work.

Strawberry Season to Close Early.

The season has not been propitious for the late strawberry crop, between a cold spring and some burning weather in late summer. The third crop is very light, and though growers have done well the season will close probably a month earlier than usual. Considerable planting of new areas is planned for the coming year.

Unlawful to Make Wine.

Field officers of the Internal Revenue are instructed from Washington to correct the erroneous impression that 200 gallons of wine may be made for family use without incurring tax liability. It is also violation of the war-time prohibition act. The person making the wine creates a tax liability of 16 cents a gallon on dry wine, and violation of the War Prohibition Act is reported to the U. S. Attorney for prosecution. Wine making appears to be licensed but you mustn't do it. The interpretation of the law so that its penalties may be clear to all concerned must soon be completed.

Fruit Standardization Convictions.

"I have been getting three or four convictions a day against violators of the Fruit Standardization Act," said Fred Seiberger, Horticultural Commissioner of Alameda County. "The Japanese are the worst offenders and Portuguese next. The convictions are for wormy fruit or deceptive packs and light weight chiefly. Three Japanese were fined \$100 apiece for a second offense. I don't think they will try it again. Theirs were deceptive packs on tomatoes. We are gradually getting them educated."

The James Mills Orchard Company is to extend their lemon orchard west of Maxwell (Colusa county) by further plantings this year. This is

claimed to be the largest lemon orchard in the world with some 800 acres in bearing.

The old proverb that "Figures can't lie" is all right. But, it might be added to "Liars can figure."

"It's the Easiest and Best Way"

"Now I'll show you how to start this little job of tree planting with dynamite: First we sink the hole with a 2-inch dirt auger. Put it down straight, and if you strike hardpan use a churn drill and set your charge in the hardpan, not above or below it. If you strike the hole *right* the charge will break up the earth all around and give the young tree roots a chance to spread. That's what makes 'em grow so fast and bear so early when they're planted with

HERCULES DYNAMITE

There's one thing to remember tho'—you mustn't blast for planting when the ground's too wet. It's like anything else in farming—you get the best results when you work under the best conditions."

"It certainly is the easiest and best way to plant trees and the Hercules Powder Co.'s 68 page book for farmers, 'Progressive Cultivation' will give you exact instructions about the use of dynamite for farm work. They'll send it *free* to any farmer or orchardist who will sign the coupon."

"All About Roeding's True TREES"

For 35 years we have been growing nursery stock. We have made it our business to study and watch every detail in order that we might be of the greatest help to the man or woman engaged in fruit growing.

How well we have succeeded, is evidenced each year by the ever-increasing patronage accorded us.

"Fancher Creek" Trees Grow and Bear. "Fancher Creek" Trees are vigorous, well rooted, and true to name.

You will, of course, want our new illustrated catalog again this year—better than ever. A real guide to successful fruit growing. SENT FREE. Better get your name in early, so as to receive one of the first copies off the press.

Fancher Creek Nurseries
400 Holland Building, FRESNO, CALIFORNIA

HORTICULTURAL JOTTINGS.

The prices set for walnuts rule a little higher than those of last season. Wine-making and grape-juice making is proceeding in Napa and Sonoma counties.

The wineries in Alameda, Sonoma and Napa counties are all busy crushing grapes.

The prunes in Sutter and Colusa counties are all dried, except the last scattering shake.

Fruit men are agreed that the Chico district is enjoying the most promising year in its history.

The rains have done some damage to figs in the northern counties and Tokays have suffered considerably.

Canned goods and dried fruits will find a ready market in Sweden, according to Foreign Markets Report.

Raisin prices set by the "Associated" have been investigated by the Government and are pronounced satisfactory.

Over 950 cars of apples have left Watsonville already this season, nearly twice as many as had been shipped to the same date last year.

The olive crop at Redlands, which usually averages half a ton to the acre, will probably yield 1,200 to 1,300 pounds to the acre this year.

Several large acreages are to be planted to peaches this year in the Wheatland district. Wells have been sunk to provide irrigation water.

A prune grower in Santa Clara county, who bought his 8-acre orchard five years ago for \$6,500 is reported to have cleared the purchase price in this year's crop.

The sum of \$1,036,336 was paid for shelled almonds imported into the United States during the month of April. After awhile California will want those extra millions.

Twelve thousand acres of additional lands will be opened to settlers next spring by the California Land Settlement Board, it is announced by Dr. Elwood Meade, chairman of the Board.

The raisin crop of the San Joaquin may now be counted as safe. The fruit is being hauled to the packing houses as fast as it can be handled. In the later sections of the north some fruit is out.

Wine can be manufactured now and held until war-time prohibition is done away with and then, according to a recent telegram from Washington, "no questions will be asked" as to the time the wine was made.

More than one-third of the total import of figs by the United States in 1918 came from the Malaga district in Spain, the quantity imported being, 3,351,193 pounds—an increase of 621 per cent above the previous year.

Nearly 26 tons of almonds—641 sacks, valued at \$16,650—were shipped in one car from Guinda (Yolo county) recently. This is probably the largest and most valuable car of almonds ever shipped. They were Nonpareils and Ne Plus.

The Tulare County Victory Fair takes place at Visalia from October 13-19. In addition to the usual county fair exhibits it will include largely patriotic features as a celebration of the part taken in the European struggle by our own boys.

Seventy-five per cent of the Malaga grape crop ought to have been shipped by the end of September, but, according to a Fresno fruit shipper, not over 30 per cent had been shipped by that time, largely owing to refrigerator car shortage.

The shortage of refrigerator cars continues to be acute—40 or 50 cars showing up where 200 could be filled. The rain up to October 4 did less damages than was thought. Some growers have been holding their grapes for better prices, but cars are the chief need.

Ten million, two hundred thousand dollars worth of checks have been signed by the Prune and Apricot Growers' Association as first payment to association members on the 1919 crop so far delivered. This sum is said to represent about one-third of the total price.

Good Plowing, Yes—

GOOD work and plenty of it, whether plowing, disking, harrowing or belt work, is the rule where an **International or Titan kerosene tractor** is used. With it you can plow as deep as you want to, as fast as good plowing can be done, do any other farm power work, do as much and as good work during the last hour of the season as during the first, and know that you are saving money at every turn of the flywheel.

Operate on Cheap Fuel

All tractors of the same size use about the same amount of fuel. It is not uncommon to use 1000 gallons in a season. International and Titan tractors operate on common coal oil, which costs about half as much as gasoline. Even if our tractors were superior in no other way, the fuel saving would make it worth while to own an International.

Tractor Service

Every tractor owner needs service at one time or another. When that time comes our Service Organization of 89 branch houses and thousands of dealers responds quickly. Think what it may mean to you in a rush season to get a repair part or have an adjustment attended to within a few hours. Every International or Titan tractor owner who needs service gets it without unnecessary delay or trouble.

Our tractors are made in three sizes, 8-16, 10-20 and 15-30-h. p. All operate on kerosene, or any other oil fuel down to 39° Baume. We will send catalogues with full information about tractors or any other machines in the list below. Write and tell us which machines you are interested in.

Work With All Farm Machines

The steadiness and dependability of International or Titan tractors are due, not to chance, but to skill and experience. We know farm machines, having marketed them for close to 88 years. We know the work you expect your machines to do and for twelve years have been selling tractors designed and built to furnish useful, economical power for that work. One or another of our tractors will draw or drive any farm power machine you have, requiring power up to 15-H.P. draw bar or 30-H. P. on the belt, and do good work with it.

Winter Cover Crops for Citrus Orchards

(Written for Pacific Rural Press by D. J. Whitney.)

When a person sits down to do a problem in arithmetic, he can, if he has a reasonable understanding of his subject, figure exactly the proper result when two things are put together. In cover cropping, or many other kinds of farm operations, he cannot be sure what the result of his work is—whether it is connected with cover cropping, fertilization, or various other matters. Farming would be simple work if the exact result of every action were seen definitely and strongly. It is not so seen, nor anything like it. In planning a winter's work on an orange orchard a man simply has to figure out what ought to be best and then do it, trusting in the long run that the results will prove profitable.

The thoughts expressed here, therefore, are merely conclusions in the cover crop problem. They cannot be proved by saying, "So-and-so did this thing and his trees looked twice as good. Hoosus, living on the adjoining ranch, did the other thing and his grove was worse." Things do not work out like that in cover crops in Central California orange groves, but a man can observe and discuss the subject with the most experienced growers and come to certain opinions.

Cover Crop Conclusions.

The best conclusions seem to be that: In some cases clean winter cultivation is the only thing possible with our present state of knowledge, but, where cover crops can be grown, they should be. Also, a legume of some kind is apparently preferable to natural growth (in most cases anyway) and sweet clover, *Melilotus indica*, is the best sown crop for the purpose, as a rule.

That a cover crop is an advantage where it can be grown seems unquestionable for the well-known reasons: That in a hot, dry, irrigated section, and in almost any other part of the world, for that matter, the soil needs all the humus it can get. There is too much tendency under the best of conditions for the soil to run together quickly after beginning to dry; for it to take water poorly; and for the trees to lose in a few years the vigorous growth that they have on new soils. Vegetable matter in abundance mixed with the surface soil is a great thing for soil in mere mechanical condition, and condition helps a great deal. As to the way that plant roots make openings into the soil, that organic matter frees plant food and aids bacterial action—all that has been told time and time again. Also, when thousands of dollars are spent for fertilizer, and clovers and related plants will provide free nitrogen from the air, the benefits of getting all the clover, vetch, or pea growth on the soil possible are self-evident.

Clean Cultivation on Adobe Soil.

On account of the great good that cover crops, whether natural or sown, can do, it seems regrettable that on the adobe or dry bog soils the only thing possible is to practice clean cultivation. Any person who can demonstrate a successful way to grow a good winter crop on dry bog or adobe soil in the Central California orange groves and then to get it under the soil properly in the spring will be welcomed with open arms. Getting a big winter growth is easy, but the disposing of it is another thing. It has been tried in many instances, though seldom twice on the same ranch, and invariably the result has been trouble galore in getting the ground in shape in spring, and big injury to the trees.

Adobe has to be worked when it is just right, and it does not stay just right for more than the briefest period. While one acre is being turned over and the crop turned under during this brief period, nine acres are getting so dry that nothing can be done with them. Where dry bog soils predominate the best thing seems to be to practice as clean winter cultivation as possible, to keep the weeds from getting a start. Doubtless it would be better if cover crops could

be handled, but how to handle them is another thing.

Treatment of a Cover Crop.

There are just two ways to dispose of a cover crop—plow it under, or cut it to pieces with a disk. Plowing can not be done until the ground is just right, and the growth is so rank by that time, particularly if spring rains have kept coming, that the job is out of the question, and disking, although it may be done on damp soil on some sandy locations, is impossible on moist adobe with a growth on it. It has been tried and the disks have filled up so with litter and muck that the tools could hardly be hauled out of the orchard. A disk will do nice work on loamy soil, or on heavy soil that is dry and fairly loose on top, but it will be helpless on dry adobe covered with vegetation, or on wet adobe. So, if a disk will not do and a plow will not do, the only thing left seems to be clean cultivation.

When adobe dries in spring with a lot of growth on it, it dries like a sun-made brick, with great cracks in it. When it dries after clean cultivation, the surface slakes and crumbles, like lime, and it can be worked nicely for a long period. Consequently the only solution seems to be clean cultivation.

It is a rather interesting fact that the problem of keeping these old, dry bog, or adobe, orange groves up to standard quality seems more difficult than keeping groves of equal age on lighter soils up to standard. This is in spite of the fact that these heavy soils are strong and rich in plant food. The explanation doubtless is the fact that enough vegetation cannot be put into those dry bog soils, while it can be grown on and worked into the lighter soils.

On the Lighter Soils.

The prevailing practice among orchardists whose soils can be worked to get a cover crop under properly in spring is to grow such a crop, or to let it grow of its own accord. In the latter case the amount of vegetation that can be turned under is usually approximately as great as on a sown cover crop. There is normally a good deal of clover of some kind or other which adds nitrogen from the air; and this is the most expensive and most necessary and valuable plant food there is, but the grass and ordinary weeds add no nitrogen and the only good done is the increase in vegetable matter. It is hard to see why, if it is worth while growing anything between trees, the best plants possible should not be grown, and those without question are legumes. As stated at the start, yellow sweet clover seems best for this locality. Field peas, horse beans, vetch, bur clover, or other related plants will do as well in proportion to the growth made. Last season, in the neighborhood of Lindsay, a number of horse beans were grown and did excellently. They were tall, thick, and made no tangled mass when the time to get them under came.

With sweet clover (and the rest) the best rule without question is, the sooner planted in the fall the better, for the more growth they will make and the earlier they will mature in the spring, therefore the sooner turned under and the better the spring work can be done. Where the trouble comes from early planting is the fall weather. A late, hot fall will mean a big call for water if the clover gets a good start, and when the water supply is only enough for the trees, something is going to be hurt. If it were not for this the planting would be done early, perhaps in early August. As it is, a person must use his judgment according to his conditions. The middle of September and very early in October is a fair rule in this location.

Are Weeds Harmful?

This argument has been made by the manager of one of the largest and best citrus propositions in Lemon Cove, in favor of substituting sown legumes in place of natural crops. Take it for what it is worth.

"Certain plants we know secrete poisons, or juices, that make it dif-

**FOR HARVESTING
EGYPTIAN CORN**

You can use both hands and cut twice as much in a day with the

DAVID EADING KNIFE

as with any other instrument. You cut off the stalk and hold the head with the same hand—and you keep both hands at work, cutting as fast as you can open and shut your fingers. If your dealer cannot supply you send direct to the manufacturer.

Pair (right and left), \$2.50, postpaid.
R. L. DAVID, Dept. C. San Jose, California

difficult for other plants to grow near them. This is proved by the way that certain grasses and weeds gradually spread when they get a start, so that nothing grows among them and they have all the ground. This is not the result of crowding, for other plants are still more crowded and yet grow close along side of many other varieties. It must be something that these plants send out. "Now in every natural growth, it is a reasonable guess that there are certain plants whose secretions are harmful. If they are harmful, I do not want them among my trees, but will plant cover crops I know are good and not harmful."

This theory, for practical purposes on the average place, can be neither proved nor disproved any more than a decided change can be seen in groves where cover crops are grown or not grown. In the whole matter it is a question of doing what seems sensible and right and relying on the general results being good.

Winter Irrigation.

On theoretical matters, it is the idea of the writer that some winter irrigation when there is a cover crop would be an excellent thing and easy to do, since as a rule the cover crop is sown with open furrows. Growing vegetation takes the water out of the soil rapidly, as a man soon finds when plowing a clean cultivated strip along side of a grass strip. The clean cultivated ground may have lots of moisture in it when the ground with weeds and grass on it is nearly dry. So cover cropped groves doubtless would benefit by being irrigated, even in winter, when the air is damp, the trees not making any growth, and the weather moist. That would depend upon the amount of rainfall.

The past few winters have been very dry and there has been more discomfort over the June drop than ever before. If the two are at all connected, some winter irrigation of cover-cropper orchards would be an excellent experiment.

No man can carry water on both shoulders and make much headway. He gets cold water thrown on him from all angles and acquires the appearance of a drowned rat.

Now is the time to get ready for next season.

RAISINS AND OLIVES FOR PIGS.

A city man once landed at Edwin Gower's, near Fowler, and saw some fine, fat hogs, just ready for the market. "What did these pigs get to make them so fat?" said the city man. "Olives and raisins," answered Mr. Gower. "Say," said the city visitor, "are there any luxuries you don't feed your hogs anyway?" The facts were that the raisins were culled raisins from the packing house, and the olives were frosted olives, which had dropped from the trees in the olive orchard where the pigs were raised.

Mr. Gower believes that if you do justice to an olive orchard otherwise it will prosper as well, or better, without cultivation as with it. This was an old orchard, with the trees so large and close together that it was hard to cultivate; also Bermuda grass was so abundant that it was wearing him out, so he made the orchard hog tight, turned a lot of hogs in, and they have worn out the Bermuda grass, or kept it down so that it does not bother, and the trees are doing beautifully.

The proposition is that the hogs are meant to be an even greater help to the trees than the land is to the hogs. According to Mr. Gower, if you can keep an olive tree growing well and thrifty, it will yield properly. If you do not, crops are likely to be very light, and the trees show by a very good set of fruit in a year when the set is naturally very small, that the system is good.

He has high ridges thrown up along each center and floods the trees between them. That supplies moisture. Then he fertilizes well with commercial fertilizer, and relies on the pigs to put in organic matter. The feed that enables them to do this comes mostly from the outside—cull raisins, raisin stems, or anything that is available. They do not bother the trees and use them mostly for shade, and frosted fruit is rare and infrequent, but they keep down the Bermuda grass and the rough feed, and the concentrates that are supplied to them they devour and then distribute the fertilizing value of that feed over all parts of the orchard, in excellent condition for plant use.

Results on this ranch suggest an opening for olive growers who grow alfalfa between their trees.

We Manufacture Levelers for Any Power from 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler

WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Frenos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners' time, labor and money.

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

A GREAT ROAD MACHINE

Every road district should own one of these machines for constructing roads. They will cut down the high places and make fills quicker and cheaper than by any other known method.

YOU SHOULD

send for our latest catalog, J-600, which is full of interesting information on Labor Saving Devices and machines for moving the earth.

What Can We Do About Calif. Potatoes?

(Written for Pacific Rural Press by W. V. Shear, State Department of Agriculture.)

If the question were changed slightly to read, "What we do with California potatoes?" it could be much more easily answered.

Just now the price of hogs is fairly good, and if many of the potatoes now being sold were cooked and fed to these domesticated animals, the consumers of both pork and potatoes would be greatly benefited. The greater quantity of potatoes now on the Sacramento markets at least should be disposed of in this way. It would save the consumers the trouble of paring and throwing away one-half of the potatoes for which they are now paying from 3c to 4c per pound, and it would leave an open market for the few good potatoes that are to be had. It would also be to the financial advantage of the consumer to pay 50 per cent more for good potatoes than he is now paying for most of the stuff that should go to the swine.

Economy in Using Good Potatoes.

An actual test of the waste in preparing an average lot of potatoes now being sold, as compared with fairly good potatoes, showed that it was necessary to throw away 47 per cent of the poorer quality stock in preparing it for the table, while there was but 20 per cent loss on fairly uniform and clean potatoes. Therefore it would be economy for the housewife to pay 4½c per pound for the better quality of potatoes rather than purchase the pig feed at 3c per pound.

Good potatoes must be produced before they can be sold by the farmer to the wholesaler, by the wholesaler to the retailer, and by the retailer to the consumer, with a sufficient percentage of profit to each to meet the high cost of living.

The Best Soil.

Good potatoes cannot be grown on any old soil. Nearly all soils can be put into such a condition that they will produce fairly good potatoes, provided the crop is given the necessary care and attention, but, if your soil is heavy or undrained, or has had a heavy coating of barnyard manure just previous to planting, do not plant potatoes on it or you will come to grief. The potato is an exceedingly sensitive crop, and in these times of good prices for almost every farm produce, select a crop which is adapted to your soil conditions. If you want to grow potatoes on heavy land, begin three or four years in advance to prepare the soil for this crop. Give it thorough drainage and then seed to rye in the fall to plow under in the spring. Then seed to some legume, such as cow peas, to plow under in the fall. We have seen a brick clay soil after five or six consecutive years of such treatment changed into a productive loam. Expensive? Certainly, but if you want to buy that kind of soil from your neighbor, would it not be expensive?

Conditions for Maximum Crops.

The time is now here when it pays to give attention to the soil and sufficient attention to grow maximum crops. If your soil is loamy and wet, drain it, because potatoes abhor a soggy, undrained footing. If your soil lacks fertility, fertilize it. Potatoes require an abundant supply of plant food, and there is hardly any other crop that responds as promptly to a sufficient supply of readily available food material as the potato. The potato requires especially a considerable amount of potash, and a liberal application of a complete fertilizer containing a relatively large amount of potash is necessary for the production of maximum crops. Much of our foothill and mountain soil requires a complete fertilizer for the production of potatoes.

The potato soils of the valley, especially the peat lands, require a large amount of potash with a minimum amount, if any, of nitrate fertilizer. Therefore, if your soil is heavy and you are not willing to lighten it, or wet and you are not willing to drain it, or lacks fertility and you are not willing to fertilize it, for the land's sake, for the sake of your own

pocket book, and for the sake of the overburdened consumer, who cannot afford to buy uneven, knobby, pointed, diseased, moth-eaten stuff, such as we now have on the market, do not plant potatoes.

One of the projects of the Farm Bureau is the experimental growing of vetches for seed in California where it is largely in demand for cover crops. of sending to Oregon for them it should prove quite a profitable undertaking—even at half the present price. *peatsu! amouq uen h mox uno ew ji*

The 23 Rural Fire Companies of Napa county (permanent) organizations, by their prompt and efficient work, saved the county from bad fires this year. There were six calls and not one of these brush fires burnt longer than an hour.

Vineyards were pretty badly burnt by the last heat wave in Sonoma county. The grapes are much exposed by defoliation. Picking and crushing begins this week.

FALL PLANTING OF ALFALFA

Surprising results have been secured by fall seeding under the proper conditions. Fall-sown alfalfa has shown a growth the next season after planting nearly as heavy as two-year-old alfalfa.

which tells about fall seeding—how, when, and where it can be done to advantage. Sent free with Price List and booklet describing Bomberger's Seven Kinds of Alfalfa.

Champion

Dependable Spark Plugs

Play Important Part in Tractor Industry

FOR hours and hours at a stretch, the tractor engine is taxed to its utmost, imposing a sustained, maximum demand upon the spark plugs.

To withstand such brutal punishment and not "miss" even temporarily, spark plugs must be of more than common hardness and efficiency.

Our famous No. 3450 Insulator, with its greater resistance to shocks and temperature changes, together

with our patented gasket construction, fortify Champion Spark Plugs for the terrific battle they must constantly wage in tractor engines.

Because Champion Spark Plugs dependably perform this strenuous service a large number of tractor manufacturers use them as factory equipment.

There is a Champion Spark Plug for every type of motor car, motor truck, tractor, motorcycle and stationary engine.

THE CALIFORNIA BEAN SITUATION UP TO DATE.

George A. Turner, president of the California Bean Growers' Association, has issued the following statement in regard to the bean situation:

"To thoroughly understand the position of the bean grower one must consider the situation from a statistical standpoint:

Year	Total U. S. Crop	Hold-over Stocks	Total Stocks Available
1917	14,987,000	3,000,000	17,987,000
1918	19,506,000	4,824,000	24,330,000
1919	10,630,000	6,000,000	16,630,000

from the Orient is to the effect that "The best information available from the Orient is to the effect that the food shortage in the past year, particularly rice, was such that much of the acreage that was formerly planted to beans will this year be planted to rice. Consequently not more than one-half of last year's crop of beans will be produced this year.

"No large stocks are held by the wholesalers throughout the country, and all indications point to a steady demand for the product.

"The California Bean Growers' Association is now so financed that as soon as the growers' beans are delivered a payment is made of approximately one-half their value. This will avoid the marketing of a large lot of beans on the market controlled by speculators and will permit of the marketing of the product according to the demands of the trade.

"At the present moment every possible effort is being made to pull the market down, and this is having its effect. The speculator is getting quite a few beans. If a farmer is willing to sell his product less than cost, you can't blame anyone for taking them away from him, but the true situation does not warrant the bean grower selling his beans at prices that do not cover cost plus a reasonable profit. Beans sold on this basis are by far the cheapest food obtainable, and there is no reason on earth why the grower should sell below the cost of production.

"The carry-over from last year (considering the crop) is not excessive throughout the United States. It is about 1,824,000 bushels more than the carry-over of 1917, and from reports at hand the present crop is 8,875,000 bushels less. Thus we go to market with 1,700,000 bushels less to sell than was actually sold last season.

"Of the carry-over quite a lot of beans were off grade. This fact causes the California growers more concern than is warranted for it is such an unusual condition. All other bean-producing sections are frequently confronted with this condition, and there is a wide market for beans of low grade. Of course, there is a differential in the price, but not nearly as great as the grower is led to believe. In the past two weeks large sales of off-grade beans have been marketed by the Association in addition to sales of beans of better grade.

"All informed bean men look for a steady market at fair prices, and the new crop is coming in of such excellent quality that it can and will hold its own with beans of any section.

"Claims have been made that beans are no longer popular as an article of food. These claims are silly, when one knows that 5,207,000 more bushels of beans were consumed in 1918 than were in 1917, in spite of the fact that an order of "pork and—" is billed from two to six times what the restaurants formerly charged.

"My advice to the bean grower is to demand cost plus a fair profit for his product. He is entitled to it and can obtain it. I do not wish to convey the idea that he can obtain anything he demands. He must always keep in mind that beans are essentially a poor man's food and must always be relatively cheap. They can be kept so and still return the grower a fair marginal profit."

The Klein-Simpson Produce Co. and H. C. Vignes, charged with violating the apple-standardization act, have entered a demurrer attacking the validity of the law.

Dependable Pumping Plants

When you install a pumping plant you want water—plenty of water—full-rated production and more, if possible. And that's what you get when you install

American Centrifugal Pumps

These pumps produce the full guaranteed amount of water and they keep power bills down to a minimum! That's more than a claim—it's a guaranteed fact.

Write for Catalog

—which illustrates and describes the entire line of American Pumps and proves their advantages beyond a question. The American Catalog points the way to irrigation efficiency.

HYATT

ROLLER BEARINGS For Farm Machinery

A Greater Agriculture

OVER 38,000,000 acres were added last year to productive acreage of American farms, in spite of the great shortage of labor. A twenty-billion dollar crop was raised.

The factor largely responsible for this remarkable showing is the farm tractor and power farming machinery. The tractor has given the farm dependable power, requires attention only when in use, accomplishes far more work in less time, and is capable of being used 24 hours a day every month in the year, if necessary.

The part the Hyatt bearings have played in producing this remarkable farm power unit, has been to provide an efficient and life-long protection for axles, shafts and other points of wear. Hyatt bearings make possible the delivery of more power at the drawbar and belt, at a saving of fuel and never require adjustment.

Hyatt bearings are now being used in nearly all of the best tractors built, in threshers, grain-binders, plows and other farm machinery, enabling them to provide a vitally important contribution to the making of a still greater agriculture.

RU-BER-OID and MALTHOID READY ROOFINGS

Are made to last

Most ready roofings look the same but they vary greatly in quality. The actual test of service must be made before you can tell the difference between good and poor ready roofing.

Ru-ber-oid and Malthoid have proved their merits under every condition. They have stood the test of time and weather because the finest quality is built into them.

In their manufacture, only long-fibred, tough felt is used. This felt, which is made in the company's own plant, is saturated with asphaltum of just the right consistency to preserve the fibres. Then the whole is coated with a special weather-resisting compound. Ru-ber-oid and Malthoid, the finished products, have an exceptionally long life, are fire-resistant and will not dry out or rot.

Standing back of Ru-ber-oid and Malthoid quality is the great organization of The Paraffine Companies, Inc. Every process of manufacture, from the gathering of the rags for the felt to the turning out of the finished roofing, is carried on within the one organization. This fact, and constant supervision by experts, make it certain that the quality of Ru-ber-oid and Malthoid is always maintained.

It is this careful choice of materials and precision of manufacture which have made Ru-ber-oid and Malthoid the recognized standards of ready roofing.

EACH THE STANDARD OF ITS KIND

Notes on the Tractor Demonstration

(Written for Pacific Rural Press.)

At the Los Angeles Tractor Demonstration four tractor concerns—the Yuba, Holt, Best, and Avery—used tractors of 70 to 80 horsepower on the heaviest tractor disks, subsoilers, chisels, and plows.

A great many of the tractors were turned loose to run in circles, unattended, but followed by implements. A Moline circled backward with a mower.

A strong feature of the Demonstration was the great number of tractors showing their inwards exposed, and many of them being operated by one of their mates.

The Union Sure-Grip tractor straightened a plowbeam in the hard plowman. One of these tractors pulled an eight-foot double-disk, followed by an eight-foot Oliver double corrugated roller to work down the clods.

A caterpillar 75 pulled a 9-standard Killefer chisel about ten inches deep, leaving a strip eight feet wide in better condition than if it had been plowed that deep.

The rear wheel of an Avery 18-36 had been run up onto a thick block of wood and then onto a piece of 2x4 standing on end to show not only flexibility of frame, but also sensitive control. It was left standing on the up-ended stick.

The Stockton 6-12 vineyard tractor pulling a six-foot double disk over the clods it had plowed was calculated to make the driver seasick or else put wings on him, so big were the clods. The disk didn't do much to the clods, but the tractor wheel lugs did make a notable difference.

We were invited to hold our handkerchief under the Twin City exhaust. No oil or carbon soiled the handkerchief, indicating perfect combustion in the 16-valve engine.

Sixty-five of the 12-22 All-Work tractors have been sold in Northern California since they were introduced at the recent State Fair. The highest point on this machine is 55 inches above the ground. The 14-28 All-Work is to be remodeled into a more powerful machine.

The G. M. C. Samson attendant showed the camshaft of this machine. It is driven by worm gear half-way between its ends. A bearing on each side of the worm gear keeps the shaft from "whipping." Samson tractors were located at various parts of the field doing belt and drawbar work.

The Heider tractor was equipped with a three-gang plow, which is lifted out of the ground by the tractor driver pushing a foot-lever. In this position it can be backed into any corner.

The little Allen 10-20 built in Los Angeles is a new one on the market. It has a positive clutch on each rear wheel and no differential. It turns in a radius of 6½ feet.

A Cleveland tractor was put up in a horse-stall labeled "The Cleveland takes one-sixth of the stall-room required for horses needed for the same amount of work and it doesn't eat during idleness." One of these tractors, circled among posts set 20 feet apart, pulling implements as close to the posts as desired, to show close orchard cultivation.

The Fageol easily negotiated the turns on soft ground among stakes set orchard fashion. One machine circled unattended with a double disk.

Several sections of a Trundaar track had been taken off from a farmer's machine after being used a year. They were hung up beside a piece of new track. The old track had plowed, disked, chiseled, cycloned, and dragged 400 acres. There was no evidence of wear except that one side of the removable sprocket teeth had been worn so much that the track had just been turned end for end to present the other sides of the teeth to wear. After another year, new teeth will be put in. They would cost \$14.40 now.

A "horribly" cloddy field was worked down to a fine seedbed by the Sanduskies. The 15-35 pulled a ten-foot double disk followed by a double-

corrugated roller. The 10-20 pulled an eight-foot double disk followed a spike-tooth harrow.

CALIFORNIA LAND SHOW.

Agriculture received greater recognition than usual from city folks at the California Industries and La Show in San Francisco, October 4-19. It is right that agriculture should receive even more attention, for it is the industry for which this State is chiefly noted the world around. The various countries might have seized this opportunity, for attendance during the first three days averaged over 25,000 daily. Two three counties did reap great advantage from their displays, and several local communities were enterprising enough to compete for the prizes offered.

The industries and Land Show was entirely distinct from the California International Livestock Show to be held in San Francisco November 1-8, so no livestock was exhibited except rabbits and poultry, including quackless ducks.

Several tractors and trucks made in California added agricultural interest, and there was a great variety of exhibits intensely interesting to ranchers' wives as well as to the women.

At no previous show in the Exposition Auditorium have the decorations been so artistic. Mountain and agricultural relief scenes with paintings in the background were supported by realism by the odor of growing wood that filled the air from branches and trees used in the decorations. Myriads of lights were suspended, star-like, in the great dome, and shaded by a large red poinsettia.

The aim of the Show was to call public attention to the wonderful variety of products "made [and grown] in California." 'Twas worth driving many miles to see.

A SUCCESSFUL GROWER'S SPRAYING METHODS.

We were in one small pear section this season where the fruit averaged 15 to 20 per cent wormy. We saw some that also ran over a third of a fruit scabby. The weather was against doing a good job, it is true, but a little more "steam" would have obtained better results in this heavy section.

Now for the story. A large pear grower came to San Francisco a week to order his spraying supplies for next season, including his arsenical sprays. He had a large crop of very high grade pears absolutely free from worms or scab—the cleanest pears that were delivered this year. How did he do it? Last year he bought more material than he needed so as to be on the safe side and have it on hand. He sprayed his pears about a week earlier than anyone else around him and did the work very thoroughly—no skimping on material. As soon as his crop was delivered he went to his spray man for the next dose and placed the order.

A man from the same section sprayed late and used far less spray to the tree; in fact he returned unused material to the hardware man. The result was that he had a crop of wormy pears, though scab was so bad. The cost to number one was approximately \$40 for four sprayings. Supposing this had been cut down to material and one spraying to \$20 an acre, the difference in quality, given the same tonnage, might at the present prices be estimated as a loss of \$150 an acre in fruit—a reduction of \$20 a ton in value!

Fred Shaffer of Yolo county has been chosen president of the California Exhibitors' Association, organized for the purpose of getting the question of a one-million-dollar bond issue submitted to the people for the purpose of improvement of the State Fair grounds at Sacramento.

Look Ahead to Next Year's Harvest and the harvests of years to come

HARVESTS measure the health of your land. The farmer who uses wasteful methods of manuring robs himself of from five to fifteen bushels per acre. And more, he robs his soil of fertility which even proper manuring cannot restore for years.

PROPER manuring means light applications. It means applying manure while it is fresh. It means thin, but thorough, applications to every square foot of soil.

Your farm paper editor, county agent, or experiment station men will tell you that light applications the year around pay best. For government tests show that six months storage means an actual loss of one-half the valuable nitrogen, potash and phosphoric acid plant-food properties of manure--a loss that any farmer can ill afford to stand.

So begin right now-- and through every week of the winter continue--to spread manure direct from your stable onto your fields. Neither cold weather nor snow will stop this good work if you use a

THE NISCO Straw Spreading Attachment

NEXT to your manure pile, straw is your biggest, most valuable by-product. Burn it, and you burn fertilizer that is worth, at the very lowest, \$8.00 per ton. Burn it, and you burn the greatest protection you can give your wheat against winter killing. For adding humus to your soil, preventing soil washing and blowing, **straw is almost invaluable!**

The NISCO Straw Spreading Attachment--for old machines or new--shreds the straw and spreads it evenly 8 to 10 feet wide. Easy to put on or take off --a one-man machin.. Your dealer will show you. Or write direct for literature.

NISCO

The Original Wide Spreading Spreader

(Known as the NEW IDEA in the East)

The time to buy your NISCO is NOW! No other investment will pay for itself so quickly. No other labor will show up so big on your next year's profits. And in no other way will you save so much disagreeable, dirty work in handling your manure.

Just look at the illustration. See how the NISCO spreads--a full seven feet wide--laying a thin, uniform blanket of finely shredded manure on every square foot of your ground covered.

Loads High--Hauls Easily

The NISCO is built low down--it is easy to load. Pile it a full 30 inches high, and your team will handle it on any ground--spreading 3, 6, 9, 12 or 15 loads to the acre as you wish.

No gears on the NISCO to break in cold weather. Strong chains drive the pulverizing cylinders and the big steel distributor paddles that spread the manure in an even stream well outside the wheel tracks.

Simple in construction, extra strong, yet light-draft --this is unquestionably the spreader you need.

See Your Dealer

If you don't know the exact money value of your stable manure--used right--ask your NISCO dealer. Let him explain how the farmers of this country are actually losing \$700,000,000 each year through failure to get the most from their manure. And then let him show you just how the NISCO will **change your share of this loss to profit.**

We have prepared a mighty interesting and valuable booklet, "Feeding the Farm". It is packed with facts and figures about the money your manure pile can make. Sent, with a copy of the latest NISCO catalog, on request. Use the coupon below.

8-ft. Extra Heavy Tractor Chisel

KILLEFER
QUALITY

Now is the time to commence deep chiseling and subsoiling. Do it in time to prepare the ground thoroughly to receive the benefit of the winter rains. Break away from the old habit or mistaken idea of scratching the ground and expecting to harvest a crop.

Plow pan, although frequently referred to as mechanical hard pan, should not be confused with natural hard pan. However, so far as crop production is concerned, the effects of plow sole and hard pan are the same. Both must be destroyed before proper cultivation can be had, and the only difference in the two that will be considered here is in the method required for their destruction.

Plow sole offers less resistance to the available methods of breaking it up than hard pan, and, with the tractor and tool of sufficient

strength now available for tractor use, it can be broken up and subdued, bringing the land back to the point where a full yield may be expected.

Plow sole offers less resistance to tillage implements than does hard pan; both are in many cases impervious to horse teams and ordinary plows, and in some instances are difficult of handling with tractors and modern implements. Yet before a full yield may be expected, this condition must be subdued, and to date the only satisfactory means is by use of the chisel or subsoiler.

The Killefer Manufacturing Co.

2209-21 SANTA FE AVE.

LOS ANGELES, CAL.

Fifteen hundred pounds of seed from one acre of late Italian cauliflower were produced at the University Farm flower.

AGRICULTURAL NOTES.

Bean bags are unobtainable. There is no lief in sight or some time to come, say those who are handling bean bags.

Frost has practically stopped shipments of cantaloupes out of Rocky Ford (Colorado), according to a recent dispatch.

Onions have been shipped East in large quantities with a heavy demand. Prices to the wholesale market have been from \$2.50 to \$2.75 per hundred pounds.

The early vegetable growers in thermal belts are now busy getting their ground into condition for planting. The rains have helped all along the coast section.

The rainfall at Lodi for the recent storm was less than half an inch. Last year, when so much damage was done, there were 3.88 inches which fell September 12, 13 and 14.

The Bean Growers' Association have requested the State Department of Weights and Measures to establish a bureau of grading and certifying as to size and quality of beans.

The Hawaiian sugar crop is estimated at 600,000 tons this year, while the Philippine crop is only estimated at 150,000 tons. California, Utah and Idaho will yield perhaps 350,000 tons of beet sugar.

Because of inadequate supplies of hard wheat in the middle western states, flour millers of the Northern Pacific States, Oregon, Washington and Idaho, are the centers of attraction for buyers.

The bean growers are to be financed by credit on warehouse receipts through the Bean Growers' Association—a system of trade acceptances that will obviate embarrassment for current expenses.

The representatives of California bean growers will appear before the ways and means committee of the "House," October 15, to present facts in favor of the proposed 2-cents duty on beans, it is said.

The new season's beet sugar is arriving on the market and will relieve the sugar situation with regard to daily consumption. Present appearances point to a good outlook for beet growers another year.

A dollar a pound for hops is the price looked for by growers in Butte county, who have not yet sold. At the present price of 65 cents a pound, Butte's hop crop is estimated as being worth \$750,000.

Pumping plants costing over \$200,000 are to be installed in Reclamation District 108 (Yolo county) for the irrigation of rice next season. Over 15,000 acres will be planted to rice in this area the first season.

The Pacific Rice Growers' Association have filed a petition with the Railroad Commission, asking that

warehouses be compelled to operate 24 hours in order to expedite shipments and eliminate car demurrages.

Rice men still find the number of ducks increasing on them, and the ducks spoil more than they eat tramping it into the ground. Five cents a day per duck means some loss. It is said there are ten ducks this year to one last year.

The recent storms had not, it is believed, damaged the bean crop to any extent, though some were being cut or threshed and others still growing. All right up to October 7. A fair fall will result in a good harvest in the North, barring bad weather till the crop is threshed.

The California rice crop will exceed last year's by 50 per cent, it is estimated, or at least 1,000,000 bags more. Last year there were 110,000 acres planted as compared with 140,000 acres this year. The crop's value is placed at \$21,000,000.

"The Fresno Turkish Tobacco Company" is the name associated growers of tobacco have assumed in Fresno county. At present there are 90 acres in the county. Last year's returns showed 1,000 pounds of tobacco to an acre with prices from 80 to 85 cents a pound. This year of scarce water the crop will run from 300 to 700 pounds to the acre.

The United States government, acting through the Department of Agriculture, under the Plant Quarantine Act of August 20, 1912, has promulgated regulations absolutely forbidding importations of seed or paddy rice, except under strict supervision.

Solano county is co-operating with Napa and Lake counties in forming a marketing association to handle their products. Their delegates have met with the State Market Director for this purpose. Eighteen crates of Kelsey plums, shipped through the Placerville Fruit Growers' Association, sold in the East at \$6.60 a crate!

In 1917 California produced 44 per cent of the country's bean crop and in 1918 63 per cent of the total crop. A heavy importation of Oriental beans left our warehouses full. The California Bean Growers' Association at Stockton and the Lima Bean Growers' Association at Oxnard have been the chief means of alleviating an intolerable situation for the grower.

Cotton exports for August were almost double the figures for the same month last year, according to Government statistics just issued, the figures being 479,058 bales, as compared with 287,450 for August, 1918. For the eight months period, ended in August, exports were 4,166,668 bales in 1919, and 2,423,489 in 1918.

ORANGE COUNTY COMMUNITY FAIR.

(Written for Pacific Rural Press.)

'Twas good fun just to watch the home folks from all over Orange county comparing their canned fruits, cakes, sewing and pumpkins, apples, and garden truck of all sorts at the second annual Orange County Fair at Huntington Beach October 2, 3 and 4. This one, which is the culmination of several local "community" events, has not lost its community flavor, for we noted no exhibits from outside the county except tractors, trucks, and machinery. Each neighborhood had its own tables and corners filled with home-grown fruits and vegetables.

Livestock is still a minor feature of this community county fair. Classes for hogs included "Miscellaneous" only. Goats, rabbits, pigeons, and poultry received more attention. Forty-eight coops were installed for poultry alone.

It was not a still exhibition. Tractor demonstrations were held daily. Entertainers performed free for Fair visitors in one of the biggest tents every afternoon and evening. The third day of the Fair saw an auction of implements and another of livestock. Every day the people had lunch on the beach with free coffee furnished. Water sports, school athletics, band concerts, and lectures added interest.

Spain's raisin crop this year is about 11,000 tons.

Monarch

TRACTOR

The very words are so closely related that you can see the more traction it has, the better it is. Traction is what counts. Every detail of construction on a MONARCH Tractor is directed toward the ultimate purpose of the machine—to give traction.

There is only one way to get proper traction on a tractor—and that is the MONARCH way—by means of the endless MONARCH tread. It grips the ground with an unfailing creep to which hills, grades and loads are no obstacle.

The Monarch Tractor

with the track that laughs at grades and hills

There is no secret to MONARCH success. The cause is self-evident as soon as you look at a MONARCH Tractor. It is built to perform—to give traction and it looks the part. It has a combination of mechanical features all designed to give that brand of continuous, reliable service that makes tractor farming an economy.

Let us send you our catalogs and literature explaining the different construction features of the MONARCH Tractor. This will prove to you that it is the logical tractor. No one can afford to buy a tractor without seeing a MONARCH demonstrated. They are now made in the following sizes:

16-9 H. P.—The right size tractor for the average farm. Small enough to be handy for such work as orchard cultivation, powerful enough to pull from two to three bottoms.

30-18 H. P.—A big brute of a tractor—able to tackle heavy farm and road work. 18 H. P. at drawbar, 30 H. P. on belt pulley.

Do not confuse MONARCH Tractors with the so-called "track-laying" types. The track on the MONARCH is made of wear resisting manganese steel. We guarantee to duplicate for MONARCH Tractors any written warranty put out by any other responsible tractor manufacturer.

Write for MONARCH Tractor literature. It gives hard facts in a worth-while fashion. Ask for "PERFORMANCE BOOKLET."

Accessories at L. A. Demonstration

(Written for Pacific Rural Press by R. E. Hodges.)

One of the chief values of the accessories tents at a tractor and implement demonstration is to give everyone an opportunity to investigate equipment and machinery which has been put on the market during the preceding season. Another of the great values is in letting salesmen tell of the best features of their machines and then looking right away at other machines of the same kind to see how they compare. Dozens of new ideas have been worked out on plows, disks, harrows, grinding machines, and all kinds of machinery and accessories for tractors and motor vehicles. The passing observer does not see these things, but the stopping listener is surprised at the variety of new wrinkles applied to commonplace machines.

The accessories tent at the Los Angeles Tractor and Implement Demonstration September 16 to 21 covered over 34,000 square feet. Various exhibits overflowed to the outside and extra tents were used for some. The writer tried to hurry through the big tent, but ten or twelve hours proved only enough to skim off some of the cream. The notes below indicate some of the things that could be learned by the stopping questioner, but they do not cover the subject in any complete way.

Around the Double Seal piston ring a square shoulder is cut for another ring to fit on loosely with its ends at the other side of the piston from the ends of the heavier ring. When these are put on right side up, the force of explosion expands the double ring to make it fit the cylinder even if the latter is out of round. If put on upside down compression would leak side down compression would leak past it, but it would keep oil from working past the piston from the crank case and would hold vacuum in the firing chamber to suck fuel in. To get both effects, the upper ring on a piston is put on right side up and the next one upside down. The close fit of these rings was shown by the attendant who had a cylinder which was worn on one side. A stopcock had been inserted at the head of the cylinder to permit the piston to be pushed in or pulled out by hand. With the cock closed and a ring right side up the attendant stood on the piston a minute or two, but could not force it down because there was no leakage. With a ring on upside down he could push it in but could not pull it out until the cock was opened.

A two-inch section of a five-inch Norwalk inner tube was holding the weight of a 285-pound rock. It was stretched to about two feet long. The attendant explained that all Norwalk inner tubes are of nine plies all sulphur-cured. In the red tubes each ply is dipped in coloring matter before putting them together. Many other kinds of red tubes are of composition rubber with the coloring matter mixed in and cured with antimony. An outer casing had been cut diagonally and its five plies of fabric were separated.

Tuition in Motor Management.

Two schools for the teaching of automobile, tractor, motor truck, and gas-engine operation had exhibits and gave daily lectures on the inward workings of gas machines. The National Automotive School had a separate tent, including a representative exhibit of its facilities for teaching. Their school is located down town, but they also have a tractor field for practical work. The U. S. Tractor, Truck, and Auto school had a section of the main tent with seats for visitors and a tractor operated by a gas engine to illustrate the daily lectures. These lectures are copied by students each day. The students then adjourn to the shop, where each day's lecture is worked out in practice. This lasts about fifteen days, after which actual commercial trouble work is done by the students under supervision.

Bosch magnetos and impulse starters were shown working in clouds of dust and under jets of water. One of

them was fitted on a Ford engine to show its special adaptation. This was explained in our columns last spring.

In the Fairbanks-Morse engine section was a sign, "All Z engines are Bosch equip." Several of these, in various sizes, were suggestive of work done while you do something else. A vertical one-cylinder 50-horsepower Y engine, installed by Fairbanks, Morse & Co., was running smoothly and quietly. Part of its power was used to operate an eight-inch centrifugal pump, running the water over a weir.

Among the many displays that attracted the wives of ranchers was that showing Dreadnaught Oil-gas burners, heating all kinds of stoves, including spiral heaters for hot-water tanks and baths.

The Splittorf Electric Co. displayed a sign saying that 66% per cent of all the tractors demonstrating at this event were using Splittorf spark plugs.

Looking over the varied exhibit of the Germain Seed Co., showing poultry feeds, fertilizers, and labeled dishes of seeds, we were told of a new grain sorghum, the Higari, which will be put onto the market next year. About 22 acres are being grown in Arizona now for the Germain Seed Co. It is a hybrid, lighter in color than milo, but said to produce considerably heavier crops.

Practically the only paraffine-base California oil was played up in a striking manner by the Ventura Oil Co., who built a reservoir of paraffine at a slightly greater elevation than the miniature farm beside it and then overflowed the reservoir with oil from a fountain in its center. The overflow was carried off by an open concrete (paraffine) flume to distant miniature mountains.

One of the toughest-looking aggregations of big, knotty, crotched logs was vigorously sawed into slabs by the R. M. Wade crosscut saw, running 300 to 500 strokes per minute, the power being supplied by a gas engine mounted on a frame, which is moved from cut to cut on the log by one man.

In keeping with a feature of tractor demonstrations and tractor buying that is sure to come, was the exhibit of Tractometers designed for use of farmers in determining how much their tractors pull. It is one way of telling on a dial when the tractor is being overloaded, and how much pull it can exert on the drawbar at various speeds. It is an inexpensive dynamometer costing \$75 to \$150. It lengthens the life of a tractor by absorbing some of the shock when the drawbar is jerked, as well as by telling the driver when the tractor is overloaded.

Domestic Accessories.

A house-watering system new to Southern California was the Westco, shown by H. W. Schillinger. A suction pipe is put into the cistern and the pump connected in with a motor, which is connected to an ordinary electric light bulb. The faucet constitutes the switch, so that when it is opened, the motor and pump automatically start and water comes a-running. This is a little more expensive in operation than a similar outfit, which includes a pressure tank. The motor starts automatically when pressure in the tank drops to 15 pounds, or whatever pressure it is adjusted for. It stops when the pressure reaches 40 pounds, or at any other adjustment desired. Forty pounds is claimed to force water about 90 feet high.

Electricity designed to lighten a score of tasks in the farm home is supplied by the Delco Light machine, which generates electricity by the power of a very small gas engine and stores it in storage batteries whenever the farm lights or other electric appliances are not using electricity as fast as it is generated. "Juice" from the storage batteries can be used without starting the engine until the

Time has no terror for the owner of a Yuba

HE is confident of his ability to do his work well, quickly, and in proper season by reason of his knowledge of its long record of reliable performance.

HE is insured from the haunting dread of a breakdown at a time when minutes cost dollars by the high quality and superior strength of its working parts.

HE knows from experience and observation that he will continue to use his YUBA year after year, as a workman uses a fine tool—that a moderate annual outlay for repairs on wearing parts will restore its efficiency to par.

HE is certain that *time* will prove the economy of his investment in his YUBA tractor.

juice is nearly all gone, when the generator starts to recharge the batteries. A little motor connected into the circuit was operating a churn. An electric fan was keeping up a noticeable breeze. A vacuum sweeper was handy to connect into a socket when desired. Those who have used electricity for home work can scarcely conceive of themselves being without it.

The lowering water-level during 1918 and 1919 has left many centrifugal pumps dry. This has led to a good business in deep-well pumps of various kinds, which replace the centrifugal because they do not require pits. One of those shown at the Tractor Demonstration was the Bean, which has been described in our notes regarding the State Fair, where it was exhibited. Another, which attracted attention in the accessories and machinery tent was the Kimball, a rather recent product made by an old concern which has heretofore devoted its attention to municipal and other large pumps. The one at the Demonstration was throwing about 160 miner's inches with a very small lift, the power being furnished by a 6 h. p. Z engine. The Kimball turbine propeller is like a simple auger. As the auger motion of the water would waste considerable power, curved fixed vanes are placed just below each propeller to correct the whirl. A propeller and its vanes within an iron casing constitute a section of the pump separate from all

other sections. Deep in a well the sections, which are about fourteen inches long, are screwed one into another. Nearer the top, the casing for each section is lengthened to as much as six feet per impeller. Balls of about 1 1/4 inches diameter in a ball-bearing at the head of the pump support the weight of the shaft and its column of water. The balls are enclosed and running in oil. They can stand 13,700 pounds weight at 1,000 revolutions per minute, which is four or five times their maximum load on this sized pump. The shaft is hollow for grease to be forced to all bearings under 600 pounds pressure.

Several tractor crank cases and transmission cases were operated in the Standard Oil exhibit by a line-shaft which was run by a Western Electric Co. farm-generating machine. The tractor cases were cut away to show how the transmissions and crank cases are lubricated with zerolene and other Standard lubricants.

Most of the American Manganese Steel exhibits were lost in the freight mess, but several tractor track links were there to show how they can be bent and twisted without cracking or breaking. An increasing number of track type tractors are using manganese steel. This material is also designed for use on the exposed drive

gears of wheel tractors.

A canvas-covered pulley a foot in diameter hung throughout the show with one end of the canvas stripped back an inch.

THE IMPLEMENT AND TRACTOR DEMONSTRATION.

(Written for Pacific Rural Press by E. E. Hodges.)

It was a place to try the effectiveness of soil refining machinery. We watched one tractor making a noticeable impression on the clods which rolled and twisted it like a small boat on a choppy sea. It was pulling a loaded double disk, but the disk was riding over the clods. The crushing was done by the lugs on the tractor's wheels. This led one rancher to observe that it would be more economical to put longer lugs on the wheels and forget the disk.

On these hard big clods, other rollers and clod crushers and heavier disks were found which eventually did the work. Most of their efforts were displayed near the headquarters tents and attracted many visitors. It is a settled fact that tractors will plow adequately, but whether they will cultivate thoroughly and economically and conveniently, close to trees, seemed still to be a question in some minds.

HAIL, THE MILK BAR!

Has it come to stay? There is only one answer to that question, and that is, yes, to judge by the patronage accorded the experimental bar conducted by the Associated Dairymen of California in the gallery of the Exposition building at the State Fair. Nothing but milk drinks were served, but they were of wide variety and ranged in price from ten to twenty cents each. Everything from plain buttermilk to the more aristocratic drinks, like the Hereford Highball, Jersey Island Chocolate, Holstein Elixir, etc., were served by beautiful barmaids, dressed becomingly in white.

This association intends to start bars of this kind in all the larger cities and at the same time carry on a campaign of education as to the healthfulness of milk and its products as a human food in every way possible. Again we say, All hail to the milk bar!

A recent bulletin from the U. S. D. A. treats on methods to reduce losses of livestock from Loco Weed. It tells how to identify the three different kinds of this weed, methods of prevention and cure; also how to eradicate the weed from the ranges.

The New 16 valve Twin City Tractor

PAYS BIG DIVIDENDS

For the first time in the history of the tractor industry, the 4-cylinder, 16-valve engine (valve in head type) is now applied to a tractor. The TWIN CITY 12-20 with its 16-valve motor actually develops 25 per cent more than its rated horsepower.

This new 12-20 is a light weight tractor that will out-pull, out-last, and out-dividend other tractors of equal rating.

Not built down to a price, but built up to a fixed ideal—to do the work assigned to it better than it has ever been done before.

The highest grade tractor will unfailingly prove the least expensive and pay the biggest dividends.

MANUFACTURERS CHICAGO

Dairy Cattle at Coming Los Angeles Show

(Written for Pacific Rural Press.)

Situated very favorably as to distance and shipping facilities, Los Angeles will have a great show of dairy cattle, drawing from all parts of the State and Arizona. There may be some Eastern shows that will have a few more on exhibition, but there will be none better. From Lockeford on the north to Phoenix, Arizona on the east and San Diego on the south, they are coming to compete for the honors and display their economic charms to an admiring public.

Burr Farm of Los Angeles that has long been one of the mainstays in supplying the city of Los Angeles with milk, cream and butter, has gone into the registered Holstein-Friesian business extensively and will have a fine exhibit. Kenneth Abbott has had the management of the registered herd lately and that means they will be in the pink of condition.

Off to the west of that beautiful little city of Chino, far enough to be somewhat by itself and still near enough to be convenient, is located the George Jr. Republic, a school for boys, with agriculture and livestock features always uppermost. They will show a fine lot of Holsteins with their great herd sire, Dichter Spofford Korndyke Lad 5th, at the head of the bunch. The boys at the school care for and will fit the cattle under the supervision of R. A. Condee, farm superintendent.

When you think about Jerseys you cannot help but think about the cattle owned by Grant A. Brown of El Monte, and be sure and see them at the Los Angeles Live Stock Show. He will be on hand with seven head of his beauties to demonstrate the ability of the south to grow the very finest of the breed. To see them once is to remember them always.

Down in the southernmost end of the State are found some of the greatest Guernseys in America. Edgemore Farm, W. H. Dupee, proprietor, Santee, will show a strong herd. He has a large number of good ones to select from and should be right up at the top in all of the classes.

Frampton Bros. of Artesia grow the best Indian corn in California, according to their statement, and back this up by actual figures. They grow this corn and feed it to some of the best Holsteins found anywhere, and they will be at the show with a very strong bunch of not less than five head. They won grand championship on their bull, Segis Pontiac De Kol Burke Clyde, last year at the Liberty Fair and this individual has not deteriorated, to say the least.

A. J. Stalder of Riverside has Holsteins that are good in performance and in the show ring. They will be at the show with a contingent that will engage the eyes of the judges in a way that will make it somewhat dangerous for his competitors.

Guernseys from Grape Wild Farms, Escalon, A. B. Humphrey, owner, will be at the Los Angeles Show this year. They will have a show herd representative of all stock shown by this great breeding establishment. Production and supreme conformation go hand in hand in this herd and their show cattle are always found in the ribbons with the blue color predominating. There is always a Guernsey show where Grape Wild Farms herd is exhibited.

Santa Anita Rancho, Santa Anita, will have a herd of high-honor Holsteins in the show ring of the kind that take the eye of the dairyman every time. Their herdsman, Mr. Earl Sturgis, knows the game from production to show ring and has done some great work along production lines, and in the show ring this fall the cattle under his care will bespeak a place right up in the front row.

E. L. Haas of Downey has Jerseys entered, and although a new man on the list, will help to make a good show.

Phoenix, Arizona, is in a rather warm locality on the earth in the summer time, but it does grow alfalfa nearly the whole year round and, therefore, dairy cattle thrive and produce wonderfully. Mr. Buckley is

bringing a herd of Jerseys to Los Angeles to compare with those owned in California and to compete for the honors at this great show. If his cattle are as good as the Salt River Valley climate in the winter time, California breeders will indeed "sit up and take notice."

Jerseys are not the only good dairy cattle raised in the Salt River Valley of Arizona, as Frank Reed Sanders will have herds of Dutch Belted and Holstein-Friesians to prove that black and white is a good color for dairy cattle in that region. Mr. Sanders has shown Dutch Belted cattle before in California, but now he comes doubly armed in this popular color and will make a fine showing.

When J. E. Thorp of Lockeford starts out on the show-circuit he keeps on going, therefore, he will be found in the ring at Los Angeles with something like a dozen and a half of his favorite cattle. Mr. Thorp is really one of the constructive breeders of the State, and while he has one or two new ones, his herd is practically all his own breeding and they are good ones, too, as his winnings at the State Fair and elsewhere this year will tes-

Dichter Spofford Korndyke Lad 5th, Herd Sire in Holstein herd of George Jr. Republic, Chino.

tity. His showing will be Jerseys.

Riverside, California, is a great place for many things and among them is a herd of the aristocratic Jerseys just on the outskirts of this beautiful city, and they surely detract nothing from

its beauty. J. E. Wherrell takes great pride in his beautiful cattle and is coming to the Los Angeles Show to see just how blue ribbons are won. The show of Jerseys promises to be a great one, and Mr. Wherrell is confi-

Calco Farm Products make and save you money - -

—because Calco Farm Products, made of Galvanized Armco Iron and Cast Iron, last. They resist rust, and hogs or stock cannot chew them to pieces.

—because, being metal, they are easily washed and cleaned. There are no cracks in which germs can hide. And clean feeding and watering equipment means fewer sick animals—and more profits.

—because they save the time of yourself and costly farm help. The watering fountain—the Automatic Grain Feeder—save hours—and money.

—because these feeding products are so constructed that they save grain and other feed—another vital saving advantage.

—because the actual money cost is small—compared with the cost of material and labor of wooden disease traps.

The Fixed-Feed Separator Has Been Tried and Found GUILTY!

Every year thousands of dairymen and farmers discover that the fixed-feed separator is wasteful. They refuse to accept the alibis put forth by the fixed-feed separator, such as speedometers, speed bells and other contraptions that merely warn the operator when he turns below speed and do not really prevent butterfat loss.

Suction-feed is the only principle in separator construction that prevents butterfat loss resulting from slow turning and Sharples is the only suction-feed separator. The Sharples skims clean at any speed—something no other separator does and that no other separator dares to claim.

SHARPLES

SUCTION-FEED CREAM SEPARATOR

SKIMS CLEAN AT ANY SPEED

Get the evidence. We will send you reports of actual tests made by dairy experts, testing associations, creameries all over the country. These reports show in dollars and cents how wasteful separators are that fail to skim clean all the time.

There is only one way to make a separator fully efficient, and that is to use a Sharples. It is the pioneer American separator—having behind it the oldest and largest separator factory in America, with 100% American ownership.

dent his cattle will win their share.

The Ayrshires are coming into their own in California and J. Henry Meyer of San Francisco and Watsonville, with his Elkhorn herd, is doing a great work in bringing this great Scotch breed to the fore. His herd won first honors at the State Fair this year and he will show practically the same ones at Los Angeles. Wm. Hendrie, the herdsman, will surely have

them so that they will be "a sight for sair een."

Coming into competition with the Elkhorn herd of Ayrshires is another competition contingent from the Salt River Valley of Arizona in the herd of A. C. McMinn of Phoenix. This valley will grow almost anything and the Scotch "coo" certainly ought to do well for all of its being so widely different from her native heath.

The Coming Swine Show at Los Angeles

(Written for Pacific Rural Press.)

The herds showing at Los Angeles this year are all from California and most of these from the southern part of the State at that. The newer breeds are leading in numbers with the Duroc-Jerseys at the head of the list. This last-named breed is very popular in the south, and if it was not for some noted herds of Poland-Chinas and Berkshires from the north, the Duroc-Jerseys and Hampshires would have it all their own way. Fourteen exhibitors of Durocs, six of Hampshires, and only six altogether of Poland-Chinas and Berkshires. Something is surely wrong in southern California with the older breeds.

In the Poland-China department M. & A. L. Bassett of Hanford will be in line with a large showing of their favorite breed. They were at the Liberty Fair last year and are back again this year. The senior member of the firm has bred more registered Poland-Chinas than any other breeder in the State, and is now showing swine of a

among the smaller breeders on one of the smaller subdivisions of the wonderful San Fernando valley. Their herd may not be as large as some, but it is producing hogs that will look fine in any company and the big fellows won't have it all their own way all the time when it comes to the show ring, for Hewitt Bros. will have some in line when the time comes.

This same Fernando valley is great for alfalfa and that alfalfa is as full of red hogs as some parts of California used to be of fleas. L. Leist of Van Nuys is another breeder whose herd is not the largest, and he means to see how his Durocs will look beside the others that are to be at the Los Angeles show.

Donald H. Graham, owner of Rancho Del Sur, near Lancaster, in the Antelope valley, has heard the call of the show ring at Los Angeles and will come down and fill most of the classes with his Durocs. The wind may blow a little at times on the Mo-

Grape Wild Rose, senior and grand champion Berkshire sow, A. B. Humphrey, owner, Escalon.

very popular type with both the breeders and packers. A quick-growing animal with plenty of bone and an excellent breeder; in fact, the "advanced type."

The George Jr. Republic of Chino will show Duroc-Jerseys, as well as Holsteins. The boys at the school are taking a great interest in the swine department and they ought, under Mr. R. A. Condee's management, make a good showing.

Castleview Ranch, Santa Rosa, will exhibit Berkshires and of the blue-ribbon type. J. Francis O'Connor, owner of the above-mentioned herd, is an enthusiastic booster for the Berkshires, and is comparatively a new breeder, but with an old head on his shoulders. It can be said truthfully that Mr. O'Connor is doing as much or more for his chosen breed of swine as any other man in California today.

The "sheeted" hog finds an advocate and supporter in L. A. Denker of Saugus, who will have his herd in the ring when the "gong sounds."

The motorist on the State Highway, about half-way between Los Angeles and Santa Barbara, notices an attractive sign telling him that the collection of nice buildings in a setting of hills and trees is Conejo Ranch, the place where they breed Hampshires and Duroc-Jersey swine. They have one of the largest swine-breeding establishments in southern California. Last year they made a great showing and will no doubt repeat what they did then when they get started. So far they have not shown, but expect to have a full quota out of each breed at Los Angeles. With their new importation from the East and Mr. Geo. Waltmeyer to manage the herds, they certainly ought to make the upper end of the line some of the time at least.

Hewitt Bros. of Van Nuys are

jaye desert, but do not think for one minute that Mr. Graham's Durocs are filled with it, for they are real top-notchers and will be rooting along toward the top of the line by the time the judge has finished.

Berkshire herds are not as numerous in this southern show as the lovers of this great breed of swine would wish, but there will be a Berkshire show for all that, as A. B. Humphrey of Escalon will be there with his herd, so that while the herds may not be as strong in numbers as some of the other breeds the exhibition will not be lacking in quality. Grape Wild Farm's herd will have a full quota and fill all classes.

Ireland Ranch at Owensmouth will show their Duroc-Jerseys, of course, and it won't be any insignificant, poor stuff either, as they have a lot of good ones, and it won't be best for those making up a slate of the winners to forget this herd. Some of them have been thought good enough to go East, but the owners thought best to hold on to what they have and not go to "chasing rainbows."

The Hampshire delegation cannot help but be strengthened by those shown by the Fairbanks Ranch at Redlands. Mr. Harvey, the manager, is an enthusiastic advocate of the breed and knows good Hampshires when he sees them. They will show a full quota. Only the very best animals in this herd, either male or female, are kept for breeding purposes and the culls go to the butcher and not to some innocent beginner.

E. Avery, Newton, is rather of a new breeder in the Duroc game, but he will compare his good ones with the others at the "big show" and see who has the best ones.

C. J. Gilbert of Lancaster has a herd of Hampshires that are among the

best and he cannot resist the temptation to show with his fellow breeders in friendly rivalry for the coveted blue, red and white ribbons that are really so little in themselves, but represent so much oftentimes to the winners of them.

The Perris valley south and east of Riverside seems to be a great place in which to raise swine, as many good herds are already established in that region, due to the ease with which alfalfa, milo maize and kindred feeds are raised. Falfadale Farms are, located not far from the village of Perris, and they are raising and importing some of the best Duroc-Jerseys. They recently brought out from the East a new herd sire, for which they paid \$2,000, and this, with many other good ones they have, will be shown at Los Angeles.

M. L. Montgomery of Simi, Ventura county, has some Poland-Chinas that are good enough to visit the "big show" at Los Angeles and help hold up the end for this great breed that seems to be lacking in numbers at this particular place.

Llano Vista Rancho, owned and operated by Gordon & Langdon, breed Hampshire hogs that are true exponents of the breed. They have a lot of 'em and are bringing some of their

best ones to try for first place in all the classes. They are bred right and fed right and right in conformation, so look out you fellows that think you are going to have some easy pickings, for you will find some Llano Vista Hamps in all classes.

Some men are born to do things by wholesale and J. E. Thorpe of Lockeford seems to be one of these. He is not satisfied to show one excellent type of domestic animals, but must have two. It is told in another column how Mr. Thorpe expects to exhibit Jerseys and now we have to record in this column about his expectations in the Duroc-Jersey swine department. He has twelve out on the show circuit that are winning lots of ribbons so far. You may stop him at it, but it will take good ones to do it. The beauty of it is, too, that these hogs are all bred by himself.

Bonita is a little place situated in the Otay valley, 15 miles southeast of San Diego, almost in sight of the Mexican border. It is not a large place in point of numbers, but there is located one of the greatest swine-breeding establishments in California, which is known as the Winsor Ranch, with R. K. Walker as part owner and manager. Last, but not least, they breed Duroc-Jersey swine, and it is the home of Model Defender Lady, grand champion sow at the State Fair this fall, and also said to be, by Fred Devore, one of the four greatest sows of the breed in America. Mr. Walker will have 24 head on exhibition and every one of the kind that are fashionable in conformation and breeding. Their consignment will materially help to make Los Angeles a great Duroc show, and that means a great swine show to many.

Out south of Los Angeles, almost on the beach, is located the little place Lomita, where J. L. Hall has his Poland-China ranch. He will bring some of his good ones to the Los Angeles show and help keep the reputation of his favorite breed where it should be.

Keystone Ranch at Lankershim will be on hand with some of their quality Durocs and will let people know that southern California is one of the best places in the world to grow swine.

Mrs. F. M. Connor of Pasadena is a great believer in the hog as one way to reduce the H. C. L., and she raises two kinds, viz.: Berkshires and Duroc-Jerseys. She will have some from both sections of her herd on exhibition and will no doubt be found near the top.

From over or around the Sierra Nevada, from the thriving city of Bishop, in that new and promising agricultural and livestock section, comes C. T. Thompson with his show contingent from his great breeding herd of Duroc-Jerseys. Last year he won the grand championship for boars with Thompson's Pilot Defender, a grandson of McKee's Defender and the pioneer Defender boar of the Pacific Coast. Mr. Thompson is very apt to duplicate his winnings of last year. Of course, the competition this year will be more keen, but it is safe to say that Mr. Thompson has not stood still in the business either.

The Diamond Bar Ranch and Walter Gatton—these are coming to be names to conjure within the livestock game, particularly just at present in the Duroc-Jersey swine department. With a large foundation herd and a new shipment, this season of premier stock selected from the best herds of the East, this establishment, situated 30 miles east of Los Angeles at Spadra, will be at the southern show with 30 or more Durocs.

Mr. F. E. Lewis 2nd, who is owner of this giant livestock enterprise, is a genuine lover of the game and aims to not only buy the best, but keep and breed the best. It sometimes takes some nerve to refuse double or quadruple what an animal seems to be worth, but the true breeder will do so if he is convinced that what he has is what he wants and will perpetuate and improve its kind. Such a man we believe Mr. Lewis to be and we look for him to do a great work in the livestock world of the Pacific Coast.

There never was a time when it was more necessary to weed out the "boarders" in a dairy herd than now.

If you want cows that will be a pride to your farm — get Jerseys.
If you want prize cows of unquestionable, pure-bred breed and championship calibre — get Jerseys.
If you want cows that feed for their udder, the profit part of a cow, and not for beef and bone — get Jerseys.

JERSEYS

BEEF CATTLE CONTINGENT AT LOS ANGELES.

(Written for Pacific Rural Press.)

The "doddies," the "whitefaces" and "reds, whites and roans" have combined to make this a beef cattle show. From North Yakima, Washington and Cheyenne, Wyoming, on the north, Kansas City on the east and Perris valley on the south, they have gathered in their glory to amicably compete for the honors so generously listed by the people of the southern city.

Caledonia Farms of West Sacramento and San Francisco, J. C. Cebrian, owner, will make their initial appearance in the show ring with the great bull, Imp. Caledonia, at the head of the herd. They will make a strong showing and will materially strengthen the Shorthorn classes on the Pacific Coast circuit.

The "doddies" will be represented by the premier herd of the Pacific Coast, that of Congdon & Battles of North Yakima, Wash. What they lack in numbers they will make up in quality. It certainly is to be hoped that the future will see an increase in the number of these cattle grown and shown on the coast. They are worthy of a wider distribution.

Conejo Ranch of Newbury Park will show Herefords for the first time. They will without doubt uphold the reputation of this great stock-breeding concern by showing as good cattle as they have swine. They certainly are in a position to breed and grow as good stock as can be grown anywhere in the world. They have ranch, climate, and last, but not least, the brains to make their mark as breeders of premium stock.

F. L. Hall of Perris valley, that wonderful country south of Riverside, where alfalfa is always green and "cattle always contented," will come to the show with a showing of Shorthorns of both beef and milking strains. He has some good ones and will have his eye on the first places.

Henn's Herefords, all the way from Kansas City, will make the Hereford showing stronger and compete for honors in all the classes. It is encouraging to have the Eastern breeders patronize the Coast shows, as it gives the Western fellow a chance to compare his stock with the source of Hereford cattle, as Kansas City is called the "heart of Herefordom."

The Pacheco Cattle Company of Hollister are following the circuit of the big shows this fall with their Shorthorn show herd. They will probably have 12 head of cattle that will be "in the money" in most of the classes. Their ranch situation is particularly good for raising top-notchers and they will always be a force in Shorthorn circles as long as they are in the business.

Rancho San Julian, owned by the Thos. B. Dibblee Estate of Santa Barbara, prominent breeders of Shorthorns, will exhibit their show herd and no doubt duplicate their winnings of the past. They have a strong herd and have added to it from the East this summer. This herd has been in existence for over sixty years, which is quite a record for the coast.

A show delegation from probably the largest registered Hereford breeding establishment in the world. This firm, known as the Hereford Corporation of Wyoming with headquarters at Cheyenne, has close to 1,000 head of registered breeding cows, and a carload of show stuff selected and fitted from such an aggregation certainly ought to be "good lookers."

T. S. Glide, Hillcrest Stock Farms, Davis, has long been noted for raising blue ribbon Shorthorns, and he is keeping up his reputation and following the big show circuit with a typical show herd this season. Such ones as Little Sweetheart, Spicy Lady (white cow with white calf at foot), King's Countess and others will be in line when the time comes. The Hillcrest cattle also are one of the old-time herds so well known in California.

D. H. Odgden of Alpine will be in line with a nice bunch of Herefords. This herd is one of the few show beef herds of southern California.

Appreciation of Auctioneer Service

Lodi, Cal., Sept. 20, 1919.

COL. ORD L. LEACHMAN,
Sacramento, Cal.

Dear Sir:—

You will please find enclosed check for \$125 which we agreed to pay you, with an average as it is.

In behalf of the SAN JOAQUIN COUNTY POLAND-CHINA BREEDERS' ASSOCIATION, I have been requested to send you a letter of thanks expressing our appreciation of the good work and assistance you have given us during our past sale.

You can feel assured that every member of our association will heartily recommend your services as an auctioneer.

Hoping we will be in a position to do business with you again in the near future, I am

Respectfully yours,

(Signed) SHERWOOD W. BECKMAN,
Secy.-Treas. S. J. Co., P. C. Breeders' Assn.

KING SEGIS ALCARTRA PRILLY

Grand Champion California State Fair, 1917, 1918, 1919.

His get won State Fair, 1919: Grand Champion Female; Junior Champion Heifer; 1st and 2nd Get of Sire; 1st Calf Herd; 1st Breeder's Young Herd; 1st Senior Yearling Heifer; 1st and 2nd Junior Yearling Heifer; 1st and 2nd Junior Heifer Calf; 1st and 2nd Senior Heifer Calf; 2nd, 3rd, 4th and 5th Senior Bull Calf; 1st and 2nd Produce of Dam.

FOR SALE

Young bulls by this sire from highly-bred, heavy-producing cows, with records up to over 35 pounds of butter in 7 days and 139 pounds in 30 days. Have some exceptionally fine young bulls about ready for service at very reasonable prices. Our cows won more places in the list of prizes for production given by the Holstein-Friesian Association for 1918 and 1919 than any herd on the Pacific Coast.

Horses Then and Now

(Written for Pacific Rural Press.)

The writer can remember how in "auld lang syne" the livestock show or fair was mainly horses and light horses at that. Then the drafter made its appearance and started seemingly an endless controversy between the breeders of the light horse on the one side and breeders of the draft horse on the other. Gradually the drafter won his way to the front until finally it seemed as though he would reign supreme forever more. His supremacy received a setback, however, along in the '90's, when it was almost impossible to sell draft horses at any price, especially breeding stock. Again the draft horse breeder pulled out of his "slough of despond" and again he reigned supreme from coast to coast and from the gulf to the eternal snows of the Arctic circle.

Then the automobile made the burden of the light horse less and less until his usefulness has passed to a large degree. The drafter hung on, however, until the auto's big brothers, the tractor and truck, commenced to grow and expand into "quads," caterpillars or "cats," "fordsons" and "sich-like ants" of the lesser tractors. Then it once more seemed as though the draft horse was a permanent member of the "has been" club, but since the war there have been signs that the great industry is once more awakening, as there is an added demand for breeding stock at home and also from European countries to a limited extent.

At the State Fair there was something to be seen of this in the large showing of beautiful and massive drafters, and now comes the Los Angeles Show, with a long entry list of Percherons.

Hall Bros. of Perris will have a beautiful black quintet composed of four mares and two-year-old stallion weighing 1,900 pounds and as good as he is big.

Mesa Sarita Ranch, J. S. Marwick, owner, will have a string of Percherons that will take us "old-timers" back to the palmy days. He ought to be inside the money in many of the classes.

Santa Anita Rancho will show almost all kinds of horses, that is, Percherons, Arabians, Thoroughbreds, as well as Mammoth Jacks. They have good ones and will make a great exhibit.

Merritt & Bowers of the Tagus Ranch at Tulare will also be in line with the powerful Percheron and of "merit," too.

O. H. Brandt of Shellville, Sonoma county, is the only exhibitor of the bonnie Scotch Clyde; but often one entry in the Clydesdales is a whole show in itself and a good one at that, combining style, action and massiveness all in one. Mr. Brandt shows ten at least, so there will surely be a Clydesdale show.

It must not be supposed from what has preceded this that the light horses are all dead and buried, but far to the contrary. They are now truly the aristocrats of horsemanship, only owned and used by the true lovers of horses and those who can afford such a luxury in these times of H. C. L. and also H. C. of horse feed.

As has been said before Santa Anita Rancho will exhibit Arabians and Thoroughbreds; Robert H. Gudgeon, Santa Barbara, Saddlers; Thaddeus Lowe, South Pasadena, Saddlers; John E. Marble, South Pasadena, Saddlers; Chas. W. Winter, Alhambra, Saddlers.

Riding ponies will be shown by Margaret E. Rock of Santa Barbara.

The above goes to show that things don't always stay down when they are thought to be even dead and buried. We still have some horses with us for so long that it is safe to say a pair would be in the next ark if there ever was to be another flood.

Present Aspect of the Goat Industry

(Written for Pacific Rural Press.)

Some fifty years ago a goat craze swept over the eastern part of the United States, including what is now called the Middle West. This only included the Angora or Mohair goats, with their grades and crosses. This fever soon died out and nothing more was heard of this branch of the livestock business for years.

All at once, about 25 years later, out of nowhere, or a clear sky, seemingly came another goat boom and this time it included all of the United States from the Atlantic to the Pacific and from the gulf to the Canadian line or beyond. The goat boomers "worked" the brushy, partially abandoned agricultural sections of New England, the timbered regions of the South, the cut-over pine localities of Minnesota, Wisconsin and Michigan, and last but not least, the arid sagebrush mountainous regions of the far West.

This last boom was of longer duration, and as in the first one of the early seventies, included only the Angora and its grades and crosses. This finally left the Angoras in regions adapted to them and demonstrated their economic value in those places, although their adaptability is not as general as the boomers would have had us believe.

In late years, or quite recently, in fact, we have another goat craze or boom, but of a different kind. This is the milch goat boom. Just how much of a place they are finally going to occupy is hard to determine at present. Some look upon the question rather quizzically, others with a doubt expressed and say it will soon die out. However, the fact remains that the industry seems to be growing and establishing itself on a more or less sound basis.

The place for them at present seems to be confined to the breeder and to those living in the outskirts of cities and villages, with a few goat dairies supplying milk for infants and invalids when prescribed by physicians.

The claim is made that the milch goat is absolutely free from tuberculosis or any other disease communicable or inimical to man. If this is true it is a great point in their favor, and we hope it is.

This phase of the livestock industry on the Pacific Coast seems to have its strongest foothold in Southern California at present, and whenever there is a fair or show of any kind in that region, from county to county, or the Los Angeles Livestock Show, the milch goat is found in steadily increasing numbers. The coming show at Los Angeles is no exception and following is a list of the exhibitors in various breeds of milch goats:

SAANENS:

S. H. Bowman, Los Angeles.

TOGGENBURGS:

I. M. Burdick, Glendale; J. T. Hoggins, Fullerton; Minnie B. Kiggins, El Monte; John N. Linden, Los Angeles; Mrs. S. O. Rhodes, Pasadena; W. B. Wilson, Lankershim.

NUBIANS:

Archie E. Ford, Hawthorne; Emma Kraft, Los Angeles; C. D. Miller, La Crescenta; Belle F. Miller, La Crescenta.

It will be seen from the above that the believers in and lovers of this growing branch of the livestock industry will have a good opportunity to inspect some of these economical milk producers.

Sheep.

The woolly fellows that furnish people of the temperate zones with so much of the material for their clothing will be represented by flocks from Oregon and California.

Half a dozen breeds will be shown, ranging from the well-known and popular Rambouillets to the newest of all breeds in this country, the Corriedales, Hampshires and Shropshires coming in between.

The list of exhibitors in this department is not at hand at the time of going to press.

A New Law

Every Dairyman should make a special effort to familiarize himself with the new State Feed Stuffs Law which becomes effective November 1st, 1919. This law was passed for your benefit, to protect you in the selection of your feed stuffs. It makes it possible for you to feed more intelligently and base the buying of your feeds on actual feeding value.

You know what you are feeding in roughage and no doubt what you should feed in a concentrate to strike the proper balance that gives a maximum milk yield.

What you want—is to know the analysis of the concentrate you feed and what simples are used in its manufacture.

You should know what kind of feed you are buying and buy a feed that will return a greater profit to you by way of increased milk yield.

Besgrade Dairy Feed is just such a feed—you can judge its real value, it comes to you tagged, showing analysis and ingredients.

Post yourself on the new feed law, passed for your benefit and also on the value of Besgrade Dairy Feed. Use the Coupon, it does not obligate you.

Great Western Milling Co., Los Angeles

Great Western Milling Co.,
Los Angeles, Cal.

Gentlemen:

Send me a copy of the New Feed Stuffs Law, also your pamphlet on Besgrade Dairy Feed containing analysis and ingredients of same.

McArthur, October 2-4. This fair is in what is known as the Fall River country and should have a good exhibit of livestock.

Livestock Queries and Replies

Hog Has Staggers.

To the Editor: We have four pigs which have been doing finely, but recently one suddenly seemed to lose the use of its legs, cannot control them and staggers around. Its eyes seem slightly swollen. It eats and seems well enough, only its joints seem all loose.—E. F. D., Aptos.

(Answered by Dr. E. J. Creeley, San Francisco.)
Give a good dose of castor oil. Change the diet to easily digested nutritive food and give the following: Acetanilid, ½ ounce; gentian root pulverized, 2 ounces; nitrate of potash, ½ ounce; slippery elm bark pulverized, 4 ounces. Mix and give a teaspoonful in the feed twice a day.

Symptoms Too Vague.

To the Editor: A sow farrowed 9 pigs, but developed milk fever. Three died and one runs with another sow. The five left have been running with their dam and have received some feed by hand. These five have developed a mouth disease in the form of a sore which is closing their eyes. The whole bunch have quite a hacking cough which I laid to dust around the yard and pen. We took them away and are washing their jaws with a solution of sheep dip, 1 to 50. Could you give me any remedy, and what

caused it? Is it contagious?—A. B. C., Kirkwood.

(Answered by Dr. E. J. Creeley, San Francisco.)
The symptoms are too vague to make a correct diagnosis. Separate the sick ones. Thoroughly cleanse and disinfect with Creoline, 1 cup; formalin, 1 cup; water, 5 gallons. Irrigate, spray and wash every portion of pens where the sick ones are kept. Bathe the affected parts with the following: Saturated solution chlorate of potash, 1 quart; oil citronella, 10 minims; zinc sulphate, 1 drachm; tincture chloride of iron, ½ ounce. Apply several times daily.

Bovine Conjunctivitis.

To the Editor: I have six cows that have sore eyes. A foamy matter runs from them. Can you tell me what to do for them?—J. R., Gonzales.

(Answered by Dr. E. J. Creeley, San Francisco.)
This is infectious conjunctivitis or inflammation of the lining membrane of the eyelids, and involves the canal carrying the tears to the nose. First wash thoroughly twice daily with bi-chloride mercury solution, 1 in 10,000, after which apply the following ointment: Yellow oxide mercury, 16 grams; lanoline, 2 ounces; white vaseline, 2 ounces. Mix and rub directly between the lids once daily.

DAIRYMEN'S DAY.

Dairymen's Day at the Los Angeles Livestock Show occurs Thursday, October 23, 1919, under the auspices of the Los Angeles County Farm Bureau.

9:30 A. M.—Auditorium State Exposition Building, Exposition Park, Figueroa and Exposition Blvd. Vice-president J. B. Vaile, San Dimas, presiding. The Los Angeles County Farm Bureau, Secretary W. S. Rosecrans, Gardena. The State Dairy Council Idea, S. H. Greene, Sec.-Mgr. California Dairy Council, San Francisco. The Place of Cow-testing in the Dairy Business, N. A. Negley, Dairy Division, U. S. Dept. of Agr., Salt Lake City. Ten Years of Testing and Feeding in Humboldt County, the Hon. F. J. Cummings. What Cow-testing Has Done for Our Herd, Wm. R. Harriman, Supt. Los Angeles County Farm. Feeds and Feeding Rations for Dairy Cows, Assistant Farm Advisor G. E. Gordon.

2:00 P. M.—In the Fair Grounds, Assistant Farm Advisor F. H. Scribner, noted judge of dairy cows, will conduct a judging demonstration.

8:00 P. M.—At an up-town auditorium (probably Symphony Hall) all dairymen are invited as guests of the California Dairy Council to a get-together meeting. Interesting program of music and pictures.

Look for the Farm Bureau cow-testing exhibit at the show.

SHORTHORN BANQUET.

Following the third sale of Shorthorns at San Francisco on Thursday, November 6th, a banquet will be held at the Palace Hotel at seven o'clock P. M.

As is usual with these little get-together affairs the occasion will be informal and some interesting addresses will be made.

The importance of the San Francisco Livestock Show coupled with our third sale warrants the attendance of a goodly representation of Shorthorn breeders and their ladies.

HORSE RACING AT LOS ANGELES SHOW.

Special prizes aggregating \$500 offered by Anita M. Baldwin of Santa Anita for the best five-gaited saddle horses, in which classes there are fifteen or more entered, and \$300 for the best three-gaited from Hart Bros., will give admirers of these beautiful, graceful and spirited animals an unequalled opportunity to inspect their favorites.

Superintendent Ed Smith, the well-known race horse man, who has the racing program in charge, has entries from all over the western part of the United States and among them are some of the fastest horses in all classes, trotting, pacing and running. Good judges of tracks and horses say it is possible that records may be smashed in all classes. Those who are still interested in the racing of the horse kind—and who is not—will certainly have their fill of enjoyment at this time.

THE SHORTHORN SALE AT SAN FRANCISCO.

The Ormondale Ranch of Redwood City will enter six head of heifers and two head of bulls in the Shorthorn Sale at San Francisco on Thursday, November 6th.

The quality of these animals, under the able handling of Mr. James McDonnell, the superintendent of the ranch, is assured.

Messrs. H. L. & E. H. Murphy of Perkins have entered the three heifers which they were fitting for the Sacramento Fair, but which owing to the illness of E. H. Murphy they did not show.

Two choice heifers will be consigned by the Pacheco Cattle Company of Hollister.

The beef cattle exhibit at the livestock show promises to be excellent both from the standpoint of numbers and quality.

Land is too valuable anywhere now to grow scrub stock. Get some purebreds—at least purebred males.

ANNOUNCING WESTERN BERKSHIRE CONGRESS

SALE OF
30—BRED GILTS AND SOWS—30
At LOS ANGELES LIVESTOCK SHOW
Wednesday, October 22nd, 1:30 p. m.

This sale will be made up of selections from the best herds in the West, including a number of sows from show herds.

A. E. HUMPHREY, Pres.
Escalon, Cal.

FRANK B. ANDERSON, Sec'y.
Box 724, Sacramento, Cal.

COL. ORD L. LEACHMAN, Auctioneer.

A postcard to the secretary will bring a catalog.

It Pays to Buy a Sire of Character

It pays to put a sire of character and individuality and an animal that will reproduce himself at the head of your herd. I have always believed it. The history of livestock breeding shows it. But this year, my winnings at the California State Fair proved it conclusively.

My Giant fifteen-months-old Berkshire boar, Natomas Baron Duke, was the grand champion of the show. He was pronounced by Judge Wyman Lovejoy of Roscoe, Illinois, as one of the best individuals he ever had seen. Immediately after the show Ruland and Mrs. E. A. Hardy, Manager of the Mark Requa's Anchorage Farm at Orland, purchased the winner from me for \$1,000.00. He has found a home in a herd of splendid foundation sows.

There is more world and national championship blood in my herd of sows than any other herd in the world. A big statement, but true. My sows have been selected regardless of cost, first for excellence of the individual; second on their record as producers of big litters of large, easy-feeding pigs; third, on their breeding and show record.

Only 600 and 700-pound sows that will farrow twice a year.

The three most important prizes are Grand Champion Boar, Aged Herd (three sows and boar) and Get of Sire (three sows and boar), all of which were won by me with Baron Duke 201st pigs.

They tell me I have the greatest herd of Berkshires in the West on my Natomas Ranch, 7 minutes from my Sacramento office, 906 K street.

If you visit the Capitol they will arrange a visit to my ranch.

I have had a new booklet made.

Will be glad to mail you one if you will write.

Yours truly,
W. F. SANDERCOCK.

and raise at least seven pigs of each litter are retained in the herd.

This was my first year to show animals actually bred and raised on my farm, yet Baron Duke 201st's offspring won the following prizes: On Boar, Grand Champion, Senior Yearling.

Champion, First Junior Sows: First Junior Yearling, Reserve Senior Champion, Reserve Grand Champion, First Junior Sow Pig and many other lesser prizes.

Baron Duke 201st, No. 200001
Grand National Champion, The Sire of Champions

A new folder printed just prior to this Fair and now ready for free distribution to those interested has many pictures of my hogs and gives much detailed information about my Berkshire herd. The following are excerpts from this folder, giving the opinion of the man who bred and raised my 780-pound herd sire, Baron Duke 201st, the \$1,400.00 Grand National Champion:

"If Baron Duke 201st is not a good one, I am no judge. His smooth shoulders, great back, width and hams, together with splendid bone and feet, should be appreciated by any judge. I never saw a better width of loin than he has. If more breeders would produce the type of BARON DUKE 201st, there would be many more Berkshires raised and sold. The fact that as good a judge as W. E. Spicer made Baron Duke 201st Grand Champion at the National Swine Show is proof of his superior quality, and there are a good many other leading breeders of the same mind. Every animal on both sides in pedigree of Baron Duke for many generations back was a good one—every one of them. His size, his heart girth, his very smooth shoulders, his back and loin, legs and feet are hard to equal in one animal. If he is not a good one and a well-bred one, there is no other. I am glad to give you my opinion of Baron Duke 201st."

N. H. GENTRY, Sedalia, Missouri.

Judge W. E. Spicer said after the National Swine Show: "Baron Duke 201st is the old-fashioned kind that farmers must have and will have, and will do his part to put Berkshires on every farm."

Wyman Lovejoy, the judge of the 1919 State Fair, said: "I was particularly impressed with the good, heavy bone, great size, spring of rib, large hams, easy feeding characteristics and the uniformity of Baron Duke 201st pigs. They would be hard to beat in any show ring."

The Grand National Champion Baron Duke 201st—the sire of Champions—and his winning daughters are on my ranch and there are a hundred of his sows and boar pigs ready to go into your herd or onto your ranch and help your hogs to gain more meat on the same amount of feed. The prices are no higher than those asked for ordinary purebred hogs. All of the hogs are immunized for life, with Purity Serum and Mixed Vaccine, against cholera.

A letter will bring the new folder and any Berkshires that you might purchase must be entirely satisfactory or they may be returned at my expense.

A letter will bring the New Folder

W. F. SANDERCOCK, President.

BEST BERKSHIRE BREEDING

IN THE WEST

To meet the great demand for bred daughters of **STAR LEADER**. We have purchased for \$1,000 the Grand Champion Boar at the State Fair this year and son of Baron Duke 201st, National Grand Champion at Omaha, 1917,

NATOMAS BARON DUKE

Judge Lovejoy, a national authority, says of him: "As he stands today he is a wonderful boar and bids fair to mature into one of the greatest boars the breed has produced." He is deep and smooth, with a large deep set ham, good feet and plenty of bone to carry his weight.

WE WILL SELL

A few daughters of **STAR LEADER**, mated to Natomas Baron for early spring farrow and also some granddaughters of Star Leader.

ANCHORAGE FARM

A booklet on "Swine," issued by Armour & Co. is full of condensed information relative to breeds, market types, gestation tables and other items relative to the business.

Lakeside Stock Farm Big-Type Poland-Chinas

MATCHLESS BIG BOB
284659

First Prize, Sacramento, 1919

This herd headed by Matchless Big Bob and Lakeside Defender. These sires are of the type and breeding that are so popular today.

Young stock from these boars and sows of A Wonder, Chief Defender's Choice and Major Hadley Wonder breeding, on exhibition at the State Fair and other fall shows.

Inquiries cheerfully answered and visitors always welcome.

Geo. V. Beckman & Sons
LODI, CALIF.

KINGS COUNTY PORK DAY CONTEST.

Every one in the State of California interested in swine raising for the market and the purebred game as well, should attend the Kings County Pork Day Contest. This is a carload contest, including all the farm bureau centers of Kings county. Each farm bureau center will be permitted to enter one carload. Any farm bureau member in good standing is eligible to enter hogs in his farm center carload.

The carloads will be judged and then ten of the best individuals selected from each carload and the best one selected from the ten. In this way the carloads come in competition, then the best tens from each carload and finally the best ones from each of the tens. Such a contest cannot help but stimulate the raising of better market hogs.

The prizes offered on carloads are as follows: First, \$350; second, \$280; third, \$210; fourth, \$140; fifth, \$70.

The prizes on the 10-hog lots: First, \$100; second, \$80; third, \$60; fourth, \$40; fifth, \$20.

Prizes offered on the individual hogs: First, \$25; second, \$20; third, \$15; fourth, \$10; fifth, \$5.

The hogs are to be judged from the market standpoint entirely in all classes regardless of breed or color. All hogs entered will be auctioned off at the end of the contest. Altogether there will be 25 carloads sold, and there will be a representative from each of the packing companies in California to bid on these consignments.

This will be the first contest of its kind in the United States held in the locality where the hogs are raised and also will be the largest sale of fat hogs ever held on the Pacific Coast at one time. As said before, it will be a great opportunity for breeders and market hogs raisers to see what kind of hogs the packers want and what Kings county can do in the way of raising market hogs.

The older an animal is the more feed is required to put on a hundred pounds of flesh.

52 BIG TYPE 52 POLAND-CHINAS

**FIRST PUBLIC SALE OF THE
Tulare County Poland-China Association
At Tulare Sales Pavilion
TULARE, CALIF. OCT. 21, 12:30 P. M.**

CONSIGNORS:

R. F. Guerin	Mrs. Z. Losleben	A. J. Elliott
W. E. Martin	Thos. Jacobs & Bro.	J. K. Macomber
G. B. Martin	F. E. Fay	Chas. L. Weaver
	Hugh C. Shinn	

Animals in the sale are sired by the following noted boars: King's Big Bone Leader, King's Timm, President, King of Golden Gate, King's Gerstale Jones and others.

Sows and gilts are bred to "The Californian," Big Bone Leader of Sunny Side, King of Golden Gate, Wondergerst, Calif. Big Bone Leader, President's Bob and others of equal note.

This offering has been carefully chosen by our selection committee from some of the best herds in California and only the best individuals are placed in this sale. They are the big easy-feeding utility kind that cannot be surpassed as producers of pork or breeding hogs.

Lunch served on the grounds at 12 M.

COL. GEO. W. BELL, Auctioneer

Trewhitt, Vaughn and Nehls Combination Big-Type Poland-China Sale

The Cream of California Production---Tops from Three Great Herds

SELLS OCTOBER 18, 1919 at Hanford, Calif.

W. D. TREWHITT'S consignment will consist of 40 head, 20 of them fall sows, nearly all sired by MY CHOICE, a son of Big Ben, out of Pfander's Giants 3rd by King of Wonders. The modern type and just the kind you are looking for; also a few by JUMBO EQUAL 2D, prize aged boar at the Panama Pacific Exposition, defeated only by the undefeated grand champion Superba. These are real toppers.

Litters of 5 fall gilts by MY CHOICE, out of Armona Wonder, a granddaughter of King of Wonders and Big Orange. A litter like this will put California in the foreground as Big Type headquarters. The balance of the offering will be big and growthy and equal to the best.

C. A. VAUGHN consignment will consist of A-1 bunch of Eastern bred gilts, bred to the Great Boar MODEL JUMBO, bred by H. B. Walters and sired by his great boar, WALTERS JUMBO TIMON, out of a Big Bob Wonder sow.

As special attractions Mr. Vaughn will consign 3 August yearlings out of a Moor's Halvor dam and sired by Orphan Bob. These and the 4 gilts from the Frazier herd sired by Giant Jones will take the eye of visiting breeders.

GEO. NEHLS will have a select lot of open gilts sired by such boars as Long Nelson 2d, Hanford Boy and Kings Model Longfellow, out of large, big-boned sows. Just the kind to start your herd or improve the ones you have. These gilts can be bred to Nehls' Bob Wonder by Big Bob Wonder free of charge.

Our catalogue will be of interest to all breeders of Big Type, but we especially urge breeders and farmers on the Pacific Coast to send for a copy. Express charges from the East are high and you can make a substantial saving by buying at home. Mention Pacific Rural Press.

W. D. Trewhitt, C. A. Vaughn or Geo. Nehls
HANFORD, CALIFORNIA

Marsh-McCracken Poland-China Sale

(Written for Pacific Rural Press.)

The initial auction sale of purebred animals in a locality is generally looked upon with more or less doubt and uncertainty by those interested, but when such breeders of Poland-Chinas as Hale I. Marsh of Modesto and Les McCracken of Ripon combine and sold a sale, there is no doubt about a favorable outcome. Of course, the herds and men are well known and an offering from the favorably known herd of McCarty & Starkweather was an element not without its advantages. Another item in favor of the success of the sale is the fact that Modesto is a good town and centrally located. It would seem that a town of such size, with the finest kind of country surrounding it and developed to a very high state of efficiency, should have a sales pavilion suitable for such occasions.

The sale started promptly at 1 p. m. with Col. Geo. W. Bell of Tulare in the box, and Cols. Leachman and Cy. Clark in the ring. The first animal sold was a Blue Valley gilt, bred to Major Hadley Wonder 2nd, that sold readily to J. Y. Peterson of Lemoore for \$130, followed immediately by another gilt owned by Les McCracken to the same party for \$140. From this point on, without a break, a sharp and snappy sale continued until at 5 p. m. the sale closed with 58 hogs sold for \$9,280, or an average of \$160 each. It is seldom that the initial sale in a locality will average nearly as much. It certainly is encouraging to the breeders of registered swine to have such a sale when the tendency of the sales of meat-producing animals at the abattoirs is rather downward than otherwise. It shows that there is no glutted market in the purebred line where the animals are up to standard.

Such prominent breeders as M. Bassett, W. L. Haag & Son, Wm. Bernstein, John M. Bernstein and F. D. Ross of Hanford; H. D. McCune of Stratford; C. G. DeRaad of Lemoore; H. C. Shinn and A. J. Elliott of Tulare; Geo. V. and Sherwood Beckman, Eugene Miner, and Frank Langhorst of Lodi; J. H. Cook of Paradise; O. H. Plagge of Oroville were present and most of them taking part in the buying. A delegation of pig club boys from Bakersfield were there and bought one or two. Two or three ladies also that are believers in Poland-Chinas bid and bought some of the good ones.

The largest buyer so far as numbers were concerned was J. Y. Peterson of Lemoore, who bought fifteen head for \$2,105, or an average of \$140.33. The top of the sale was the sow, Ripon's Panora Girl, bred and owned by Les McCracken, going to W. L. Haag & Son of Hanford, owners of Lendorris Ranch, and prominent breeders of Poland-Chinas for \$420. Several others went for long prices, in fact, there were ten that sold for \$200 and better. Four from the McCarty & Starkweather herd sold for \$1,150. Again it might be said that this sale is encouraging to breeders of purebred swine in California.

The animals were widely distributed and aside from the one buyer from Lemoore that bought 15, they went in small lots.

While much credit must be given Col. Bell, who cried the sale, and Cols. Leachman and Clark, that worked in the ring, it must be remembered that a very high class of buyers were present and that in nearly all cases the bidding was rapid and sales quick.

The Hampshire Hog

The Hampshire has become America's most popular hog by sheer force of merit. At the 1918 International he won Grand Championship over all other breeds, and sold for \$2.25 per hundred above his nearest competitor. And when it comes to high dressing percentages the Hampshire is in a class by himself.

Ideal for California Conditions

The Hampshire is a natural foraging, green-feed hog, and thrives particularly well on California's alfalfa and other succulent grasses, therefore requiring less grain than other breeds. Send for free information about the progress of the breed and its adaptability to California conditions.

Livestock and Dairy Notes

Dairy.

The Bridgford Holstein Company's new barns and buildings are just about ready for occupancy and is the most up-to-date and largest establishment of its kind in the West.

Grape Wild Farms of Escalon report sale of a bull to go to Central America and one to Placerville. These are two sales of many consummated during and since the State Fair.

H. E. Cornwell since arriving home from the State Fair has completed a very creditable record with the senior two-year-old shown at Sacramento, of 18 pounds butter and 386.5 pounds of milk in 7 days.

The Carnation Milk Products Co. have purchased a site at Gustine, Merced County, on which to erect a large condensary. This is in the center of a large dairy district and will cost \$250,000 and employ several hundred people.

Patterson is to be the Holstein center of the State if real hustling can make it so. N. W. Thompson has been elected president of the Farm Bureau Center and has appointed a committee to select Holstein calves to place in calf clubs in that Center.

A circular entitled "Feeding Dairy Cows in California," the work of Prof. F. W. Woll of the University Farm, Davis, covers the diverse conditions existing in California, with timely suggestions as fully and completely as possible in a publication of this length. With present high prices of feed it is worth every dairyman's time to procure this circular.

An item has been handed in that is entitled a "New Dairy Breed" and gives the results of a test of a two-year-old Brown Swiss heifer, Bravura 3rd, at the Michigan Agricultural College. Her year's work resulted in 12,918 pounds of milk and 558 pounds of fat. This is somewhat of a new breed on the Pacific Coast, but is well known in the East in certain localities. It is a cow of this breed that holds a well authenticated world's record for one day's production of butterfat.

The Jerseys seem to be favorites in the Humboldt County region. J. C. Mankin, who conducts a modern dairy on the Lord-Ellis road above Blue Lake, has just purchased a 7-months Jersey bull calf from Bonniksen Bros. of Ferndale. This calf was first prize junior bull calf at the Arcata Fair. Mr. Mankin lives where he makes his own butter and finds a ready sale for it in Korb. He is milking 30 cows at present.

C. S. Rasmussen of Ferndale had a fine exhibit of Guernsey stock at the Arcata Fair and his 4-year-old bull, Proud King, was grand champion of the breed. Proud King was purchased from W. H. Dupee, Edgemoor Farms, Santee, and is an animal of rather unusual size for the breed, weighing 2,000 pounds, but losing none of the refinement necessary in this splendid breed of dairy cattle. This bull was a winner at Sacramento and Phoenix, Arizona, in 1916.

The increased interest in Guernsey cattle is increasing rapidly, according to a press report direct from the American Guernsey Cattle Club. The number of applications for membership entry and transfer of cattle Advanced Register and subscriptions to the "Journal" are unparalleled in number since May 1, beginning the fiscal year. There has been an increase of over 25 per cent in the number of subscribers to the official paper the past year. An era of unprecedented prosperity seems to be looming large ahead.

A. M. Bibens of Modesto is much pleased with a Segis Fayne Boone heifer that has just dropped a heifer calf sired by a grandson of Prince Gelshe Walker, that he paid \$270 for at a recent sale in Newman. He has recently been offered \$1,000 for her, but thinks she is good enough to keep. Mr. Bibens has two females just started on test that are promising exceedingly good records. One is a third calf cow that is testing plus 5 per

cent and milking between 50 and 60 pounds. The other just started and is traveling at the rate of 35 pounds of butter in 7 days. Some prospects.

A bulletin giving the results of the use of milking machines at the University Farm, Davis, for the past three years shows results favorable to the milking machine if it is handled as it should be. According to this bulletin the milking will have to be done by machines in the future in all dairies having 30 cows or more, where help has to be hired to do the work. There are at present eight different makes of milking machines on the market that are considered reasonably "fool proof" and will give satisfaction if a reasonable amount of intelligence is mixed with the use of the machine. This bulletin was written by F. W. Woll, Prof. of Animal Nutrition at the University Farm, Davis.

Swine.

W. L. Carruthers of Live Oak and Mayfield reports things moving along nicely on the ranches, and the sale of two yearling Berkshire sows and an 8-months service boar to a prominent breeder in Yuba City.

It is estimated that more than \$1,500,000 worth of swine were on exhibition at the National Swine Show at Des Moines, Ia., the past week. One boar, Grand Model's Equal, died at the beginning of the exposition. He was owned by Thos. Robinson of Independence and was insured for \$10,000.

The Diamond Bar Ranch, breeders of Duroc-Jersey swine, will stage a swine exhibit at Los Angeles next week that will equal any made in the East this year. The value of this exhibit will not be much under \$100,000, a feature in itself that will be worth going miles to see by anyone interested in swine raising.

Jack Borge, the prominent Duroc-Jersey breeder of Dos Palos, reports the sale of 11 sows to Dr. Belknap, owner of the Jersey Queen Farm at San Jose. Mr. Borge took 9 hogs to the State Fair and sold 8 of them. This speaks pretty well for the quality of his stock. He also says that he has sold \$4,000 worth of Durocs since the first of April.

Oak Knoll Farms, Lakeport breeders of Chester White swine, report marketing a carload of hogs that dressed out an average of 72.3 per cent. This for a carload is exceptionally good, and speaks exceedingly well for the Chester White breed. Mr. Lea Bleakmore, owner of this farm, says that he always received 1 cent above the market, but on this carload he received 1½ cents premium. Why not more of these high priced porkers?

El Profito, the 900-pound boar of the Poland-China herd owned by Mrs. Viola L. Renwick of Santa Barbara, won first honors at the Ventura Fair. The rest of the herd came in for their deserved share of the prizes also. Mrs. Renwick is certainly making a great success of the Poland-China business and her hogs are of the very best type for present day conditions. El Profito is such a prepotent fellow that even when crossed on the old Berkshire breed, his progeny look like prize-winning Polands.

McCarty & Starkweather's herd is looking fine since coming back from the State Fair and promises to make an even better showing at San Francisco than at Sacramento. They have five Kansas King sows that are about a year old and alike as "peas in a pod," and of the long, strong, "up-on-their-toes" kind that every one wants. Taken as a whole they have one of the best footed lot of hogs found anywhere. Mc's Miss Wonder is a great sow in every way and only lacks in one little point to be perfect just as one looks at her. She is truly a great sow of a great breed.

J. M. De Vilbiss, the well-known Duroc-Jersey breeder of Patterson, has recently completed a new farrowing barn 50 feet long and divided into twelve pens. Mr. De Vilbiss has recently purchased some California-

bred Durocs along the Crimson Monarch, Pathfinder and Orion blood lines that are as good or better than any of the Eastern importations. His herd sire is a son of his old grand champion boar, Crimson Monarch 2nd, with a dam strong in Orion and Taxpayer blood. This veteran breeder has some good ones and is liable at any time to drop back into the show ring and win some more ribbons. Every individual in his herd is of the smooth, long, strong-backed kind, well up on legs, and will please anyone who is looking for fashionable Durocs.

Miscellaneous.

Los Gatos reports rain three-quarters of an inch deep the past week, which is enough to start grass on the ranges.

Samuel C. Hildreth of New York recently refused \$300,000 for his 3-year-old horse, Purchase. It is the largest offer ever made for a racehorse in the United States.

Hiram J. Hill, Jr. of Toyon Farms is on a trip East to visit the National Dairy Show, and to try to make arrangements so that it will be possible for California to have dairy herds on the Federal Accredited List. (Continued on page 506.)

Bonita, San Diego Co.

UNEEDA QUEEN MODEL,
Grand Champion State Fair, 1918.

UNEEDA GLENN COUNTY HERD OF Duroc-Jersey Hogs

KEY HERD OF PACIFIC COAST

Won at Sacramento:

Grand Champion Sow, Senior Champion Sow, Junior Champion Boar, seven Firsts, 23 other prizes.

CLASSY STOCK FOR SALE.

40 sows and gilts, many bred to our great eastern boar, Experimental Defender, by old Defender. Also a few choice service boars, and some topdy pigs of King's Col. and Defender breeding. Just the kind you need.

H. P. SLOCUM & SON
WILLOWS, CAL.

JOHNSON'S DEFENDER JR.

Owned by GREENWOOD FARM, Live Oak, Cal.

Is California's greatest representative of Defenders, the greatest Duroc family. At the State Fair he was the smoothest boar shown, weighing 700 pounds at 17 months and carrying it on a perfect set of feet and legs. He won second in the strongest class of boars ever shown on the Coast and was a popular favorite. Three of his brothers won ribbons in the same class, showing the strength of this line of breeding.

Five Ribbons Won on Five Entries.

H. C. WITHEROW, Mgr.

LIVE OAK, Sutter Co., Cal.

Every Hog on the Gardiner Ranch is Cholera Immune.

Has the frame to build on and the legs and feet to carry it. The best boar we have ever seen.

Poland-China Breeders' Banquet

(Written for Pacific Rural Press.)

On the evening of the 3rd inst., at Hotel Hughson, Modesto, a banquet tendered the Poland-China Breeders' Association of California by Hale I. Marsh of Modesto and Les McCracken of Ripon will go down in the annals of the association as one of the "red-letter" events connected with the breeding of Poland-China hogs in California. It was a fifty-plate affair, attended by many prominent members of the association and invited guests of the locality and also of the agricultural press. We hear about political "love feasts" which are not always what they are said to be, but every one attending this particular banquet expressed himself as never having attended such a meeting where such a general good time was evident in every way.

H. C. Carr of Porterville, banker and promoter of boys' pig clubs, made the address of the evening. He told what a pronounced success the boys had made of the swine-raising business about Porterville, and what a demonstration of the soundness and worth of the purebred swine business it had been to not only the people of that locality, but to the whole State as well. Also how farmers and ranchmen had not told their bankers what a firm financial proposition the registered swine business is and worthy

of the fullest confidence and support of the banks. Mr. Carr made a great point of the actual necessity of bankers in a community financing boys on their own notes for the purpose of getting started in the registered swine business. That is, if the communities where they have not done so wish to keep up with the others that have.

Elmer Lamb, of Ceres, a prominent Duroc-Jersey breeder, furnished some amusement and also facts in a very acceptable talk. He touched upon the color scheme for swine and about handicaps arising from crossbreeding.

Wm. Bernstein of Hanford, president of the association, acted as toastmaster in his usual very pleasing and able manner. Other prominent breeders from a distance were M. Bassett and Fred Ross of Hanford, Geo. V. Beckman of Lodi, A. J. Elliott and Hugh Shinn of Tulare, E. K. Brown of Dos Palos and others from all the Poland-China centers of the State.

It may not be always possible to have such a banquet preceding every sale of importance in the future, but there is no denying the psychological effect produced upon the minds of those present and placing them in a very plastic state of mind for the following day.

Fresno Co. District Fair a Great Success

The fair this year on the whole eclipsed that of any previous display in every way, and particularly so in the livestock department. Dairy cattle, swine, sheep, horses and jacks and jennets were in evidence in large numbers and of highest quality. It is encouraging in the extreme to the breeders of purebred livestock to see so much interest manifested in these departments.

A Classy Dairy Display.

In the dairy cattle classes the Holstein-Friesians and Jerseys were strongest. The Holsteins were represented by five prominent herds from near and far. W. J. Higdon of Tulare, H. E. Cornwell, of Modesto, R. E. Holmes of Modesto, J. R. Phillips, Fresno, and Mrs. Annie Donders of Fresno all had cattle in line and were awarded prizes.

The beautiful Jerseys were represented by three noted herds, one owned locally and two from outside of the county. J. E. Thorpe of Lockeford, A. A. Jenkins of Tulare, and W. R. Eichner of Fresno owned the herds shown.

Holstein winnings were fairly well distributed, with W. J. Higdon of Tulare winning the largest number of firsts and grand champion bull and cow, first on aged herd, first on calf herd, first on produce of cow, and first and second on get of sire. H. E. Cornwell of Modesto won senior champion cow, two years old or over, and junior champion heifer. Mrs. Annie Donders won first on senior heifer calf. It certainly was a great Holstein show.

In the Jersey classes J. E. Thorpe of Lockeford won grand champion cow and bull and first on aged herd, young herd, calf herd and get of sire. E. R. Eichner won first on bull, two years old and under three. A. A. Jenkins won first on senior yearling bull, junior yearling bull, and first on junior yearling heifer. Truly a Jersey exhibit that might have been larger, but not better. Those who were second or third were just barely less good than those placed first.

In the contest for the W. F. Chandler special dairy herd prize of \$500, awarded on herds of ten animals consisting of one bull three years or over, four females three years old or over, one bull two years old or under three, and four females of same age. First, J. E. Thorpe, \$200; second, W. J. Higdon, \$150; third, J. E. Phillips, \$100; fourth, A. A. Jenkins, \$50.

The Best Swine Exhibit Ever

The swine exhibit was the best ever seen at this fair, with herds mostly

from Fresno county, although good ones also from Kings and Tulare counties were there.

The list of Poland-China exhibitors are as follows: H. D. McCune, Stratford; J. C. Palmeter, Jack Hall, Kerman; J. W. Hall, Caruthers; W. C. Ficklin, Chas. E. Dack, Fred Grant, Fresno; J. Van Cleef, Riverdale; Buckland Ranch, Fresno; E. S. Myers, Riverdale; W. L. Choisser, Riverdale; Thos. Caesar & Son, Reedley; John M. Bernstein, Wm. Bernstein, W. T. Dice, Hanford; Harry Barkena, Fresno; A. W. Uridge, Fowler.

Duroc-Jersey exhibitors were in large numbers and are as follows: C. G. McClune, Jas. Mallory, E. Borges, Fresno; Joe N. Chinoweth, E. Fulgham, Visalia; R. E. Clifford, Strathmore; J. E. Thorpe, Lockeford; R. M. Cross, Raisin City, and J. P. Walker, Visalia.

Horses and Mules Again to the Fore.

The horses, mules and jacks and jennets were in evidence and there are indications that these lines of livestock that were once so prominent are coming into their own again, although they may never attain to the high place once accorded them.

Altogether, this year will be a high mark in the livestock classes that may not be exceeded for some time. Of course, with the stimulus of the high prices of the past two or three years and continuance of the same, next year can be even greater.

LOS ANGELES LIVESTOCK SHOW JUDGES.

Manager Thomas has certainly selected a corps of judges for the coming Livestock Show that are of the very highest in ability and reputation. Exhibitors may rest assured that their animals will be rated correctly and placed according to their exemplification of the breed they represent. The list of the judges follows:

Shorthorns and Aberdeen Angus—Frank Brown, Carlton, Oregon. City, Mo.

Herefords—Wallace Good, Kansas Dairy Cattle, all breeds—Ed Carey, Carlton, Oregon.

Draft Horses—Prof. F. W. Wilson, Reno, Nevada.

Berkshires, Duroc-Jerseys—E. J. Barker, Thorntown, Indiana. Poland-Chinas, Hampshires, Sheep—C. R. Doty, Charlton, Illinois.

Poultry—E. C. Branch, Lee's Summit, Mo.

Goats—S. H. Bowman, Los Angeles. Light Horses—Eastern judge to be named later.

An Improved Stock-Watering Device

(Written for the Pacific Rural Press by Marsden Manson.)

Several years' experience with and successful use of a simple and cheap type of watering trough warrants placing this type before stock raisers. The original water supply in this instance was both inadequate and severely foul, so that not only was more water necessary, but clean water. Clean water was the first requisite, abundant water next. The stock was forced to drink the water in which they stood or wallowed. To keep stock healthy and avoid severe losses I devised and installed the following simple type of closed trough, with open drinking cups, or small buckets permanently attached to the sides.

Construction.

The trough is shallow, say 12 or 14 inches deep, and of any length and

placed so as to water one to four fields. Another instance: The owner of one place not only lost several head of stock, but over 60 per cent of his turkeys, the young ones of which had passed the nine weeks of infancy and should have been healthy and hardy. His loss aggregated several thousand dollars in one season. This loss could be attributed to no other cause than foul water, and gave rise to the conclusion that turkeys do not pay. Five per cent of these losses would have given these young turkeys a chance for life and incidentally a profit to their owner. The

Development of an Adequate Water Supply

Is often possible from either underground or surface sources. In some

Pacheco Marshal, First Prize Shorthorn bull, property of Pacheco Cattle Co., Hollister.

width required, and can be made of galvanized iron, or better still, of concrete. The drinking cups are riveted on the sides if of galvanized iron, and built thereon if of concrete; near their bottom they are connected with the trough by a $\frac{3}{4}$ - or 1-inch hole, and, they extend to about 1 inch above the full water line of the trough. The flow of water into the trough is controlled by a flat float valve. Hogs or other stock can get their noses into these drinking cups, but cannot foul the contents. The usual open water trough is covered with green scum, harmless in itself, but which in decomposing affords developing ground and lodgment for dangerous germs and bacteria. The open pool or sluggish stream is full of certain sickness and loss of stock results. A few actual examples may be instructive.

By the use of these shallow troughs with drinking cups 100 per cent of the pigs born alive were raised, while nearby raisers lost 33 per cent and in one instance 50 per cent of the pigs. Ten per cent of this loss would in either instance have built the clean, sanitary drinking troughs above described, as of either material they are cheap and simple, and, except in quite large concrete troughs, easily moved. They can of course be readily concreted up with tank supply and

instances these are not fully developed and in others not known or even suspected. The following case came under the writer's observation:

An owner was contemplating sinking a well in strata of doubtful water-bearing reliability, and, pumping the hoped-for supply to a tank 150 feet above the surface of the ground at the doubtful well. Very simple investigation by an experienced authority disclosed a nearby supply easily and cheaply made available in part by gravity and with a pumping head of only 30 feet as a high service supply.

In these days of high-priced food supply it is necessary and economical to give stock of all kinds not only clean and abundant food, but clean and abundant water.

H. G. Gross, M.D., of Eureka, not only practices medicine, but he breeds registered Jersey cattle as well. The doctor finds both pleasure and profit in conducting the Butter Valley Ranch and likes to come down to the State Fair and see what other breeders are doing with his favorite animals. He has 30 head of his own with Raleigh's Fairy Boy 9th of Financial Countess breeding as his herd sire. The doctor not only breeds Jersey cattle but raises Spitzenburg apples

LIVESTOCK AND DAIRY NOTES.

(Continued from page 502.)

About two and a third inches of rain were recorded at Northfork (Madera County) in the storm ending Oct. 2. It spoiled what dry feed there was, but the young grass is springing up rapidly all over the ranges and there should be a good stand of feed before the weather gets too cold.

The Los Angeles Live Stock Show constructed two special barns to house the livestock exhibit of the Santa

Anita Rancho. This ranch will show Holstein-Friesian cattle, both draft and light horses, including Percherons, Arabians, Thoroughbreds, and Mammoth Jacks; swine and Airedale dogs. Some show in itself. Altogether, there are six barns full of cattle, 60 draft horses, 7 barns of swine sheep and goats. Truly a great show.

More than 20,000 employees of Swift & Co. have been vested with part ownership in the packing concern.

Announcements have just been made of the results that came of the gigantic profit sharing plan offered by the company to its people. The employees were allowed to purchase shares according to their earning capacity and nearly all of them have taken advantage of the opportunity offered. No employee was allowed to purchase more than five shares and it is paid for at the rate of \$1 per share per week.

Director G. H. Hicks, in charge of all agricultural departments now, was in the office last week talking over prospects for the coming year. He stated that Dr. J. P. Iverson, in charge of the Animal Industry department, is in the East at present and will attend the National Dairy Show while there.

The Sonora office of the Stockton Record reports excellent results by farmers feeding the best of alfalfa hay in connection with other nutritious feeds to "locoed" horses. This is a subject that has been given quite some thought by local farmers lately, as quite a number have reported "locoed" animals and veterinarians have advised the treatment. The writer knows from his own observations that such treatment has produced excellent results in Arizona in years past.

THE BASSETT-ROSS-CRAWSHAW SALE.

Sale commenced at 12:30 p. m., with Col. Ord Leachman in the box. After expatiating upon the merits of the various herd sires noted for reference in the catalogue, he introduced Wm. Bernstein, President of the California Poland-China Breeders' Association, who as usual gave a very pleasing address about his favorite breed and the breeders holding the sale. Wm. Bernstein and Fred Gatewood of Fresno worked in the ring, rendering valuable assistance to Colonel Leachman throughout the sale.

While the sale did not carry quite as high an average as some recent sales as a whole, it could not be considered anything but a satisfactory one. Everything included from one end to the other, 62 head sold for \$9,190, or an average of \$148.22 per head.

F. D. Ross, with 7 females selling for \$1705, or \$243.57 each, had the highest average. The December boar pig California Buster, bred by A. Buckland & Son, and consigned by Mr. Ross, sold for \$160.

M. and A. L. Bassett sold 30 females for \$4,230, or at an average of \$141. They sold 4 young boars for \$365, or an average of \$91.25.

T. A. Crawshaw's twenty females brought \$2,730, or \$136.50 each.

The top of the sale was a substitute for Model Wonder, catalogue No. 2, consigned by M. Bassett and bought for \$360 by J. F. McSwain of Merced, an enterprising young breeder that was right after the good ones, and purchased 12 head that will be a fine addition to his already excellent herd.

Les McCracken of Ripon also indulged in 9 head, and you know they were good ones, for this young man had the nerve to pay \$700 for King's Big Bone Leader, one of the greatest boars of the Poland-China breed on the Pacific Coast both as an individual and as a breeder.

The Bakersfield Pig Club Boys, with H. K. Dickson, District Club Leader of Bakersfield acting in an advisory capacity, purchased \$1,560 worth of good ones to take to Kern County and help supply pigs for a big Pig Club sale next May.

Altogether the sale was a success, due to the good stuff offered and the aggressive salesmanship of Colonel Leachman.

CALIFORNIA INTERNATIONAL LIVESTOCK SHOW.

With entries still on the way, according to telegraphic advices received by Gordon H. True, manager of the California International Livestock Show, close to a thousand head of livestock have already been entered for the big livestock show to be held in the Californian Building on the Marina at San Francisco, November 1st to 8th. This is exclusive of the entries for the horse show, which, according to Superintendent Thomas Mangan, will number right around 200, as San Francisco society has taken hold of the horse show feature with great enthusiasm.

CALEDONIA SHORTHORNS

LARGEST HERD OF HIGH-CLASS SHORTHORNS

In this country—400 head of wonderful breeding matrons, combining the noted Blumendorf and Harkness herds.

The fountain-head of international prize-winning stock, producing the dam of the Grand Champion steer over all breeds at the 1917 Chicago International; the dam of the Grand Champion Shorthorn steer at the 1918 International; the dam of "CALIFORNIA MODEL," the highest priced Shorthorn bull ever sold on the Pacific Coast, bringing \$5,500 at public sale.

Prof. Trowbridge, Shorthorn Judge at the State Fair, says of our herd: "I do not know where I have seen a more valuable lot of cows." Prof. Cotchell, representative of The American Shorthorn Association, Prof. Burns of Ames, Iowa, and others who have seen our herd recently, say the same.

The Greatest Herd Sires

IMP. CALEDONIA, our senior sire, is considered the best Scotch bull imported in recent years. Sired by the Duthie bull Proud Emblem, the best stock bull in Scotland, whose calf topped the sales last year at \$20,000. Out of a Rosewood cow—the best in the Wm. Anderson herd. In breeding, type, color and individuality, this bull stands supreme.

GAINFORD MATCHLESS, first prize senior yearling at last Chicago International, son of Imported Gainford Marquis, combines finest breeding with unusual scale (weighs 2,500 lbs. at 2 years).

PINE GROVE KING, by Champion King Cumberland, the highest-priced bull of his day, and out of a Clipper dam. His individuality is as good as his pedigree.

SELECT SULTAN, a double great grandson of Whitehall Sultan. This young bull combines with wonderful breeding, fine individuality, and a most promising outlook.

ROSELAWN SHORTHORNS AT PUBLIC SALE

Thursday, October 16, 1919

H. M. ELBERG

ROSELAWN STOCK FARM WOODLAND, CALIF.

PROPRIETOR

Roselawn Shorthorns have for thirty years played a leading part in the progress of the breed in the West, winning consistently in the show ring, always an attraction in the sales rings of California and the Northwest, and now comes the greatest offering ever made from this noted herd, in a sale that will materially reduce the size of the herd, temporarily, due to the settlement of an estate and the readjustment of some farm leases. The offering will consist of

45 SCOTCH AND SCOTCH-TOPPED SHORTHORNS

numbering among the females such outstanding individuals as MISCHIEF E 3D, undefeated in Canada, Grand Champion at 1918 California State Fair, and dam of ROSELAWN CHAMPION, junior champion bull at the same show; ROSIE MAYFLOWER, a rare showyard prospect of rich breeding, by the University Farm bull, Sultan Mayflower, who sired the 1918 Chicago International champion Shorthorn steer, and the \$5500 bull California Model; MAYFIELD MAGNOLIA, also by Sultan Mayflower and selling with a promising roan heifer calf at foot by White Knight; PRIDE'S LOVELY 3D, a beautiful roan heifer of the Cruickshank Lovely family, bred to Roselawn Champion; PEACEFUL 6TH, by Golden Goods, selling with bull calf at foot by Crescent Dale; and a long list of richly bred cows and heifers, about 15 with calves at foot, and all of breeding age in calf to Crescent Dale and Roselawn Champion.

SPLENDID BULLS OF RICH BREEDING AND HIGH QUALITY

CRESCENT DALE, by Whitehall Rosedale, son of Avondale, and out of a daughter of Ruberta's Goods and imp. Crescent 8th, heads the notable list of bulls in the offering. He is a real head header, who must be seen to be fully appreciated. The list of bulls also contains a choice selection of younger bulls, Scotch and Scotch topped, and a most pleasing lot of individuals throughout.

Poultry and Rabbits for Profit

FARM POULTRY VS. POULTRY FARMING.

(Written for Pacific Rural Press.)

Farm poultry—that's the thing! Not poultry farming, for that means having a man spend all his time fussing with hens. What the State needs is to have practically all of the eggs and poultry meat come from the ranches of the State. Tulare, the town, or rather the ranchers doing business at that town, is showing what should be done and how to do it, and, ignoring poultry centers where hen folk congregate, it is about the only farming district from Oregon to the Mexican line that is living up to its possibilities.

Doing Big Business.

The Tulare Poultry Association, which is directly and solely responsible for conditions, did a business of \$229,220.11 in 1918 and is handling far more eggs and poultry supplies now than a year ago. Nearly every bit of that business was poultry business. In addition the large firm of McCullough Provision Company has a big branch there, and most of the grocers get and ship a great many eggs.

Describing conditions in another way: Driving through the ordinary farming section, nothing but dooryard flocks are seen. Driving through the Tulare district, dooryard flocks are found on perhaps the majority of ranches, but on practically all the rest there will be seen well kept flocks of say 250 fowls, well looked after and of good type, but clearly a side issue; and many more ranches where the birds will run not far from a thousand, but which are strictly fruit, alfalfa or dairy farms. In other words, poultry raising is a big thing from a real farm standpoint and that is what the Rural Press feels should be the case everywhere. Tulare folks swear that the only way other districts can develop poultry as a big side line is to have a co-operative association, because that is the only way they can get decent prices for eggs and chickens. A person can use his own judgment as to whether that claim is right or not, and why things are so good there and poor elsewhere.

What a Press Representative Saw.

The Rural Press representative visited a number of Tulare farmers and will show just how things go according to varying farm conditions. First, take Egbert George, president of the association, for a long period the largest egg producer in the association and this year second in line. He farms single-handed and with only a little help in haying, 70 acres of alfalfa land, milks four cows, and cares for 800 to 1000 hens as a general average.

Advocates Free Range.

Why, man, if you gave a specialized poultry man 1000 hens to look after, he would have little time for anything else, and when you take an irrigated ranch of 70 acres in addition to that number of fowls, something is proved some way. It must be that the specialized farmer, with his long houses, or colony houses and all the rest of it, cannot stand against competition like that. The reason is that on this place the fowls have free range and so require little care and attention. Hens on free range, particularly when there is plenty of alfalfa, grasshoppers and shade, will be healthy, happy and lay more on less feed than the best looked after fowls of equal merit that are confined. The range here is alfalfa, the shade a eucalyptus grove, but Mr. George says that figs or some other fruit tree will be better, for in addition to the food provided by the fruit, the shade would be denser and more welcome in the hottest days of summer. Many of the hens roost in these trees, a clean, healthy habit and no disadvantage. When it is necessary to catch them, all that is required is to keep them off the trees at roosting time and they will go into the houses with the rest of the hens.

Equipment Needed.

In addition to brooder house for baby chicks the equipment required is composed mainly of four houses 14

feet wide and 36 or 40 feet long, also a scratching shed, and various odds and ends. These houses are nothing like so elaborate or costly as the long houses of the specialized poultry farm. Two of them have smooth concrete floors and the others will have soon. There is an open space about 18 inches high, covered with wire along the bottom of all four sides; the nests are along the north walls, roosts cover the main body of the building and no dropping boards are used, nor is any part of these houses used as scratching area, to feed the grain in.

Some details about roosts and nests may be given later. It is enough to state that Mr. George can clean out all four houses in half a day's work and that this is necessary only once in from two to three weeks. Figuring the year round, under the methods used, only about one-fifth of his working time (he says) is needed in attending to the fowls. The busiest period is in the spring, caring for the baby chicks, until they can care for themselves. Then the poultry take up half of his time.

Free Range Means Less Work.

But free range also means that hens and chickens of all ages will get mixed up together. "How then," you say, "is a man going to know when to market his old hens? He cannot tell which is which." He can on this ranch and on many others around Tulare on account of getting a different breed of baby chicks each year. A person can kill off the culls or inferior fowls at all times, but when a hen has reached the age at which her usefulness is to close, if she is of a different color from all the younger hens, her identification is easy on the darkest night (with the help of a lantern). Simple, isn't it?

Mr. George keeps his hens three years. He now has White Leghorns, Anconas and Buff Leghorns—all of them Mediterranean breeds. He did have Brown Leghorns one year and other breeders select that as one of their colors. Another year he tried Rhode Island Reds, but found that the business of keeping two radically different types of birds on the same ranch was commercially impossible, so ditched them for a light breed. White Leghorns are the strongest, best leghorn variety in George's estimation, but the free range system will not allow keeping a solid white flock and the other colors hold their end up very well.

(Continued on page 510.)

GERMOZONE The Best Pet Stock Remedy

For Poultry, Pigeons, Dogs, Cats, Rabbits, Parrots, Canary and other birds or pet animals. Germozone is a universal and safe remedy for colds, snuffles, roup, sore throat, loss of voice or singing, influenza, bowel trouble, distemper, sore eyes or ears, canker, gleet, loss of fur or feathers, sores, wounds, skin disease, or other affections of skin or mucous membrane.

"My hens have never done so well as this year and haven't lost a single chick."—Mrs. Flora Kapple, Walker, Ia. "Simply grand for rabbits."—L. W. Browning, Boone, Ia. "Cannot praise Germozone enough. I use it for chickens, stock and household."—Mrs. Wm. Hoeppel, Hugo, Okla. "My bird puppies don't know what distemper is and I never had such good success before with chicks."—Curley Smith, Kennett, Mo.

Germozone is sold by most drug, seed and poultry supply dealers, or mailed postpaid in 25c, 75c, and \$1.50 packages from Omaha. Book on treatment of diseases free with each package.

Geo. M. Lee Co., Dept. 528, OMAHA, NEB.

Start Hens Laying Now Keep Them At It

THERE'S only one reason why most hens lay off laying as soon as egg prices begin climbing—right when you most want them to produce. They simply haven't the vigor in them to lay regularly. And they won't get it either until egg prices drop or until you put it into them.

Make your hens vigorous, make them lay. Just give them

Pratts Poultry Regulator

with a well-balanced ration. You will find Pratts will make hens lay heavily and regularly when they ordinarily would lay little, if any. It gives them keen appetites, sound digestion. Any year, it returns profits many times greater than its little cost. And this year—with egg prices beating all records—judge for yourself whether it's best for you to get Pratts. Keep your hens from catching colds, catarrh, roup—use

Pratts Roup Remedy

This remedy not only overcomes but prevents all these disorders common to bad weather.

"Your Money Back If YOU Are Not Satisfied."

"Just like a hen" - only better

Biddy's temperature was always right, when she hatched the eggs—you never had to worry. But Biddy was an uncertain quantity in some other ways. Ordinary incubators require so much attention—night and day—then if a cold snap happens suddenly, and the eggs are chilled—or the flame, left unwatched, "runs up"—the whole hatch is lost. That's why poultrymen and farmers, and their wives, everywhere are blessing the

CHARTERS REGULATOR

(Readily attached to your incubator. Part of the equipment of Charters Incubator.)

The Regulator watches over the hatch while you go to town—while you sleep—no matter if you are delayed, or if you forget. It keeps the flame at exactly the right size to produce the right temperature.

No matter how big, or how small your season's "hatch" may be—from one to one hundred machines or more—if they are Charters machines, you can count on a definite saving of time, worry and expensive loss. You need no incubator cellar with the Charters.

J. H. Stubbe, of Palo Alto, now using 66 Regulators and ordering 35 Charters Incubators, says: "We need not give the lamps any thought at night. The Regulator takes care of any change in temperature perfectly."

P. R. Lyding, of Sebastopol, with 26 years of incubator experience, writes: "Your incubators complete are absolutely the best I have ever used."

Write for our free catalog today, or send your order for your machine now, so we can deliver in time for your Fall hatch. The Regulator is \$10; the incubator (with Regulator attached) is \$65.00. If it does not do what we claim for it—your money back.

See The Charters at principal fairs and poultry shows this year.

THE HOME CIRCLE

THE RIVER.

It's the glory of the morning,
It's the coming of the dawn,
And the sun rising red o'er the hill-tops,
When the mist from the river is gone.

It's the laughing rush of water,
It's the thrushes' morning song,
And the splash of the bass when he's feeding,
The rocky banks along.

It's the far-off blue of the mountains,
It's the green of the nearer hills,
And the deep blue-green of the river,
The woodsman's heart that thrills.

It's the wonderful glow of the fire-light,
It's the call of the whip-poor-will,
And the quiet hush at the midnight hour,

When all the world is still.

It's the moon rising over the treetops,
It's the lullaby of the pines,
And the wonderful song of the river
Where the white spray leaps and shines.

So, pal, is it any wonder,
When we live dull city lives,
That we sit by the fireside and dream
and think
Of that River of Paradise.

—John T. Collins in Boys' Life for August.

OPENING META'S EYES.

"Come on," shouted little Helen to Dorothy and Meta, who were slower in getting out of the boat. "Hurry up, and I will show you lazy girls something worth seeing." She dashed through the tangle of the grass and weeds, which grew as high as her shoulders, and was lost from sight.

When the others found her, she was stooping over and looking intently at the under side of every leaf on some stalks of milkweed. In a minute she picked a leaf and, holding it up, said: "Meta, look here and use both of your eyes. Dorothy, keep still because you know, Meta, do you see anything?"

"Why, I don't see anything," said Meta, with a puzzled face.

"Must I show you an elephant before you can see something? Look again, Meta."

"Well," said Meta, slowly, "the leaf is perfectly clean except for a little speck of dirt."

"Oh, you are beginning to use your eyes," said Helen. "That little speck of dirt, as you call it, will surprise you before we get through with it." After having picked several stalks of milkweed they rowed back from the island to the "Lodge."

The girls have come to Natahala Lodge on the Raquette River in the Northern Adirondack wilderness just the day before, and were wild to begin running about. Helen and Dorothy were sisters, aged twelve and ten years respectively, and had spent several summers in this beautiful spot. Their parents had helped them to learn much about the outdoor world. So it came to pass that they were becoming little naturalists. They had brought along with them from Chicago this summer their neighbor Meta, who had romped and played in the country every year, but had never learned to use her eyes upon the wonders of nature.

When the girls reached the Lodge, Helen took a magnifying glass and said, "Meta, look at the speck of dirt."

As Meta caught sight of the little cone, beautifully decorated with pits and bands and resting firmly on the soft, woolly under-surface of the milkweed leaf, she cried, "Oh! oh! what is it?"

"That is the egg of a butterfly," said Helen.

"Egg of a butterfly! Do you mean that a butterfly will hatch out of that little thing?" Meta exclaimed with staring eyes.

"Don't tell her any more," interrupted Dorothy. "Let her find out for herself."

So it was agreed that Meta must wait, but she was comforted a little by being told that it would not be long.

The milkweed stems were placed carefully in jars of water and set in boxes which the girls' father had fastened up to the wall of the porch. Each box had a muslin door which let in light and air and could be opened easily for the change of food.

In a few days each egg hatched out a tiny black caterpillar, which went to work at once eating the milkweed leaf.

"Meta, isn't it curious," said Helen, "that this little fellow begins to eat his own table? The mother butterfly never arranges for twins, but just puts each egg on a table by itself."

Now began the work of feeding the growing caterpillars, and every day the girls rowed to the island for fresh leaves.

"But can't you put in other leaves?" inquired Meta one day when it seemed too warm to go on the river.

"That caterpillar," replied Helen, indignantly, "would rather die than eat anything else. He is just obstinate enough to spite us if we do not get him what he wants! But any way," she went on in a milder tone, "we ought to be good to him because he does not live long."

So the little caterpillars, being

treated indulgently, grew fatter and fatter and longer and longer,—not so fast as Jack's beanstalk, but quite fast enough for their own comfort and the comfort of the little girls who had so many things to do besides setting a fresh table before each greedy creature each day. Indeed, they grew so

fast and so fat that every few days each one was obliged to take off his skin and throw it away, while a new one underneath stretched out comfortably for a time until that also became too tight.

All caterpillars are like the man who never left off eating except to

"Full Steam Ahead"

Sixty pounds in fifteen minutes—the fastest little steamer ever put on the market. Especially built to meet the need for quick work where good dry steam is needed. Can be adapted to hundreds of uses. Occupies very little space—neat, trim and compact and very reasonable in price. Absolute safety assured.

For the Dairyman alone, it solves a great big problem as a means of increasing the milking capacity by steam-cooked feed. As a sterilizer, it cannot be equaled.

Steam-heating systems, dye works, laundry, pig vulcanizers, laboratories and steam-cleaning works are only a few suggestions for its many uses.

Write for detailed information and circular. Do not forget the Little Burner for Cookstoves and Heaters—it is the same burner that does this wonderful work.

Manufacturers, LOS ANGELES, CALIF.

sleep and never left off sleeping except to eat. It is no wonder then that in two weeks and a half these milkweed caterpillars, with such thick, juicy, tender leaves to eat, should find themselves surfeited and grow quiet as if they were going to die. Meta wondered as she saw them still and dumpy and refusing all food. All the satisfaction she could get from Helen and Dorothy was in the words, "Just wait." The two sisters wore such smiles of assurance as to make Meta sure that something was going to happen.

It was not long before she found out for herself, but she was more mystified than ever. As she walked along the porch the next morning, she looked up at the boxes and stopped in amazement. "Girls," she cried out, "there are no caterpillars here, but just some beautiful little hanging bulbs or thimbles, covered with gold dots and a gold band." Meta had discovered, thanks to her chums, one of the many wonders which continually crowd about us and which can be seen for the looking.

A week went by, then another, and still the little cases hung lifeless. The only answer to her inquiries was, "Wait and see." She often stopped to look and to see if she could find any signs of life, but it seemed hopeless. By the seventeenth day, however, she noticed that the cases were turning dark; and, upon looking closely, as she had now learned to do, she saw strange colors through the thin, outer skin of each case.

Before the eighteenth day was over Meta, who was down at the bank of the river, heard a call: "Come! Come as quick as you can!" She flew to the porch and saw for the first time a butterfly splitting its case and slowly crawling out of its prison. Little by little it released its wings, which had been bent back upon themselves, but now fell apart and straightened out. It clung to the empty case with its feet, while it dried its wings by waving them gently back and forth. Helen and Dorothy never tire of seeing this strange thing again and again, though they have seen it many times.

"Isn't that a curious little suit-case out of which such a splendid creature can step with a new suit and big wings?" said Helen. "Nobody could pack him in there again."

"But does he have a name?" asked Meta.

Both girls tried to answer at once. "Yes, he has a fine name as such a fine fellow ought to have. His English name is Monarch Butterfly because he is so large and royal in his looks, especially in flying. His Latin name is Anosialexippus. Isn't that name all right for a monarch?"

Meta was now busy with her notebook, for the girls had told her that she must put down the dates when the eggs were found, when the caterpillars hatched and moulted, when they changed into the little cases, or pupas, and finally when the butterflies came out. She was ready to do it, for she really wished to learn about the new strange world of nature at whose threshold she stood.

By this time the girls had told their friend that the mother butterfly which laid the eggs on the milkweed leaves had probably come a longer distance than they themselves had journeyed from Chicago, for these butterflies spend the winter in the South. It is thought that they gradually learned to fly farther and farther from their original home in a warm climate, until now they push their way even into Canada. In the fall sometimes great numbers of them can be seen getting together and starting upon their flight of hundreds of miles to the South.

It seemed too wonderful to be true. Meta gazed at the dark, orange-colored wings with broad black veins running through them and tried to think of them waving their flight for nearly a thousand miles.

By this time other caterpillars were living and feeding in the boxes, and strange things were occurring from week to week.

When Meta reached home she exclaimed: "O mother! I've been more happy than I can tell you. I'll go without lots of candy if you will only get me some books about butterflies

and moths, like the ones Helen and Dorothy have." And she showed her mother, with many smiles, the numerous cocoons which she had brought home from the woods and which would give up their surprising treasures of beauty during the following winter and spring.—Stephen Morrell Newman, in the Congregationalist.

FALL FASHIONS.

New York is showing the shorter skirt—eight inches from the floor being a popular length. Afternoon and evening dresses are longer and in the draped effects are quite long.

Side draperies and pannier effects are very popular for evening gowns, but the drapery is not pulled about the figure, but arranged to give fullness at either side, with the bottom of the skirt turned in under in an Oriental fashion.

Top coats are very generous in size and wrap around the figure. They are long enough to completely cover the dress and are often fur-trimmed.

Duvetyn is the most popular material of the fall fabrics. It is wonderfully soft and is used for one-piece dresses, suits and wraps.

Black continues to be very popular for both afternoon and evening, and it is at its best when trimmed with jet.

Deep collars of lace are being worn over dark dresses, a decided change from the severe neck line of last season.

Dancing frocks for girls are made of layers of tulle or net over a foundation of metallic cloth.

Tiers of fringes over a scant black satin skirt makes a very graceful skirt for a miss.

Furs for the coming winter are high in price, but in spite of that, the fur garments are more luxurious than ever; rich, brown tones prevail and many furs are dyed that fashionable color.

More Light Than 20 Oil Lanterns

AT LAST—the light of lights! A lantern that lights with common matches just like the old style oil lantern, but makes and burns its own gas from common gasoline, giving a brilliant, steady, white light of 300 candle power.

POULTRY FOR PROFIT.

(Continued from page 507.)

To the Editor: I have learned many things regarding poultry from your paper, but I have never seen anything regarding a way to tell the probable age of a hen, and I would like to know how.—T. C. F., Carson City, Nev.

Our correspondent probably wishes to learn if there is some way to determine the age of fowls that would be as satisfactory as the examination of the teeth of quadrupeds. No such method has been discovered. The general appearance and the development of the bones of the fowls indicate approximately whether they are less than a year old or are fully developed. Under different conditions the same fowls may appear to be about a year or two old or to be several years of age.

Disease infected earth may be fatal to little chicks. It is a good plan to move the coops from place to place frequently.

Poultry Breeders' Directory

Rate 3½ cents per word each issue.

BOOKING FOR WINTER, SPRING DELIVERY—Thousands of chicks off weekly now, open most weeks till March, reduced. Leghorns, Anconas, Reds, Rocks, Minorcas, Wyandottes, Orpingtons, ducks, turkeys—cleaning customers \$5 yearly. Bred 20 generations back to lay winters, 200-290 eggs yearly. Half go to former customers. Doubling over 70,000 hatching capacity. Returned thousands dollars for chicks we couldn't supply. Hundreds breeders, laying, younger pullets, reduced. Circular with proof free. J. Beeson, Pasadena, Calif.

WARDS' S. C. RHODE ISLAND REDS caused a sensation at Sacramento by winning: 2nd cock, 1st and 3rd hens, 1st and 3rd cockerels, 1st and 3rd pullets, special for best-colored female. Special for best display. Hatching eggs. Write for circular. Ward's Poultry Farm, 390 South Lincoln Avenue, San Jose, California.

California, per cbl\$3.65@3.70

BARLEY.

While there are still some shipments of barley being made to Europe, it is stated that these are made up in the most part of barley contracted for long ago, and that there is practically none of the shipping variety left of last year's crop. There is plenty of the feed variety, however, and this is moving very slowly at somewhat lower prices.

Feed\$2.90@2.95
Shipping\$3.15@3.20

OATS.

Lack of interest in oats continues. The local market is dead and the continuance of the waterfront strike makes shipments along the Coast practically impossible. This strike is holding up some shipments of feed barley as well as of oats.

Red feed, per cbl\$2.80@3.00
Red for seedNominal
Black for seedNominal
Recleaned Red or Black for seedNominal

CORN.

The general softening of the grain market showed in reduced prices for corn this week, although this grain has shown greater strength for some time than either barley or oats.

California\$3.50@3.60
Egyptian, choice\$3.40@3.70

HAY.

Receipts of hay for the past week were 1980 tons compared with 2893 the previous week. These lowered receipts are due, doubtless to two causes, the clearing of the fields and the car shortage. The latter is becoming more serious daily and it is practically impossible at some points to obtain any transportation. Hay continues to arrive by boat from river and bay districts, but these fields are now pretty well cleaned up. The later cuttings of alfalfa are now being offered, and where shipment by water be effected they are moving readily.

FEEDSTUFFS.

The feedstuff market reflects the condition

of the whole grain market. When loading of vessels, for the Coast trade especially is again normal, there may be a spurt in feed-stuffs.

Roller Oats\$61.00@62.00
Cocoanut MealNone
Cracked Corn\$78.00@79.00
Alfalfa Products\$38.00@45.00

POTATOES, ONIONS, ETC.

There is very little demand for either potatoes or onions for shipment at this time. This is due to the plentiful supply in other States. Potato prices are unchanged, but the condition of the market is soft, with a tendency to lower prices. Onions, on the other hand, are firm with a higher price for yellows. It is said that onions may show still higher prices before the middle of November. The general vegetable market is slow, with only minor changes in prices from day to day.

BEANS.

The Southern Lima Bean Association has named a high price for the opening of the market and some of the local dealers think the price rather excessive in the face of the stagnant condition of the market in other varieties. It is admitted that 14½ cents at a later date when last year's crop is better cleaned up, might be right, but as an opening price the southern limas are likely to move slowly. The prices on pinks and large and small whites were lowered this week in the face of the jump in limas over the last last quoted price for the old crop.

POULTRY.

Broilers were in good demand this week and readily sold at higher quotations. With the exception of Belgian hares, which were weaker, the market was firm on comparatively small receipts. The receipts include a car from the East and another car is reported to arrive at the end of the current week. Squabs

are higher on a reported combination of growers in Alameda county to get a better price. Growers and dealers outside the reported combine have raised their prices to correspond to the prices of the Alameda growers.

Old roosters, colored, per lb.22@23c

BUTTER.

The butter market was very quiet and inactive throughout the week. While receipts show a falling off the consumption shows even a greater subsidence. This is said to be due to the strikes, and possibly warmer weather. There is a greater demand for storage butter, and daily withdrawals of considerable amounts are now occurring. The cutting of the income of about 50,000 men in the Bay region from about \$40 per week to a \$10 weekly strike benefit bonus is showing its effect on all dairy products.

Thurs. Fri. Sat. Mon. Tu. Wed.
Extra65 64½ 62½ 62½ 63 63

EGGS.

Extra eggs show a falling off of 5 cents from the high price of last week. In spite of the small receipts in this market, the strikes are the important factor in this decline. This is shown in the increased demand for the undersized eggs which showed during the week an extreme advance of 10½ cents over the low price of the previous week. Pullets show a loss of only 2 cents from the high of last week and closed at the opening of last week's market. An average of four cars a week of carefully selected extras is going to the Eastern markets, where prices also are lower on falling receipts. Here again it is said that strike conditions are responsible.

HONEY.

None of the local dealers are buying in large quantities at present prices. The local consumption is comparatively small.

Special Livestock Market Report

San Francisco, Oct. 8, 1919.

CATTLE—Unsettled political and industrial conditions tend to make an unsatisfactory market. At present ample supplies are reaching this city to meet the demands of slaughterers and butchers. Packers are striving to work off stocks accumulated at higher than prevailing prices, and are slow buyers. Cattlemen predict a beef shortage the coming winter, and are optimistic over the outlook. The bulk of the cattle have been coming from Nevada. Calf receipts are light.

EASTERN MARKET.

Chicago, Oct. 7, 1919.

HOGS—Receipts, 22,000; estimated tomorrow, 32,000; generally 25 to 50c higher, closing dull with advance partly lost; heavy, \$15.50 to \$16.75; medium, \$15.75 to \$17; light, \$15.25 to \$16.75; heavy packing sows, smooth, \$14.50 to \$15.25; packing sows, rough, \$14 to \$14.50; pigs, \$15 to \$16.

CATTLE—Receipts, 28,000; estimated tomorrow, 14,000; firm. Beef steers, medium and heavyweight, choice and prime, \$16.75 to \$18.50; medium and good, \$17.25 to \$16.75; common, \$8.75 to \$11.25. Lightweight—Good and choice, \$15 to \$18.25; common and medium, \$8.25 to \$15. Butcher cattle—Heifers, \$6.50 to \$14.75; cows, \$6.50 to \$13.50. Canners and cutters, \$5.50 to \$6.50. Veal calves, \$18.50 to \$19.50; feeder steers, \$7.25 to \$12.50; stocker steers, \$6.50 to \$10.25; western range steers, \$8 to \$15; cows and heifers, \$6.50 to \$13.

SHEEP—Receipts, 15,000; estimated tomorrow, 35,000; weak. Lambs, \$13.50 to \$16; culls and common, \$9 to \$13.25; ewes—medium, good and choice, \$6.75 to \$8; culls and common, \$3 to \$6.25; breeding, \$7 to \$13.25.

THE OPENING PRICES FOR WALNUTS, 1919.

(Written for Pacific Rural Press.)

Following are the opening prices named by the California Walnut Growers' Association for the 1919 crop:

Diamond Budded, 34 cents a pound; Golden State Budded, 32 cents a pound; No. 1 Softshell, 31½ cents a pound; No. 2 Softshell, 26 cents a pound.

The new crop comes onto a bare market. The cost of labor increase and the extra irrigations needed because of dry seasons, as well as spraying and dusting, have increased the cost of production to a marked degree. The fact, therefore, that opening prices to the trade are little more than those paid last year has given rise to expressions of satisfaction on the part of dealers and handlers of the nuts. Opening prices last year were 31½ cents for budded nuts, 28 cents for No. 1, and 25 cents for No. 2. This year's crop has already been sold, with about 55 per cent of the orders at opening prices.

This year's crop of walnuts is the largest we have ever produced. The lightness of the June drop is attributed to the extraordinary and assiduous irrigations and cultural methods practised. Little damage also from sunburn was in evidence.

RICE.

Rice is showing further declines, and spot and futures in both fancy and choice were reduced this week. Fancy is quoted, for spot at \$11.25 and \$10.25 for futures. Choice is quoted for spot \$11.00 and for futures \$10.00. No. 1 Paddy, f. o. b. shipping point, is quoted at \$5.25 to \$5.50.

HIDES.

There is little interest shown in the country hide market, a situation due doubtless to the disturbed economic conditions now prevailing throughout the country. Holders are trying to force sales, with but little success.

WOOL.

It has been anticipated for some time by growers that the wool market would improve, but the general unrest has had a depressing effect, and prices will not stabilize. There is little trading in this commodity in this state at present, and prices are anywhere as between seller and buyer.

LOS ANGELES.

Los Angeles, Oct. 7, 1919.

BUTTER

Receipts are lighter in this market than a week ago. Prices the same. A good demand is reported. Receipts for the week, 297,500 lbs.
Fresh extra California creamery67c
Fresh prime first65c
Fresh first63c

EGGS.

Offerings are lighter than last week. The market is steady and firm and an advance of 1 cent is reported on fresh ranch. Receipts short of demand, and for the week 423 cases.
Fresh ranch, extra69c
do, case count60c
do, pullets55c

POULTRY.

Broilers are in fair demand, and so are heavy hens. Friers and light hens dull. Turkeys coming in more freely and in fair demand, but weak. Ducks steady and in fair demand.
Broilers, 1 to 1½ lbs.38c
Broilers, 1½ to 2 lbs.38c
Friers, 2 to 3 lbs.33c

Geo. L. Horine, the very well-known Duroc-Jersey breeder of Winton, writes he has sold 62 head of breeding swine in the past 7 months and is about cleaned out for the present, but will have some more sows in about two months. About 90 per cent of the business was obtained through the Pacific Rural Press.

FALL FAIRS AND SHOWS.

October 4-19—California Industries and Land Show, San Francisco.
October 6-8—San Joaquin County Fair and Livestock Show, Stockton.
October 6-11—Land Show, Martinez.
October 6-11—Tulare Livestock Show, Tulare.
October 7-11—Southern California Fair, Riverside.
October 13-18—Northern California Apple Show, Second Annual, Eureka.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

OF PACIFIC RURAL PRESS, published weekly at San Francisco, California, for October, 1919.

State of California,)
City of County of San Francisco,)ss.

Before me, a notary public, in and for the State and county aforesaid, personally appeared Frank Honeywell, who, having been duly sworn according to law, deposes and says that he is the Publisher of the PACIFIC RURAL PRESS, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher, Frank Honeywell, San Francisco.
Editor, E. J. Wickson, San Francisco.
Managing Editor, E. J. Wickson, San Francisco.

Business Manager, Frank Honeywell, San Francisco.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock): Frank Honeywell, San Francisco.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state). None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

FRANK HONEYWELL.

Sworn to and subscribed before me this 26 day of September, 1919.

(SEAL) E. F. HOBBSON, Notary Public,
In and for the City and County of
San Francisco, State of California.

MISCELLANEOUS.

RANCH SUPERINTENDENT open for engagement, thoroughly experienced with tractor farming, cattle sheep and hogs. A-1 construction ability and maintained. No small proposition considered. References, J. H. Cochran, 1747 Webster St., Oakland, Cal.

BERRY PLANTS—Strawberries, Raspberries, Blackberries, Currants, Gooseberries, Dewberries and Loganberries. Order now to assure delivery. Write M. J. Moniz, Berry Specialist, Sebastopol, California.

ALL SIZES OF PIPE and screw casing, both new and second-hand, dipped and undipped. Guaranteed. Prices right. Shecter Pipe Works, 304 Howard St., San Francisco.

MADE OF REDWOOD, Hawley's Perforated wooden well casing, the best and cheapest well screen made. Send for descriptive circular. G. M. Hawley, La Mesa, California.

FOR SALE—Ranch, Contra Costa County. 2 miles southwest Brentwood. 36 acres alfalfa, 5 acres orchard. Improved. John E. Davis, 3221 Illinois Ave., Fresno, Calif.

CROLEY'S BALANCED HOG FEED—The cheapest feed to fatten hogs. Write Geo. H. Croley, Townsend St., San Francisco, Calif.

WANTED—Married dairyman, experienced in A. R. O. fitting for shows; calf raising, etc. Sunnybrook Ranch, Willits, Calif.

A NEW ALFALFA—Investigate now. Our great "Hardy Hybrid" alfalfa. For facts, write J. L. Lawson, San Jose.

MAMMOTH JERSEY KALE SEED—2 oz., 15c, by the pound, \$1.00. A. P. Ward & Son, Calistoga.

12-20 YUBA TRACTOR, used very little. P. M. Pederson, Oakdale, Cal.

COUNTRY LANDS.

WOULD YOU LIKE TO
OWN A SMALL FARM WITH
SCIENTIFIC MANAGEMENT
OF IT ASSURED YOU?

If so, join us in forming a company where each will own his land but have it FARMED AS A WHOLE under scientific supervision by the company. We will raise dairy cows, hogs, poultry and vegetables.

WE WILL FINISH THE PRODUCT on the farm and sell hams, bacon, lard, milk, butter, cheese and fresh and canned vegetables, DIRECT TO THE CONSUMER. We save middlemen's profits and duplication of equipment.

We have no solicitors or agents.

Particulars can be had by communicating with H. W. McSpadden, 2234 Haste St., Phone Berk. 149 W. Berkeley, Calif.

FOR SALE—20 acre ranch, 5 miles from Oakdale, ½ mile from S. P. Flag Station, 1½ mile from Valley Home Railroad Station, ½ mile from Highway; under Oakdale Irrigation System, plenty of water; property all checked for alfalfa with laterals for irrigating every part of ranch; land ready for re-seeding to alfalfa; good sandy soil of A-No. 1 quality; good barn; enclosed tank house; good tank and windmill; family orchard around the house; four-room house covered with vines. Price \$5,000 gross. If bought direct from owner real estate agents' commission will be thrown off. Owner, BERKELEY SECURITIES COMPANY, 218 First National Bank Bldg., Berkeley, California.

160-ACRE CORN, GRAIN FARM, \$7920.
On improved road, near railroad town, splendid community. 100 acres high cultivation tillage, chocolate loam, clay subsoil, producing heavy grain, corn, grass. 60 acres wire-fenced pasture, home-use wood, fruit. 2-story house, built 6 years, 3 verandas, big barns, granary, corn, smoke, poultry houses. Partnership owners dissolving, quick buyer gets low price—\$7,920; easy terms. Details page 88, New Fall Catalog, 100 pages farm bargains from Maine to Florida and west to Nebraska; copy free. STROUT FARM AGENCY, 831AF, N. Y. Life Bldg., Kansas City, Mo.

WANTED TO BUY in Santa Clara county, in the hills, between Mayfield and Saratoga, about six productive acres and a house, or a good home-site, the same being part of a large, modernly-equipped orchard or dairy farm. The seller to continue, by yearly agreement, to work the six acres, in addition to his own land. Trees, water and view necessary. No agents. Address, Room 324, Merchants Exchange Building, San Francisco.

FOR SALE—Eighty-acre alfalfa dairy ranch in heart of orchard district, two miles from Hollister, including forty milk cows, 28 heifers, four work horses, 150 tons alfalfa hay, 6-inch centrifugal motor-driven irrigation plant, 60x90 barn, modern house, machine shop and other buildings. Address, Owner, Geo. P. Merritt, Hollister, Calif.

RANCH FOR SALE—240 acres, 6 miles E. Santa Margarita, Calif. 25 acres orchard—apples, pears, prunes, peaches; 50 acres cleared; 50 acres level. Live oak on hills. 4-room house and bath; outbuildings. 8 tons hay, machinery, buggy, wagon, harness, cow, horses, bees. School on place. Write Mrs. Bertha Boomer, Santa Margarita, Cal.

FOR SALE BY OWNER—Splendid 20-acre, improved and irrigated ranch. 10 acres alfalfa; family orchard, assorted fruits of choicest variety. 2 miles from railroad station and Highway. Also have 40 acres adjoining. Would sell if buyer wanted larger acreage. Part cash; balance on contract. Address Box 215, Willows, Glenn Co., Cal.

FOR SALE—Ten cow dairy, fully equipped; team, 8 head young stock, 40 head hogs, 50 ton alfalfa in stock. 20-acre ranch for lease; modern buildings. P. O. Box 374, Porterville.

TRAPPERS

Abraham
Smoke Pump
Drives 'Em Out

Something new. Get all the facts about Abraham Smoke Pump. You will want one of these pumps. Greatest smoker ever invented. Makes most smoke. Drives 'em out from longest logs or deepest dens. Just say you are interested and we will have something to say to you. Don't miss this.

FREE Fur Facts and Trappers' Supply Catalog

You must have this new book "Fur Facts." Contains good trapping stories by Geo. J. Theissen and others and valuable information. You get our new catalog free also. Best hunters and trappers' guide published. Not a penny to pay for it. Gives you lowest prices on supplies—Traps, Guns, Knives, Hunting Coats, Heavy Coats, Suits for all weather, Fox Horns, Turkey and Duck Calls—everything you want for trapping.

Weekly Reports—Also Free

We will put your name on our mailing list for Abraham's Weekly Reports. They keep you posted—right up-to-date on prices, etc. Just a post card—that's all you need to get all this—FREE—Fur Facts, the Catalog and the Weekly Reports. And don't forget the Pump. Ask for offer on that. Now, get your post card into the mail—quick.

RHUBARB WAGNERS
PLANT NOW Growers making \$1000 annually. Splendid results in six months. Special prices for immediate planting. Also berries and small fruit, etc. Write to the originator, J. B. WAGNER, Rhubarb and Berry Specialist, Pasadena, Calif.

The hens that pay are the hens that lay!

Just one way to tell the result-producers in your flock—the profit-payers. How? By the amount of eggs they lay. And egg-production is largely a matter of proper feeding—you know that! So it only simmers down to a question of “What shall I feed?”

Surelay is ready to solve this question for you—just as it has for thousands of other successful poultrymen. Then, why waste time and money and energy experimenting with hand-mixed feeds and mashes when Surelay puts the whole secret in the hollow of your hand?

Mixing feeds is our special business. We have the equipment. We have the facilities. *We know how!* We have studied it from a scientific and practical standpoint—have worked with Government and State Experimental Stations—and this, together with years of actual experience, enables us to produce a *uniform*, high-grade feed that will make your hens *pay* by making them *lay*.

And don't forget—Surelay keeps your flock in fine condition all the while. It's a perfect balanced ration—there's nothing in Surelay to “throw your hens off their feed.” For Surelay is *always* uniform, *always* the same, *always* dependable! You will find a guaranteed analysis of Surelay printed on the back of every sack; and what's on the sack is in the sack—and that's what makes the eggs.

It has been proven time and again that cheap feeds lessen the profits of every hen in the flock. Thus, a uniform, high-grade feed like Surelay is *always economical*—and especially when prices reach the level they are today.

Our booklet, “Makes Hens Happy,” takes up this feeding question in detail. It is full of practical information and money-saving suggestions. It has served as a guide-post to success for many a poultryman; perhaps it will be of help to you. This booklet is yours for the asking—simply fill in the coupon and mail *today!*

[Be sure to look in your Surelay sack for the Certificate that entitles you to our 1920 Surelay Egg Record and Calendar]

The American Grape in California

Written for Pacific Rural Press by Wilbur S. Tapper.

WHY IS NOT THE AMERICAN GRAPE more generally found in California gardens and vineyards? For domestic purposes it is of great value. It is, par excellence, the grape for jellies, jams and grape juice. And the grape pie is a joy to the housewife and the entire family. People accustomed to vinifera grapes prefer them, as a dessert fruit, to the Eastern kinds. But, on the other hand, those accustomed to American grapes generally prefer them to the viniferas. Wines and brandies are better from the viniferas. But grape juice now appears to have a decidedly better future than the wine and brandy industry, and grape juice is made from the eastern grape.

American Grape Culture Quite Recent.

The growing of American grapes is a comparatively recent industry. While the vinifera species has been cultivated from the dawn of history, it has been less than a hundred years that viticulture in America, with native grapes as a basis, has been well established. California was a State before the Concord was developed. Only three other grapes, listed at the close of this article, are as old as the Concord. The finest varieties of vinifera had found congenial conditions in California before there were many American grapes worthy of the name.

There is another reason why American grape culture has developed slowly in the Golden State, and this reason has an important bearing upon the question at the present time. While many species of vitis are native to America, it is chiefly from the species *Labrusca* that our native grapes have been developed. Concord is the best known type of this species in cultivation. Seventy-five per cent. of all grapes grown for market east of the Rocky Mountains are Concord. In the East it is the "grape of the millions." It followed, naturally, that the first attempts to raise the Eastern grape in California should involve the Concord, and especially, since in the East, it is the grape of good quality, most easily and cheaply grown. But the Concord did not thrive in this State. In fact, it developed poorly, both as to vigor and productivity. The habitat of the *Labrusca* has a climate with cold winters; with small daily range of temperature during growing season; and with great humidity of climate, the nights being humid as well as the days. These are conditions rarely found in California. Pure *Labruscas*, therefore, as a rule, do not grow well in California. The only exception, coming under the writer's observation, is *Vergennes*, included in the list below. This variety, as grown here, does not belie its Eastern reputation for vigor and productiveness.

Fortunately for native American viticulture, East or West, grapes of the pure *Labrusca* type form a relatively small proportion of the varieties grown. The better varieties are hybrids of *Labrusca* with *Vinifera*, or occasionally other American species crossed with *Labrusca* or with *Vinifera*. Catawba, Niagara, Isabella and Delaware are examples of these hybrids.

California Soils Adaptable to Eastern Grapes.

Any soil in California, adapted to fruits, will generally be found suitable

for Eastern grapes; but it should be well drained, as grapes will not grow with their roots constantly in water. Irrigation should be provided during the growing season. In the Eastern grape districts the rainfall averages four or five inches per month during the growing season, and two or three per month during the ripening period. Where moisture can be regulated, it is better to give very little water during the ripening season. An excess of moisture at this period produces an inferior quality of fruit. Regulation of the water supply, by irrigation, will, therefore, be a distinct advantage; and the fruit will not be spoiled by unfavorable weather conditions at ripening.

Our California climate, generally, affords enough heat units to ripen the Eastern grape, and we have a greater proportion of sunshine than grape-growing districts of the East.

Treatment of the vine for the first two years is practically the same as that given *Viniferas*. The first year is calculated to develop a root system, and in the winter following the vines are cut back to the ground, leaving but two or three buds. The next year should develop a stem or trunk. During the winter this trunk is cut back to three or four feet, according to the vigor of the vine and the system of training contemplated. During the second winter the trellis should be built. A common form consists of two wires on posts, the first wire being two, or two and a half, feet above the ground, and the other an equal distance above the first. Posts are set every third or fourth vine, depending upon distance between vines. Strong-growing varieties, such as Pierce, Catawba and Niagara should be eight or nine feet apart. Smaller growers, such as Delaware, Iona and Lady, may be planted four to seven feet apart, according to their vigor.

The vine is trained as follows: two canes, at, or a little below, the level of the lower wire, are laid down upon it, running, in opposite directions, and similarly, two on the upper wire. The canes should not be twisted around the wire, but tied on top of the same. During the first fruiting year, two or three canes may furnish enough wood.

The Object of Pruning

is to restrict the fruit-bearing wood to a point where the vine will produce the largest amount of fine fruit without sacrificing the vigor of the plant. The unpruned vine

will produce a much larger yield than the pruned canes, but a larger proportion will be skin and seeds, and the fruit will ripen imperfectly. Further, the great burden of fruit on neglected vines is detrimental to the plant. The vine, under careful pruning, will produce, year after year, a fair crop of fruit of the best size and quality. Forty to sixty clusters is an average yield for the average vine. We may assume that each shoot will average two clusters. Therefore, from twenty to thirty buds should be left, on wood of previous season's growth, to supply the fruit for the coming season. Pruning is done in the dormant season, and consists in cutting away all the canes, (including those that have borne fruit), except four to be laid down for fruit for the ensuing season. The pruner must take

(Continued on page 519.)

The above basketful of luscious American grapes was grown at San Leandro, Alameda county, in a delightful homelike environment.

EDITORIAL.

A BUSY AUTUMN.

EVERYTHING in California is intensely active. It is usually thus in California at autumn-tide—but this year more abundantly. Our autumn is the birth of the year. The sere and yellow leaf drops not idly to wait the spread of winter's pall and to lose itself beneath it in darkness, dampness and decay. Here it is that the dying leaf "hops off" like an aviator—to course the filmy distance of the sky, or, harelike, to skip over the warm bosom of the earth, as its fate may be. Even if it lodge in chink or furrow of the earth, it only lies secure until the blades of new grass thrust it upward and onward again along the course of moving things. And as it is with leaves, so also with men and women in California. For them autumn is not—

"the season where the light of dreams
Around the year in golden glory lies
While scarce a breath disturbs their drowsy
trance."

Quite otherwise, autumn is always in California the time of beginning, not of ending and of rest—the time to make investments, to take up enterprises: even "moving day" is an autumnal festivity in California! But, wont as Californians are to such sequence of affairs, which even the weeds of the field, humblest of Nature's teachers, proclaim to them, it is an interesting fact that there never has been such sensational activity in California affairs since Americanization began in the fall of '49. The very air is charged with movement California-ward, and the fact that a man has thrown himself from New York to San Francisco by the atmospheric route in less than twenty-four hours of moving time, is only symbolic of the speed and grace with which all our development affairs are moving. Not only are great investments from new sources being made in California industries to an extent and diversity not known before; not only are organizations for irrigation and other improvement agencies being undertaken with greater outlay and area than in earlier years, but individual undertakings are everywhere being entered upon with greater confidence and expansive generosity. It has always been a farming ambition for a man to "own all the land that jines him," but now we see hundreds of those who have played as winners in the current game of production adding piece to piece of good land or promising plantation at prices recently held to be unmentionable. We hope all their ventures will prove wise and good. It is a good thing for a country when those who know it best are the highest bidders for possession of it!

A DAWN OF HUMAN FEELING.

In company with all other residents of the east-hay cities we have been sorely inconvenienced because about 1,200 operators of trolley cars decided to strike and interfere with the normal activities of more than a quarter of a million people, into whose transportation service they entered after eagerly seeking admission thereto in previous years. Either they or their friends pursued a line of public intimidation in addition to ruining business and causing great hardship until riots passed beyond

local control and necessitated an appeal to the governor of the State. We have no present interest in characterizing the behavior of these strikers toward their neighbors and friends except to say that it was apparently wrong and unjust enough to cause the strikers themselves to weary of it, and that is reason for making this reference. There seemed to dawn upon the consciousness of these men, who are really good citizens and estimable members of the community, that they were not right in causing such public inconvenience and hardship, and so, after ten days of suffering and great losses to all the people, the striking carmen concluded of their own volition to go back to work and submit their claims for less time and more pay to decision by conference and arbitration. We count this incident of great public advantage. We honor these men for obeying their own consciences. We consider the example they have set of repentance of selfishness and self-will and of reasonable recourse to settlement of claims in a true American way, as a manifestation of possession of a true patriotic spirit, and we certainly hope that they will receive from fair arbitrators and a friendly public everything to which they are justly entitled. It seems to us that by their expression of their sober second thought they have sounded the keynote in harmony, with which all our discords between groups and interests of Americans may be merged into the music of mutual advantage and good will.

NATIONAL INDUSTRIAL CONFERENCE.

As we write on Tuesday the National Industrial Conference (which is the proper name of the capital-labor approachment) is in session in Washington trying to settle the great "steel strike." It is rather rough on a deliberative body to be compelled to demonstrate its competence for talk by means of its success in embodying its principles in practice. It is as though a great authority on public health were taken with a pain inside of himself while on his way to the lecture platform, and had to cure it before he could speak of the pains of the public. We are not sure, however, that it may not be the most fortunate thing that ever happened—that is, in the case of the National Conference, of course. If it can bring to an end one of the greatest strikes that ever happened in this country, and thus concretely demonstrate that its theories will work, it is hard to over-estimate the attention which will be paid to its subsequent findings. On the other hand, if it disagrees, or if its prescription does not cure this particular industrial pain, very little will be cared what it does afterwards. The Conference seems to be up to a very old test: "Physician, heal thyself."

It is an interesting fact that California as a State is much better represented numerically in this national affair than our pro rata title to representation for we have three out of the fifteen representing the general public of the United States, viz.: Gavin McNab and Louis Titus of San Francisco and Gertrude Barnum of Berkeley. On the distinctively labor group we have Mr. Scharrenberg. On the whole, then, we have four Californians out of forty-five, while our pro rata as a State would be .937 of one. We like to be accurate in a matter of such moment. And California is making her voice heard, for the telegraph says that Mr. McNab has filed a proposition, which has received the approval of the "public interest" group, to the effect that issues between employer and employe shall be referred to a "permanent arbitration board, of which all living ex-presidents shall be members." Mr. McNab's idea to give his arbitration board a national standing and to provide ex-presidents with a good job, so that they can live without creating an over-supply of "professors"—a business which is already worse paid than bricklaying. However that may be, we are glad that California has spoken first in the conference for reasonable arbitration as a substitute for strikes, violence and public hardship. And if he desires to cite a glowing instance of California's preference for peace and fair play, the return of the Oakland trolley-men to reason and humane feeling will serve very well.

HOW THE FARMER GETS OFF.

We are glad that the fact that the farmer is not profiteering is slowly percolating into the public mind. The following statement is printed in the

"Nation's Business." We do not know the exact affiliation of this journal, but it is clearly not undertaking ex parte statements for agriculture under such a name. The following is interesting:

Among the things on which the city man's mir has ceased to function is the perfectly self-evident fact that the farmer cannot profiteer. To profiteer involves controlling the supply and setting it price at a level which involves making large profit. The farmer cannot control the supply, does not and has never set a price. There are 7,000,000 individual farms in America and every farmer sells what he raises in competition with every other farmer, at price fixed by the purchaser. And he buys his necessities in the open market at what the vendor asks for them, and gambles his capital, and the labor of himself, his wife and his children from two years old up against the weather, plant and animal diseases and insect pests, to get his crop without any assurance of even an average crop, without an time more than the probability that he will have a market, and without any assurance at any time that the market price will make him a profit.

Of course, as applied to California, the foregoing is not now exactly true, for we fortunately do have now a few associations which are so capable in their co-operative protection that they do fix the prices of a few articles, and this saves our California face from the charge that the farmer "has never set a price." Still, however, it is not done for a profiteering purpose, though, some of our local groccerymen have been foolishly charging that and back-firing on the farmer to deflect the heat of public indignation from their own alleged activities. The California associations which set prices have reached a co-operative control which enables them to charge back to the consumer the cost of production and save themselves from destruction just as manufacturers have always done, and that is just what all farmers must do, not only for their own solvency, but that the world may be continuously fed. The time has come when the farmer cannot longer live and sell his product "in competition with every other farmer and at a price fixed by the purchaser." It is true, as the writer we have quoted declares, that practically all farmers are now doing that and therefore cannot profiteer. But it is also true that they are starting toward a control of their business which will enable them to profit but not to profiteer. There are too many of them to agree in a profiteering combination, and they have too many and diverse minds to hold together under the stress of profiteering, which requires "addition, division and silence," and which is both physically and morally impossible in a popular assembly of fair-minded men, such as constitute our farming population.

CALIFORNIA PROMOTING COLLECTIVE SELLING.

It was the idea of Congress in 1914 to protect farmers in their right to sell jointly the produce of their labor in ways protective against price-fixing by the purchaser, which the writer in Nation's Business cites as the beginning of the farmers' hardships. There has been, however, some doubt as to the surety of his legal release from being judged as "in restraint of trade." Congressman Hugh S. Hersman of the Santa Clara and southern district, has a bill now in Congress to remove all distrust and danger along that line, and we notice that Eastern farming communities are taking keen interest in it and calling Mr. Hersman to conference with them on the subject. Mr. Hersman's bill has these among other specific reservations of farmers' freedom from anti-trust proceedings:

"Nothing contained in this Act or in the anti-trust or other laws shall forbid or be construed to forbid the existence and operation of associations, corporate or otherwise, with or without capital stock, of farmers, vineyardists, horticulturists, planters, ranchmen, or dairymen engaged in making for the producers thereof collective sales of farm, vineyard, orchard, plantation, ranch, or dairy products, and, incidental thereto, packing, drying, churning, storing, grading, or otherwise processing or preparing such products for market, or to forbid or restrain individual members, shareholders, directors, or officers of such organizations from making such collective sales and prescribing the terms and conditions thereof."

It is intended, of course, that such associations for collective selling shall be non-profit associations, and that the money shall be distributed to the producers of the commodities sold, except in the case of associations with capital stock there

may be "no greater dividends on capital stock or membership capital investment than the minimum gal interest of the State where organized." It is, of course, necessary and right that organizations should be enabled to borrow the capital needed in their operations or to be paid interest if the organizers themselves provide it, but it is just as clearly forbidden that promoters shall organize farmers to make profits for themselves out of the farmers' operations. Farmers do not desire to profiteer at the expense of the public. They have been enslaved hitherto financially and commercially and they now seek a square deal for themselves and for the public which is dependent upon them.

THE LIVE STOCK SHOWS.

On the date which this week's issue bears, the Live Stock Show will be opening in Exposition Park, Los Angeles, and through the full circle of next week its activities will continue, as we stated somewhat abundantly in our last issue. In our paper of October 25, we plan to forecast the California International Live Stock Show, which will open in this city on November 1 and hold until November 8. For this event, which it is hoped to develop into one of the regular events of the year in the metropolis, preparations have been proceeding for several months. The entries assure a great display. These, with the historic, architectural and natural charms and interests of the place, promise an overwhelming popularity and patronage. The fact that the California Building of the Panama-Pacific Exposition will throw open its doors and welcome the people to this new demonstration of the State's resources and capabilities, should add greatly to the popular interest. As already claimed, Californians are unusually awake to great things this fall, and this show of live stock of all kinds will afford suggestive demonstrations of the delights and opportunities in California out-door activities and investments which will be full of significance for the progress of the individual and of the State. Such things will occupy our attention in our next issue.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Pruning Bearing Bartletts

To the Editor: How should I prune Bartlett trees seven years old that have not been topped for two years? They are mostly straight shoots going skyward. This year a number of shoots have grown from the base on the outside of the trees, which are two to four feet long. What should I do with them?—Farmerette, Shellville.

It is hard to tell without seeing the trees. As your trees have not been topped for two years, it is probable that your upright shoots have developed fruit spurs and some short laterals. If they are crowded remove some of them entirely and cut back the others to outside shoots so as to spread your upright Bartlett trees more. Do not cut back short those which you leave—cut back to an upper lateral pointing in the right direction. Keep the laterals and spurs on the older branches unless they are feathered too thickly, and in that case remove some of them. Remove all the shoots below the main forking of the trunk unless you wish to grow bushes.

Green Manure Crop Indicated.

To the Editor: I have 40 acres of grapes, which I irrigate. The soil is coarse, sandy loam, with coarse gravel underlying about 6 feet from the surface. It is situated about a mile from a river, which, together with the coarse character of the soil, augments drainage. I am of the opinion that a cover crop planted this fall and turned under in spring would fertilize and help retain moisture. Please advise me what to plant, if anything, and how would you suggest sowing?—P. M., Escalon.

Yes, a good lot of green stuff plowed under will enrich your soil and make it more retentive of moisture—overcoming the coarseness of it by filling it with fibrous organic matter. The plant of which the seed is most available and which grows best in a coarse, deep soil is yellow sweet clover (*melilotus indica*), and it should be started just as soon as you can seed and get moisture into the ground. On such a loose soil it is apt to catch well by broad-

casting before irrigation—the fine seed being usually sufficiently covered by the process for a good fall start.

Birds and Cotoneasters.

To the Editor: I asked Mr. Vallance a question which he told me to pass on to you as our best authority. Could you tell me of some kind of a spray to keep the birds from eating the berries off the Cotoneaster crenulata? I should not like a poison if I can help it.—R. P., Oakland.

We are afraid we cannot justify Mr. Vallance's high praise, for we are considerably unsettled in mind about birds and cotoneaster berries. We would not kill birds to save anything not necessary to a living for ourselves, and as we enjoy both birds and cotoneasters we would let the birds take half of the berries without complaint. Perhaps the birds could be discouraged by spraying the bush and fruit with some ill-smelling stuff, but that would make the garden as offensive to you as to the birds—besides, the neighbors would make remarks about it, and you will receive a visit from the health officer. Probably you must try to frighten the birds away. This might be done with strips of tin hanging from strings so the wind will make them flash in the sunlight. This works for awhile usually, and there are many such little scaring devices, like children's windmills on tall sticks above the bushes. But probably the most effective scare could be rigged by fitting a collar to the house cat and tying her to a stake in an open space near by. Her ceaseless efforts to get free will drive away all the birds in the neighborhood. Or, if you dislike to do that, perhaps the neighbors have a cat which seems to you useless, which you could take down to the taxidermists and have him set her up in a menacing attitude and put her out in sight of the birds. We admit this advice is somewhat theoretical, but we must do something to support our citation as an authority.

Peas and Barley.

To the Editor: I have been told that to plant Canadian field peas with barley greatly increases the yield of the barley, and that the peas will ripen and fall to the ground before the barley is ripe, and will make great hog feed after the barley is harvested. What do you think about it, and if a good thing, what amount of each should be sowed to the acre?—S. A., Maxwell.

There are theoretical possibilities in your proposition, but the chances are that you will not practically realize them to any noticeable extent under ordinary grain-growing conditions in your valley. It is true that a legume growing with a grain will give some of its nitrogen to the grain and speed it up—providing there is moisture enough in the soil to keep them both at work to the end desired, and that will not usually be the case. There are more chances, unless you have moist or irrigated land, that you will get less barley, and pinched at that, and not peas enough to give you your seed back, nor pea forage enough to much improve the barley stubble. If you wish to grow a lot of green forage for hogs, or possibly to get a lot of mixed hay for cows, the barley and peas combination has more chances of paying out on ordinary rainfall land. As for the Canadian peas after barley is cut for grain, they will not grow in valley heat and drouth after harvest. Even if there is moisture enough (which is doubtful) to start the seed that falls (if there is any), the growth will be very short and scant—yellow, mildewed, and perhaps lousy. We do not think much of the proposition. If you wish to try it, sow 40 lbs. of peas with the barley and watch to have your stock ready to eat it up, as it begins to go backwards in the spring.

Budding-Over Peaches.

To the Editor: I have a hundred or more McDevitt clings, which seem to be an every-other-year bearer. They are from one to five years old. Can I cut them back when I prune this fall and bud the new growth next July or August to Orange cling? Would you cut back as far as for grafting, and would the tree be as strong as formerly?—W. M., Placerville.

On such young trees we would not cut back for a new top but would try to get a new head by starting buds in the old bark or in the spring growth. If your trees have not gone too far dormant you can get buds in now and have them take for a start next spring—cutting back after the new growth is out and going well. If the bark is now too tight you can get buds in next spring by keep-

ing some bud-sticks dormant until the old bark slips on the stock. If, however, you prefer to cut back and get sprouts to bud into, do it late in the winter, not as early as pruning is usually done, and then bud into the bases of the best-placed sprouts in May or June, and for a growth on then. The plan you propose would cause you to lose two years' fruiting. You ought to work it so as not to wholly lose more than one. If you are pretty smart in handling the buds started in the spring in the old bark you can get some fruit and growth on these buds also and thus not entirely lose any crop.

Broom Corn.

To the Editor: What is the average crop of broom corn, brush and seed per acre? Which month is proper for seeding, and how much seed per acre? Does broom corn require much water?—H. F., Biggs.

The average lies somewhere between a quarter and half a ton of brush, though in rare cases a ton or more is secured. Of seed there may be fifty bushels. The plant is tender and is sown when Indian corn is considered safe in the same locality. It requires about three pounds of seed to sow an acre so the plants will stand about eight inches apart in rows 3½ feet apart. The plant requires either naturally moist or irrigated land, for it must make good growth to secure good brush. A broom corn crop is not like growing forage or grain. It requires a lot of experience to handle the brush right and one should not plant much area to experiment on. The plant must be well grown, not skimmed, and the brush must be cured into strong fiber, not merely dried up.

California Weather Record.

Spraying Stone Fruits in November

(Written for Pacific Rural Press by Jno. J. Fox.)

THE time has come to remind growers that a month from now they should be spraying their peaches and almonds for blight and curl leaf, and the apricots for bud-blight and shot-hole fungus. Two sprayings are necessary for these, the first any time between November 15 and December 15, and the second as the buds are swelling. Either lime-sulphur 1-9 or a good, strong Bordeaux is used. We favor the Bordeaux mixture for this November-December spray, and the lime-sulphur when the buds are swelling. The Bordeaux can be used up to 6-6-50. For the few still uninitiated this means 6 pounds of bluestone (sulph. copper), 6 pounds of lime, and 50 gallons of water. The bluestone is dissolved in any kind of vessel except a metal one. The lime is slaked and strained into the tank and the bluestone water added, but not until you are ready to spray it on, as its value deteriorates by standing over after it is mixed.

It is possible that this same November spray may be useful in the control of shot-hole fungus and of the blackheart in apricots. Nothing has yet been found to overcome the latter, the only suggestion being that of planting apricots in the most temperate locations and where changes are least extreme.

For Black Scale or Brown Apricot scale on cots, spray from now on with an oil emulsion or miscible oil spray—the sooner the better, as better results are obtained while the young scale is in a tender condition. The damage that the Brown Apricot scales do in sapping the vitality of the tree, stunting the young growth and weakening the set of bloom is very great indeed, quite apart from the injury to fruit and foliage by the sooty fungus that covers them in the spring. November and December are good months for applying the miscible oil. The pump should furnish at least 150 pounds pressure to give good results, and a good agitator is important with almost any kind of spray. It is absolutely essential with crude oil emulsion, which is also an excellent spray to use against the soft-bodied scales as well as the armored scales.

Brown Rot.

Where brown rot was bad all mummied fruit should be collected and destroyed. Quite a little late brown rot was in evidence in peaches and apricots while still on

With the use of the new spray guns this method of spraying from a height is not so much practised.

the trees, and we notice many on the ground in some orchards. These should be gathered up and destroyed, too.

Many men feel they would like to get through with their pruning before spraying, but it is a great mistake to wait for this with blight, for the time is apt to slip by when it is most effective. If crude oil emulsion is used, perhaps December 1 is early enough to begin using it, but the miscible oils can be applied right away for the Brown scales. We have found generally that prune and apricot growers have remarked on the mellow condition of the bark on trunk and main limbs, after using any of the oil sprays, and it has been quite noticeable.

How Can I Tell Peach Blight?

That is a question still asked. Some wood dwindled, and died this year. Some of the young branches failed to

Here is a peach orchard already pruned and sprayed.

make any growth, the leaves were small and fruit failed to develop on those twigs and branches. Some died back entirely. These are some symptoms. If you examine the growth you will find discolored and dead spots on the shoots as well as round the buds. These buds die out as does much of the fruiting wood, and perhaps a whole large shoot will die back clear to the limb. In the winter time soft, jelly-like gum comes from the affected parts, and you can rub it off with your finger. The spring spray alone will not do. The November spray is necessary as well to get rid of peach blight on both peaches and almonds.

Every Bud on the Tree.

Must be sprayed thoroughly. Get up a good pressure and walk clear round the tree to get results. If there is no blight, it is not necessary to spray till the buds swell in the spring so as to catch everything, though it is really safer to spray in November as well where curled leaf is common and rife. In the

great peach-growing sections of the San Joaquin, it is most essential that all the vitality possible be conserved in the trees. For they have suffered enough from light rainfall, shortage of water and a heavy crop, and it will pay to nurse them along and spare no expense.

BEWARE THE UNKNOWN PEDDLER.

A good many credulous people have been badly "sold" at various points the past four seasons by peddlers going round selling nursery stock under absurd conditions and valueless guarantees. Some men were around one year selling gooseberries at 25 cents a bush that were said to be marvels of production in size and quantity. The way contracts of purchase were signed up was by a reciprocal compact on the part of the peddler to buy all the fruit produced at a huge price f. o. b. The writer knew one man who made a hot bargain. By dickering, he got 500 of these bushes for a paltry \$100! Another "sold" a number of ranchers volcanic ash for fertilizer, showing samples of its mineral value in neat phials.

Don't buy trees or fertilizers from any unknown firm or irresponsible persons.

lands will probably find it far more difficult to get back into the United States than it is to get out.

A cannery man last season visited a peach packing house and claimed that a canned freestone had a higher flavor than a canned cling. They did not believe him, so he opened two cans, emptied out the juice, passed over fruit samples, and got the unanimous verdict that the freestone was fine, the cling tasteless. His explanation was that the syrup gave the cling its flavor, but the freestone had a good flavor without help. Query: from this test was the freestone the superior canned fruit, or since clings are always sold and eaten in the syrup, are they better after all?

In regions where the Russian thistle has been considered a pest, it has been used both in the silo and cut for hay. When cut for hay the mower is started just as the spines commence to harden or even earlier.

The sum of your results depends on whether your calculations have been based on facts or imagination.

How Fast Are We Losing Our Population?

(Written for Pacific Rural Press.)

The only way to alleviate conditions brought about by lessened production during the war is for every man to dig in and produce to his utmost capacity. This axiom is now realized all over the world, and in Germany most of all, where the nation's workers are said to have added "two patriotic hours" to each day's work till they shall have recaptured the trade lost during their isolation.

Apart from strikes, how are we affected in this matter? Though our producers are working hard for maximum results, immigration seems to be going on at a somewhat disquieting rate. We could better afford losing the money they are taking with them and to lose the immigrants themselves—barring a few.

Here are figures covering the immigrants leaving America, recently furnished:

"The full outgoing steerage capacity (of our ships) averages 1200. This is taken months in advance. There

are usually 2,500 on a daily waiting list. Italians, Greeks and Serbians are in predominance—80 per cent being Italians, the average amount of money they are taking over being \$2,000. All amounts in excess of \$1,000 are subject to a 12 per cent tax."

Anthony Caminetti, Commissioner of Immigration, who has been investigating a rumor of exaggerated conditions of exodus, emanating from his own department, finds that since the armistice 102,513 foreigners have left the United States. This, he says, is natural, and does not exceed the normal rate of emigration from our shores.

Mr. Caminetti is the official keeper of records with regard to immigration and emigration, and we have to accept his figures rather than rumor. Accurate data of departures through or to Canada are more difficult to obtain.

Many men now going to their home-

Ornamentals Fruit Trees ROSES

We are recognized as specialists in the propagating of Ornamentals. A thorough knowledge of the business, aided by the best soil, water and climatic conditions, enable us to grow superior stock.

ILLUSTRATED CATALOG SENT FREE

Our fruit orchards for propagating and test purposes contain more varieties than are assembled in any other one place, and it is from this reliable source that we secure our FRUIT TREE buds.

We have unequalled facilities for planning and executing landscape effects for the modest home or the large estate, parks, factories and school grounds. Well laid out grounds enhance property values, as well as adding to the joys of living.

WORMY PEARS A DEAD LOSS.

(Written for Pacific Rural Press.)

Many owners of dry-yards that bought windfall pears this year, found toward the latter end of the season as high as 25 per cent of them wormy and in many instances worse than this. Now wormy pears, even when the worms are cut out, never make first-class dried fruit, apart from the great added labor expense involved and the large added loss in cutting.

Some of the dryers have talked this matter over among themselves in order to make arrangement to protect them from losses next year. The following tentative plan has been worked out:

That purchase will be made on the basis of pears free from worms. Should shipments contain wormy pears, those that are wormy will be rejected. In the event of disputes arising between growers and dryers, the Horticultural Inspector will be called in and the average percentage of wormy pears in a shipment will be determined.

If this plan is carried out, the grower whose shipments go 50 per cent wormy will receive 50 per cent of the basis price and will receive no payment whatever for the wormy pears.

The moral of this is, that every grower should make early preparations for more thorough and systematic spraying than ever before. While nearly all growers attempt spraying, in many cases, particularly where there are Oriental tenants, spraying has been so carelessly done that only one side of a tree is sprayed, leaving the other side of the tree unprotected.

In California this year, out of an estimated crop of 110,000 tons of pears, probably 10,000 to 15,000 tons were wormy, entailing a loss to the grower of perhaps \$750,000 or more. Next year, with wormy pears refused, the loss will be nearly double this. Also it is illegal to offer wormy fruit for sale and men have been fined every day in the State for trying to get them on the market. The remedy is to spray thoroughly, to use the right mixtures and to spray at the right times.

One grower told the writer he thought he could safely offer a dollar for every wormy pear found in his orchard of 40 acres. He sprayed five times and on one 10 acres of old orchard netted \$1500 an acre for pears shipped.

PRUNING OLD WALNUT TREES.

(Written for Pacific Rural Press.)

The difficulty with an old walnut tree that has become dense and full of dead or poor growth is to know just exactly what to do with it. We know it has to be opened up some without laying any wood open to the sun. But with all the nuts on the extreme outside something has to be done, and that seems to be a matter of individual judgment.

We were recently shown some trees in the E. S. Picket place at Goleta (Santa Barbara county), which had been pruned under the supervision of Eugene S. Kellogg, the Horticultural Commissioner. The basis of his system is to cut out practically all branches that don't reach to the outside of the tree. New sprouts were showing strong in trees that had been opened up and these will be pinched for fruit wood. Mr. Kellogg thought some of the thinning had been overdone, but no dead wood was showing and the 26 acres carries a heavy load of nuts. The trees are 18 years old and bore 1400 pounds to the acre last year. They will beat that this year. No irrigation. About half this orchard has been pruned so as to let in light and the improvement is noticeable. The system of letting a vertical gore of space into an old tree is apparent, but needs judgment, and the big cuts should be cared for. These open spaces provide a larger bearing area for new wood, and an orchard could be kept in pretty good shape, it would seem, by taking four or five years to go over it and then start again. Mr. Kellogg covers his large cuts with zinc, covered with as-

phaltum inside and out. This obviates or reduces the possibility of wood rot entering.

A dust of powdered starch in the shoes is a prevention of sore or blistered feet.

"No Backache in This"

"Dynamite will do your heavy work, boys, but to get the best results you've got to know how to use it right."

"It looks easy to prime this cartridge—and it is easy if you know how. Practically all blasting work on the farm or in the orchard is simple—but there are as many wrong ways as right ways and you want to know the right ways to use"

HERCULES DYNAMITE

"The way I found out about the proper use of dynamite was by sending to the Hercules Powder Co. for their 68 page book, 'Progressive Cultivation.' This book gives you detailed information, illustrated by photographs and diagrams, about all kinds of blasting processes for farm work."

"Even if a man has been using dynamite, he can get valuable pointers from this book. The Hercules Powder Co. will send a copy of 'Progressive Cultivation' free to any farmer or orchardist."

Sign the coupon and mail it today. Your copy of this valuable book is waiting for you.

A GOOD LAND BUY

160 acres unimproved, one-half mile north of Tudor in Sutter County on Southern Pacific Railroad. Bonds voted for highway along front. Abundance of water. Electric power for pumping. Land level, soil excellent, surrounded by good orchards.

Am offering this fine quarter section at \$140 per acre for immediate sale with very liberal terms. After Nov. 1st price will be \$150.

Write for full particulars.

J. A. BENNETT, Owner

Walnut Creek, California

Here and There in the Fruit Business

Squirrel Work in Contra Costa.

Considerable headway has been made in this county in the squirrel campaign, according to Frank T. Swett, Horticultural Commissioner, under whose general direction the work is proceeding. Since May 25 tons of poisoned barley have been prepared and used. In the Delta section good results have been obtained by the use of poisoned corn, which seems to appeal to the taste of the tule squirrels. It is just as effective as the barley and they eat it more readily. Squirrel Inspector Dirion has five men working with him.

Tuolumne Apple Harvest.

Tuolumne county apple growers organized and are having their apples packed under State Inspection this year for the first time and are using the State apple stamps. They produce fine fruit and now that the industry is growing so rapidly they are going to get started right. To this end they have had apple-packing demonstrations at their farm centers by expert packers. W. I. Newcomb, District Apple Inspector, is supervising the whole pack.

Spanish Olive Oil.

During the first six months of 1919 Spain exported 17,994,877 gallons of olive oil. The difficulty of getting cotton-seed oil and the precautions taken to prevent adulteration avert suspicion of its purity. There is a government restriction on wholesale exportation so as to ensure an adequate domestic supply. Applications for this year's export now on file amount to over 26,000,000 gallons. The use of pure olive oil is growing in this country, especially in cooking, as it is in Spain.

How the Citrus Men Buy.

The Fruit Growers' Supply Company, which furnishes the members of the Citrus Growers' Association with all its supplies, from bud-wood to boxes, transacted a business last year of approximately \$6,200,000 at an operating expense of \$1.10 per \$100 of value on purchases. After paying 6 per cent interest on capital invested and setting aside a small reserve, it will refund to its members \$525,000

or the equivalent of 8 per cent on their purchases. The Company has acquired, in addition to its timber tract at Hilt, Cal., 41,414 acres of forest in Lassen county, in order to guarantee its members an adequate supply of box shooks for 50 years to not get tinplate.

Prunes on Peach-Almond.

John Vallance of Piedmont grafted over a six-year-old peach-almond tree to French prunes last year, putting in 12 scions. The wood of the peach-almond takes more after the almond than the peach. The young French scions made such heavy growth that they had to be cut back in June for safety sake. The tree is now one mass of brush and should be a good producer after next year. Mr. Vallance said that his sugar prunes weighed up better this year than his French did.

Giving the Prunes a Turkish Bath.

"I've found out one thing," said Albert Glaser of Dry Creek Valley (Sonoma county), and that is that you can't dry prunes by heat alone. I tried drying prunes in that storehouse; closed the door and put a good stove in to dry them out. I got the heat all right, but when I looked in next day the prunes had whiskers on them. Then I gave them more heat and in a few hours the whiskers had doubled in length. Finally I took them out and dried them outside after dipping again. The thing seems to be to get rid of the moisture that comes out of the prune, and I want to see how it is done cheaply and effectively." So do we all.

The Apple Situation.

The Northwestern apple crop is the largest on record and of excellent quality. Prices started 25 cents to 50 cents higher per box than last year. Export demand is likely to be active, with Canada a keen competitor for business, both here and abroad. The Eastern barrel apple crop is the lightest in recent years. The center of heaviest commercial apple production is moving westward. Washington's commercial crop for this year is estimated at double that of New York.

Precocious Peaches Profitable.

Eighty acres of four-year-old peaches on the Sierra Vista Ranch, between Richgrove and Delano (borders of Kern county) yielded 250 tons of fruit this season, the Elbertas selling for \$60 a ton and the Clings for \$70 a ton. This is better than three tons to the acre at four years old. W. C. Wallace, the proprietor, expects to get three carloads of Red Emperor grapes from eight acres of three-year-old vines. About 1,000 acres of the original Sierra Vista ranch are planted to citrus, olive and deciduous fruit and vines.

Olives in Yuba County.

There is a good crop of olives in the Marysville district, the condition being 110 per cent, according to G. W. Harney, County Horticultural Commissioner. There are three large groves here, all owned by companies operating plants at Oroville. One of them contemplates resuming planting olives next spring. The opening price on olives still stands at \$175 a ton "orchard run."

Another Non-Fruiting Mulberry.

To the Editor: I have a non-bearing mulberry; can have all the cuttings anyone wants; send in orders for spring work: all free.—Wm. Patterson, R. 1, box 68, Woodland.

QUICK FIGURING NECESSARY.

Her lover held up a ripe luscious Bartlett and asked the maiden teasingly, "Will you have a kiss or a pear?" Guess what Miss Innocence replied.

Take your pencil and figure it out. Then do it. But don't take too long figuring or it will never be done.

"What is worse than biting an apple and finding a worm in it?" said Mr. Smart. "Finding only half a worm," said the gloomy one.

The **FRUIT GROWER** says—
"for tree planting
genuine **GIANT** is
most satisfactory"

The Giant Farm Powders—Eureka Stumping and Giant Stumping—loosen and pulverize the soil instead of packing it and throwing it high in the air.

Western fruit growers have used hundreds of tons of these Giant Powders for blasting beds for trees. They have proved that blasting with genuine Giant Powders provides free drainage, increases moisture-storage capacity and insures vigorous growth and early bearing.

"My trees planted three years ago in beds blasted with Giant Powder are 75 to 100 per cent bigger and better than the trees that I planted in dug holes," writes H. H. Smith, Oregon City.

You will enjoy reading "Better Farming with Giant Farm Powders." It describes all the new and money-saving methods of blasting beds for trees, sub-soiling established groves and orchards, clearing land, ditching, etc. Write for it now.

APA SCHOOL CHILDREN IN THE FRUIT HARVEST.

(Written for Pacific Rural Press.)

During the three weeks' vacation of the grammar schools at Napa, given for the purpose of relieving labor shortage, the little ones earned \$10,15.66, according to Professor J. L. Wheeler, the superintending principal. Of a total of 1,063 pupils of all ages, from 7 years to 15, the number who picked prunes was 593. The largest amount earned by any one room was that of D. T. Davis, principal of Lincoln, with \$1,301.73. The largest amount earned by an individual pupil was \$98.50 for the 3 weeks. The total amount earned by students of the High School was \$5,867, according to Prof. J. S. Denton, the principal. This is not the first time the Napa school children have saved the situation for the prune grower. One little tot of six was found outside an orchard weeping bitterly because she was not going to be able to report that she had picked. The kind-hearted lady who found her lifted her into the auto and took her forthwith to the orchard and allowed her to fulfill her little mission and brought the sunshine back to her heart.

Professor J. S. Denton said of the Napa High School students: "They were given three weeks' vacation for the purpose of helping to garner the prune crop. One hundred dollars was the highest sum earned by one student, a boy. One girl, 14 years old, earned and received \$85.50. Two sisters, aged 13 and 15 respectively, earned \$70 each."

Open Sundays and Evenings

Thus the school children, in a town of 7,000 inhabitants, earned \$15,883.50 in three weeks' work in the fruit harvest—a record to be proud of. For it represents picking up 3,000 tons of prunes.

THE AMERICAN GRAPE IN CALIFORNIA.

(Concluded from first page.)

into consideration, not only the vigor and productiveness of the variety, but also the consideration of the individual plant. If the vine is not strong enough to properly ripen the fruit, leave fewer buds; if too strong, leave more.

Many of the American varieties are self-sterile, and do not set fruit well, without cross-pollination. It is a matter of regret that nurserymen, generally, do not indicate in their catalogues the self-sterile kinds. Such a variety, unless set near self-fertile ones, will be very disappointing. In view of the fact that some of our very best varieties are self-sterile, this is a matter of great importance. Only actual observation of vines fruiting in California can determine

Kinds Suitable to Our Conditions.

For several seasons careful note has been made of the behavior of American vines, growing in different parts of this State, in home gardens and nurseries. There are eighty-five varieties growing at the State Farm, at Davis. The writer has carefully checked these over, at different fruiting periods. There is a much larger collection at the U. S. Plant Introduction Gardens at Chico. These have likewise been observed by the writer, during the fruiting season. All observations have been checked and compared. The list following, with one exception, gives varieties of good quality that have shown themselves healthy, vigorous and productive, wherever observed. The Concord has been included, since it is the cosmopolitan grape of the Eastern states. Self-sterility has been noted, and kinds with abundant pollen blooming at the same time have been suggested as pollenizers. The list does not assume to be complete, the ideas being to suggest a few varieties, covering the season, and with differing characteristics. It is offered with the hope that it may stimulate American grape culture generally, and especially in sections where the Vinifera kinds cannot be grown, without special protection.

A Partial List.

A partial list includes the Agawam, Barry, Brighton, Brilliant, Campbell, Catawba, Concord, Delaware, Diamond, Empire State, Goethe, Herbert, Iona, Isabella, Jefferson, Lindley, Niagara, Pierce, Rommel, Salem, Triumph, Vergennes, Winchell, Worden.

WILD GRAPE VINEGAR.

To the Editor: Will you kindly tell me how to make vinegar from wild grapes?—H. W. T., Oroville.
(Answered by Professor W. V. Cruess, University of California.)

I would suggest that you make up your wild grape vinegar in the following way: Crush the grapes into a stoneware crock or an iron bucket. Cover the crock with a cloth and set it aside until the alcoholic fermentation is complete. This will ordinarily be in about three weeks. Then press out the juice and place it in the original container. Add about one-tenth to one-fourth of its volume of strong cider vinegar. Again cover the vessel with a cloth and set aside until it is strong enough in acid to use. This will ordinarily be within four or five months.

WHEAT AND CORN IN AMERICA.

The visible supply of wheat in the United States and Canada October 1, 1919, was 195,073,000 bushels, as compared with 110,571,000 bushels a year previous. The wheat supply east of the Rockies in the United States October 7, 1919, was 84,909,000 bushels as against 96,886,000 a year previous. Corn east of the Rockies October 7, 1919, amounted to 2,163,000 bushels, which was considerably less than half of what was available October 7, 1918.

STANDARD OIL COMPANY

Suggestive Agricultural Pointers

(Written for Pacific Rural Press.)

Unusual Vegetables Displayed.

Unusual vegetables were displayed at the Orange county fair at Huntington Beach October 2, 3, and 4. Lemon cucumbers that look like quinces and taste like cucumbers but have no bitterness were shown by P. R. Canady. A roselle jelly-fruit plant crowned the display on the same table. The only red lima beans in the world were exhibited by C. N. Brush of the Harper-Fairview mesa. beans and [or] adobe or other foreign. They are the product of a sport found on the Irvine ranch last season. Feijoas, guavas, and avocados accompanied this display. Several of the New Guinea beans, each about 3½ feet long and five inches in diameter, were shown by Hubert Head of the Garden Grove district.

Lima Bean Grade Established.

Definite standards for the grading of lima and baby lima beans of the 1919 crop were recently adopted by the California Lima Bean Growers' Association. Choice recleaned beans "shall contain not less than (including splits which shall not exceed 2½ per cent) 97 per cent of edible beans, and not more than a total of 3 per cent of stained and [or] worm-damaged beans and [or] adobe or other foreign matter; and in no case more than one per cent of worm-damaged beans and no more than one per cent of adobe or other foreign matter, and no more than 1½ per cent of stained or discolored beans, all percentages to be determined by weight." A little more adobe is permitted than under the rule of the Lima Bean Selling Agency last spring, and small green beans are permitted as they are of equal quality with the others. Side delivery rakes are held responsible for as much as 15 per cent of adobe in some lots of beans received at warehouses this fall.

Oriental Rice Scarce.

Hong Kong rice shortage had become so critical July 30 that the Government took over all stocks and fixed retail prices. All exports from the colony, which is under British rule, were prohibited, except by special permit; and the Government arranged for importation of 7,000 tons monthly so long as the shortage should continue. The imports were to come from Bangkok, Siam; but Siam's exports had already been restricted 15 per cent by its Government. Emergency measures for feeding the poor in Hong Kong were estimated to cost the Government about \$160,000 monthly.

San Joaquin Water Association.

The old San Joaquin Valley Water Problems Association is to be reorganized at Tulare October 24 if delegates from thirteen counties to be represented there shall so decide. A new

constitution recommended by Secretary A. L. Cowell of the Irrigation Districts Association of California will be discussed and adopted if approved. The purpose of the new association is to consider all water problems of the counties affected and to co-ordinate their solution most efficiently. Boards of supervisors, municipalities, and civic organizations are eligible to membership and each may be represented by one delegate at meetings of the new "San Joaquin Valley Water Conservation and Development Association."

Grain Smut Prevention.

How grain smuts grow, how much harm they accomplish, soil infestations, formulas and directions for treatment, and possible injury to germination due to treatment are discussed in Univ. of Calif. Circular 214, written by Prof. W. W. Mackie and recently published. It is sent free to Californians on application to the Dean of the College of Agriculture at Berkeley.

What's in the Seed You Buy?

Impure seeds may disseminate noxious plant diseases, they may carry the seeds of unwelcome and dangerous weeds, they may not be true to name, they may not germinate well, they may cause loss through paying for a mixture of worthless trash, and inferior varieties may destroy the value of good plants for seed by cross-fertilizing them. It has been demonstrated that the life of any commercial variety is not long, owing to cross-fertilization in the field and the careless admixture of impure seeds.—G. H. Hecke, State Director of Agriculture.

Sow Treated Wheat Seed Early.

Seed wheat treated for smut may have its germination reduced. If it is planted in cold, wet soggy ground, it may not make a good stand. The better way is to be careful to follow directions in the treatment and plan to sow early while the ground is not too cold or wet.

"Chino—Where Everything Grows."

You believe the above slogan after you have seen it posted all around the Chino district in San Bernardino county and have observed the splendid field, crops and orchards which justify it. Nowhere in the State have we seen better crops of the grain sorghums particularly. Some of the Indian corn crops are as heavy as any in the State and alfalfa thrives abundantly. Only sugarbeets seem to have started to the discard. There is plenty of well water and the climate to make it useful.

Barley Shipped from San Francisco.

Barley shipped from San Francisco by water in 1919 is as follows, according to reports of the San Francisco Chamber of Commerce: January, 319,019 cents; February, 524,462; March, 229,586; April, 224,164; May, 702,480; June, 408,204; July, 417,840; August, 354,261; totaling 3,184,016 cents. Rail shipments from San Francisco during June were 1,051,320 cents, and during July were 1,366,120 cents. How much of this was old barley and how much was new cannot be told.

Manure Washed onto Alfalfa.

Cow stables nowadays must be kept clean or the dairy inspector talks business. A common way of finishing the cleaning is to use water from a tank. Frampton Bros. of Los Angeles county wash out all of the manure. It runs by gravity through an eight-inch pipe which enlarges to twelve inches and opens onto an alfalfa field a few hundred feet away. "The alfalfa is always about six inches taller where the manure runs onto it," says Mr. Frampton.

Milo and Barley on Los Ang. Market.

Fifteen hundred tons of milo for October and December delivery changed hands among Los Angeles dealers October 7 at \$2.77½ per cental. On the same day, 500 tons of barley were transferred at \$3.07½ for October delivery and \$3.12½ for December delivery.

Dropping boards should be cleaned two or three times weekly. Keep them covered with a thin layer of dirt, and sprinkle them frequently with slaked lime. Change litter when it becomes foul.

SAVAGE

Woodchuck Season and Your Savage

Side-hill—hazy afternoon sunshine—clover—bumblebees.

Hunch down lower. That woodchuck is working this way. See the grass shake? There—he's sitting up!

Now hold that little Savage front-sight into the grey of his neck—right where the ear ought to be. Hold that rifle tight! And don't yank that trigger. Squeeze it gradually—smoothly—and watch those sights while you squeeze!

Bang! Spat! Hear it hit? Never knew what strick him! Pace it off. Eighty-eight steps? About fifteen rods. And right where you held. Some gun!

Aren't you glad you picked a Savage? The .22 Model 1904 Savage Junior is made and inspected and tested by the same men who make the .22 Savage N. R. A. rifle—the miniature military match rifle that the greatest experts use—and the .250-3000 Savage that kills lion and rhino and hippo and elephants. It has 18-inch round barrel, military bolt action, automatic ejection, and is a take-down. Shoots the world-beating .22 long rifle cartridge (shorts and longs, too) and costs only \$8.00.

See it at your dealer's. If you want to know still more about it, write us.

SAVAGE ARMS CORPORATION

U. S. WHEAT DIRECTOR IN CALIFORNIA.

(Written for Pacific Rural Press.)

United States Wheat Director Julius H. Barnes addressed the San Francisco Chamber of Commerce October 7. Of his many pertinent remarks, we reproduce the following:

The census of 1910 gave the value of farm property in the United States at 41 billion dollars, which was 51 per cent of the value of productive property of all kinds in the United States. The farm income in 1910 of six billion dollars increased to ten billion in 1914 and to 21 billion in 1918. The acreage of the ten principal crops increased from 297 million in 1914 to 326 million in 1918. We may claim that Food Administration policies have thus demonstrated to have been stimulative and constructive and not restrictive.

As to the spread of price between producer and consumer of wheat, we find that between 1913 and 1918 the farm price of wheat increased 166 per cent, flour 118 per cent, and bread only 75 per cent. Yet the healthy condition of these industries show again that Food Administration policies were not destructive.

Production Was Never More Necessary.

There was great pressure on the office of the Wheat Director to arbitrarily reduce the price of wheat on the theory that it would automatically influence the general living cost," said Mr. Barnes. "I was quite convinced of the necessity of the just protection of the consumer, and it was on my recommendation that Congress appropriated one billion dollars to make effective a reduced price of wheat, if the world price indicated that the consumer could have bought his wheat in an open market without the influence of the guaranteed price, at less money than the guarantee basis. Crop shrinkage, however, altered the whole phase of the world position and today it is very clear that the world price is fully equal to the guaranteed price. This being so, a reduction of wheat price would be pure subsidy to the table of every American from the National treasury. An artificial reduction of that sort automatically breaks the influence of wheat on other foods, as shown in the case of Britain, France, and Italy, where other foods are ruling at 350 per cent of the pre-war price with bread artificially held down at enormous national expense. More than that, the threat constantly before the grower of readjustment to an artificially depressed price for the product of his wheat would inevitably tend to stifle production, which was never more necessary than today, in all foods and all commodities. So it becomes a matter of principle not to do the cheap and spectacular thing of attempting to depress the price of one standard food."

No Great Exodus of Workers.

Regarding the exodus of foreign workers from the United States, Mr. Barnes pointed out that in the past six months 94,000 people had emigrated from the United States and 84,000 had come in to replace them.

European Lands Quickly Planted.

A five-thousand mile auto trip through central Europe indicated that 90 per cent of the crop area had been sown within four months after the armistice.

More Bread Would Reduce Food Cost.

A material corrective for high household expenses was pointed out emphatically by the Wheat Director, viz.: enlarged consumption of wheat flour to replace more expensive foods. Strangely, but perhaps from force of habit, flour consumption had sunk far below the pre-war normal. A return to pre-war flour consumption would save at least a billion dollars per year in the national food bill. For two months, Mr. Barnes and others have been pointing this out and statistical reports rendered to his office show that already there is a material increase in flour consumption and a continual fall in the consumption and price of meats, lards, and other competitive foods.

It is reported that the Welch Grape Juice Co., the largest manufacturers

of grape juice in the world, are to establish a big plant in California.

Prunes can be watered with judgment up to the middle of July. Later

they may split under previous dry conditions.

If you had been on the Arizona

HERE she comes, homeward bound, with "a bone in her teeth," and a record for looking into many strange ports in six short months.

If you had been one of her proud sailors you would have left New York City in January, been at Guantanamo, Cuba, in February, gone ashore at Port of Spain, Trinidad, in March and stopped at Brest, France, in April to bring the President home. In May the Arizona swung at her anchor in the harbor of Smyrna, Turkey. In June she rested under the shadow of Gibraltar and in July she was back in New York harbor.

Her crew boasts that no millionaire tourist ever globe-trotted like this. There was one period of four weeks in which the crew saw the coasts of North America, South America, Europe, Asia and Africa.

An enlistment in the navy

gives you a chance at the education of travel. Your mind is quickened by contact with new people, new places, new ways of doing things.

Pay begins the day you join. On board ship a man is always learning. There is work to be done and he is taught to do it well. Trade schools develop skill, industry and business ability. Work and play are planned by experts. Thirty days furlough each year with full pay. The food is fine. A full outfit of clothing is provided free. Promotion is unlimited for men of brains. You can enlist for two years and come out broader, stronger, abler. "The Navy made a man of me" is an expression often heard.

Apply at any recruiting station if you are over 17. There you will get full information. If you can't find the recruiting station, ask your Postmaster. He knows.

Shove off! Join the U. S. Navy

Estimate of California Fruit Production

In the October report by E. E. Kaufman, Field Agent, Bureau of Crop Estimates, there is practically no change indicated in the production of the principal fruit crops for the State as compared with that of one month ago. The total production of the principal deciduous fruits this year compared with last year is estimated as follows: Apples, 136 per cent; peaches, 152 per cent; pears, 115 per cent; prunes, 278 per cent; almonds, 125 per cent; walnuts, 120 per cent; raisins, 105 per cent.

Peaches.—The report is for a total production in comparison with a normal production, and the tabulation of the reports from various parts of the State indicate the largest crop of peaches ever grown in the State. While the peach harvest is practically completed, there are still a few late clings going to the canneries. The tonnage of dried peaches will not be quite up to early estimates, but the tonnage canned will be larger and fully confirms earlier forecasts of 435,000 tons on a green basis.

Prunes.—While early drying seemed to indicate greater shrinkage than expected, it is now believed that the total production will be about 125,000 tons. Roughly estimating the production by districts, Santa Clara will have about 66,000 tons; Sonoma, 19,000; Sacramento Valley, which includes Napa and Solano Counties, 28,000; San Joaquin Valley, 11,000; scattering, 1,000. Final figures may change these totals for the various districts to some extent, but not very materially.

Pears.—Estimates indicate that from 25,000 to 27,000 tons of pears will be used for drying, 28,000 to 30,000 tons canned, and about 50,000 tons shipped as fresh fruit, showing that the commercial crop will amount to about 105,000 tons or 4,300,000 bushels, which is about 5 per cent greater than the crop of 1917, the largest in the history of the State. The commercial pear crop of the United States is estimated at 8,600,000 bushels, of which 4,300,000 bushels, or 50 per cent, is credited to California.

Apples.—The commercial or boxed apple crop for the State is now estimated at 3,900,000 boxes, or slightly less than 60 per cent of the total crop. The Yucaipa District shows an increased production, and a new boxed-apple district is opening up in Tuolumne County and, though small this year, will help to swell the total. The commercial apple crop of the United States is estimated at 23,200,000 barrels, compared to 24,724,000 barrels last year, and the total crop of apples is placed at 156,721,000 bushels, compared to 169,911,000 bushels in 1918.

Olives.—The condition for the State is now placed at 65 per cent of a nor-

mal, compared to a ten-year average of 77.

Almonds.—Late varieties of almonds are now being harvested, and, while the crop is more or less spotted, condition reports indicate a probable production of about 6,500 tons.

Walnuts.—A larger percentage of No. 2 nuts than was indicated earlier in the season will have a tendency to slightly decrease the total tonnage, which is now placed at about 24,000 tons, or 20 per cent greater than one year ago.

Figs.—Reports indicate that the condition of the crop is 105 per cent of a normal. This excellent condition and new bearing acreage will bring about an increased production of figs over that of former years.

Grapes.—Wine grapes are reported 100 per cent of a normal crop.

Table grapes show some slight decline in condition in two or three of the principal districts, owing largely to unfavorable weather conditions the last few days of September. A slight decline is noted in the condition of raisin grapes. The shortage of irrigation water and high temperatures were the cause of lighter yields than expected of muscat raisins. The total tonnage will probably be 5 to 10 per cent greater than last year when the total production amounted to 167,000 tons.

Oranges.—Navels are now reported at 59 and Valencia at 73, compared to 59 and 71 on September 1. A few reports from Tulare County show an increased percentage of split oranges. The small crop in some orchards together with the heavy rains in Southern California the last of September will have a tendency to increase the size of individual fruits, and thus increase the total number of boxes. Total production for the State will probably be in the neighborhood of 14,500,000 boxes, divided among the different counties as follows: Los Angeles, 5,000,000; Orange, 2,000,000; Riverside, 1,500,000; San Bernardino, 3,500,000; Central California, 2,000,000; Northern California, 150,000; San Diego and Ventura, 250,000. California citrus growers will be interested in the forecast of production of Florida oranges and grape fruit. Under date of September 15, the Florida Field Agent, Bureau of Crop Estimates, estimates the production this year at 6,300,000 boxes of oranges; 3,300,000 boxes of grape fruit; and 50,000 boxes of limes and other small citrus. Of last year's crop, about 5,700,000 boxes were oranges, 3,200,000 boxes grape fruit, and 50,000 boxes limes and other small citrus. All citrus crops were reported in excellent condition, the fruit filling out rapidly and promise of an early shipping season. No fruit from late bloom is expected this season.

pleted on Monday, the judges being A. C. Hoyt, Secretary of the State Department of Agriculture; Professor Tufts of the University of California, and John J. Fox of the Pacific Rural Press.

The Bean Spray Company evidently look upon Humboldt county as a future field, for they had a good display at the show.

Dean Thomas Forsythe Hunt addressed the farmers and a massed meeting of Farm Bureaus

SOUTHERN CALIFORNIA FAIR AT RIVERSIDE.

This is really more than a district fair and almost in the class of a State Fair, so far as a livestock exhibit is concerned. All the principal breeds of livestock from horses to goats were fully represented.

In the dairy cattle the Jerseys were shown by seven exhibitors, all winning more or less. Grant Brown of El Monte won grand champion cow with Shy Lady Viola, and junior champion bull with Shylock Monte. Geo. W. Thomas of Riverside won grand champion bull with Walnut Park Noble. J. E. Wherrell of Riverside won junior cow with Rowena. The Holstein-Friesians were shown by seven exhibitors and most of them carried away some ribbons. Framp-ton Bros. of Artesia won grand championship on their bull Segis Pontiac De Kol Burke Clyde, and Burr Farm, Los Angeles, the grand champion cow with Durmelia 2nd. California George Jr. Republic won junior champion bull with Republic Tuebie Korndyke and Stalder Bros. of Wineville, junior champion cow with Rosamaines Johanna Mercedes. Guernseys were not blessed with such strong competition, and Hollow Hill Farm of Colton won all the championships.

Shorthorns were represented by two exhibitors, F. L. Hall of Perris and Frank E. Collier of Wildomar. F. L. Hall won all grand championships and herd prizes. Frank E. Collier won first on junior yearling bull, senior yearling heifer and senior heifer calf.

Herefords were shown by D. H. Ogden of Alpine, who won all firsts and championships.

Berkshire swine had to be contented with two major exhibitors and two minor ones. F. L. Hall of Perris won grand champion boar with Rose Crest Rival 8th.

The Poland-Chinas had six exhibitors, among whom the prizes were quite equally divided. H. Christiansen winning senior and grand champion boar with President's Model. Grand champion sow went to Burton C. Platt on Big Sis and the Poland-China Ranch of San Bernardino won junior champion sow on Candy Girl.

The Duroc-Jerseys topped the list with ten exhibitors and such a showing probably never was put on in any fair outside of a State fair. The ribbons were very equally divided. The grand championship on sows went to the Winsor Ranch on Model Defender Lady, grand champion boar to Mammoth Sensation 2nd, owned by the Diamond Bar Ranch, which also had the junior champion sow in Pathfinder's Very. Best. Falfadale Ranch won junior championship on boars with their new boar, Great Orion Sensation Jr.

Hampshires had five exhibitors showing, four of them dividing honors about equally. Grand champion boar went to Fairbanks Ranch,

Redlands, on Harvey's Choice; grand champion sow to C. J. Gilbert of Lancaster, who also had junior champion boar; junior champion sow went to Llano Vista Ranch of Ferris; first on aged herd to Fairbanks Ranch; and first on young herd to Llano Vista Ranch.

Northern California Apple Show

(Written for Pacific Rural Press.)

The Northern California Apple Show, which opened at Eureka on October 13, had on display probably the finest show of fruit ever shown on the Coast as regards quality and color. It is the only apple show held in California this season. Oregon and Washington were unable to come through with the expected large exhibits because of the dearth of packers and handlers, but thousands of boxes of all the best keeping apples produced were on display.

The exhibits were all in place in the exposition marquee Monday morning, the massed banks of color shown in the opened boxes of apples being broken by the Farm Center exhibits.

Humboldt county has just begun to realize that dairying, lumber and live stock are not her only sources of wealth. She has potentialities in apple and pear growing that will be developed because of the superior quality of her mountain fruit, because of its freedom so far from pests, and because of the attractive coloring her climate imparts to the fruit.

The great drawback at present is the difficulty of transportation from

some of the best apple-growing sections and the high railroad rates. Only "California Fancy" can be shipped profitably at present.

The great apple show is not only an advertising medium for Humboldt apples; it is educational to the men who are embarking in a new industry.

The whole show was made up of commercial packs in carload lots, 100 box lots, 20 box, 5 box and single boxes, also plate exhibits. The necessity of complying with standardization laws was demonstrated and Professor Tufts, Assistant Pomologist of the University of California, demonstrated the methods of packing, by packing a perfect box, an indifferent pack, and a poor one.

Albert Etter of Etnersburg has a unique show of seedling and other apples of his own propagating which was really the feature of the show. Some of these varieties promise a future in the county. His strawberries and processed fruit were very interesting, for he has several strawberries that are perfect canners.

There was a large attendance at the show and the judging was com-

Alfalfa is Making Perris Valley

(Written for Pacific Rural Press.)

As the alfalfa shipping season in Perris Valley of Riverside county was closing late in September, we asked one of the leading growers of that district for a survey of the situation. He is G. I. Lytle, one of the prime movers in organization of the Alfalfa Growers of California, Inc., of which most of the alfalfa growers of the valley are members.

Mr. Lytle estimates that there are about 3,500 acres of alfalfa in Perris Valley and that about 3,000 carloads have been shipped out during the past season. No. 1 dairy alfalfa hay late in the season was bringing \$27 per ton f. o. b. cars, with an active market. Livestock in Riverside county is increasing fast, so that the local market for alfalfa is all the time becoming stronger.

The Valley is fairly well supplied with pump water, the lift along a center line lengthwise of the slope being around 75 feet. The Marina district, which is mostly planted to fruit,

has gravity water; and there is prospect of a considerable addition to the gravity supply from the Warner ranch district about forty miles southeast of Perris. Mr. Lytle has a pit 86 feet deep, in the lower 26 feet of which there is considerable seepage, even at this end of two long dry seasons.

Peruvian Alfalfa Proves Good.

While the ordinary alfalfa always slows up its growth after the first of September in Perris Valley and ceases growth in November, there is quite an acreage of Hairy Peruvian and smooth Peruvian. Mr. Lytle has some of the latter, which produces more winter pasture and greater tonnage per year than the ordinary kind. Several of the growers in the Valley have Hairy Peruvians. Some of them do not notice much difference, while others are enthusiastic. Mr. Lytle points out that it is inclined to make coarser hay, but is good feed if cut right, and careful growers get pleasing results.

BEAN PRODUCTION IN CALIFORNIA MUCH LESSENED.

Bean threshing was interfered with in the southern part of the State by rain the last week in September. Clear weather has since prevailed, and the damage will doubtless be slight. Reports from the lima bean growing counties as of July 1 indicated plantings of 125,000 acres of lima beans this year. Reports on October 1 indicate that 96 per cent of the planted acreage has been harvested, and that average yield for the State is about 450 pounds, making the total production of lima beans 540,000 sacks, compared to 1,545,000 sacks in 1918. Ventura County, as usual, will produce about 60 per cent of the total crop on practically one-half of the total acreage.

Show only 60 per cent of a normal crop in the Santa Maria and Lompoc

district. As this district is the largest producer of Small Whites, it means a material decrease in the production of this variety. In the Salinas Valley conditions are better. A heat wave September 18 to 20 in the Sacramento Valley put still another crimp in the beans of that district, and conditions are only about 60 per cent of normal, which on reduced acreage means a greatly lessened production. San Joaquin Valley fares but little better, and the estimated yield per acre for the State is about as low as ever recorded. The production forecast is for about 3,487,000 bushels. This gives a total for all beans of \$4,387,000 bushels compared to 8,594,000 bushels last year and 8,091,000 bushels in 1917. Growers are still up in the air about markets.

Bean production in the United States is estimated at 12,690,000 bushels compared to 17,437,000 bushels in 1918.

OVER 90 PER CENT OF MONTEREY RANCHERS HAVE BANK ACCOUNTS

It was the writer's privilege last winter to visit Pacific Rural Press subscribers in many districts of Monterey county to ask them to renew their subscriptions. The amazing uniformity with which they pulled out their own check books or signed the blank checks which the writer carried for the purpose, was an eye-opener, indicating unusual prosperity of Monterey county ranchers. We recently had the pleasure of visiting bankers from one end of the county to the other. We put the same question to all of them.

"What proportion of the ranchers in your district carry bank accounts?" We had expected a high figure, but not so high as these bankers gave. Unanimously they said that over 90 per cent of the ranchers carried bank accounts. They pay their help by check, and in many cases these men simply deposit part of their checks, thus making several bank accounts from each of a great many ranches. An exception to this is noted in the southern end, where it is claimed that prohibition is poorly enforced and ranch hands still cash their checks in the booze joints. An end to this is in sight, however. Meanwhile, it is noted in the northern end that ranch hands coming to town have no place to spend their money. They put up at the best hotels, buy a surplus of silk shirts, and slap a pocketful of silver when some rancher wants them to go to work. This transitory condition is likely to add greatly to the number of small bank accounts so soon as the idea and desire to save money are absorbed by the men. Bank accounts are the forerunners of investments and investments are sure causes of steadfastness in a homebuilding, prosperous population, which will give Monterey county an accelerated development as the years roll on.

Growers Do Not Get Their Share

To the Editor: I have been thinking of writing but have never taken time. I have just read "Is the Grower a Real Profiteer?" by H. J. B. Napa. I knew that the vegetable growers were not making a living this year, but I supposed the fruit growers were "getting rich" as I have just paid \$2.25 and \$2.75 for 40-lb. lug-boxes of peaches. What is the matter with us farmers? Why don't we all demand a fair price for our produce pay freight and express? If we buy anything from San Francisco we pay freight. Why should we pay freight when we sell? Here are the returns for August 14:

1 sack beans—581 lbs. at 3½c.	\$2.03
2 boxes squash at 40c	.80
3 boxes squash, dumped	
1 box cucumbers	.50
1 box cucumbers, dumped	
1 sack beans, 67 lbs. at 4½c	3.01
4 boxes squash at 25c	1.00
Total	\$7.34

Out of this we had to pay:

Freight	\$2.27
Commission	1.10
Box and yard labor	.11
Box rent	.55

Total cost	\$4.03
Net to us	\$3.31

Take sweet corn, which sold at \$1.00

a sack this month, freight 27c; commission and our cost were 15c; sack, 5c.; total, 47c. We get 53c. Each sack contains 8 or 9 dozen ears and San Francisco people paid 5 cents for each ear. The same week squash was selling at 10 cents and 12½¢ a pound. The boxes are 40 pound boxes and are the best squash that can be grown and are well packed. We only live 32 miles from San Francisco and have to pay 16 cents freight and the people from San Jose only pay 15.

My city friends say the farmers are fools—yet they can't live without us farmers. Are we going to work like slaves? Yes, from daylight to sundown, 12 to 14 hours a day, and get nothing for our labor? What is the matter with the farmers striking, and not allowing any produce to go to market till we get a fair price? We should not ship anything, but make them come out to us and pay our price and let them pay all shipping expenses. I think we have all endured enough of this commission business. I dearly love the country and the work, but we should get enough from our labor so that we can afford to educate our children so they will not be called fools. We would be lost without the Pacific Rural Press around. It is the biggest and best dollar bargain, and no farmer can be without it.—M. C., Palo Alto.

NEWS NOTES FROM NEVADA.

(Written for Pacific Rural Press.)

Mr. C. C. Tidd of Smiths Valley has just purchased four purebred Holstein heifers from the Henderson and the Bonita herds.

County Agent Leader Creel and State Leader in Dairying Scott are making a trip by auto through the agricultural sections of the State. They hope to visit Churchill, Pershing, Humboldt, Elko, White Pine, Clark, and Lincoln counties. It will require about six weeks to cover the territory and they will have covered over two thousand miles before they return.

Senator H. F. Dangberg of Minden has lately added a purebred herd of Hereford cattle to his beautiful Carson Valley ranch. Mr. Dangberg hopes to add a few Shire horses, and Hampshire sheep and Hampshire swine and in time build up a large purebred breeding establishment in connection with his large range and ranch holdings in Douglas county.

The Nevada Hereford Ranch, Wells, Nevada, has lately sold three heifers, sired by Harris Standard, to Wm. Briggs of Dixon, Cal. Two were open heifers. A two-year-old was bred to Beau Blanchard 76, the \$10,000 herd bull purchased last winter. This firm will show a herd at the San Francisco Show and will also consign a few head to the sale held in connection with the show.

Nevada has 500,000 acres of excel-

lent agricultural lands at present idle that can be made to produce bumper crops by irrigation, declared Clay Tallman, Commissioner of the Federal Land Department while visiting in Reno recently. The Walker River, Humboldt, Pershing, Churchill and Washoe counties will contribute very materially to the production of agricultural crops when proposed projects in their sections are complete.

The Department of Animal Husbandry of the University of Nevada has just sold Senator Dangberg a good son of Beau Perfection 34 and out of Ramona, Senior Reserve Champion at the 1918 California State Fair, to head his Hereford herd. The Department has also lately sold Rambouillet, Corriedale, Dorset, Hampshire, and Shropshire rams to head good flocks of sheep in Nevada and California.

The State Fish and Game Commission has established a new fish hatchery near Carson City at Lake View to take care of the eastern brook trout. In years past spawn was taken from Marlett Lake and transported to the hatchery at Verdi. Poor results during the past few seasons have been experienced. With the new hatchery the spawn can be transplanted within a short time. No doubt a good hatch will be brought out from this time on. The Verdi hatchery is to be used for the hatching of other varieties of trout, which will give more space by the relief from the new station at Lake View.

GENERAL CONDITION OF CALIFORNIA FIELD CROPS.

J. E. Rickards, Field Agent, says of the general field crops:

Corn.—There is no change in the condition figure in California—it remains the same as of September 1—83 per cent. The forecast, based on this figure, indicates a production of 2,388,000 bushels. The condition for the United States shows an improvement during the month, the forecast now being for a production of 2,991,000,000 bushels.

Oats.—This crop has not turned out as well in California as last year, the yield per acre being two bushels less. The total production is a little above five million bushels.

Barley.—Has turned out much better in our State than was expected two months ago, the yield per acre being five bushels better than the 1918 crop. The total production is over thirty-five and a half million bushels, the farm value of which is very nearly forty-nine million dollars. The total production in the United States is 3,000,000 bushels better than the Bureau's estimate made September 1—198,000,000 bushels. It is interesting to note that California produces nearly one-fifth of the nation's barley crop.

Potatoes, Irish.—The cold nights in the early part of the growing season retarded their growth and the effect is now manifest when they are about ready for harvesting, the yield not meeting earlier expectations. Based on the condition figure of 81 per cent, the forecast for this year's crop is 11,761,200 bushels. The estimate for total production in the United States is for 350,000,000 bushels.

Potatoes, Sweet.—California's crop should be 924,000 bushels. There is a slight falling off in production of the nation's crop, the forecast now being 99,400,000 bushels.

Rice.—The rains during September caused a little uneasiness for a few days respecting this crop. Fortunately no damage was done, and the warm weather which followed rapidly ripened the grain and harvest was on in earnest. All reports indicate a yield slightly above that of last year. From the information we have gathered we now forecast California's crop to reach 8,659,000 bushels. The Bureau's estimate of total production in all rice growing States is 44,300,000 bushels.

Sugar Beets.—The condition of sugar beets October 1 was 68 per cent of normal, compared to 90 one year ago and a 10-year average of 90. The average yield per acre for the past ten years is 9.68 tons, making the prospective yield this year about 7.30 tons per acre. For the United States the crop is estimated at 7,303,000 tons compared to 5,890,000 tons produced in 1918.

Cotton.—The condition of cotton in California on September 25 was 95 per cent of a normal, and the indicated production of 116,000 bales compared to about 95,000 bales last year. The acreage to be picked is estimated at 167,000 acres compared to 173,000 acres, the final estimate of acreage picked last year. All cotton grown in Imperial Valley is included in above figures. The Census Bureau reports that prior to September 25 California had ginned 4,563 bales of cotton, compared to 4,571 last year and 1,525 in 1917.

ORANGE COUNTY SUGAR BEETS.

Sugar beets are waning in importance in Orange County. Sugar factories dot the landscape in most any direction, but beet acreage is light and the beets generally look discouraged and too lonesome. Poor stands are the rule. Nematodes, alkali, and other troubles have caused uneven growth. Many fields are ready in July, and it is believed that the beets lose sugar by remaining in the ground from July until the factories start operations. Some growers have said they do not intend to plant next year unless the factories will start in July. Considerable dissatisfaction has been expressed with the returns to growers. As the factory operators are generally uneasy about future sugar markets, the whole situation seems to spell reduced acreage next year.

The Tracks Save Power

THE Cletrac Tank-Type Tractor runs on metal tracks like a locomotive. Six wheels, three on each side, carry the entire weight of the machine and run on the endless tracks which are laid down and picked up as the Cletrac goes along.

This distinctive and efficient type of construction enables the Cletrac to go practically anywhere. No matter what the soil conditions, it runs on its tracks—nothing stops it.

It doesn't have to expend extra energy to push itself along. This saves power, saves fuel, saves time.

The power isn't wasted propelling the tractor. It goes into the "pull" on the implement.

And the tracks being broad, distribute the weight of the Cletrac as snow shoes distribute a man's weight. Think what that means in the preparation of your seed bed. Think what a tremendous advantage it gives you on hilly ground. Think of the extra power and the lower upkeep under hard conditions. Think of the greater speed and the easier handling.

Announcing

The LAUSON 15-30
DUST PROOF—ALL GEARS ENCLOSED

We take pleasure in announcing to the trade the LAUSON 15-30. This is the "pattern tractor" with some added refinements which make the LAUSON more than ever the tractor masterpiece. There is no change in design; it is still made in only the one powerful 3.4 plow size. The refinements consist of

- a larger engine which allows of increased rating on the belt pulley—Gear Driven Fan
- Lauson Air Washer—Sylphon Thermostat.

We have new literature which explains these improved features and will be glad to send it to you on request.

Mechanical Power on the Farm

SOME DETAILS ABOUT BORED WELLS.

(Written for Pacific Rural Press by David Bahrs, Wheatland.)

The article in your issue of September 20, "Practical Pointers on Farm Irrigation," is worth its weight in gold to any farmer. D. J. Whitney knows whereof he speaks. Let me say a few words in defense of the well borer.

The article says: There are three ways to get a well: either bored by hand, bored by horse or gas power, or drilled with heavy drilling tools. The first way is the cheapest, where a shallow well is wanted.

That is a fact providing there are no cobbles or quicksand. Whenever a fellow hits large cobbles with a boring outfit he will have to stop, and try another hole.

The men running drilling outfits claim that a bored well is crooked as a hind leg of a dog. I beg to differ. I have bored holes up to 250 feet and have gone past large cobbles a-plenty and the well was straight as a dart flies. Some places where it is 100 feet to surface water you can take a looking glass, shine the sun into the well and see the water 100 feet down. Surely, if the hole (a 10-inch one) is crooked you would not see down far.

If a fellow has a long auger and gets the well started straight, the chances are it will be straight all the way down.

The only advantage I can see in a drilling outfit is for work deeper than 250 feet. Most all the good wells in the Sacramento valley are from 60 to 250 feet in depth. There are quite a few wells from 400 to 900 feet that I know of which are worthless. There are localities where it is 500 feet down to water and that is where a drilling machine shines.

Another thing is that drilling machines mostly make a 6 to 8 inch hole only, while a boring machine will make any size, from 6 to 24 inches. The reason the well borer stops is not because he dislikes to go down too deep, but the chances are he is in a bed of loose gravel, which keeps caving. He can work all day taking out sand and gravel and get the well no deeper, unless he uses plenty of casing. Some wells may be 150 feet deep and only need 30 feet of casing. If there is a large bed of sand at 150 feet and plenty of water, why put 150 or more feet of casing down to case the water off?

You are sure of nothing below. The extra casing would amount to between \$100 and \$150. The deep boring would cost a lot more and there might be no more water farther down.

I have been doing nothing else but well-boring these last six years and know as much about it as most of them. I own a hand-boring outfit, a power-boring outfit, and also a drilling machine. They all have their virtues and vices.

When you get to a big bed of water, and wish to case it off and go deeper after that, pay the well-borer by the day instead of by the foot, and see how quick he will take you up.

MORE POWERFUL GASOLINE.

Automobile manufacturers are looking toward the adjustment of their engines to the less volatile but more powerful gasoline now being supplied by petroleum refiners. Refiners, in order to meet the increasing demands upon petroleum stocks, have cut deeper into the crude oil and are producing a fuel considerably more powerful than that of former years. The problem of engine adaptation to the supply of petroleum and its refined parts is one expected to come before the statistical research bureau which the American Petroleum Institute, with headquarters in New York, intends to establish. In this institute producers, refiners and consumers of oil may join in co-ordinating their efforts for the improvement of the industry.

Dr. Van H. Manning, director of the United States bureau of mines, is also chairman of the Improvement

Committee of the Institute. He has recommended to the Institute directorate that the new bureau be established with an appropriation of \$1,000,000 a year to be raised on a production basis from refiners and producers. A special committee to consider this recommendation has been appointed by President Thomas A. O'Donnell. A favorable report on the Manning proposal is expected by individual members of the Institute.

The problem of using a less volatile, but more powerful gasoline for automobiles is not a new one. According to Henry L. Doherty, chairman of a committee of petroleum producers and refiners which is now negotiating with the manufacturers of motors, Doherty's committee and another headed by John N. Willys, of the automobile manufacturers, have had the problem under consideration for some time. Although petroleum producers are bending every possible effort toward increased production they have thus far been unable to adequately cope with the enormous increase in the demand for petroleum products, especially gasoline. Refiners, however, have advanced the only practical solution to the threatened shortage by cutting deeper into the crude oil and extracting a greater volume of gasoline which is less volatile but more powerful. In this way it is hoped the supply of this fuel can in some measure keep pace with the demand.

It is significant to note the spirit of co-operation between petroleum producers, refiners, and automobile engineers. A satisfactory solution of the future of the gasoline problem is expected and one which will not cause automobile owners to suffer serious loss in the adaptation of their engines to the more powerful fuel.

NEW FOUR-WHEEL-DRIVE TRACTOR.

A new four-wheel-drive tractor of 15-20 horsepower is to be built by the Sumner Iron Works. Its final drive to all four wheels is an internal gear enclosed and running in grease. It uses a Waukesha motor, Timken, Hyatt, and New Departure bearings throughout, magneto and impulse starter, speeds 1 1/2 to 4 1/2 miles per hour, turning radius eleven feet, wheel base 100 inches, tread 64 inches.

An unusual job recently accomplished was the removal of a 30-foot silo out of a farm yard and a considerable distance down the road. Sled runner timbers had been placed under it and a 45-horsepower tractor was pulling it steadily without stopping.

The finest, deepest dust mulch we found was among the stakes cultivated by the Little Bear tractor, which operated with cutaway disks and Forkner tillers. A Little Bear on exhibit was sold to a buyer from San Salvador, Central America.

POWER

A weak heart in the wonderful engine called our body, makes a weak body, and so a spark from a Magneto can make or mar the efficiency of any tractor deriving its power from an internal combustion engine.

The spark from K-W Magneto, is so hot, that when it occurs within a cylinder filled with carbureted gas, the combustion is instant and complete, and full power is assured from every drop of fuel used. This is why a tractor K-W equipped, will show far greater efficiency; power and economy, over the same tractor using other ignition.

The K-W Magneto was built for tractors, and has proven its worth in tractor service covering a period of nine years—when two manufacturers adopted it—until today, when on over 70 per cent of all tractors made, the K-W is standard equipment.

Make sure the tractor you buy is

K-W equipped. It is your insurance against expensive and annoying delays, and a guarantee of service and satisfaction. Write for a list of K-W equipped tractors.

ORCHARD TRACTOR WHERE HORSES GAVE UP.

(Written for Pacific Rural Press.)

Late last spring H. E. Church's apple orchard in Yucaipa Valley of San Bernardino county had not yet been plowed and the soil was as hard as a road. He hired a man and team to plow it. The plow made a series of dives and jumps. The man followed it three or four rounds and went home.

A tractor came to the rescue. Geo. Knutsen had bought a handy little one of 9-16 horsepower in March. Mr. Knutsen has an orchard of his own, but very soon he found the demand for tractor work among his neighbors so insistent that through this summer he has done the cultivation for about 100 acres of their orchards, sometimes rather neglecting his own. He charges a price per hour which covers the expenses and gives him good pay for his time. Working by the hour is much more satisfactory than by the contract, as it avoids friction.

When Mr. Church asked him early in April to work the hard orchard where horses had given it up, a survey of the place showed that it had been repeatedly plowed toward the trees so that a ridge had been built sloping upward to each row. Plowing was omitted, but the tractor double-disked the place both ways and pulls the dirt away from the trees. The disk worked a strip about six feet wide each trip and was always followed by a heavy piece of gaspipe about six feet long and 3½ inches in diameter to pack and smooth the surface. This was all the work on the orchard until the middle of May, when two and sometimes three furrows were opened at once. The furrower was made by putting shovels on a Jensen gooseneck cultivator. After each irrigation, the ground was cultivated and smoothed off by means of the six-foot gooseneck cultivator, followed by the gaspipe. The furrows were the right distance apart, so the tractor wheels ran in them. They did not pack the wet soil, because they run on a series of long steel points projecting from the rim of the wheel. The cultivator did not fill the furrows quite level, so next year its teeth will be twisted to throw more dirt into them.

Gasoline is used altogether by Mr. Knutsen as he figures that what he would save by using distillate would be more than lost by loss of time starting and cleaning the engine. Ten gallons were enough for a 7½ hour run at most orchard work.

SHIPPING TOMATOES FROM ORANGE COUNTY.

(Written for Pacific Rural Press.)

Tomato shipment from Orange county began in earnest the last week of September, due to frosts all over Colorado and in many places throughout the East. Very good prices of \$1 per 30-pound box f. o. b. cars, were being received.

About 1,200 acres of tomatoes for shipping were grown in Orange county this year, according to W. E. Whitacre, who is the agent of the California Vegetable Union for that county. Total acreage is about 2,000, quite a few of which were grown for seed, which are extracted at the plant erected near Santa Ana last year for this purpose. The rest are for canning. The chief tomato districts are Fullerton, Yorba, Anaheim, Santa Ana, Buena Park, Garden Grove, and Stanton.

Crop conditions were very good until the rain about September 30, and that did no great damage. No blight is reported, and but little loss occurred from wilt and nematodes. That loss was on light soils, which are rather scarce in this county.

MONTEREY COUNTY FAIR.

Monterey county is a big bunch of communities, many of which are far apart; but they got together in a splendid county fair at Salinas, October 11 and 12. The schools of at least 31 districts were represented fittingly, and were possibly the most active in preparation. The ranchers brought their best products and animals for

keen but good-natured rivalry, and quite a number went home resolved to do better next time. Local business industries were well represented, and about fourteen tractors of seven different makes performed for visitors.

This is the first county fair in many years, but judging by the support given by county supervisors, public schools, farmers, and local business men, it will be repeated on a larger scale each year henceforth.

California Wins in National Dairy Show

(Written for Pacific Rural Press.)

According to a telegram received from Dean Van Norman, who is attending the National Dairy Show at Chicago, California has again stepped into the limelight and this time along dairy lines. The telegram reads as follows:

"Hurrah for California! First on certified milk goes to University of California. First on market milk and market cream to Elliott-Brant, whose cream scored 100—first time this high score ever was given at National Dairy Show. On City House Department Exhibit, Los Angeles gets first. The Pacific Coast gets six out of nine firsts in milk and cream classes. Dupee of Santee won Grand Champion on Guernsey bull."

The certified milk mentioned securing the highest award was from the University of California Certified Dairy conducted on the campus at Berkeley.

It was another feather in the cap of

the California livestock breeders when Edgemoor Farms at Santee, W. H. Dupee, owner, wins the grand championship in the Guernsey bull class with Itchen May King. It is not to be wondered at though when the bull is taken into consideration.

The dairymen of California sent a large delegation to the National Dairy Show. Two special pullmans, one from northern California and the other from the south, met at Ogden, continuing their journey together, and no one being able to say which car contained the cream of the trip.

Dean Van Norman of the University Farm School, Davis; Dr. J. P. Iverson, Chief of the Division of Animal Industry, Sacramento; S. H. Greene, secretary of the California Dairy Council, San Francisco, and D. O. Brant of the Elliott-Brant Rancho, Owensmouth, are among those composing the delegation.

CALIFORNIA INTERNATIONAL LIVE STOCK SHOW.

Effort is being made in all departments to make this the greatest show of its kind ever pulled off in California or elsewhere on the Pacific Coast.

In the horse department Roy M. Pike, chairman of the horse show committee, announced yesterday the entry of two famous horses, Uhlan, the great trotter, owned by C. K. G. Billings of Santa Barbara, and Friar Rock, the famous Thoroughbred from the stables of J. H. Rossiter. These horses will participate in the horse show that will be held in connection with the stock show November 1-8.

Stalls and pens for 1,000 head of livestock are being constructed with all speed inside the building and already it is known that all these will be full. Carload lots of fat stock will be shown outside in specially constructed pens.

Much interest is being shown in the breeding of thoroughbred horses in Nevada, due to the annual race meets held in Reno. The Nevada Stock Farm owned by Geo. Wingfield has experienced a successful season on the track and at the Farm. Several good prospects have been sold at a good figure to enter the racing strings of several eastern racing men, while a few have been sold to local and California breeders. This firm sold a consignment of thoroughbreds to Hawaiian breeders about a year ago which met with the approval of many in the islands.

Reynolds and Lonquist's fine herd of registered Red Polled cattle are attracting much favorable comment in the Hat Creek Valley, Shasta County.

CALIFORNIA INTERNATIONAL LIVESTOCK SHOW

CALIFORNIA BUILDING,
PANAMA-PACIFIC EXPOSITION GROUNDS

San Francisco, Cal., November 1st to 8th

Presents the most complete showing of Cattle, both dairy and beef, Horses, Swine, Sheep, Goats, Poultry and Rabbits ever offered on the Pacific Coast.

The Dairy Division, with its competitive display of Dairy Products, and an extensive exhibit of modern dairy and barn appliances, makes this the "National Dairy Show of the West."

The Night Horse Show will feature some of the most celebrated track and road horses of the country, comprising the fullest program of horse events ever offered in the West, including spectacular and novelty performances by U. S. Cavalry Troops.

San Francisco, with the co-operation of the entire West, has provided a really big live stock attraction that is both educational and entertaining and an exposition that you cannot afford to miss.

Show opens Saturday, November 1st.

Closes, Saturday, November 8th.

San Joaquin County's Big Fair

The revival of the county fair, after a lapse of years and much grief in the reviving, was an unqualified success. Community exhibits, each of them, were better and more varied than could have been made by the county as a whole at the time of holding the last fair. Machinery helped, as Stockton is a machinery center, and the factories and other concerns all assisted to the best of their ability.

The livestock exhibit was a wonder. Swine were represented by Berkshires, Duroc-Jerseys and Poland-Chinas. Dairy cattle by Guernseys, Holstein-Friesians and, last but not least, Jerseys; sheep by Shropshires and beef cattle by Shorthorns. In the special prizes, A. B. Humphrey of Escalon

won the Stockton Record Cup for the "Best Exhibit of Live Stock" with his Berkshire swine and Guernsey cattle. J. E. Thorpe of Lockeford won the special Fair Association prize for the "Best Group of Live Stock" with his Jersey cattle and Duroc-Jersey swine.

H. E. Cornwell and R. L. Holmes of Modesto made out to win most of the ribbons in the Holstein-Friesian classes, winning both grand championships.

The Poland-China exhibit was fine, with Geo. V. Beckman & Sons, J. F. Lehman of Lodi and N. K. Horan of Lockeford, showing their good ones. Grand championships both went to Geo. V. Beckman & Sons on Matchless Big Bob and Belle's Beauty.

Kings County Poland-China Sale

(Written for the Pacific Rural Press by Ted Cameron.)

At the recent Kings County Poland-China Breeders' Association sale, held October 11 at Hanford, a new world record was established in the sale of the open gilt, Big Kate 4th, consigned by Fred Ross of Hanford, and keenly bid on by the three well-known breeders, J. A. Crawshaw to \$3,100, Les McCracken to \$3,125 and the winners of the grand young animal, M. & A. L. Bassett, to \$3,150. The new price exceeds the recent sale price of the March gilt, Buster's Kind, sired by Giant Buster and out of Morgan's Kind, sold to Paul Wagner for \$3,1000 in the corn

belt within the past few weeks; both animals were of the Big Bob breeding.

With anxious bidders present and a good audience, Col. Ben. A. Rhoades presiding, and Cols. Leachman and Bell assisting in the ring, the 64 animals were placed in new homes at desirable prices in quick time. The other feature of the sale was the choice of one gilt out of the litter from Edith Rose, sired by the great boar, Supreme Prospect. After being strongly bid on to \$1,250 by H. T. Ashford of Lemoore, Les McCracken of Ripon, the noted breeder, took the pig home when he raised the price to \$1,275.

TULARE COUNTY POLAND-CHINA SALE.

The Tulare County Poland-China Breeders' Consignment sale will bring out some of the best offerings of the

year. This is their initial sale, but all are old breeders, and judging from the above picture, it will be very hard to find better animals offered anywhere. Breeders who are contemplating sending East for stock should go slow and

attend their home State sales first, as here they can see what they are buying. Also, hogs raised in this country do not have to endure change of climate, change of feeds and a long trip

by rail. If we only get in the habit of patronizing home industry in this line, we will then be in a position to give all the credit of our super-excellent swine to California.

BERKSHIRE Bred Sow and Gilt Sale

Los Angeles Livestock Show

WEDNESDAY, OCT. 22, 1:30 p.m.

THIRTY BRED SOWS AND GILTS, and a few carefully selected young boars will be offered at public auction in the judging ring, consignments being made by the leading breeders of the Pacific Coast.

This sale offers beginners a splendid opportunity to get established with some of the best animals of the breed, and safely settled to boars that head the best herds in the country.

Established breeders will find bred sows of breeding that will make strong additions to their herds, carrying the blood lines that have won National and International honors in the show ring.

Remember that this is strictly a guaranty sale, and that every sow must prove to be with pig or purchaser has the privilege of accepting an animal equally as good or have his money back.

No time is better than the present to get started in the purebred business, and no breed of hogs is better established in the West than the Berkshire. Send your grade or scrub to the butcher and buy a good registered bred sow.

Remember, these sows are guaranteed breeders and will be sold at your own prices.

FOR SALE

One of the best bred foundation herds of Aberdeen-Angus cattle to be found in the United States, consisting of herd bull; three young cows with two heifer calves at foot. While these cattle are high-priced for the reason that they are highly bred, I offer them at a reduction, owing to the fact that I have decided to sell my ranch property. The cattle are on my ranch, which is located 8 miles east of Oakdale, Stanislaus Co., Cal.

Overproduction of Purebred Livestock

(Written for Pacific Rural Press.)

To begin with we have to establish just what we mean by the term "purebred" as applied to live stock of all kinds. There has been in the past much confusion as to just what is meant when we say an animal is "purebred," and there is some difference of opinion among authorities today as to just what is understood when the term is used. Some people have the idea that if purebred or registered sires are used long enough in a flock or herd of farm animals that the progeny will eventually become eligible for registration in the particular herd book of that breed of animals, but such, so far, is not the case under the present rules and regulations established by the various livestock organizations. Therefore, if we say the term means the same as registered we will have its general meaning when used as a qualifying term when applied to domestic animals.

"Thoroughbred" and "Purebred."

A word at this point may not be out of place relative to the use of the terms "thoroughbred" and "pure blood" in the place of the term "purebred." We should all confine ourselves to the use of the terms "purebred" or "registered" when we speak of animals that are enrolled upon the herd books of the various livestock organizations. The term "thoroughbred" is rightfully applied only to the English breed of running or race horses and it is safe to say that all healthy animals are "pure bloods" whether they are registered or not.

Now, as to the question as to whether there is danger of overproduction of purebred livestock. The answer is yes, if by overproduction is meant an over-supply of animals that are eligible to registration regardless of whether they even approach those breed qualifications laid down by the livestock registration associations. The danger lies not in an over-supply of Tilly Alcartras or Vive la France, but in an over-registration of mediocre or even inferior animals by persons of whom some are actually dishonest and some who do not realize that because an animal's sire and dam are purebred that it can be inferior. We are sorry to say that it is often the case that inferior animals are the result from mating purebred animals, but it is less often the case from those animals that approach perfection than those of ordinary merit. Therefore, if breeders generally would carefully cull their young animals and send to the butcher all calves or steers, pigs and lambs that do not come very close to

their particular standard of perfection the danger of over-production will be eliminated for generations to come.

Economic Rather than Color Qualification.

Forty years ago it was almost impossible to find a Jersey bull or cow that was not of a "solid color with a black tongue and switch," and so much stress was laid on this color qualification that other more practical qualifications were lost sight of in many cases, and injury done the breed that it has taken years to overcome. It is necessary then that animals, to be good and worthy of registration and putting on the market as sires and dams must, with certainty, or nearly so, reproduce the economic and aesthetic qualifications so much desired. Particular stress must be laid on the economic rather than color qualification and faddish notions.

Some may say that if we cull our animals too closely that we might just as well send them all to the butcher and not bother with the purebred side of the business at all. True, if they consider it a "bother" to breed the best, for that is what makes the great breeder, the man who is willing to take the "bother" and has the patience to select and cull and when he finds an animal that reproduces with certainty the characteristics sought he will "hang on" to that bull or cow or boar or ram, as the case may be, under great temptation of price, and with such animals build up a great herd or flock and therefore receive the high prices so coveted.

Everything is not lost either in turning a large percentage off as culls to the slaughter pen, but a higher price is almost certain to be received for the purebred culls when fed and marketed in competition with grades and crossbreds. They will feed easier and give a greater gain for the feed consumed and will be more uniform in appearance. Remember that by appearance it is not entirely color that is meant but uniform conformation and size.

True Purebred Market Never Glutted.

Therefore, if breeders of registered livestock will study the characteristics of their animals and what is needed to make those animals perfect, and reserve for breeding purposes only those that approach perfection, then there will be no danger of over-production and a ready market found for all registered animals. The true breeder's market for purebred animals never has been and never will be glutted, neither will his prices be unremunerative.

Co-operation Among Livestock Shippers

The very latest in co-operative associations seems to be a movement toward a national organization of the co-operative livestock shippers. They have gone so far as to hold a series of so-called regional conferences at Memphis, St. Louis, Kansas City, Omaha and Sioux City.

Temporary Organization.

The temporary organization has central headquarters at Chicago in Room 906 Royal Insurance Building, Earl J. Trosper, Organizing Secretary. It is the intention to have the permanent headquarters located in Chicago, as that is the most central point of the livestock industry.

The chief business so far accomplished has been the get-together movement mentioned above with the consequent discussion and passing of a set of resolutions very similar at all regional meetings stating the needs and reasons for such an organization. These needs, etc., are set forth fully, but are too long to publish here, but one situation at least will be given

that really tells what the association hopes to accomplish, and is as follows:

Outstanding Needs.

"Resolved, That this conference expresses itself in favor of a National Organization that will look after claims for losses in transit, poor train facilities, irregularities in yardage and feed charges, clean pens, adequate yardage, lower insurance rates, needed legislation (state and national) in securing a uniform and equitable freight rate on livestock, working towards stabilizing the market, and carrying on educational work to the end that a uniform and efficient marketing system be adopted by the individual shipping associations, and in general co-ordinating the various shipping associations by securing standard methods of operation, standard accounting systems, improved exchange relations, a general greater efficiency and any other particular lines of improvement which it may see fit to take up."

Every Hog on the Gardiner Ranch is Cholera Immune.

Has the frame to build on and the legs and feet to carry it. The best boar we have ever seen.

TOMMY TUCKER **GARDINER'S KING'S COL.** Is the model you can all build by. You won't go wrong if you do. We have the right type. We aim to produce breeding stock for the best breeders. We have hogs of all ages and both sexes for sale. Write us your wants.

THE GARDINER RANCH

ROUTE 4, BOX 735,

SACRAMENTO, CAL.

While California is not situated closely to the regions where this effort has taken place there are nevertheless many co-operative livestock centers doing business in the State.

If there is to be great benefit from such an association, it seems as though they might at least hold a regional conference and get in connection with the central organization.

PUREBRED LIVESTOCK IN SAN LUIS OBISPO COUNTY.

(Written for Pacific Rural Press.)

The Pecho Ranch and Stock Co., San Luis Obispo, A. B. Spooner & Sons, owners, have gone into the purebred Holstein-Friesian business quite extensively. They have other stock interests, but the Holsteins seem to be their leader and they are keeping right up to the times by buying a fine young Holstein bull calf from Gotshall & Magruder of Ripon. This calf is Karlay Pontiac Tola, sired by King Korndyke Pontiac 20th and out of King Pontiac Tola Joe, the state champion senior two-year-old, a daughter of the King of the Pontiacs.

The Pecho Ranch and Stock Co. was one of the chief moving forces and exhibitors at the San Luis Obispo Live Stock Show held at that place last June. Other stockmen there were like Prof. R. W. Ryder of the Polytechnic School; Warren C. Day, secretary; S. J. Lowe, Shorthorns; H. M. Warden, Holsteins, and many others that helped by personal effort and exhibition of their stock to make the show a success.

Shows Inspire Ambition.

While pride in having their show a success had much to do with spurring them on in their endeavors, the results are more far reaching than they have thought perhaps. Such shows stimulate interest in better methods of farming and in better stock as well. Some will bring grade stock, thinking it is as good and looks as well as any of the purebred stuff, but upon close comparison they soon see the lack in their stock and promise themselves some of the purebreds. Those having purebreds will see the need of better purebreds, and so it goes, each trying to get up a little higher in the plane of livestock raising, the result being that the next year the stock shown will be far better than the year before.

The country tributary to San Luis Obispo is primarily a stock country and will always be such. With a wonderfully good range, well watered and supplemented by valleys growing all kinds of grains and forage crops, the livestock industry is but in its infancy in this region. Many ranches are carrying a large amount of stock now, but it is the kind that will bear improvement in some cases.

An Ideal Range.

S. J. Lowe has a herd of Shorthorns that are a good example for range men, as he has a large proportion of purebred cattle running on a range at the foot of the grade just above "San Luis" that really is an ideal place to raise cattle, as the pasture is good and water plentiful. The climate in all this country is ideal, the extremes being tempered by the proximity of the ocean.

One 8,000-acre ranch, farming some 1,500 acres, cuts tons and tons of volunteer hay each year, but is getting into the more intensive side of the game by erecting silos and growing more cultivated crops for stock feed.

As has been said, this is a stock country, but conditions will be improved by more intensive methods as mentioned above, until about 3 cows are kept where one is kept now, and 10 hogs where one is kept now. When these conditions obtain then "San Luis" will be a city of double its present size and wealth.

Bullard Bros. of Woodland, breeders of Rambouillet sheep, report recent sales as follows: Three hundred and sixty yearling rams, some of which were high grade, the others registered, to Sponcer & Marsh of Mountaineer, New Mexico; 6 yearling rams sent to Fort Bragg, 20 yearling rams to Lohn & Ward of Red Bluff and a standing order of 100 registered ewes to Rice of the Hawaiian Islands, to be delivered as soon as possible. Their \$3,000 ram has been of great interest to sheep admirers during the recent fairs, where they have made an excellent display. At Sacramento they refused \$5,000 for the ram Combination, of their own breeding.

Teach calves to eat before weaning.

Producing Animals Need Help.

Your stock have been through a strenuous season and face the unnatural conditions of winter stabling, crowding and winter forage to which domesticity subjects stock. These conditions bring on lagging appetites, susceptibility to colds, blood disorders, worms, bowel and kidney troubles.

Nature demands laxative elements in feed, tonics and blood purifiers to keep stock in tip-top shape to ward off disease. Supply these elements in their winter feed—give them

Livestock and Dairy Notes

Dairy.

H. Marioni, Etna Mills, Siskiyou county, is developing a fine dairy. He is now milking 40 cows and expects to increase the number to 100 in the spring.

Grade dairy cattle continue to bring top prices in the Modesto section. Last week on the Will Keeley ranch east of town 41 cows brought an average of \$142.50. It is not so many years ago when the average with the hundreds figure left off would have been considered a good one.

Interest in purebred dairy stock is on the increase in San Luis Obispo county. The Pecho Ranch & Stock Company recently purchased from Gottshall—Magruder of Ripon, a fine Holstein bull calf, Karlay Pontiac Tola, sired by King Korndyke Pon-

Karlay Pontiac Tola, Pecho Ranch and Stock Co., San Luis Obispo.

tac 20th. This is a very promising individual, as can be seen from the accompanying picture. A community cannot have too much of this kind of stock.

Vive La France and Tilly Alcartra, the two champion cows of the world of the Jersey and Holstein-Friesian breeds, respectively, are to be the honor guests of the California International Live Stock Show at San Francisco during the show. California Gretel, the world's champion milch goat, will be brought from the University Farm at Davis, making a trio of the highest milk-producing animals in the country.

The valleys in Siskiyou county's mountains are great dairying localities. Greenview Creamery at Greenview, at an altitude of 2,800 feet above sea level, is doing an exceptionally fine business. Located in the interior, some distance from a railroad, they believe in manufacturing a finished product and shipping out the butter instead of sending out the whole milk, which would be much more bulky and of not much more value.

Beef.

The cow, Laurel Frantic 33rd, sold recently at Medford, Oregon, for \$4,500, and was bred by the veteran Shorthorn breeder, Wm. Bond of New-ark, Cal.

The Ormondale Company of Redwood City has just sold a 7-months-old heifer calf, Ormondale's Viola, to Rafael Larco of Peru, South America. This is one of the good ones like those the South Americans have gotten before.

The Monterey Cattlemen's Association held a regular meeting at Salinas October 11 and elected officers as follows: C. Z. Hebert, Salinas, president; J. A. Trescony, San Lucas, vice-president; H. E. Abbott and W. J. Martin, directors. The next meeting will be held at King City, January 10, 1920.

The coming Hereford consignment sale to be held during the California International Live Stock Show will offer the best lot of Herefords ever consigned on the Coast. There will be 30 females and 5 males of the very highest type of the breed, and intending buyers will make no mistake in deferring their purchasing until this sale is pulled off.

The Hereford Corporation of Wyoming, with headquarters at Cheyenne, have become members of the Pacific

Coast Hereford Cattle Breeders' Association. As this is perhaps the firm having the largest breeding herd of Herefords in the United States, the Coast breeders especially are glad to have them become members of this association.

E. C. Apperson of Sunol, an extensive rancher and cattleman of that locality, recently purchased a 13-months-old Hereford bull of J. A. Bunting, Mission San Jose, to place on his 5,000-acre ranch. Mr. Apperson and his son had travelled around somewhat and visited several herds, but concluded Mr. Bunting's stock was the best he had seen. He also offered Mr. Bunting \$700 for another one that was already consigned to the coming Hereford sale at the San Francisco Show.

Feed in the Mission San Jose district is fairly good. Most of it is stubble at this time of the year, and it seems to be holding out fairly well. Another indication of good feed is that feeders in the cattle line are rather hard to buy. Mr. Bunting, owner of the Mission Herd of Herefords, has erected a silo and a 72x80-foot barn, with 20-foot wings on two sides for feeding sheds. He has this silo partly full and over 200 tons of hay, and needs some steers to eat it, but finds them hard to buy.

Sales of registered dairy Short-horns recently reported by the John Lynch Ranch of Petaluma are as follows: Two senior yearling heifers, Marjorie Richardson 2nd and Lady Lee 8th, to the Kirtland Farm, Central Point, Oregon. A two-months-old calf, Corporal Peach, to G. M. Haycock, Upper Lake. A three-months-old bull calf, Wapsie Lad, to James Williams, Jr., Concord. The three-year-old cow, May Richardson 8th, and a two-months-old bull calf, Grand Wapsie 2nd, to Thos. Harrison, Santa Rosa Stock Farm, Santa Rosa.

Sheep.

Chas. Kimble of Hanford is always selling sheep either at home or abroad. Last week half a car of rams went to Red Bluff, and now he is ready to ship two cars to Holbrook, Ariz., where their forests are all petrified, although the sheepmen are "live wires"; also, one car to Texas. If Charlie's sheep hold out, Texas and Arizona will have to enlarge their borders to contain all he sends them, as it is only a short time ago that he sent a trainload to Texas.

Educational exhibits for sheep raisers showing models of equipment, such as barns, feed troughs, dipping plants, etc., are furnished by the Bureau of Animal Industry, U. S. Department of Agriculture, to co-operative sheep specialists at fairs and other gatherings in livestock communities throughout the country. Large illustrations of the different breeds and samples of wool, showing the different grades, are included in each exhibit. The objective of course is to get the best methods before as many people that are interested as possible.

Swine.

Harvey M. Berglund, Duroc-Jersey breeder of Dixon, recently sold A. Bloom of Petaluma 2 bred gilts and a boar; Dr. O. A. Hoffman of Dixon, 1 spring boar; Chas. E. Green of Woodland, 1 spring boar; J. H. Vetera of Walnut Grove, 1 bred gilt; W. C. Scott, Winters, 1 service boar. Harvey always has good ones to sell if he has any.

Recent prices on market hogs reported by the Western Meat Company are from \$14 per cental for the highest down to \$12 for the big heavies, weighing 300 to 400 pounds. This is not as high as they have been in the past, but Mark Bassett of Hanford does not care for that, as he paid \$3,150 for an open gilt, bred and consigned by F. D. Ross of Hanford at the eighth semi-annual Kings County Poland-China Breeders' sale Saturday last. This is said to be a world's record price for an open gilt. Another young sow in the sale brought her con-

704 Townsend St.,

San Francisco

signor, John M. Bernstein, the owner of President, \$1,250. Who says Kings county doesn't raise good Poland-Chinas?

Geo. L. Horine of Winton, breeder of Duroc-Jersey swine, writes that he has a sow that has just farrowed her fifth litter and that her record is 11, 11, 13, 17 and 16 pigs farrowed. Her three litter sisters have also had some nice litters, all farrowing 11 or over. The sow first mentioned weighs 550 pounds and produces pigs that weigh 200 to 250 pounds at 6 to 7 months of age on alfalfa and grain. Mr. Horine thinks it pays to grow such hogs and that it is more profitable to have a few such sows, rather than twice as many half as good.

Miscellaneous.

Italy has a shortage of meat products and will need 20,000 tons of meat a month for the next years, according to a government report. Foot and mouth disease has contributed to the shortage. This troublesome disease has been quite prevalent in this country the past year and still exists in some localities.

The anthrax outbreak in the Live Oak and Pennington sections of Sutter county is reported as being under control by Dr. R. S. Christman, who has inoculated several hundred animals against the disease. The disease spread from the southern end of Butte county, where it had existed for some time. No further spread is apprehended.

More than seventy millions of animals were inspected last year under the Federal Meat Inspection system. This included cattle, calves, sheep, goats and swine. Tuberculosis in cattle and tuberculosis and cholera in swine were responsible for more condemnations than all other causes combined. All condemned meat and products are destroyed under government supervision by conversion into grease and fertilizer in government-sealed rendering tanks.

NEW RECORD OF VETERINARY EXAMINERS.

A new board of Veterinary Examiners for the State of California was recently appointed by Gov. Stephens. The members are as follows: Dr. John L. Tyler, Pomona; Dr. Maynard Rosenberger, Los Angeles; Dr. J. F. McKenna, Fresno; Dr. W. W. Thomas, Merced, and Dr. E. J. Creeley, San Francisco. The appointment of a board of this character places the profession on fully as high a plane as it has ever occupied and much benefit must accrue thereby.

The new board met in San Francisco last week for the purpose of election of officers and examination of candidates for license to practice Veterinary Medicine.

The officers of the new board are: Dr. E. J. Creeley, San Francisco, president; Dr. W. W. Thomas, Merced, vice-president; Dr. John P. Tyler, Pomona, secretary; and Dr. Maynard Rosenberger, Los Angeles, treasurer.

The following veterinarians passed the examinations and were given licenses to practice Veterinary Medicine: Dr. S. O'Toole, Long Beach; Dr. F. G. Ward, San Diego; Dr. C. J. Dibern, Glendale; Dr. R. W. Smith, San Francisco; Dr. D. B. McCarthy, San Pedro; Dr. M. Wakelin, Hollywood.

CALIA GROVE FARM, MANTECA, CALIF.—Breeders and importers of Hampshire sheep.

Mail Order Livestock Business

(Written for Pacific Rural Press by Thos. F. McConnell.)

Sometimes we hear a breeder of purebred livestock say, "I have just about concluded to drop the mail order business as I do not find it satisfactory." Again, once in a while, another one will say, "I like the mail order business and find no trouble in disposing of all my good surplus stock."

Causes of Dissatisfaction.

Now why do we find dissatisfaction with this method? It would seem there must be several reasons, for if there was but one reason, that would have been discovered and eliminated long ago. If everyone that has bought an animal by means of a mail order in the past had received what he ordered this method would be very much more popular than it is today. From this viewpoint it would appear that the seller has been to blame and attempted to get rid of inferior stock by this "unsight unseen" method. No doubt this has been true in many cases, too many in fact, but it is not always the seller's fault. The buyer on the other hand claims the animal not as represented and endeavors to get a refund of part of the purchase price, or the animal replaced, by undertaking to prove the animal not as represented by the seller when there is really no ground for complaint. The latter case is not generally the fact, however.

There Is a Remedy

For these troubles that has been put into practice with success in the past, and it lies largely with the party selling to overcome them. For instance, never misrepresent an animal in any way, but try and send a little better one than would be expected from your description. After an order is received prepare the animal for shipment in the very best possible manner. If it is a hog or a sheep old enough to need it, see that the toes or hoofs have been properly trimmed so that it stands squarely without undue strain on the pasterns. Provide for its comfort in every way. Be sure that the crate is strong and secure without undue weight, and if one that has been used several times, see that it is clean and not dilapidated looking and with a neat and attractive address, whether on a printed card or put on with a stencil. Notify the customer when the animal is shipped so that he can receive it upon arrival. Much dissatisfaction has been caused heretofore by animals not arriving at the time they were expected. Also try and avoid Sundays and legal holidays, eliminating troubles caused by congestions of freight or express thereby.

Methods of Publicity.

Perhaps the reason for dissatisfaction on the part of the seller is not due to customers who are displeased, but to the fact that he does not have customers enough of any kind. This condition is caused only by a lack of publicity or of a lack of knowledge on the part of the buyers that any such flock or herd of animals is in existence. There are various methods of letting the prospective buyer know that you have such animals for sale, but there are two that are the most common. Newspaper advertising or "printers' ink" and exhibition at fairs, county, district and state. The first named is the method employed by the mail order dealer almost exclusively to inform the public what he has to sell. The last named tends to bring buyer and seller into personal contact and eliminates the mail order business.

Right here something should be said again about the condition of the animals offered through the medium of the newspaper and mail order method. When the breeder or seller takes his animals to the fair, he spends weeks, perhaps months, in preparation for the event or events, as the case may be, and the results are generally excellent. If this same breeder would take as much pains to select and fit his animals for his mail order customers as he does for the customers he meets on the fair circuit, he would

not have dissatisfied customers, neither would he be dissatisfied with lack of customers as soon as people found out what "blue ribbon" animals they obtained from him.

What "Show Condition" Means.

Something must be said here about this term "condition" or "show condition." In former years "show condition" meant one of excessive fatness in most cases, but some modification in ideas along this line have taken place lately, and all breeding animals are shown in a more normal, thrifty, but no less attractive condition.

Now we come to the point that must not be lost sight of by the one who wishes to succeed in the mail order line without attending the fairs. Fit your animals as was mentioned before and only send out those that are somewhere near good enough to take to the fair. Send to the butcher all those animals that would not certainly improve at least a grade herd. Neither should one expect to sell even good animals that are in inferior condition and give satisfaction to mail order customers. No one would buy for the top price an automobile that was not painted and finished. If any one gave a mail order for a first-class machine, he certainly would be disappointed if it came unpainted or scratched and muddy.

Some breeders that use the mail order method to dispose of their stock are sending prospective customers kodak prints or pictures of the animals they have for sale, which is an excellent thing to do. Be sure, though, to have the pictures good ones, taken in such a manner that no part of the animal is distorted or shown at the expense of another part. Take time in making the exposures. It takes time and patience to "take" good animal pictures, but no more time and patience than to do some other things about fitting the animals for sale. A catalog with cuts and pedigrees is another method of letting your old and new customers know what you have. It can be made very attractive, but never should it be made so at the expense of the truth.

Take Pains to Satisfy the Customer.

After all is said and done and the animal is shipped to the customer, be sure that everything is satisfactory; that the transfer of ownership is made on the association books and evidence thereof forwarded promptly to the buyer. If there is complaint be prompt in requesting that the animal be returned even though you know the complaint is unjust. If it is unjust a request on the seller's part for the prompt return of the animal is the quickest and surest way of silencing the complaint, and if it is just then the return of the animal is the only thing to be expected. The breeder that sells only first-class stock lets the public know that he has such stock for sale, is prompt in making transfers of ownerships through his association, and is willing at all times to rectify all mistakes, is sure to make a success of the pure-bred livestock mail order business.

LACK OF CARE COST \$100.

One hundred dollars vanished within a few minutes recently for a San Joaquin valley swine breeder as a result of not doing things right. A sow with ten thrifty young pigs was put into a yard where arrangements for shade had not been all completed. The owner had a sick spell that afternoon and could not look after her, and as it was a very hot day he had some water taken out to cool her off. Some was sprinkled on her and the rest thrown on the ground near her. She thought this was a pretty small wallow and rolled and squirmed to cover first one side, then another, until she had crushed four of the little pigs, which being high-class purebreds, were worth at least \$25 each. With a larger area of moist soil, or plenty of shade, she would not have squirmed around so much and all of her litter would have been saved.

Model 265
Calco Sheep Feeding Rack

for sheep

These two Calco Stock Specialties are especially for sheep. They are made of durable, rust-resisting galvanized Armco Iron and will last a life time.

Sheep Feeding Rack

A real money saver because when sheep draw the hay through the rack the fine chaff drops in the feed pan and is saved. The rack is 10 ft. long, 32 in. wide and 37 in. high. The legs can be bolted down.

Sheep Watering Trough

The edges are smooth and cannot injure the sheep. The trough is sanitary and easily cleaned. Built narrow and deep but wide enough to permit drinking from both sides. Sheep cannot jump or be shoved into it.

Send for complete descriptions and price list.

Livestock Terms Defined

(Written for Pacific Rural Press.)

Much confusion has heretofore arisen at times relative to the exact meaning of the terms "purebred," "thoroughbred," "standard bred," "scrub," "crossbred" and "grade," as applied to livestock. The U. S. Department of Agriculture in its campaign for "Better Sires—Better Stock" has adopted the following definitions for these terms, which it is to be will be adopted by every one and eliminate confusion in the future.

Purebred.—A purebred animal is one of pure breeding, representing a definite, recognized breed and both of whose parents were purebred animals of the same breed. To be considered purebred, livestock must be either registered, eligible to registration, or (in the absence of public registry for that class) have such lineage that its pure breeding can be definitely proved. To be of good type and quality, the animal must be healthy, vigorous, and a creditable specimen of its breed.

Thoroughbred: The term "thoroughbred" applies accurately only to the breed of running horses eligible to registration in the General Stud Book of England, the American Stud Book, or affiliated Stud Books for thoroughbred horses in other countries.

Standardbred: Applied to horses, this term refers to a distinct breed of American light horses, which, includes both trotters and pacers which

are eligible to registration in the American Trotting Register. Applied to poultry, the term includes all birds bred to conform to the standards of form, color, markings, weight, etc., for the various breeds under the standard of perfection of the American Poultry Association.

Scrub: A scrub is an animal of mixed or unknown breeding without definite type or markings. Such terms as native, mongrel, razorback, dung-hill, piney woods, cayuse, broncho, and mustang are somewhat synonymous with "scrub," although many of the animals described by these terms have a certain fixity of type, even though they present no evidence of systematic improved breeding.

Crossbred: This term applies to the progeny of purebred parents of different breeds, but of the same species.

Grade: A grade is the offspring resulting from mating a purebred with a scrub, or from mating animals not purebred, but having close purebred ancestors. The offspring of a purebred and a grade is also a grade, but through progressive improvement becomes a high grade.

As a rule, when a hog goes off feed he shows a high temperature; consequently, the more feed that he is induced to take the more his fever increases, and this is an injury to the animal.

MALTHOID and RU-BER-OID READY ROOFINGS

Ten years from now

You can judge the quality of ready roofing only after it has been tested in actual use. When you buy it, you must rely for your selection upon the experience of others and the reputation of the manufacturer.

The ideal of The Paraffine Companies is to make Malthoid and Ru-ber-oid the best ready roofings that can be made. The Company has succeeded, as has been proved thousands of times under widely varying conditions of climate and use.

If you roof your farm buildings or home or factory with Malthoid or Ru-ber-oid, in ten years from now you will *know* why it has become the recognized standard of ready roofing. Malthoid and Ru-ber-oid are made to last. They will not dry out or rot and they are particularly fire-resistant. If painted every few years, they will give good service indefinitely. Malthoid and Ru-ber-oid have met successfully every test of time and service to which they have been subjected.

The reputation of The Paraffine Companies stands back of Malthoid and Ru-ber-oid. They are the best ready roofings that we know how to make.

Tobacco Co.

NEVER was such two-fisted-smokejoy as you puff out of a jimmy pipe or home rolled cigarettes packed with Prince Albert! *That's because P. A. has the quality!*

Your taste apparatus certainly cannot be fooled! So, when you smoke Prince Albert and get a lot of delight you *know* you've got the big first prize on the end of your line!

Prince Albert's quality alone puts it in a class of its own, but when you figure that P. A. is made by our exclusive patented process that cuts out bite and parch—well—you realize why P. A. is so unlike other kinds.

No matter what your past luck has been on pipe smokes or makin's cigarettes, you put your confidence in Prince Albert for it certainly makes good every time the clock ticks.

Toppy red bags, tidy red tins, handsome pound and half pound tin humidors—and—that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition.

R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

Poultry and Rabbits for Profit

THE BACK YARD, THE BUNNY, AND THE CHILD.

(By Frederick W. D'Evelyn, President Pacific Coast Rabbit Breeders' Association.)

There are 167 millions fewer rabbits in the War Zone than there were five years ago. This means a big market is empty and a big food product is no more. Shippers and producers mutually admit it is a grave and compelling situation. To us "over here" it means that we must work overtime, increase our production to meet the demands, replenish the depleted markets, and assist the stockless fancier. Alike from the economic and grade view points, a novel and unique reversal of interests exists. The currents have taken on a new direction. American breeders will be exporters rather than importers, cheques, pedigrees and stock will be out-going products. Rabbits "made in California" will be found on foreign breeders' lists and as show entries;—truly, a new and stimulating order of things. We have the stock, the climate and the feed to make "the goods," and we are convinced that our Western breeders will arise to this privilege and opportunity.

Hence the desirability of every local stimulus to the industry—such as Breeders' Clubs, Fanciers' Associations, State and Community Exhibitions. But this is not our story just now. We have another issue that we deem of equal urgency, and that is the back yard, the bunny, and the child. We confess a great appreciation for this triad of co-agents and co-operators. It is of deep interest that in the recent school survey of one of our Bay sections a most exhaustive statistical census was made of the children in grammar grades who "raised, cared for, or kept" chickens, pigeons, or rabbits as backyard products. Some 6,000 homes were returned as having these triple assets. Their attempted classification presented a varied estimate, from the viewpoint of valuation, from eggs to broilers; from fur to jugged rabbit; from scrap-consumers to squabs. These "commonplaces" were tabulated and classified as valuable entities in the great complex problem of home life, education and character building. The problem of the after-school hours of the growing child, and how to utilize them, loomed up in this investigation with an arresting urgency. It was fully recognized that the child is alive, and more variedly alive than any other young animal, with an imperative urge born in him to chum in strange kinship with other things that live and move and are likewise alive. That instinct is congenital. This instinct exists as a latent

reality before we even proceed to educate and train the young human. It was found that in equal proportion as the child was conceded the personal care-taker or owner of the especial stock or pet, in like measure was the interest effectively centered and the reflex benefit secured. This surely is a phase of backyard utilization that is worth while.

A Word on Utility.

In this relationship the backyard bunny—standard stock preferred—can be raised economically, successfully and further afford a fascinating study in "real life." It beats the home garden as a food maker thirty to one; it will thrive where chickens would "pine away" and pigeons "go light" for want of aviation. Properly selected, it breeds readily, develops rapidly, and makes a pot-roast or an "Irish stew" with a meat that is rich in food value. The product is pleasant to the eye, good for the "tummy" and as brain food, is capable of producing a Socrates or a Supervisor. We heartily commend the rabbit as a specific asset to the housekeeper, a capable aid in the solution of the H. C. L., a most interesting problem for the student of evolution, an ever-shifting problem to the scientific breeders, an utility factor to the fancier, a consumer of table scraps, a keeper-at-home for Dad, a silent, wholesome, alluring and interesting pet, for aiding and stimulating the all-significant instinctive tendencies in that God-given mystery of a child's biological birth-right. Punnies, back yards, and babies are a Shamrock that make good in all that you entrust them to do.

QUACKLESS DUCKS.

To the Editor: Is there any profit in raising Muscovy quackless ducks? Can I get a Bulletin from Washington on the care of ducks?—O. B., Van Nuys.

A number of poultry keepers located in various parts of the State have reported satisfactory profit from the sale of Muscovy ducks and eggs, but only by a careful investigation of the local market demand for killing, and for breeding, also the cost of feed, can our correspondent determine whether or not it would be profitable for him. Send for Farmers' Bulletin No. 697, entitled "Duck Raising."

TANNING RABBIT SKINS.

To the Editor: Will you please send me a receipt for tanning rabbit hides. I rubbed them in ashes and salt. Now what preparation can I put on to soften them.—A. B. C., Cedarville.

Clean thoroughly the skin surface with soap and water—scraping off all

traces of flesh or fat. When nearly dry rub for several minutes with finely ground alum, and fold, skin sides against each other, and allow it to lie two or three days in a dry place. Then it ought to have a soft, leathery surface.

FEED VALUE OF SKIM MILK.

To the Editor: What amount of good meat scrap, costing 5¼ cents per pound, is equal to 100 pounds of sour skim milk for feeding to chickens? How much mill feed is equal to 100 pounds of sour skim milk for hog feed? What difference is there in fresh and sour skim milk for feeding purposes?—S. M., Fallon, Nev.

One pound of good meat scrap has a feed value of about fourteen pounds of skim milk, either sweet or sour. With the price of 5¼ cents for meat scrap the milk is worth about 38 cents per 100 pounds. Nearly all poultry feeders think it is better to feed the milk sour.

Poultry Breeders' Directory

Rate 3½ cents per word each issue.

YOU'VE OFTEN THOUGHT—How can I get hens to clear \$5 yearly? Easy. Twenty generations selecting, training, breeding best, has developed 200-300-egg hens that reproduce their kind. Let our circular reveal the secret of \$2 hens clearing \$3.00; \$3.50 hens clearing \$5. Leghorns, Anconas, Reds, Rocks, Minorcas, Chicks, Turkeys, CHICKS, EGGS—hundreds. LAYING, YOUNGER PULLETS, BREEDERS, near price ordinary stock. Well booked into Spring, yet most weeks open for thousands chicks, 140,000 hatching capacity. Half go to former customers. Returned thousands dollars for chicks we couldn't supply. Learn why. J. Beeson, Pasadena, Calif.

WARDS' S. C. RHODE ISLAND REDS caused a sensation at Sacramento by winning: 2nd cock, 1st and 3rd hens, 1st and 3rd cockerels, 1st and 3rd pullets, special for best-colored female. Special for best display. Hatching eggs. Write for circular. Ward's Poultry Farm, 39C South Lincoln Avenue, San Jose, California.

MAHAJO FARM

P. O. Box 597,
Sacramento, Calif.

White Leghorns, Brown Leghorns, White Rock; Cockerels and Pullets.
High-class, standard-bred stock.

ORDER BABY CHICKS NOW—For immediate or spring delivery. Several varieties. Safe arrival guaranteed. Write for free circular. R. I. Red, Buff Orpington and White Rock cockerels now ready for shipment. Stubbe Poultry Ranch and Hatchery, Box 67, Palo Alto, Cal.

S. C. WHITE LEGHORN CHICKS—by the 100 or 1000 from A-1 Hoganized and Trapped stock. Won 1st, 2nd and Special (Utility Class), Oakland and Modesto. Order early for Fall and Spring delivery. A. D. & P. M. Forster, 2918 Otis St., Berkeley, Cal.

FEBRUARY PULLETS from selected pens of Barred Rock hens weighing eight and nine pounds and laying from 16 to 24 eggs per month from October to February last season. Prices very reasonable. Geo. L. Horine, Winton, Cal.

ANDERSON'S PEEKLESS ANCONAS lay more and eat less than other breeds. 50 big husky cockerels \$5 and up. 200 pullets, trios and pens for sale. Hatching eggs. Catalogue free. J. W. Atkinson, Box B, 130 Willard Street, San Jose, Cal.

PETALUMA HATCHERY. Can ship day-old chicks to points reached in three days. Four varieties. We challenge the hen, or anybody else. Free fall circular. L. W. Clark, Petaluma, Calif.

S. C. RHODE ISLAND RED cockerels, February hatch, breeding pens. Hatching eggs. Improve your color and egg capacity. Wm. Larm, 3915 39th Ave., Fruitvale, Cal.

WHITE HOLLAND TURKEYS—Young breeding stock. January and February hatch. Chance to get a thoroughbred young tom reasonable. A. P. Ward & Son, Calistoga.

BARRED PLYMOUTH ROCKS—Nothing better in poultry. Prize-winners and wonderful layers. Choice stock for sale. Chas. H. Voden, Box 3, Los Gatos, Calif.

"EASTMAN'S BRED-TO-LAY"—Hoganized and trapped Barred Rocks. Fall chicks, eggs, cockerels. Fairmead Poultry Farm, Fairmead, Calif.

ROCK, RED OR LEHOEN baby chicks—large or small lots. Right prices. Madera Hatchery, Madera, Cal.

BUFF ORPINGTONS, BUFF DUCKS, BOURBON RED TURKEYS—The Ferns Ranch, Rt. 2, Box 144D, Pomona, California.

GOLDCROFT BUFF ORPINGTONS—Winners San Jose show. Choice stock for sale. Samuel Abrams, Los Altos, Calif.

TROUBLES A-PLENTY.

To the Editor: Our chickens were recently troubled with two diseases and they are beginning again. The chickens that are troubled with one of the complaints cannot stand; they fall over, but otherwise they look well and eat. Finally they become helpless on their feet. Those with the other complaint stand around stretching their necks, gasping for breath. They do not eat and very soon they die. Advice.—R. M. M. Modesto.

If the chickens that look well but cannot stand are young and growing fowls the trouble very likely is caused by rapid growth in connection with a lack of bone-building material. This may be quickly corrected by supplying them with fresh, or good dried, ground green bone. A fresh brisket bone chopped into small pieces is excellent. If they are well grown or mature fowls they may be suffering from night-shade or other poisoning. In our issue of September 20, page 402, we published a remedy for night-shade poisoning. Without more information as to feed, quarters, and whether or not fowls are infested with vermin or houses with mites, it is practically impossible to determine the exact cause or causes of death from the other complaint. Vermin alone will produce symptoms as described, so will a drafty house, or one that has no ventilation. The symptoms of roup, fowl diphtheria and some other complaints are similar, but as it has been determined that when fowls are fed with an exactly correct ration they are nearly immune against these common diseases it is likely that the trouble is due to improper feeding.

LOOKS LIKE PTOMAINE POISONING.

To the Editor: About a week ago one of my young roosters would throw his head up and walk straight up—I killed it. Now another is affected the same way. They run at large and are fed Gyp. corn. What is the trouble and is there a remedy?—C. N., Linne.

Without more information as to the feed secured on the range we can only advise a careful examination of the premises. It may be the fowls are eating decayed animal matter which has resulted in ptomaine poisoning, or the trouble may be due to eating night-shade, mention of which has been made in recent issues of this paper.

FEEDING FOR EGGS.

In order to make hens lay in winter we must duplicate summer conditions. To take the place of grasshoppers, worms and bugs obtained in the late spring and summer, the fowls must be provided with animal food. After the frost has killed the bugs and worms, high grade meat scraps offer a convenient form of animal food. Fresh green bones make one of the very best animal foods. Half an ounce per hen daily will be sufficient. When this amount of green bone is fed, no other animal food is required. Skim milk is also very good.—E. J. Peterson, N. D. Agr. College.

MOVING TIME FOR PULLETS.

September is moving time for the hens and pullets which must be transferred from the range to their winter quarters as early as possible so as to be acclimated to their cold-weather environments before they begin to lay. Year after year poultry keepers neglect to ship their stock from the summer resorts to winter lodgings early enough, as this is one of the basic principles of best management, according to specialists of the United States Department of Agriculture.

BEST CORN FOR FATTENING TURKEYS.

To the Editor: Kindly let me know which would be the best to fatten turkeys on—Egyptian corn or Indian corn?—W. F., Hardwick, Cal.

Opinion among turkey raisers seems divided as to which is better, but when both grains are of equal market value the majority favor Indian corn. Some prefer a mixture of both.

HOW MANY EGGS IN A YEAR.

How many eggs does your hens lay in a year. A state egg-laying contest has been arranged for at the North Dakota Agricultural College by Enoch J. Peterson, the poultryman. Breeders can send in a pen of five birds. These will be trapped for a year, thus giving a complete record of each bird for every day in the year. This egg-laying contest begins November 1st.

Ducks are easily raised. They are hearty eaters and must be fed liberally. They should have plenty of pure water and a pond for swimming is desirable but not absolutely necessary. They generally lay at night.

Feed regularly at certain intervals each day. Feed as long as the birds will eat ravenously and eagerly, but when you notice a hesitation or slowness in seizing the food, stop feeding.

INTRINSIC WORTH.

San Jose, Aug. 25, 1919.

Dear Rural Press: My attention has been called to your renewal offer. The subscription is a present to my wife and is actuated by our belief of its intrinsic worth. We have both been in touch with the Rural Press in some way since the "seventies," which is the basis for that belief and hope to continue so long as either exists. We believe your paper is worth much more than your regular rates, and I enclose a check for its continuance for six years.

Trusting that you may long continue your good work, I remain, Very truly yours,

F. P. McCRAY.

Tainted eggs are often due to hens eating onions, garlic, decayed meats and other things which have strong odors, or to drinking filthy water.

"Some have many possessions and some have few possessions." But whether these possessions be knowledge or wealth, they might just as well be in a hole in the ground unless they are used that others may benefit.

EGG-O-LATUM KEEPS EGGS ONE YEAR

It costs only one cent per dozen eggs to use Egg-o-latium. There is no other expense. Eggs are kept in carton or box in cellar. Eggs may be boiled, poached or used in any other way, just like fresh eggs. Simply rubbed on the eggs—a dozen per minute. A 50c jar is sufficient for 50 dozen eggs. At Drug, Seed and Poultry Supply Stores or postpaid.

GEO. H. LEE CO., Dept. 528, OMAHA, NEB.

After the Moul— EGGS

REMEMBER, going through the moult is like going through a long spell of sickness. To force out the old quills and grow new feathers saps a hen's vitality.

If you expect your hens to be fall producers and winter layers, then feed them Poultry Pan-a-ce-a during and after the moult.

Dr. Hess Poultry Pan-a-ce-a

will start your pullets and moulted hens to laying

It contains Tonics that put your moulted hens in fine condition—Tonics that tone up the dormant egg organs—Iron that gives a moulted, run-down hen rich, red blood and a red comb. It contains internal antiseptics that destroy disease germs that may be lurking in the system. No disease where Pan-a-ce-a is fed.

It brings back the singing—it brings back the scratching—it brings back the cackle. That's when you get eggs; and it's eggs you want—fall eggs, winter eggs—when eggs are eggs.

Feed Pan-a-ce-a to all your poultry to make and keep them healthy. The dealer refunds your money if it does not do as claimed. Tell the dealer how many fowls you have and he will tell you what sized package to buy. Always buy Pan-a-ce-a according to the size of your flock. 30c, 60c, and \$1.25 packages. 25-lb. pail, \$3.50; 100-lb. drum, \$12.00. Except in Canada.

POLLY'S BIRTHDAY.

By Sydney Dayre.

"I say it's a shame,—a real shame!"
It was one o'clock in the afternoon,
and Polly had gone to her own room
to have a fit of crying.

"I wouldn't let anybody know how
I feel about it for the world. But—
to think of its being my birthday, and
not a single thing done to make it a
greater day to me than any other day
in the year! Well,—I don't care!"

And, to show how little she cared,
Polly burst into another flood of
tears.

If mamma had been there, it
wouldn't have been so."

But mamma was not here, and
Polly knew she would have to make
the best of it.

"I wouldn't let one of them know I
expected to have anything done. Not
for the world! If they don't want to
think about my birthday, they
needn't."

"They" meant Polly's grandfather,
grandmother, and Aunt Sarah. Polly's
father was dead, and her mother had
come back to her old home to live.
And two weeks ago her mother had
been sent for to go to another aunt,
who was very ill. It was owing to
her absence that her birthday had
not been remembered.

She sat by her window, feeling
very forlorn and wretched indeed.
The early spring day was raw and
cold, and everything looked gloomy.

"And there's Aunt Sarah going out.
Where's she going, I wonder? Down
to the village. Well, I do think she
might have asked me to go with her.
Even that would have been better
than to stay here alone."

She followed Aunt Sarah with her
eyes until the last flutter of her dress
in the wind disappeared as she turned
a corner of the country road. Half a
mile further on was a little village.

Only 1/3 cent for a cup
of fine rich invigorating
tea!

If you could have
everything else as good
for so little money, the
"high cost of living" would
be out of date.

Schilling Tea is the fine
practical economical tea of
this country.

There are four flavors of Schilling
Tea—Japan, Ceylon-India, Oolong,
English Breakfast. All one quality. In
parchmy-lined moisture-proof packages.
At grocers everywhere.

A Schilling & Co San Francisco

"Perhaps, if I had been downstairs,
she would have asked me."

But it was too late for that now.
She sat looking out of the window.
The roof of a long porch sloped below
it. It was very old, as was all the
large farmhouse. The shingles on it
were loose and warped. Grandpa had
told her she must not get out on it.

No danger of her doing that, Polly
had thought, when he spoke of it. It
always made her dizzy to be in high
places, and nothing would have
tempted her to step out on that steep
roof. So she thought.

At the back end of the porch was a
low building used for a wood-house.
The shingles of this were also old and
loose.

Now, as Polly's eyes wandered idly
on outside things, they stopped near
the edge of the wood-house roof.

"What's that? Dust?"

But how could there be any dust
there this time of year?

"Why,—I believe—"

Polly sprang to her feet, still gaz-
ing fixedly out of the window.

"It is—yes, it's smoke."

For one moment she stood with
hands clasped in terror. At once she
guessed what it was. A tall pipe,
which carried off the smoke from the
kitchen fire had lately blown down.
Grandpa had said it was not safe
without it, for now cinders might
blow on the dry, old roof. This very
afternoon he had gone, with the hired
man, to bring home a new pipe.

But perhaps that new pipe was
coming too late.

There had been a great fire in the
kitchen all the morning, Polly knew,
—along with which had come a new
birthday grievance in the fact of Aunt
Sarah's not having asked her to help
about what she was baking. Some-
thing good it must have been, too, by
the smell; but she hadn't even baked
her a patty-pan cake or offered her so
much as a cookie.

Polly watched the smoke. Only a
little curl at first, but getting larger.
She was about to scream, for what is
more natural than to scream at sight
of fire where fire should not be?

But, with a sudden effort, she con-
trolled herself. Grandma was the only
person in the house except herself.
She could do nothing. She was not
strong, and a fright might do her
great harm. The curl of smoke grew
larger. Now it came in bunches with
the gusts of wind. Now,—yes, there
was a little tongue of flame.

In all her life Polly will never for-
get the terror which came over her
with the thought of all that was de-
pending on her in this dread emer-
gency. The old buildings which
formed the dear home of all she loved
lay at the mercy of a pitiless de-
stroyer, unless she, with her feeble
hands, should prevent it. Could she?

For one or two moments she held
her breath, sending up a swift prayer
that she might be enabled to do the
right thing. Then she snatched up a
rag rug from the floor, and brought
her water-pitcher to the window. She
opened it. Could she step out? Her
head seemed to swim with the
thought. But there was no time to
lose. With the rug under her arm,
and in one hand the pitcher, trem-
bling in every limb, she walked along
the shaking, rattling shingles; the
whole roof seemed to sway under her
feet. She reached the end, but never
could remember how she got down
upon the lower roof.

But she trampled down her fears,
as she bravely did the work she had
come to do. Pouring the water over
the rug, she beat upon the fire with it
again and again. The bit of flame
was soon put out; but how long it
seemed before she saw the last of the
smoke, and could feel sure that no
smouldering danger was left!

At length, certain of this, she
turned sick and faint. The edge of
the porch roof had crumbled under
her feet, as she had stepped down
from it; and nothing could have in-
duced her to climb upon it. She
could not get down without help, and
for a long hour she waited in the cut-
ting wind.

Grandpa and Caleb came at last.
Caleb put up a ladder, and brought
her down; and grandpa carried her
into the house in his arms.

Aunt Sarah was just coming in the
gate, and, with every one else, was
shocked and horrified, as Polly,
through quivering lips and just able
to keep back her sobs, told her
strange story.

"Well, I've heard tell of heroines
before," said grandpa; "but I don't
know as I ever heard of a braver
little one than you, Polly."

"What shall we give her?" said
grandma, as they flew about and
petted her, and seated her by the fire
wrapped in warm blankets.

"Peppermint tea," said grandfather.
"Catnip's better," said grandma.

DREADNAUGHT
BLAZING-AWAY-IN-COST-DEFENCE!

When a Fellow Needs a Friend

Talk about your "blues" and a "dark and stormy
night"—could anything be worse than on a raw, cold
morning, to have mother announce, "No wood, no break-
fast"? The chill is bad enough, but a fellow's hungry,
too. Oh, isn't it wonderful, the experience necessary to
become a member of the "Regular Fellows' Club?"

We are that man's friend—mother's, too—bless her
heart. We can forever eliminate this frosty morning
hustling and the everlasting poking in of wood. A
Dreadnaught Oil-Gas Burner in the same stove, a tank
of kerosene elevated to give it the "fall," or natural
pressure—that's all—real clean gas. Nothing to clean,
bring in or take out. The gas is properly matured so that it is
dry, burns clean and produces full value in heat. Wet gas is a
carbon maker, dirty and expensive. With wood it means expense
and slavery, and then lose two-thirds of it up the chimney in un-
consumed fuel. Write for circular—questions cheerfully answered.

Durable-DURHAM
Hosiery is a product
of industrial democ-
racy—never of Child
Labor. We have no
strikes or lockouts.

**The right hosiery for all the family
—for every season—for work, dress, or play**

HOSIERY for every one in the family that is made thick and warm for winter—and light and
cool for summer, but always of honest wearing value—and always good-looking. Every pair has
real value. Longer wear at reasonable cost means true economy. Not only in the money saved—
but the time that is saved in less darning.

Right now, thousands of men and women are buying Durable-DURHAM fleecy-lined hosiery for
winter. Every pair is full of warmth and full of wear. This hosiery is comfortable to wear—and
has a fine appearance.

**DURABLE
DURHAM HOSIERY**

FOR MEN, WOMEN AND CHILDREN
MADE STRONGEST WHERE THE WEAR IS HARDEST

The strong reinforcing at point of greatest strain gives extra months of wear
to Durable-DURHAM Hosiery. Styles for men and women include all
fashionable colors and come in all weights from sheer lisle to the heavy fleecy-
lined hosiery for coldest weather.

Every pair of Durable-DURHAM is made right. Legs are full length; tops
wide and elastic; sizes are accurately marked. Soles and toes are smooth,
seamless and even. The Durham dyes will not fade.

Ask for Durable-DURHAM Hosiery and look for the trade mark ticket
on each pair. Your dealer should have Durable-DURHAM. If you do not
find it, please write to our sales department, 88 Leonard Street, New York,
giving us the name of your dealer.

HIKEE
An extra warm and
long wearing sock.
Double fleecy-lined
throughout. Full of
warmth and full of
wear. Strongly re-
inforced heels and
toes. Black only.

"Nothing like ginger-tea," said Aunt Sarah, positively.

And, long before it could be agreed on, three bowlfuls had been made; and Polly had to take some of each kind. She thought within herself that she would easily get over her out-of-doors experience; but whether she should live through the remedies was a thing to be doubted. She was, however, too polite to say so when such a kind fuss was being made over her; and it is pleasant to be able to say that, whether it was due to the petting or the wrapping or the teas, Polly suffered no harm from her exposure.

"And here is her birthday letter," said grandpa, when at length Aunt Sarah stopped bringing her some kind of tea. "It was at the post-office, and I thought I'd wait to give it to her till she was well warmed up."

Polly read it, and handed it, with a smile, to Aunt Sarah, to read to the others. The beginning is the only part we shall listen to:

"My Dear Little Daughter,—Your birthday is very near; and I am kept so closely at your aunt's bedside as to be able to do nothing to make it pleasant for you. But I wish you to remember, dear, that, though nothing may be done to make it a special day to you, you may, if you try, make it a special day to others."

"Well, if she hasn't"—Aunt Sarah broke off, with a little cry, and ran to give Polly another hugging, in which the others joined. Polly was afraid more tea would be brought, but no one spoke of it.

"And now," said Aunt Sarah, "do you feel well enough to dress?"

"Dress?" said Polly, inquiringly; for she did not usually change her dress in the afternoon.

"Yes; I see two of your little friends coming up the walk."

Polly skipped up the stairs as actively as if she had not been sitting in the March wind for an hour. A quarter of an hour later she was down again to meet, not simply two girls, but two dozen, who greeted her with—

"Happy birthday, Polly! Many returns of the day!"

In her own room at bedtime, Polly again talked with herself.

"Oh! oh! oh! How glad I am that I didn't let anybody know how scowly and growly I felt all the morning because I thought nobody was thinking of my birthday. And all that baking that Aunt Sarah was doing was for my party. And, when she went down to the village, it was for the nuts and candy."

"I like what mamma says about birthdays." She opened the letter and read from it—

"Though nothing may be done to make it a special day to you, you may, if you try, make it a special day to others."

HOUSEHOLD SUGGESTIONS.

To make a copper kettle look new, rub it with salt and vinegar.

After a cane chair has had much use the seat will begin to sag, and a simple and easy way to tighten the cane is to wash it with very hot water and let it dry.

In order to clean black cloth and restore the color, sponge with logwood and ammonia. Infuse the logwood chips in a jar of boiling water placed in a pan, strain and use cold, adding a teaspoonful of ammonia to half a pint of logwood. This solution should be guarded as a poison.

Candles improve with keeping, so it is wise to buy in large quantities.

Cloves are said to be as effective an agent against moths as either camphor, tobacco, or cedar chips.

Half a cupful of milk put in a dish-pan full of hot water will serve instead of soap. It softens the water, keeps the hands better, because it will not roughen them like soap, and leaves no scum in the pan.

HELPFUL HERBERT.

What a friend we have in Hoover,
All the skins and thieves to bare,
What a surplus fat remover,
All our hungry pangs to share.

Ever present help in trouble,
Guide, philosopher and friend,
Pass the shark-meat and fried stubble—
Will the conflict ever end?

Edith was giving a birthday party, and there was some slight delay in providing seats for her little friends, when she spoke up, quite soberly—

"You see, it isn't that we have not chairs enough, but I have asked too much company."

HANES
ELASTIC KNIT
UNDERWEAR

GUARANTEE—We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

Greatest underwear value in America at the price!

You can't get greater warmth or better workmanship or more comfort or more actual wear than every suit of Hanes winter weight underwear for Men and Boys surely will supply!

Hanes is made in winter weight Union Suits and Shirts and Drawers. Illustrated here is the staunchest, most comfortable, wear-resisting union suit ever sold at the price.

Hanes Union Suits have the most desirable and dependable features—unbreakable seams; reinforced, non-stretching buttonholes that last the life of the garment; tailored collar that cannot gap; shape holding elastic shoulders; elastic knit wrists and ankles; pearl buttons sewed on to stay. And, a closed crotch that stays closed!

Hanes Shirts and Drawers have the same desirable quality; perfect workmanship and features. Drawers have the durable, snug-fitting 3-button saten waistband.

Union Suits for Boys in quality, cozy warmth and workmanship are unsurpassed at the price! Reinforced at all buttonhole and strain points. In fact they duplicate Hanes Union Suits for men, with added fleeciness. Made in sizes from 2 to 16 years. Two to four year sizes have the drop seat.

If your dealer cannot supply "Hanes" write us direct.

Don't "Shut Off" Rooms This Winter Heat them all with a Mueller Pipeless and save on fuel

INSTEAD of huddling around stoves in two or three rooms this winter—instead of shutting off half or more of your rooms because of cold—install a Mueller Pipeless Furnace and experience a grateful, cozy, homelike warmth in every room.

The Mueller Pipeless will enable you to do this without fuss or bother. It is guaranteed to heat every room to a comfortable temperature through one register and it will keep the air moist and healthful. The Mueller Pipeless burns any fuel—hard or soft coal, coke, wood, lignite, gas or oil—you can use whichever is cheapest and easiest to obtain. And you can actually save money by using less fuel than ever before and many have reported a saving of 1/3 to 1/2 on fuel.

MUELLER PIPELESS FURNACE

It is scientifically designed and correctly constructed. It embodies exclusive features. Every part is accurately and properly proportioned. Vast heating surface—large register face—free unobstructed air passages.

Thousands in use, heating homes of all sizes satisfactorily. Easy to install—no tearing up of walls and floors for pipes.

Get the Mueller Book, "The Modern Method of Heating Your Home." It explains in detail the many features that make the Mueller the most satisfactory pipeless furnace. Write for it today.

Market Comment

Italian Lemon Products Cost Double.

The cost of lemon production in Sicily has more than doubled since 1914. There has also been a heavy increase in the manufacturing cost of citrus by-products, such as citric acid, citrate of lime, essential oils, etc.

Cotton Crop Brings Many Millions.

With the 1919 cotton crop of the southwest valued at approximately \$43,360,000, the territory embracing California, Arizona, and the Imperial Valley in Mexico, is regarded potentially one of the greatest cotton-growing sections in the world.

Bean Growers Need Protection.

It is the contention of our California bean growers that they must have protection against their Oriental competitors or go out of business. An import duty as high as 4 cents a pound, it is claimed in some quarters, is essential to the conservation of this important industry in this State.

Easterners Like the California Egg.

The California hen and her product are in high favor in the East. Large shipments have been made recently to Eastern centers with the result that local storage supplies have been heavily drawn upon to meet these requirements.

Walnuts Still in the Ascendant.

Despite some protests from Eastern brokers handling California walnuts, that the announced prices are too high, it is believed that owing to light imports from Spanish sources of supply and to the plentifulness of money in circulation at home, prices will go still higher. An increase any day need not surprise us.

Price Trend Upward.

It is the prevailing belief that the maximum prices on many foodstuffs have not yet been reached, and that the approaching winter will see many farm commodities go to still higher price-levels. Present efforts on the part of the Government and of the public to hold prices down, may avail temporarily, but it is thought there is no permanent relief yet in sight.

Dairy Products—Foreign Competition.

Roy C. Potts, specialist in marketing dairy products, says America is not likely to feel foreign competition on home markets for two years at least. He also makes this interesting observation: "Fluctuating prices at wholesale make for wider margins between producer and consumer, while stabilization permits greater economy in distribution. Wide price publicity, he contends, narrows fluctuation."

Citrus Market Satisfactory.

Growers of Valencia oranges are, on the whole, receiving satisfactory prices for their shipments, which are on a \$5 to \$5.25 f. o. b. basis. Stock showing decay is responsible for lower prices received. There are now about 3,200 cars remaining for shipment, due to scarcity of refrigerator cars. Growers of Navel in Central California state that the crop is developing satisfactorily, and giving promise of yielding quality fruit. The lemon market is still high, but it is thought the topnotch price has been reached. The total shipment of cars of oranges for the season commencing November 1, 1918, are 33,294 and 9,334 cars of lemons.

Special Deciduous Market Report

(Written for Pacific Rural Press by J. L. Nagle.)

Sacramento, Cal., October 14, 1919.

Considering unfavorable weather conditions in some of the Eastern markets and the fact that most of the cars were loaded heavily, which caused some of the fruit to be in poor condition, fruit the last two weeks sold to exceptionally good advantage. The light supply has unquestionably stimulated the demand.

We do not look for any improvement in the refrigerator car situation. The Malaga growers were very fortunate in having been able to ship about 85 per cent of the crop, whereas but less than 50 per cent of the Lodi Tokays have been shipped, and about 80 per cent of the Florida.

Industrial disturbances in many of the Eastern markets have not so far affected the demand for fruit, nor the delivery of the cars, except in New York. The strike situation, however, in New York was short-lived as the carriers finally made arrangements to unload cars with practically no loss to the shippers.

If fruit continues to arrive in fairly good condition, and is not too seriously affected by the overloads, we anticipate a strong market, with indications towards an advance throughout the balance of the season.

Averages for the week:

NEW YORK: Bartlett Pears, \$3.82; B. Hardy, \$3.77; Glout Morceau, \$3.65; Winter Nellis, \$3.42; B. Clairgeau, \$3.78; B. Anjou, \$4.75; Levi Cling Peaches, \$2.90; Salways, \$1.32; Orange Cling, \$1.80; Malaga Grapes, \$2.14; Tokays, \$1.82; Cornichon, \$2.00; Muscats, \$1.95; Black Prince, \$2.16; Seedless, \$2.13; Alicante Bouschet, \$2.71; Zinfandels, \$2.30; Emperors, \$1.75.

CHICAGO: Tokays, \$1.87; Cornichon, \$2.16; Malaga, \$1.94; Seedless, \$1.79; Zinfandel, \$1.86.

BOSTON: Malaga Grapes, \$1.78; Tokays, \$1.72; Muscats, \$1.75; Cornichon, \$1.92; Alicante Bouschet, \$2.10; Mission, \$2.03; BBlack Prince, \$2.20; Zinfandel, \$2.10.

THE MARKET REPORTS

Figures Given Are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO.

San Francisco, October 15, 1919.

BARLEY.

The barley market is quiet and no interest is being displayed in either spot or futures. The continuance of the waterfront strike is holding up some small shipments up the Coast, but even with this drag on the business removed there appears very little prospect of much increase in the demand.

Feed \$2.90 @ 2.95
Shipping \$3.15 @ 3.20

OATS.

Like barley, oats are very dull, and the few sales consummated this week showed a lower price than last week. The general labor situation, as well as the water-front conditions, is affecting all the grains.

Red feed, per ctl. \$2.75 @ 2.85
Red for seed Nominal
Black for seed Nominal
Recleaned Red or Black for seed. Nominal

CORN.

Egyptian sold somewhat lower this week on small demands. While in somewhat stronger position than the other grains, corn is suffering from the prevailing conditions.

California \$3.50 @ 3.60
Egyptian, choice \$3.20 @ 3.50

HAY.

Receipts of hay for the past week were 1,365 tons compared with 2,893 the previous week. This drop in receipts is attributed to the clearing of the fields and the scarcity of cars. Most of the hay is now under cover and shipments by water are falling off materially. Although the receipts are small, there has been sufficient hay arriving to meet all demands. Most of the receipts, however, have been of the medium and poorer grades and very little fancy hay, which usually comes from rail points, has been available. The results have been that when a car of fancy hay has arrived it has been sold at prices in advance of quotations.

No. 1 Wheat, or Wheat & Oat. \$15.00 @ 18.00
No. 2 Wheat, or Wheat & Oat. \$12.00 @ 15.00
Choice Tame Oat Hay \$15.00 @ 18.00
Wild Oat Hay \$10.00 @ 14.00
Barley Hay \$12.00 @ 16.00
No. 1 Alfalfa Hay \$17.00 @ 22.00
Stock Hay \$ 8.00 @ 12.00
No. 1 Barley Straw, per bale. \$50 @ 80

FEEDSTUFFS.

There was a general lack of interest in the feedstuffs during the week, and while possibly rolled oats should be lowered, in the general lack of business all quotations are maintained nominally unchanged.

Roller Oats \$61.00 @ 62.00
Cocoanut Meal None
Cracked Corn \$78.00 @ 79.00
Alfalfa Products \$38.00 @ 45.00

POTATOES, ONIONS, ETC.

Potatoes are dull and unchanged in price. There seems to be a scarcity of real good to fancy stocks, and if they were shipped they would probably bring a higher price, although the shipyard and other strikes have a tendency to lower consumption. Onions are in a better position and a fair demand gives strength to this product. Both peas and beans are higher.

String Beans 5 @ 7c
Peas 9 @ 11c
Carrots, per sack \$1.00 @ 1.25
Rhubarb, Strawberry, box Nominal
Cucumbers 75c @ 1.00
Eggplant, box 75c @ 1.00
Lettuce, per crate 75c @ 1.25
Tomatoes, Early Annas 50 @ 75c
do, Stone 75c @ 1.00
Summer Squash, lugs, Alameda \$1.00 @ 1.50
Green Corn, Alameda, sack \$1.50 @ 2.00
Potatoes, Garnets \$2.00 @ 2.35
do, local whites \$2.25 @ 2.50
do, Rivers \$2.00 @ 2.35
do, Sweets, new, lb. 3 @ 4c
Onions, new red Nominal
do, Browns \$2.50 @ 2.75
do, Yellow \$2.50 @ 2.75
do, Green, Alameda \$1.00 @ 1.25
Garlic 20 @ 22c

BEANS.

A demand developed during the week for blackeyes and cranberry beans and the prices responded by advancing. Otherwise the market was dull with lower prices quoted on small whites and garbanzos. Limas have maintained their opening prices, and it may be that the association will be able to maintain this price.

Bayos, per ctl. \$6.25 @ 6.50
BBlackeyes \$5.75 @ 6.00

Cranberry beans \$6.50 @ 6.90
Pinks \$6.00 @ 6.25
Mexican Reds \$5.50 @ 5.75
Tepary beans \$2.50 @ 2.75
Garbanzos \$0.50 @ 1.00
Small whites \$6.75 @ 6.90
Large whites \$6.25 @ 6.50
Southern limas (new) \$14.50
do, (new), baby \$13.00

POULTRY.

The poultry market is showing considerable strength. Receipts have not been excessive and a steady demand has been maintained for practically all descriptions. An exceptional demand for small broilers caused their price to advance and the same is true of fryers. Most of the turkeys coming in at this time are sale, very few arriving dressed for immediate sale. Live turkeys are quoted from 40 to 45 cents, according to their condition, and the daily fluctuations of the market due to the supply and demand. Jack rabbits have not been in first-class conditions in many shipments, but the extra readily brought \$3, and in one or two cases higher prices.

Broilers, 1 1/2 lbs. and under 36 @ 38c
do, 1 1/2 to 2 lbs. 32 @ 34c
Fryers, 2 to 3 lbs. 32 @ 34c
Hens, extra, per lb. colored 33 @ 34c
do, Leghorn 30 @ 32c
Smooth young roosters, per lb. (3 lbs. and over) 32 @ 34c
Old roosters, colored, per lb. 22 @ 23c
Turkeys, dressed, young spring, lb. 60c
do, live 40 @ 45c
Geese, young, per lb. 26 @ 27c
do, old, per lb. 22 @ 23c
Squabs, per lb. 60 @ 65c
Ducks, young 20 @ 25c
do, old, per lb. 15 @ 20c
Belgian hares 15 @ 16c
Jack rabbits \$1.50 @ 3.00

BUTTER.

Butter has been steady throughout the week with a drop of a cent on Wednesday, which is said to have been due to the fact that some of the large dealers did not have the usual orders on file this morning. The finer grades of butter are scarce and other grades are not in excess of the demand. Storage butter is coming out freely at present prices of fresh butter, and this is one of the reasons that the present small receipts do not cause butter to go higher.

Thurs. Fri. Sat. Mon. Tu. Wed.
Extra 63 63 63 63 62

EGGS.

Monday, October 13, was observed as a holiday on the exchange and no quotations were made on that date. Extra eggs continued to show weakness to Saturday of last week. At that time a new description was called, Dirtsies No. 1, and on the next call, Tuesday, extras showed an advance again. It is stated that the producers of eggs are making careful selection of extra white eggs and are shipping them to New York, where they bring 86 cents. This leaves a number of dirtsies or slightly soiled eggs on the hands of the producers. These eggs are extras as far as size and freshness go, but they can not be sold in that category. The removal of these eggs and the selected eggs for the New York market leaves but a few extra eggs to come to this market and the price advanced as a consequence. At the same time extra pullets sold at lower prices and undersized advanced on the demand of consumers to have fresh eggs at less than the top prices. Storage eggs are being sold in larger quantities.

Thurs. Fri. Sat. Mon. Tu. Wed.

Special Livestock Market Report

San Francisco, October 15, 1919.

CATTLE—The cattle markets have ruled steadily this past week, though prime, grain-fed steers are scarcer and higher. Beef trading is, on the whole, quite active. Quotations unchanged.

Steers, No. 1, 950-1100 lbs. 10 @ 10 1/2 c
do, No. 1, 1100-1300 lbs. 9 1/2 @ 10 c
do, 2nd quality 8 @ 8 1/2 c
do, thin 6 @ 7 c
Cows and Heifers, No. 1 8 @ 8 1/2 c
do, 2nd quality 6 1/2 @ 7 1/2 c
do, common to thin 4 @ 5 c
Bulls and Stags, good 5 1/2 @ 6 1/2 c
do, fair 4 1/2 @ 5 1/2 c
do, thin 3 1/2 @ 4 1/2 c
Calves, lightweight 12 @ 12 1/2 c
do, medium 11 @ 11 1/2 c
do, heavy 8 @ 9 c

SHEEP—There is a fair market for all sheep on the hoof, and an especially good demand for fat lambs and good yearlings. Indeed, it is not easy to meet requirements for the latter grade of stock. Quotations stand:

Lambs, Yearling 10c
do, Milk 12 @ 12 1/2 c
Sheep, wethers 8 1/2 c @ 9 c
do, ewes 8 1/2 @ 7 c

HOGS—The rapid and steady descent of hog prices during the past few weeks is dispiriting to the swine growers of the State—and to make matters worse, no one can forecast the end of the slump. The lessened demand for our pork products from Europe and the general protest against the high cost of living, including the cost of meats, appear to be the leading factors in this sensational decline. The various swine growers' associations of California are giving serious attention to this somewhat depressing situation, and are hopeful of strengthening their position and of giving new tone to the weakening market. Settlement of labor troubles and improved shipping facilities are looked forward to for some relief. Quotations are sharply lower.

Hogs, hard, grain-fed, 100-150 13 1/2 c

Undersized, 49 46 1/4 47 1/2 .. 49 1/2 50 1/2

CHEESE.

The cheese market is steady and very quiet. Price changes were slight during the week. The general demand was lacking for most descriptions and this was especially marked in the case of California flats fancy.

California Flats, fancy 31c
do, Firsts 27c
Y. A. Fancy 31 1/2 c
Oregon Triples 29 1/2 c
do, Y. A. 32 1/2 c

FRESH FRUITS.

The apple market is the best of the fresh fruit market at present. The Oregon product at \$3 is now plentiful and receives much support. Oregon peaches are also plentiful. While there are a few cantaloupes still coming in, there is no demand for this fruit at this season of the year. Quinces are weaker, on account of the sugar situation.

Apples, Alexanders \$1.25 @ 1.50
do, Jonathan, \$1.50 @ 2.20
do, Kinn \$1.50 @ 2.00
do, Bellflower \$1.50 @ 1.75
do, Newtown Pippin, \$1.75 @ 2.00
do, Oregon Delicious \$3.00
do, Oregon Banana \$3.00
Pears \$1.50 @ 4.00
Figs \$1.00 @ 1.25
do, white \$1.00 @ 1.25
Plums, box 75c @ 1.50
Grapes, Seedless \$1.25 @ 1.75
do, Others \$1.50 @ 2.00
Strawberries \$1.50 @ 1.80
Raspberries \$1.40 @ 1.60
Watermelon, lb. 14 @ 1 1/2 c
Quinces \$1.00 @ 1.25
Oregon Peaches \$1.25 @ 1.50

CITRUS FRUITS.

There have been some arrivals of grapefruit this week and these were eagerly snapped up by buyers. The new crop will not begin to arrive before the middle of next month and at about the same time navel oranges will begin to arrive. In the meantime there were no changes in quotations for any description.

Oranges, Valencia \$5.25 @ 5.75
Lemons, fancy \$7.00 @ 7.50
do, choice \$6.00 @ 6.50
do, standard \$5.00 @ 5.50
Lemonettes \$4.00 @ 4.50
Grapefruit \$6.00 @ 6.50

DRIED FRUITS.

Prices to growers for dried fruits weakened very materially this week. Most of the buyers have secured practically all they care to contract for and as a consequence prices dropped one or two cents for the several descriptions still on the hands of growers.

Apples 16 @ 18c
Pears 16 @ 18 1/2 c
Peaches 15 @ 17c
Apricots 21 @ 28c
Prunes 11 @ 13c
Figs, Adriatic 12 @ 18c
do, Calimyrna 15 @ 21c

RICE.

There were no changes in rice quotations either for spot or futures this week. The market is regarded as steady and little variations from present prices are expected before the crop is about ready to move.

LOS ANGELES.

Los Angeles, October 14, 1919.

BUTTER.

Following a break in the San Francisco market, prices went off here up to Tuesday 2c, but at this decline there was very good buying the balance of the week. Receipts for the week 260,000 pounds. We quote:

Fresh California extra creamery 65c
do, prime first 63c
do, first 62c

EGGS.

There were a few more eggs in the past week. Yet the arrivals of fresh ranch eggs

do, 150-225 14c
do, 225-300 13c
do, 300-400 12c

Los Angeles, October 14, 1919.

CATTLE—Steers continue rather scarce, firm and in demand. Cows are plentiful, but slow sale and weak. Calves are steady and in fair demand.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 @ 1100 lbs. \$9.50 @ 11.00
Prime cows and heifers \$8.00 @ 9.00
Good cows and heifers \$7.50 @ 8.00
Canvans \$5.00 @ 5.50

HOGS—Sharply lower in sympathy with declines East. Offerings only fair, and what are coming in selling without trouble at quotations.

BEANS.

There was a further advance in limas the past week and the demand was very good. Some little move was also made in blackeyes, but the whites and pinks continue dull. Limas, per cwt \$12.50@13.50
Large white, per cwt. \$6.25
Small white per cwt \$6.50
Blackeyes, per cwt. \$5.00@5.25
Tepary, per cwt. \$3.00@3.25
Pink, per cwt. \$6.25

HAY.

Not much came in the past week, and the market is a little stronger for alfalfa, with fair buying. Grain hay is still dull. We quote f. o. b. Los Angeles.

Barley hay, ton \$18.50@21.50
Oat hay, ton \$22.50@25.00
Alfalfa Northern, ton \$24.00@25.00
Alfalfa local, ton \$25.00@27.00
Straw \$ 9.00@10.00

BERRY PLANTS—Strawberries, Raspberries, Blackberries, Currants, Gooseberries, Dewberries and Loganberries. Order now to assure delivery. Write M. J. Moniz, Berry Specialist, Sebastopol, California.

MADE OF REDWOOD, Hawley's Perforated wooden well casing, the best and cheapest well screen made. Send for descriptive circular. G. M. Hawley, La Mesa, California.

CROLEY'S BALANCED HOG FEED—The cheapest feed to fatten hogs. Write Geo. H. Croley, Townsend St., San Francisco, Calif.

FOR SALE—Bean Tractor, has latest improvements; in A-1 condition. Will sell cheap Gibson Development Co., Oakdale, Calif.

WANTED—Married dairyman, experienced in A. B. O. fitting for shows; calf raising, etc. Sunnybrook Ranch, Willits, Calif.

A NEW ALFALFA—Investigate now. Our great "Hardy Hybrid" alfalfa. For facts, write J. L. Lawson, San Jose.

MAMMOTH JERSEY KALE SEED—2 oz., 15c, by the pound, \$1.00. A. P. Ward & Son, Calistoga.

COUNTRY LANDS.

FOR SALE—20 acre ranch, 5 miles from Oakdale, 1/2 mile from S. P. Flag Station, 1 1/2 mile from Valley Home Railroad Station, 1/2 mile from Highway; under Oakdale Irrigation System, plenty of water; property all checked for alfalfa with laterals for irrigating every part of ranch; land ready for re-seeding to alfalfa; good sandy soil of A-No. 1 quality; good barn; enclosed tank house; good tank and windmill; family orchard around the house; four-room house covered with vines. Price \$5,000 gross. If bought direct from owner real estate agents' commission will be thrown off. Owner, BERKELEY SECURITIES COMPANY, 218 First National Bank Bldg., Berkeley, California.

FOR SALE BY OWNER—Ten-acre apple orchard 3 miles south of Bishop, Cal., in Sunland District. Just coming into bearing. Lays under head of Mesa canal with ten inches of water—none better in America. Climatic conditions are unsurpassable. Orchard is in good location on main traveled road with ideal view of mountains and valley. Varieties of fruit are Winesaps and Jonathans, the leading varieties for Owens Valley. Phone 5F4, No trade. Clyde Hall.

SMALL FRUIT RANCH for rent at Loomis, Cal. Address 206 Lake St., Reno, Nev.

\$1500 DOWN SECURES

108 Acres, 3 Horses and 9 cows, 3 heifers, bull, hogs, chickens, wagons, buggy, plows, cultivators, harrows, disc, mowing machine, rake, grain drill, harness, long list tools, 150 bu. oats, large quantity hay, corn, potatoes, near railroad town, electric cars, high school, few steps milk station, 10 miles world-famous resort, 12 miles large city, 60 acres in high cultivation fields, wire-fenced, 20-cow pasture; home-use wood; 200 apple trees, 40 pears, 24 cherries, abundance other fruit, berries, 12-room house, good condition, running water, air-pressure system, good, painted barns, stable, granary, corn, smoke, ice, poultry houses. Retiring owner sacrifices all for \$6,500, only \$1500 down needed. Details page 32, New Fall Catalog Farm Bargains, Maine to Florida, and west to Nebraska; copy free. STROUT FARM AGENCY, 831AF, N. Y., Life Bldg., Kansas City, Mo.

WANTED TO BUY in Santa Clara county, in the hills, between Mayfield and Saratoga, about six productive acres and a house, or a good home-site, the same being part of a large, modernly-equipped orchard or dairy farm. The seller to continue, by yearly agreement, to work the six acres, in addition to his own land. Trees, water and view necessary. No agents. Address, Room 324, Merchants Exchange Building, San Francisco.

FOR SALE—Eighty-acre alfalfa dairy ranch in heart of orchard district, two miles from Hollister, including forty milk cows, 28 heifers, four work horses, 150 tons alfalfa hay, 6-inch centrifugal motor-driven irrigation plant, 60x90 barn, modern house, machine shop and other buildings. Address, Owner, Geo. P. Merritt, Hollister, Calif.

120 ACRES IRRIGATED LAND—52 acres cleared, 35 acres in orchard, 17 acres hay land, balance timber. Price \$4,000; one-half cash; terms on balance. Abstract title water with the land. Located in Happy Valley, Shasta Co., Cal. Write Box 133, Cottonwood, Shasta county.

FOR SALE—15-acre improved and irrigated ranch one-half mile from Newman in Stanislaus county. Deep soil, no hardpan. Bargain at \$4,200. Good for dairy, chickens or variety farming. Ready for double crop this year. Owner, W. L. Bone, Escalon, Cal.

FOR SALE—450 acres—sediment soil; water on each five acres, 16-inch cement pipes. Will sell in tracts to suit. Raised over 200 sacks of onions per acre this year. Full particulars. Address R. H. Middleton, Lakeview, Cal.

40 ACRES—Fine for berries, vegetables, poultry and cows; plenty water and wood; near town. H. Koenig, Fort Bragg, Cal.

FOR SALE—14 acres orchard or berry land. Paradise near Chico. Cheap. Address Box 1700, Pacific Rural Press.

"Ask Barker Bros."

This is a safe way to settle any question about the furnishing or refurnishing of all or part of your Home.

Making better, more beautiful, more comfortable Homes is one part of our business. Helping to take the drudgery out of Housework is the other part.

This is an organization of 1300 Home making enthusiasts. A helpful, appreciative understanding of the many problems met in making a better Home exists throughout Barker Bros.' store.

Our mail brings us daily throughout the year questions from puzzled Home makers everywhere in the West—questions as to how best to solve some important problem of Home furnishing or Home efficiency.

Barker Bros. consider it a part of their duty to give careful detailed answers and suggestions by mail to all such questions. It is your welcome privilege to write us for information on any particular Home subject in which you are interested.

Or if you wish to receive our Magazines and Special Literature, as issued from time to time, just say,

"Put my name on your Mailing List."

GHIRARDELLI'S Ground Chocolate

No birds get through *his* shot patterns

THE successful sportsman knows that his bag depends almost as much upon the shot pattern, or evenness with which the shot spreads out and covers the game, as it does upon his gun handling.

The secret of uniform game-getting patterns is in the control of the gas blast from the exploding powder. This in turn depends upon the *wadding* in the shell.

The Winchester gas control system

The Winchester system of wadding and loading is the result of repeated experiments to determine the most effective control of the gas blast.

The base wads of Winchester Shells are constructed to give what is known as progressive combustion to the powder charge. The ignition spreads to the sides, in all directions, as well as forward.

Under the heat and pressure of this progressive combustion the tough, springy driving wad expands and fills the bore snugly, completely sealing in the gas behind. In being driven through the bore this wad offers just enough resistance to the gas blast to

insure complete combustion of every grain of powder, so that the full energy of the whole powder charge is developed at the muzzle. Thus none of the shot charge leaves the gun until it is being driven by the maximum energy and velocity possible from the load.

At the muzzle, the expanded, snug-fitting driving wad is slightly

sure the maximum pattern possible from any load. The broad fish-tail flash from the primer gives even and thorough ignition; the driving wads completely seal in the gas behind the shot; the stiffness of the crimp or turnover at the shell head is varied exactly according to different loads, great care being taken never to stiffen it to such a degree that it offers undue resistance to the powder explosion.

A patchy pattern often means a miss, many times a cripple, and sometimes badly mutilated game.

The hard-hitting Winchester pattern is evenly distributed. No game gets through, and no game is mutilated.

checked by the muzzle choke or constriction, while the shot cluster travels on unbroken by gas blast or wadding, making the hard-hitting uniform pattern for which Winchester Shells are world-famous.

Uniform shells. From primer to crimp Winchester Shells are so balanced in construction as to in-

In addition Winchester Shells are, of course, thoroughly waterproof, insuring true shooting in damp saturating salt air or drenching rains. A special lubrication of the paper fibre prevents brittleness and splitting in dry weather.

Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps be sure your shells are Winchester Leader and Repeater for smokeless, Nublack and New Rival for black powder. Leading hardware and sporting goods dealers in every community carry Winchester arms and ammunition. They will be glad to assist you in determining the particular load best suited to your purpose. Upon request, we will send you, free of charge, our interesting booklet on Winchester Shotguns and Loaded Shells. Winchester Repeating Arms Co., Dept. 251, New Haven, Conn. U. S. A.

The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where the wadding is checked by the "choke" or constriction. The shot cluster travels on ahead unbroken. Actual test target 350 pellets out of 451 or 78% of the shot charge (1 1/2 oz. of 7 1/2 chilled) inside a 30-inch circle at 40 yards.

California International Stock Show and--

GREAT HORSE SHOW AS WELL. They are not doing things by halves. A great big live stock show is fine and they are going to have it, but also a real Horse Show, to take the bread and buttery taste out of our mouths, to give us all a good time, young and old, rich and poor alike. After the serious business of the day is over, the judging of the hogs and cows, the sheep and goats, and dinner has been eaten, what then? The day is not complete without amusement of some kind to relax the tired thought with something beautiful and send us to bed and into delicious dreams of expectation of what is coming tomorrow.

Go and See a Real Horse Show.

Did you ever go to a real horse show such as they will have in San Francisco, when they really set out to do their level best? No, you have not. You may have gone to something in the past that was called San Francisco's best, but it was just as the Mid-Winter Fair was great. That was years before the "Panama Pacific," and which was greatest and best? The last one, of course, and that is the way it will be with this coming horse show. It will "see" the last one whenever that was held and "raise" it a

"stack of blues," it will be so much better. San Francisco, with the assistance of all the horse lovers of California, will see to it that a perfect setting is given to this great livestock show that is going to be "pulled off" the first week in November.

You have seen horses before, but the horses you will see here will have the fire and the courage, strength and endurance, the beauty and the gentleness of the ages back of them all. With a skin and coat like satin, the intelligence of man and the carriage of conquerors. Single and double, abreast and tandem, fours and sixes, all greater and better and more beautiful than ever before under thousands of lights to the strains of the most entrancing music, the gaited saddle horses, the light harness and heavy harness horses, trained and fitted to the second, all will be there ready and willing to show as they never have shown before. They cannot help it, these beautiful things we call them. They always do their best. Always go to "the end of the trail."

In connection with the stock show the U. S. Department of Agriculture will have a large part of the exhibit here that was at the National Dairy

SERMONS IN STEERS.

TWO WEEKS ago we indulged in a few reflections concerning the entry of the live stock idea and enterprise into the portion of geography which is now included within the boundaries of California. The entry was then accredited to our padre pioneers and path-finders who herded or corralled the first domesticated grazing animals in San Diego in 1769, multiplied them during the following half century until their skins and tallow brought traders' ships half the circuit of the globe to secure them—and thus California's export trade in animal products began. While this was going on many animals saved their hides by breaking away from their herders and populated California's arid pastures with wild stock. Thus the Americans who came in '49 found the State well filled with animals on ranches, also animals wild as antelope on wild land, which had never been subdued even to the degree of a Spanish grant, and the first Americans were free to supply themselves by rope or rifle as they saw fit. Thus California was provisioned throughout from the south and supplied also with foundation stock ready for rapid multiplication and improvement as American development of the State began. For Americans had no idea of continuing California as a hide and tallow state, nor of prolonging the rude, pastoral husbandry which satisfied the ambitions of their predecessors. And thus it came to pass that, though historically there were foundations laid for California's animal industries by the Spanish occupants who entered the country from the south, the superstructures which are building today rest only remotely on those foundations, for they have now deeply passed from view beneath the achievements of the American plains-crossers, isthmus-crossers and horn-rounders who entered California over the Sierra or through the Golden Gate "in '49 or the spring of '50," and developed in Central California herds and flocks upon the basis first of the British and later of the Hollandish breeds. So strong was the feeling in support of improved stock in the early '50s that to charge a man with owning and breeding Mexican cattle was something of a social reflection and reproach and by as much as was the dishonor to such by so much the more came honor to those who gave effort and money to importing "good stock" by driving them across the plains from the Middle West or bringing them by ship from ports on either side of the Atlantic.

CITIES' INTEREST IN COUNTRY CATTLE.

It is an interesting fact, which carries its lesson even to the present day, that the live stock industries of the country-side owed their origin and speed of development to the insight and interest of pioneer city men and their participation in the demonstration that California never could become great as an American State unless Mexican cattle, sheep and swine and Mexican ways of growing them were completely displaced by better animals and better animal husbandry. It was largely owing to city men that arrangements were made to vividly

contrast the old with the new, the worse with the better in animal forms and the significance of form in capacity and capability. The first State Fair was held in San Francisco in 1853, but it was wholly an affair of plants and their products, and was popularly criticised as incomplete. The second State Fair was also held in San Francisco in 1854, and it was rounded out by a branch consisting of a cattle show at the Mission which was of course richer in popular Spanish equine exploits than in improved stock, but involved a conception and impulse toward the latter. The State Fair of 1855 was held in the Assembly Chamber at Sacramento with a cattle show at the "Louisiana race track"; that of 1856 was in San Jose and was prominently designated as "not only a fair but a cattle show," and deserved the title; that of 1857 was of the same complete character and was held in Stockton; and the same is true of a display in Marysville soon afterward. Thus the five "great cities" of the '50s joined in declaring their conception of the desirability of the proper development of American live stock industries in California and their confidence in the attainment of it. And the contribution of these pioneer towns was not merely the arrangement of a popular assembly to promote sport and extend trade, which is always an urban motive in getting the country to the town—it was more than that, for the exhibits, in the live stock lines especially, were largely imports made by city people and the offspring thereof bred upon their own country property—and thus the resources of townspeople were poured out in enterprises which made for rural development. It is fair to say "poured out," for distant purchases for California account were of the very best and the prices at the very top for the times, because nothing less than the best would be worth the trouble and expense of delivery in California at a time when it cost a lot more to deliver a bull than a man in this corner of the world—especially as the bull required the services of a human valet to bring him through. It was largely due to the free money of successful city people, therefore, that California made such a quick start toward an abundance of pure bred stock, and one of the results was the early obliteration of the Mexican types and the multiplication of grades which manifested the prepotency of their pure bred sires to such an extent that as early as the '60s it was a common observation by expert visitors that the common-run of stock in California was superior to that in the oldest Eastern States, which were slower to recognize the powers of the pure bred and more cautious in investing money in it. Long before hard-headed Eastern farmers ceased to claim that "a cow is just a cow" the adventurous and discriminating Californians were perfectly satisfied that "a cow may be a cow—providing she is not a Mexican," and they backed their judgment with their coin.

COMMUNITY OF CITY AND COUNTRY.

This wide interest and free participation of successful city people in rural improvements has had a marked influence upon California rural advancement from pioneer times to the present day. We are not of course claiming that it was a new idea in California, for it has been in the world ever since Nebuchadnezzar took to grazing, and it has been discernible in the history of all great cities and their environments—in none perhaps more striking than in the rural proclivities of the nobility of ancient Rome. In modern times also all great cities have furnished their wealth-winners great sport on country estates. What we claim for California that is different from all this lies in two lines, viz.: the conception of the importance of urban investment in rural advancement and indulgence in it as a development-motive rather than for personal gratification; second, the wider prevalence of both the idea and the action in urban population. The effect of this wide recognition of patriotic motive in building up the country was also twofold: it engendered a better attitude of the urban toward the rural resident and a recognition of the dependence of the city's growth upon rural development and increase of the highest class of rural production. Nowhere in the world has the farmer been recognized as capable of moving in so high a social class as in California and nowhere has he carried so light a commercial and financial handicap. Of course we do not mean that he has

not been the victim of social and commercial discrimination at all, for that claim would be nonsense. The world seems to have been set for that line of injustice ever since Adam slipped, sprained his back and was put to pulling thistles, and never again this side of heaven will the farmer be allowed to look upward as he ought, but he comes nearer to the perpendicular in social and financial affairs in California than elsewhere in the world, so far as we have heard or seen. This fact is due in the main of course to the capacity, quality and culture of our farming people, who have been able to command such confidence and consideration by their own achievements in production and organization of their business affairs, but contributory to such standing has always been the general recognition, by other population-groups of Californians, of the fact that in California the food produced is not a mere incident or subsidiary of commerce, finance or manufacture, and ought to be thankful to live as a by-product thereof, but is really the wealth-producer upon whose activity the State advances and all other activities find their opportunity and chance of reward. The standing of the farmer depends not upon his self-consciousness of this fact, but upon others' recognition of it, and therefore our claim that the early and continued interest of our urban populations in what the country can do and must do if the State is to reach its fullest development has contributed to the honorable standing which the farming element of our population has always occupied in California, and is destined to more fully occupy in the future.

COUNTRY'S SHARE OF CITY'S SURPLUS.

Our observation is that no other State has two great cities where interest in rural development is keener, more direct and more widely spread among city people than in San Francisco and Los Angeles. We doubt if there are any which come so near to farming its own back-country than do these two. So far as that fact goes by itself we are not sure that it is a good thing, and we are taking no pride in it, but if it is a fact it clearly involves an obligation which the present generation should acknowledge and act upon as frankly and fully as their ancestors did. If the city does largely own the country it should work actively for its development, for that is the secret of either holding or selling profitably—ignoring all altruistic or patriotic motives, which should be strong if not predominant. The city should therefore proceed wisely and continuously with improvement of rural property. If such obligation is recognized, along what lines should such improvement be urged? Three lines suggest themselves as chiefly contributing to State development, viz.: the horticultural (fruits and vegetables and preservative industries thereof); the animal (meats and dairy products and their preservative industries); the agricultural (grains and milling, which gives them commercial forms; forages and their profitable lifting to higher forms by animal agencies). Of these three lines the first has a character which is in itself very attractive and has attained a headway which is self-impulsive, and may not need systematic promotion—our horticultural industry. It is ministering to the desires of the world for food of particularly delicious and salutary characters. It is attracting capital and enlisting workers about as fast and far as either can be profitably employed. It is making its own way and will continue to make it.

It is an interesting historical fact that fifty or sixty years ago the relations of the three lines of agriculture which we have indicated sustained about the same relations to each other as they do now. Nine-tenths of those who came to California for any agricultural purpose in the '50s came to grow fruits and vegetables, and in from three to five years the capacity for local consumption of both was oversupplied. It was nearly ten years before a surplus of grains was produced, and nearly twenty years after the first inherited mass of Mexican meat was eaten up before American meats reduced importations (on foot or in the barrel) to the fraction of the local consumption which it has never fully displaced, and about thirty years before the dairy industry caught up with importations. The general situation has therefore always been this way: fruit production has never needed promotional effort, though it had plenty of it from

colony-organizers and county-advertisers; animal production has always needed promotive effort, either in production, packing or commercial handling, and has never had it in the effective ways which the fruit industries enjoyed. The result is that about seventy years after American farming began in California the fruit industries by their own attractiveness and by the cultural and commercial ability of those whom they attracted—fruit products which were a glut on the California markets of 1858—are scarce in the markets of the world in 1919, although the value of a quarter of a billion dollars' worth were produced and exported. Another result is that our animal industries, which never have been adequately promoted, have never reached production equal to local consumption, and have never made anything more than spasmodic exportation at odd times of the year and are wholly insignificant when compared with the volumes which still steadily seek our markets from distant producing regions. In view of these facts it is not hard to see in what direction the city's surplus for country development should go—for its own profitable employment and the good of the State.

HOW SHOULD THE CITY DO ITS PART?

In a word, the city should do what the country is not doing, or cannot sufficiently do, for itself. This is capable of being done in ways too numerous to enumerate. Two broad lines may however be cited. First, the city should finance the country fairly and generously from its vast accumulation of surplus capital. It is agreeable to note the fact that the city is now better disposed toward this service than ever before. Large city banks are establishing branches in country towns for more direct trade in money. During the present month a group of city capitalists organized and established in San Francisco the first joint stock farm loan bank on the Pacific Slope. Such banks are cousins of the co-operative farm loan banks (of which the central institution is the Federal Farm Loan Bank in Berkeley), and their organization was provided for by the same act of Congress. This new financial institution in San Francisco, looking country-ward, may be taken as an indication that our metropolis is inclined to do its financial duty, and we let it go at that for this time.

The second broad line of urban activity in rural affairs leads to the turning of idle land to productive activity. This may take the form of irrigation organization and construction, subdivision and settlement, etc., which are now proceeding very actively and will increase of their own accord. The phase which needs promotion, because it requires rather more courage and a higher degree of personal attention and mastery of practical and scientific details, is the installation of production on large tracts which may be bought as an investment or if already in ownership may be turned from idleness and desolation to activity and the music of industry. It is an economic sin to let large tracts of land lie waste, not bearing their proper share of public expense and giving our single-tax friends the mull-grubs. Owners of such lands, who are mostly city people and institutions, should not be putting in so much time bluffing the county assessors, but should blow in some more money making their lands do something. Suppose the tax collector does get most of the net income—he will probably leave enough for interest upon your development-investment and that will put you ahead, for the land yields you practically nothing now and by making it produce something you will hurry up the unearned-increment so that it may hit you instead of your grandchildren. Besides you will be doing something which may justify the public in the hope that you may live long in the land, whereas they now do not care a whoop how soon your toe hits the bucket! There will be some risk in it, of course, but you are used to that. Unless you are a miser, everything you do has risk in it, but this is a thing which you can work at yourself, fill your life with sporting joy and interest and make the end justify the means in an honorable way. Besides if you lose you are not worse off. What you have title to now is not only emptiness to you but to the whole community. Do something to fill her up or let her go, Gallagher! We are perfectly sure that the city has no right to our land in the country for the sake of keeping it idle. If

you cannot think of anything else to do with it, smooth it off and let the public use it as a landing-place for air-planes. It may bring you nearer to heaven that way than you will get otherwise.

A SUGGESTIVE DISPLAY.

Whither is this homily tending? It is this way. This issue of our journal largely looks forward to the opening in this city of a live stock show of which the purpose and motive closely resemble those which actuated the first of its kind just two-thirds of a century ago—viz.: the amplification and diversification of the live stock industries of California. It is significant that great as is the contrast between the scant collection of commendable beasts which they had in 1855 with the multitude of purebreds which will be assembled this year, and the contrast also of the fancy riding of the Mexican chicken-snatchers of that day with the elegance and grace in the horse-show ring of 1919—both events made clear the same great fact, viz.: California's opportunity for the expansion and improvement of the animal industry. The fundamental and far-reaching significance is that no matter how great may be the attainment at any date, the State and its capacity for progress will still beckon forward to the men and women who have love and effort for California.

H. C. Ahlers on San Vicente, 5-gaited stallion, undefeated champion at 1919 State Fair, to compete at the Horse Show, California International Live Stock Show, San Francisco, November 1-8.

What may be expected at the coming show and all the facts about the arrangements for it may be found in other columns of this issue, which is the contribution of the Pacific Rural Press to the glorious success of it. The show itself is San Francisco's acknowledgment of its joy to discharge, as best it can in one event, the obligation to promote the prosperity of its environment and to suggest specific ways in which this end can be attained. As the metropolis undertakes such a concrete suggestion, the obligation rests upon all San Franciscans to translate its language into individual attitudes and actions. The city says to all citizens: "Come ye and see the glories of the animal kingdom as applied by human insight, ingenuity and industry to the advancement of civilization and the prosperity of mankind." And this means of course that the show will be a demonstration of the capability of the domesticated

animal to assume forms and serve purposes which are essential to State development and individual prosperity which have been continually in view throughout the course of this discussion. It will be an idle show if one beholds it only for passing gratification—though that is perfectly commendable if that forms the limit of one's abilities or resources. It is hoped, however, that for thousands it may serve as a spur and incentive to action; that the lordly animal one sees may suggest that to grow poor animals is a waste of time, land and money; that the enthusiasm which the study of a good animal is likely to beget in any discerning mind may lead to desire to enter into generous rivalry with other men and women to produce such animals or even better ones; that the whole display may create in many minds an appreciation of the industrial significance of the promotion of live stock interests by such investments as are needed in enterprises for fair and systematic sale of stock, preparation of products and resulting rewards to producers. Our animal industries need betterment all the way from the pasture to the consumers' tables to the end that more and better products may more adequately requite those who give their lands and lives to the output thereof, and a great stock show must hold such ends to be its ultimate aim and purpose.

Spring or Fall Plowing.

To the Editor: Which is the most beneficial—spring or fall plowing?—F., Biggs.

Neither is clearly superior under all circumstances and conditions. If you have land which is pretty well on edge in a place where rainfall is heavy and erosion dangerous, or if you wish to get all the natural cover crop which will grow, it is better not to plow in the fall, but let the weeds hold the land until they get to be as high as you can plow under and this will be late in the winter or early in the spring. On the other hand, if you wish to start a cover crop by sowing, it should be put in as early as practicable in the fall. Also, if your rainfall is not excessive and you wish to save run-off and get as much moisture into the ground as you can and there is no great danger from erosion—them again fall plowing and leaving the land rough is also best. And there are many other conditions and purposes which may make either fall or spring plowing superior on particular places, so there can really be no rule. It is up to every man to look and think closely and decide for himself which is better for his land. In a general way it may be said that fall plowing gets most moisture into soils which are disposed to yield run-off if left hard. It is also true that spring plowing, as a rule, is capable of losing considerable moisture by evaporation, which in many cases cannot be spared.

ASSOCIATED DAIRYMEN WIN PRIZES.

At the San Francisco Land Show the Associated Dairymen of California won first on butter, first on milk (San Francisco Dairy Company's product), second on cheese and second on milk products.

California Weather Record.

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending October 21, 1919.

INVITATION FROM CALIFORNIA DAIRY COUNCIL.

California Dairy Council welcomes you to participate in its activities at the California International Live Stock Show.

The Council is an organization of producers, distributors, manufacturers and allied industries interested in the promotion of the Dairy Cow and increasing the consumption of her products through co-operative and united effort.

SAM H. GREENE, Secty-Manager.

Program of California Dairy Council

Thursday, November 6th, has generously been set aside as California Dairy Council Day by the management of the California International Live Stock Show. The whole day will be given over to practical discussions and the viewing of the many enlightening exhibits which no member of the Dairy Industry can afford to miss. A special meeting has been called for November 6th by California Dairy Council for all members to attend a special program which has been arranged, featuring topics of paramount importance given by recognized authorities.

The program has been divided into morning and afternoon sessions as follows:

9:30-10:30 A. M.—Stock judging demonstration in the arena, open to all dairymen.

10:45-11:15—"The Place of Cow Testing in the Dairy Business," N. A. Negley, Dairy Division, U. S. Dept. Agr.

11:15-11:45—"How Cow Testing Will Help to Make Money for the Dairy Man," A. J. Gallagher, Bodega.

11:45-12:15—"The County Agents and the Dairy Council," Prof. B. H. Crocheron, State Leader, College of Agriculture.

2:00-2:30 P. M.—"The State Dairy Council Idea," Sam H. Greene.

2:30-3:00—"Why Every Commercial Dairy Herd Should Have a Purebred Sire," M. H. Tichenor, Palo Alto.

3:00-3:30—"The Dairyman's Obligation to the Public and His Opportunity," Prof. C. W. Ruebel, College of Agriculture.

3:30-4:00—Illustrated Lecture—"Ten Years of Cow Testing in Humboldt County."

Many interesting features will be provided that do not appear upon the program. Every member of the Council should attend this special meeting, and all dairymen, whether members of the Council or not, are specially invited.

The Council plans to have committees of school children visit the show daily and report their observations to their respective classes either orally or by compositions. These student committees will be in charge of either officials of the Council or of the Live Stock Show and will be shown the different breeds of dairy cattle and the various exhibits of interest to the youth of California.

During the week, November 1-8th, it is planned to hold a typical dairy luncheon at the Commercial Club, at which only dairy products will be served. It is planned to have Dean Thos. Hunt, Dr. Wm. Hassler and Sam H. Greene address the club on the importance of Dairying to the State of California and present facts and

figures showing the true patriotism and practical wisdom of encouraging the use of milk and its products.

During the same week it is planned to call a meeting of representative people in order to disseminate accurate information concerning the true status of the Dairy Industry and its obligation to the Public. It is contemplated having in attendance at this meeting Ralph Merritt, Dean Hunt, Dean Van Norman, Dr. Meyer Jaffa, Dr. Geo. Ebright, Dr. Wm. Hassler, Dr. Adelaide Brown and members of the San Francisco Medical Milk Com-

Lady Beatrice 593394, Senior and Grand Champion at California State Fair, 1919. Property of Alexander & Kellogg, Suisun, California.

mission, Heads of the Home Economics Departments of the University of California and the S. F. Public Schools, Four City Milk Distributors, two representatives of the Certified Milk Producers, two ice cream manufacturers, two to four milk producers, representatives of both the Milk Drivers and Stationary Engineers' Unions, Frank Connolly of the Retail Grocers' Association, S. F. Secretary of Labor, officials of women's clubs, etc.

MILK GOAT BREEDERS' MEETING.

The next regular meeting of the Central California Milk Goat Breeders' Association will be held in San Francisco on the afternoon of Saturday, November 1, at 1:30 p. m. This meeting will be held at the time of the California International Live Stock Show and will assemble in the California Building on the old Exposition Grounds.

Miss Irmgarde Richards of Montara, Calif., is to read a paper on some phase of the goat industry.

INVITATION OF PRESIDENT W. T. SESNON.

The California International Live Stock Show, Inc., is about to stage the greatest exhibition of livestock ever given west of the Rocky Mountains. Work has been going on for months in all departments, and now comes the culmination of it all. We have the great California Building on the old Exposition grounds at San Francisco fitted with stalls and pens for the animals, a stadium with seats for 5,000 people, and ample ring facilities for judging the largest classes of livestock and staging the greatest of the horse show acts. We are certain of the greatest display of its kind. Instruction and amusement features of the very highest order will be in evidence throughout the show, and I, now, on behalf of the officers and directors of this corporation, invite the people of the Pacific Coast and beyond, one and all, to come to San Francisco during the period of the show from November 1-8, inclusive, and be with us and enjoy the fruits of our labors.

W. T. SESNON, President.

Judging Livestock at International

Pew, Ravenna, Ohio. Tamworth Swine by V. F. Dolcini, Davis, Cal. Shire Horses by Dean C. F. Curtiss, Ames, Iowa. Dressed Carcasses by Frederick Miller, U. S. Meat Inspection Service, San Francisco, Cal.; E. E. Niccolls, Bureau of Markets, San Francisco, Cal.

THE COMING SHORTHORN SALE AT SAN FRANCISCO.

(Written for Pacific Rural Press.)

Forty head of specially selected Shorthorns are in this the third sale under the auspices of the California Shorthorn Breeders' Association. Lovers of the "reds, whites and roans" will have a great opportunity to supply their minds at their own price. Consignments are tops from the leading herds of the State, which means that the quality of the offerings could not be excelled on the Pacific Coast. Coming as it does at the time of the California International, prospective visitors can "kill two birds with one stone" by exploring the wonders of the big show and attending the sale.

Seventeen specially selected Shorthorns will go to make up the offering of the Caledonia Farms to the third Shorthorn sale at San Francisco on November 6.

Mr. Edward Cebrian, the owner of the magnificent Caledonia herd, is in this way evincing his enthusiasm over the San Francisco sale during the period of which the sale will be held.

This will be the first appearance on the Coast of Auctioneer Earl Gartin, whose reputation has, however, preceded him. Many of the Shorthorns entered in this third sale will come direct from the judging ring. California is entering on an era of appreciation of "better quality."

The distribution of breeding animals of the quality of those entered in this annual sale is tremendously far reaching in effect. The three heifers consigned by Murphy Brothers of Perkins are the same which they contemplated showing at the Sacramento State Fair, and were unable to do so on account of the illness of one of the brothers.

The Ormondale offering needs no eulogy, as the quality of the animals entered by this enterprising company are always worthy of commendation. The same is true of the consignment of the Pacheco Cattle Company, who have entered three head of choice heifers.

FOR SALE

One of the best bred foundation herds of Aberdeen-Angus cattle to be found in the United States, consisting of herd bull; three young cows with two heifer calves at foot. While these cattle are high-priced for the reason that they are highly bred, I offer them at a reduction, owing to the fact that I have decided to sell my ranch property. The cattle are on my ranch, which is located 8 miles east of Oakdale, Stanislaus Co., Cal.

Address Owner,

DR. VERDO B. GREGORY,

323 East Weber Avenue,

Stockton, California

ELDERSLY FARM

ABERDEEN ANGUS

We have several Young Bulls for sale, sired by our Eldersly Prince, Grand Champion bull of 1917 State Fair. Remember, the "DODDIE" has a most enviable record as a herd improver. This young bull will put quality into your cattle.

J. H. WARE, Live Oak, Calif.

The Best of the Beef Breeds

(Written for Pacific Rural Press.)

The above title certainly tells in a general way what will be shown in the beef classes at the California International at San Francisco, November 1-8 inclusive. The "best of beef breeds" includes those that will be shown at this coming great show, and is made up of the Aberdeen Angus, the Herefords and Shorthorns. No doubt there are other beef breeds that should be included in this list, but they did not happen to be coming this way when the show is to be held.

The beef cattle industry was perhaps the first of the livestock departments to be started in this State and for many years the improvement was slow; in fact, at a standstill. Gradually it began to show until at the present time there are as good Shorthorns and Herefords to be found in California as there are anywhere. If you who read this do not believe it to be true, then come to the California International Livestock Show and see for yourselves, and we know you will be convinced. The following is a list of the exhibitors and their entries:

Ormondale Company with a ranch in the Portola valley, 7 miles west of Menlo Park, has 12 Shorthorns entered in the show and 8 in the Shorthorn sale slated for November 6. The Ormondale Company's herd is strong in Scotch blood and the individuals are as good as the breeding. They will show Little Sweetheart 2nd, a full sister of Little Sweetheart, the grand champion female of the Shorthorn breed at the State Fair this year, and Golden Beauty, another good one. A number of the entries for the sale are sired by Golden Good Jr., the sire of Little Sweetheart mentioned above and a bull of great prepotency.

Cumberland Gloster, first prize junior yearling bull at the State Fair this year, will head the entries by Wm. Bond of Newark. Mr. Bond will have three at the show and of the kind the Shorthorn breeders like. Mr. Bond bred Frantic 33rd that recently sold for \$4,500 at a public sale in Medford, Oregon.

In the foothills of the Mt. Hamilton range, near the western portal of Pacheco Pass, is located one of the noted Shorthorn breeding establishments of the Pacific Coast, known as the Pacheco Cattle Company. They will have their tops at the show and in the sale. They had the first prize two-year-old bull, Pacheco Marshal; the first prize junior bull calf, Pacheco Brampton, and the first prize senior heifer calf, White Pacheco, with other prize-winners at the California State Fair this fall. They are coming with their usual strong showing and will materially help to make the show and sale a success.

J. A. Bunting, Mission San Jose, owner of the Mission Herd of Herefords, has entered 11 head in the show and 4 in the sale to be held during the week of the show. Mr. Bunting has not been in the purebred cattle game very many years, but he certainly is making his mark. Last year his herd won "all along the line," and this year

did equally as well, as his 8-months-old bull calf, Mission Chief, was made grand champion at the State Fair. Among those Mr. Bunting will have in the sale is California Prince Donald, that was grand champion bull of the breed last year at Sacramento.

Harold Rice of Paia, Maui, Ter. Hawaii, will show a yearling Hereford bull, sired by New Era 2nd, that weighed 1,150 pounds at 11 months of age and is just as good as he is heavy. There may be better ones shown, but it will be a great Hereford exhibit if there are.

Wm. T. Chapple, owner of Fair Oaks Ranch at Willits, has entered Shorthorns for exhibition in the coming California International. Mr. Chapple has been gradually adding to his herd after selling down to quite a small bunch of select cows of Orange Blossom, Victoria and Elgetha blood lines. The additions made were of straight Scotch stock, which combined with what he already had, should place Mr. Chapple's entries close up to the top. His ranch is located in an ideal cattle country.

Caledonia Farms of San Francisco and West Sacramento, breeders of Shorthorns, have entered and will be found competing in all the classes. This herd is considered by good judges to be one of the best herds on the Western Hemisphere. Four hundred matrons of the best individuality and breeding, with herd sires that are of the very best, we cannot help but prophesy a wonderful showing from this great herd at the coming California International. The senior herd sire is Imp. Caledonia, and is considered the best Scotch bull imported in recent years. He seems to be right in every way.

The show herd of Scotch Shorthorns from Hillcrest Stock Farm, Davis, owned by T. S. Glide, have entered a full quota and will show in all the classes. Little Sweetheart, grand champion at Sacramento this year; Spicy Lady, King's Countess, junior champion female; Village Lassie and others of this famous herd of many years, will make it one of the competitors to be reckoned with in the final contests. Quality, breeding and individuality all are to be found in the animals composing the herd.

H. M. Barngrover of Santa Clara is following the show circuits this fall, filling all classes with his Hereford herd. He won a good lot of ribbons at the State Fair. His bull, Patrician 5th, was first in class and senior champion. He also won first in aged herd and calf herd with a strong, typey lot of cattle that will show well in any company.

The representation of that great breed of beef cattle, the Aberdeen Angus, will depend upon Congdon & Battles' herd from Yakima, Washington, and our own University Farm. The time will come when this typical beef breed will be more largely represented than it is now. When it comes to uniformity of size and type, excellent beef conformation and kill-

VISIT THE BIG BEEF SHOW.

The beef cattle division will be made up of animals that would easily grace the ring of the International at Chicago. It is admitted by the other sections of the country that the Pacific Coast is the best place on earth for growing good stock, and we are going to demonstrate that it is the best place to show this stock. It's going to be a great show and we want everybody to come and see it.

W. S. GUILFORD, Supt. Beef Cattle Division.

ing qualities, they always make a supreme showing. It is to be hoped that those who have small herds in different parts of the State will have them in condition for the show circuit in another year or two, so that we may have a better showing of the breed.

Woodland, California, is noted for many good things in the various lines of agriculture, horticulture, and last, but not least, its herds and flocks of purebred livestock, and it is something that seems to be growing in the community. Henry M. Elberg will bring some of his beautiful Shorthorns down to the big livestock show at San Francisco the first week in November. Mind you, they won't be any common, every-day cattle either, but will be in the pink of condition, showing the highest quality, excellent Shorthorn type and the best of breeding.

The Hereford Corporation of Wyoming, the most extensive breeders of purebred Herefords probably in the world, are making the circuit of the big shows on the Pacific Coast this fall. It is certainly an addition to any cattle show to have their show herd enter the lists, as it surely very materially helps to make a beef show what it ought to be. They have somewhere about 1,000 purebred cows in their breeding herds, which gives them great opportunity to select show animals.

Another great Hereford breeding establishment that will show their good ones at the San Francisco Show is John H. Cazier & Sons of Wells, Nevada. The best of breeding and individuality, coupled with the highest quality, makes their Herefords sought after wherever known. Their cattle at the show and sale will be the kind that will make competition closer in the show ring and bidding higher in the sales ring. Those who think Nevada grows only sagebrush will change their minds when they see these cattle.

Thos. B. Dibblee Estate of Santa Barbara and Lompoc will have their native-bred and imported Shorthorns in the show ring when the classes are called in their departments. Their

great herd sires, Hallwood Flash and Bashan Augusta, the first-named first in class and senior champion and the latter junior and grand champion in the Shorthorn classes at the State Fair this year, with a lot of classy females, make them a force to be reckoned with in any show ring.

Thos. T. Miller of Hollister, formerly of Los Angeles, breeds and will show Shorthorns of high class and individuality. This herd has been selected with great care as to breeding and individuality and is composed of some of the best cattle bred in America and Great Britain as well. Mr. Miller's show will fill all classes.

W. J. Bemmerly of Woodland breeds Herefords that grow so fast and into such excellent animals that he can sell 'em for \$2,500 apiece when they are a year old. Of course, he may not sell all his yearlings for quite that figure, but he has good ones and always in good condition. If he hasn't sold all his topnotchers, and who ever knew a good breeder that did, he will have a bunch at the California International that we will all like to look at. Mr. Perfection, Bonnie Brae 9th and New Era 2nd are sires that have a wonderful lot of progeny in this herd and that are hard to beat anywhere.

H. H. Gable of Esparto, owner of the Diamond G. Ranch, will show at San Francisco, and if his purebred herd look so well as they did in August on the wheat stubble, he could bring the whole herd to the California International and win with 'em. Of course, they were not washed and combed, but it almost seemed as though that was all they needed to put them in the best of show shape.

Jenner-By-The-Sea at the mouth of the Russian River, where the grass is green nine months in the year and the other three months it is just right for cattle to eat—right in such a location and with 5,500 acres of land that grows such grass, Chas. Rule breeds and raises beautiful "Whitefaces" with the bluest kind of Hereford blood in their veins.

Mr. Rule will show some of these aristocrats at the California International and have some in the sale.

CALIFORNIA CATTLEMEN'S CONVENTION.

California Building, Exposition Grounds, San Francisco.

M.: Sale of Herefords. 7:30 P. M.: Banquet of Live Stock Breeders of California and business men of San Francisco to consider ways and means to perpetuate the California International Live Stock Show.

GOOD HEREFORDS.

The Hereford Corporation of Wyoming, with ranches and offices at Cheyenne, Wyo., and headquarters in Denver, Colo., is the last new member to be reported in the Pacific Coast

Breeders' Association. It is one of the largest, if not actually the largest breeder of registered Herefords in the United States, as it carries approximately 1,000 head of breeding cows.

This corporation is following the Coast show circuit this fall and will have 15 head in the California International the first week in November. It is showing some that have won in Nebraska, Colorado and Utah this fall. It also has 4 head consigned to the Hereford sale on November 7. This consignment consists of Miss Era 14th, Miss Dale, an aged cow, and the two Dare heifers, Miss Dare 10th and Miss Dare 11th, sired by Premier Dare.

PACIFIC COAST HEREFORD ASSOCIATION SALE.

This sale will be held on Friday, November 7, at the California Building during the California International Live Stock Show. The consignors to the sale are: W. J. Bemmerly, Woodland, H. M. Barngrover, Santa Clara, J. A. Bunting, Mission San Jose, G. W. Emmons, Oakland, H. H. Gable, Esparto, Chas. Rule, Jenner, J. H. Cazier & Sons, Wells, Nev., Hereford Corp. of Wyoming, Cheyenne.

Having a total of 34 head in the sale. These as a whole will be the finest lot of Herefords that ever went through a sale ring in the west. In this lot there will be about 24 head that will be shown at the California International Live Stock Show. These cattle are all tuberculin tested and guaranteed breeders. There will be about 17 head of cows with calves and most of the others to calf in the spring. Earl Gartin of Greensburg, Indiana, will be the auctioneer, and the sale will be conducted under the auspices of the Pacific Coast Hereford Breeders' Association.

ROSELAWN SHORTHORNS SELL WELL.

Again it has been demonstrated that good Shorthorns bring big money. Not that the demonstration was needed, but it gives the owners and breeders of this great breed another assurance that their faith in their favorites is well founded and not a "house built upon the sand." Forty-three animals averaged over \$600 each, or, to be accurate, \$607.55. The top of the sale was Rosie Mayflower, sold to the Conaway Ranch for \$2,200, and a close second was the 3-year-old bull, Crescent Dale, selling for \$2,000 to O. L. Raper of Glenn County. Mischief E 3rd became the property of Caledonia Farms for \$1,550. Fair Oaks Ranch of Willits paid \$1,150 for Lovely's Pride.

THE OTIS HERD

WILLOUGHBY, OHIO.

Milking Shorthorns

LADY OF THE GLEN.

Bred by us and acknowledge the best and most valuable individual of the breed.

Largest herd in America with the best connection. Many cows weighing 1,700 lbs. and above with records of over 10,000 lbs. of milk. Winners at the recent Congress sale owned by us or of our breeding. Sale cattle in carload lots or single. Calf clubs a specialty.

Write T. H. Harrison.

Santa Rosa Stock Farm, Santa Rosa, Cal. California Representative.

Among the buyers who purchased liberally were Edinger-Johnson Co. of Hood, who obtained 7 head; Butte City Ranch, 4 head; R. H. Parsons of Holt, 3 head; J. F. Dunne of Gilroy, 5 head, and J. H. Bond of Newark, 3 head. The rest going in single and double lots in various directions.

The sale was well attended both by buyers and others interested in the welfare of the breed. B. O. Cowen, former assistant secretary of the American Shorthorn Association, spoke on the history of the Shorthorn.

If no alfalfa is available it will pay swine breeders to feed tankage in connection with any of the grain feeds at the ratio of 1 part tankage to 10 to 15 parts grain.

GREENSBURG, IND.

Caledonia Shorthorns

LARGEST HERD OF HIGH-CLASS SHORTHORNS

In this country—400 head of wonderful breeding matrons, combining the noted Elmendorf and Harkness herds.

The fountain-head of international prize-winning stock, producing the dam of the Grand Champion steer over all breeds at the 1917 Chicago International; the dam of the Grand Champion Shorthorn steer at the 1918 International; the dam of "CALIFORNIA MODEL," the highest priced Shorthorn bull ever sold on the Pacific Coast, bringing \$5,500 at public sale.

Prof. Trowbridge, eminent Shorthorn Judge, says of our herd: "I do not know where I have seen a more valuable lot of cows." Prof. Cotchell, representative of The American Shorthorn Association, Prof. Burns of Ames, Iowa, and others who have seen our herd recently, say the same.

The Greatest Herd Sires

IMP. CALEDONIA, our senior sire, is considered the best Scotch bull imported in recent years. Sired by the Duthie bull Proud Emblem, the best stock bull in Scotland, whose calf topped the sales last year at \$20,000. Out of a Rosewood cow—the best in the Wm. Anderson herd. In breeding, type, color and individuality, this bull stands supreme.

GAINFORD MATCHLESS, first prize senior yearling at last Chicago International, son of Imported Gainford Marquis, combines finest breeding with unusual scale (weighs 2,500 lbs. at 2 years).

PINE GROVE KING, by Champion King Cumberland, the highest-priced bull of his day, and out of a Clipper dam. His individuality is as good as his pedigree.

SELECT SULTAN, a double great grandson of Whitehall Sultan. This young bull combines with wonderful breeding, fine individuality, and a most promising outlook.

Will show at the CALIFORNIA INTERNATIONAL, November 1-8,
and have consigned some good ones to the Shorthorn Sale,
November 6.

THE QUEENS OF THE DAIRY EXPECT YOU.

The great development of the dairy cattle business on the Pacific Coast will be reflected in the Dairy Division of the California International Live Stock Show. There is scarcely a recognized dairy breed but what will be represented with strong classes. Not only will we have a good show of dairy classes in the show ring competition, but we will have the honor of entertaining Tilly Alcartra, the world's record cow, giving dairymen and public alike an opportunity to see the greatest cow of all time.

C. W. RUBEL, Supt. Dairy Cattle Division.

LARGE ATTENDANCE MARKS LOS ANGELES STOCK SHOW.

By the time this paper reaches its readers the above mentioned show will have about closed its doors and passed into history as a land mark of progression in animal industry. As we go to press reports are coming in as to its auspicious opening.

Sunday the grounds were thronged and at least 30,000 people visited the show, and all were loud in their praises except those who had forgotten the ban on Sunday racing.

The horse show feature was "pulled off" between the heats of the racing and Monday saw the beginning of this popular feature. An innovation in the horse line was the parade of individual exhibits in certain open places reserved for them so that the crowds could see them comfortably, as it was impossible for the people to see them by the "walk around method."

The Secretary of the Chamber of Commerce was very enthusiastic over

DAIRY SHOW AT CHICAGO.

Sam H. Greene, secretary-manager of the California Dairy Council, was one of the fifty Californians who helped make up the grand total of 75,000 people who passed through the turnstiles of the National Dairy Show, October 6-12, and he pronounced it as to be expressed in the most superlative terms—Immense! A whale! And such expressions used as a barrage only would convey the correct thought of this the greatest of dairy exhibitions.

The exhibits were extremely large with 870 head of cattle entered for competition and 1,000 head in all, including those consigned to the Jersey and Holstein sales. The exhibit of machinery was tremendous and all the exhibitors report good sales. Twelve additional buildings were necessary to house the exhibits of all kinds, in addition to the amphitheatre building.

The exhibit of the U. S. Department

California Gretel, World's Record Milch Goat. Bred and owned by the University of California, Berkeley.

the livestock exhibits. He thought the show would be a great demonstration of the varied resources of California and would show people who think we have only "oranges, flowers and sunshine," that we are surely doing great things in the livestock lines.

Grading in the horse show departments commenced Monday. Three and five-gaited saddle horse classes were judged and also California stock horses.

It seems as though more interest was manifest in the livestock judging than in former years. This is as it should be, as the time is coming when livestock, particularly the pure-bred, is going to be much more in the spotlight and people will be obliged to know more about the different classes. A stock show like this was, is one of the very best places to learn many things about the different breeds. All classes are shown and the very best types of these classes.

Calf Profits

Are you getting them? Calf profits mean more to you now than ever before.

Blatchford's Calf Meal

has been known since the year 1800 as the complete milk substitute. Costs less than half as much as milk—prevents scours—promotes early maturity. Sold by dealers or direct from the makers.

See actual figures showing you how to increase your calf profits. Write for New Data.

MEET TILLY ALCARTRA

THE WORLD'S GREATEST DAIRY COW

CALIFORNIA INTERNATIONAL LIVESTOCK SHOW

San Francisco, November 1 to 8

Tilly Alcartra and two of her get will be included in our show herd at San Francisco. This great cow holds the world's long distance record for both milk and butter with a six years' production of

156776.1 pounds milk—6142.17 pounds butter.

She is the only cow in the world that has produced over 33,000 pounds milk in one year.

She is the only cow in the world that has produced over 63,000 pounds milk in two years.

She is the only cow in the world that has produced over 93,000 pounds in three years.

She is the only cow in the world that has produced over 120,000 pounds in four years.

She is the only cow in the world that has produced over 1100 pounds butter three different years.

She is the only cow in the world that has five records averaging over 1,100 pounds butter in one year.

She is the only cow that has six records averaging over 1,000 pounds butter in one year.

She is now in her seventh yearly test and has produced 18,400 pounds milk and 700 pounds butter in 204 days.

KING MORCO ALCARTRA, son of this great cow, heads our herd. His dam and sire's dam average 1204.07 pounds butter and 31,125.8 pounds milk in one year. A young bull by this great sire, or out of one of his daughters, which are soon due, merits your consideration.

Holstein Breeders' Banquet will be held Friday night, after the sale. Drop the Manager a Postcard, if you expect to be present. so proper reservations can be made.

George A. Gue, Sale Manager
Yakima, Wash.

Dandy Dairy Cattle at International

(Written for Pacific Rural Press.)

Producers of "whole, fresh, clean lacteal secretion" will be much in evidence at the San Francisco Live Stock Show during the first week of November. Lovers of the stately Holsteins, the beautiful Guernsey, the dainty Jersey and comely Ayrshire will find scores and scores of their favorite breeds to inspect and admire. Many of the herds have been seen at previous fairs and some are exhibiting at this show for the first time this year. Even those who have shown at previous fairs have in many cases added some animals to their former exhibit, something they have held in reserve for the bigger time.

It has often been said in these columns that because a breeder, young or new, did not have a full herd to exhibit should be no reason why he should not have something at the show if he has even only one or two to uphold the glory of his ranch. In the horse line it is no uncommon occurrence to find exhibitors having only one animal on exhibition, but in other classes many times they think it is of no use if they only have one or two. Everyone that is making a business of raising and selling purebred animals of any kind should give their business as much publicity as possible and therefore, whether it be goat,

granddam in the world. Come and see us at San Francisco.

Toyon Farms at Los Altos, with a wonderful (the adjective is used conservatively) herd of cows to draw upon, will make an exhibit, and of course, it will be a super excellent one. Their senior herd sire is Pietertje Ormsby Mercedes 43rd, with a great record back of him, and he is an excellent individual as well. The past year has seen a supremely good lot of animals added to this already great herd. In making these additions from time to time, first consideration was given the health of the animals; then came points of breeding, performance and conformation. Every female in the herd will be given a 305 or 365 day record, and when it is known the herd contains over 200 head, it will be partly realized the work of such a breeding establishment.

Frank B. Anderson of Sacramento will have his Holstein-Friesian junior calf, Juliana De Kol Mead, sired by King Mead of Riverside, in the show and she ought to be in the money. She will be a credit to Mr. Anderson no matter where placed.

Holstein-Friesians from Palo Alto Stock Farm will mean stronger competition in these classes. Such breeding establishments are the kind that

Tilly Alcartra, World's Record Cow in Milk and Butter Production. Property of A. W. Morris & Sons Corp., Woodland, California, will be shown at the California International Live Stock Show.

hog or horse, if it is a good one, take it to the fair or livestock show.

The Napa State Hospital, T. J. Brown, dairy superintendent, will have 12 Holstein-Friesians at the coming San Francisco Show. Their herd is headed by Prince Rag Apple Imperial, Napatalios Asa and Hiram Raphaella Alcartra. Among the noted animals they will have on exhibition will be Hazelwood Heilo Queen, grand champion at the 1917 Land Show, San Francisco; Raphaella Johanna Aaggie 3rd, champion official milk producer for one year and U. S. champion for 7, 30 and 60 days. Hiram Raphaella Alcartra is a son of the last-mentioned cow and a grandson of Tilly Alcartra, which makes him the highest record calf from dam and

go to help in a large way to make livestock shows a success. King Pontiac Segis Korndyke is their senior herd sire with a long string of producing daughters better than most. Among the great producing females in this herd is Johanna Princess Mooie 2nd, that has 1,175 pounds of butter and 25,625 pounds of milk in 365 days to her credit. This cow is only one of many good ones to be found at this place and there is no question but what the show herd sent to the San Francisco Live Stock Show will be a great one.

Woodland and the surrounding country claims many notable herds of cattle, but perhaps there are none more worthy of the high reputation they bear than the A. W. Morris &

Sons Corporation, breeders of Holstein cattle and owners of Tilly Alcartra, the world record cow for the combined production of milk and butter. Tilly will be shown at the coming

California International. This great cow was sent to Seattle to be bred to Carnation King Sylvia, the \$105,000 bull owned by the Carnation Milk Co. On her return she was given a stop-

KING SEGIS ALCARTRA PRILLY

Grand Champion California State Fair, 1917, 1918, 1919.

His get won State Fair, 1919: Grand Champion Female; Junior Champion Heifer; 1st and 2nd Get of Sire; 1st Calf Herd; 1st Breeders' Young Herd; 1st Senior Yearling Heifer; 1st and 2nd Junior Yearling Heifer; 1st and 2nd Junior Heifer Calf; 1st and 2nd Senior Heifer Calf; 2nd, 3rd, 4th and 5th Senior Bull Calf; 1st and 2nd Produce of Dam.

FOR SALE

Young bulls by this sire from highly-bred, heavy-producing cows, with records up to over 35 pounds of butter in 7 days and 139 pounds in 30 days. Have some exceptionally fine young bulls about ready for service at very reasonable prices. Our cows won more places in the list of prizes for production given by the Holstein-Friesian Association for 1918 and 1919 than any herd on the Pacific Coast.

WILLOWMEAD HERD

325 REGISTERED HOLSTEINS

Females represent choice breeding. The herd contains many granddaughters of Dutchland Sir Pontiac Rag Apple, full brother to Pontiac Clothilde DeKol, the first cow to produce over 37 lbs. butter in 7 days and over 1270 lbs. in one year, and to the former world's record cow, Pontiac Rag Apple, the dam of Rag Apple Korndyke; tracing granddaughters of King of the Pontiacs. A number of daughters of King Mead of Riverside, the sire of the world's record cow, Aaggie Acme of Riverside 2nd, and daughters of other sires of the best breeding.

THREE GREAT HOLSTEIN SIRES

YOLO VALDESSA HENGERVERELD, 1184353

carries some of the very greatest producing and transmitting blood of the breed on both sides of his pedigree, is almost white in color, and an individual of high excellence. The records of his dam, his sire's dam, and his sire's granddam average:

Butter, 30 days	149.68 lbs.
Milk	2534.20 lbs.
Butter, 7 days	38.83 lbs.
Milk	606.00 lbs.

PRINCE ECHO SILVIA SEGIS, 247369

is a splendid individual, evenly marked in color. No better blood lines have yet been developed in the black and white breed, large milk production with desirable per cent of butter fat appearing consistently on both sides of his pedigree. The seven nearest dams of Prince Echo Sylvia Segis average:

Butter, 7 days	31.75 lbs.
Milk	582.55 lbs.
Butter, 7 days	29.45 lbs.

RAG APPLE WALKER KORNDYKE, 266362

Is the youngest of our three herd sires, and promises to develop into an individual of great merit. Five of his seven nearest dams average:

Butter, 7 days	31.30 lbs.
Milk	578.28 lbs.

Five of his seven nearest dams have produced a total of 22 A. B. O. daughters, six of which have official records above 30 lbs. butter in seven days.

We can supply you with a good bull to improve your herd at a price you can afford to pay. Come and see the herd or write your wants. The farm is two miles south of Sacramento City limits on paved Freepoint Road. Go straight south on Twenty-first street out of Sacramento.

JAMES MCGILLIVRAY

TULARE, CAL.

H. L. REDD, Herdsman

over at Portland, where the Chamber of Commerce gave a luncheon in her honor and she was visited by over 2,000 people in the short time allowed.

Dairy Cattle.
San Jose is considered the center of the prune-raising industry of California, but Dr. L. J. Belknap of the Jersey Queen Farm finds a corner of that beautiful valley in which to raise Jersey cattle. He grows good ones, too, and will have some in the show ring at San Francisco. The doctor has not shown before this fall so that his coming will be watched with interest. He is known to have good ones.

J. Henry Meyer of San Francisco, with a great Ayrshire ranch known as the Elkhorn Farm, on the old "toll road" between Watsonville and Salinas, will have his herd here for the big show. They did very well at the State Fair, winning many firsts. The cattle were in fine shape then, and it is safe to say they will be here.

The Guernsey cattle classes will be filled by L. Dee Smith of Berkeley with his show herd. Mysie's Laddie of Claremont is a very classy youngster and will be in the herd showing. Mr. Smith exhibited at the State Fair this fall and is now coming to the San Francisco show. His herd will bear close inspection both as individuals and as performers. Do not fail to see them.

R. S. Holmes of Modesto is following the circuit of the fairs this fall with his Holsteins. Mr. Holmes always has his cattle in fine shape, and when they are seen at the home place it would seem as though to look at his cattle he was just ready to start for some fair. His cattle are performers as well as show animals, and he is a great believer in testing his cows regularly and finding out just what they can do.

The Jersey cattle have no stronger supporter than J. A. Goodall of Keyes

HOLSTEINS
and the
MILK CHECK

The size of your milk check depends less upon the size of your herd than upon the size of your cows. Get big, healthy, purebred cows with the ability to convert feed into milk at a profit.

Wherever dairying is on a prosperous footing, that's the home of the Holstein cattle. Besides being the leading dairy breed, they bring top prices when beefed. They breed regularly, and the calves are easily reared.

The Holstein-Friesian Assn. of America
BOX 141, BRATTLEBORO, VT.

20

Registered Cows and Heifers

20

In preparing for the winter we find we are compelled to reduce our herd, so we are offering for sale a splendid string of young Holsteins. If you want good production and a reasonable price this offering will please you.

Write at once or call and see them.

M. HOLDRIDGE
R.D. A., Box 437, San Jose
1½ miles out north First Street, beyond city limits.

and he is bringing a contingent of his herd to the California International this fall. His herd is strong in the blood of Sophie Tormentor. His herd sires both come from the Hood Farm. June Acres Farm, Davis, V. F. Dolcini, owner, will show some of their Holsteins and Sir Aaggie Korndyke Mead, senior bull calf, is liable to repeat his performance at the State Fair, where he won first in a very close class. Mr. Dolcini is certainly on the right track in the Holstein breeding business.

The Holstein show is always a better one when the Henderson Company's contingent is present. Their senior herd sire, King of the Black and Whites, is the first bull of any breed whose seven nearest dams average over 30 pounds of butter in 7 days, four of which have produced 30-pound daughters which have 30-day records of 126 pounds of butter. They have a junior herd sire, Supreme Glista Pietje, that is a very promising youngster. His breeding is of the best and he should make a record for himself in this great herd. Their two-year-old bull, Domino Glista, and their senior yearling bull, Model Bonnie Fobes De Kol, both were first in class at the State Fair this fall, as well as many other winnings.

M. Fortini of Orland, owner of Tintagel Farm, is one of the small breeders who shows what he has, but almost anyone would show if they had two such outstanding individuals as Noble Peer's Jewel and her daughter, Jewel of Tintagel. The last named was first in class and junior champion at the State Fair this fall. Noble Peer's Jewel has a long record of winnings to her credit, and unless there is something very good in competition, they should stand a good chance of repeating their previous performances.

Phoenix, Arizona, is a locality where alfalfa grows almost the year around, and as a consequence, dairy cattle thrive and produce wonderfully. Frank Reed Sanders comes to the California shows with herds of Holstein-Friesian and Dutch Belted dairy cattle that we will all inspect with satisfaction. Mr. Sanders has shown cattle before in California with a good deal of success.

Ladies are coming more and more into the spotlight in the purebred stock business. Mrs. Annie Donders of Fresno has some good ones that have shown up wonderfully well in performance, and now will make their bids for their share of the ribbons at the coming California International. Mrs. Donders is the owner of the sen-

Sir Pietertje Ormsby Mercedes 43rd

SENIOR HERD SIRE

HIS SIRE: SIR PIETERTJE ORMSBY MERCEDES, the greatest sire of yearly record daughters of any breed. Twenty of his daughters, most of them under mature age, average over 1,000 pounds butter in one year; two have records above 1,300 pounds butter in one year; eight have records above 1,000 pounds butter in one year; fourteen out of his 66 A. R. O. daughters have records above 30 pounds butter in 7 days; two have records above 40 pounds butter in 7 days. Three of his daughters sold for over \$30,000, and one son for \$65,000 in the Minnesota Breeders' sale. Production and show ring records establish him as the breed's premier sire of producers and show-ring winners.

HIS DAM: AAGGIE WAYNE PEEP, one of the outstanding cows of the breed. Her records are:
Butter . . 7 days . . 34.59 lbs. 1 year . . 1,250.35 lbs. 4 years . . 3,999.35 lbs.
Milk . . 7 days . . 657.20 lbs. 1 year . . 27,762.50 lbs. 4 years . . 88,509.70 lbs.

She is a full sister to Early Dawn Peep 2nd, 1,287.72 pounds butter from 26,204.1 pounds milk in one year; and half-sister, by the same sire, to Ona Clothilde Wayne, 1,266.65 pounds butter from 27,091.5 pounds milk in one year, and Jennie De Kol Veeman Wayne, 1,003.21 pounds butter from 20,876.3 pounds milk in one year.

JUNIOR HERD SIRES

SIR AAGGIE MEAD
Sire, Sir Aaggie De Kol Acme, Dam, Aralia De Kol Mead.
His dam and sire's dam each have strictly official yearly records above 1,200 pounds, averaging 1,273.49 pounds; his dam, dam's dam, and his sire's dam average 1,229.76 pounds; his three nearest dams each have averaged over 2,200 pounds butter in two consecutive years. Five of his seven nearest dams average 1,177 pounds butter in 1 year. You can't beat this long distance ancestry.

FINDERNE SOLDENE VALDESSA
Sire, King Valdessa.
Dam, Finderne Soldene Hengerveld.
His sire is a son of the first 41-pound cow and a grandson of the first 44-pound cow. His dam, a 35.34 pound three-year-old (world's record for heifer with first calf), is a daughter of King Hengerveld Aaggie Fayne, one-third of whose daughters have exceeded the 30-pound mark, and who is a brother to the 50-pound cow Segis Fayne Johanna.

The Health of Our Herd is Under State Supervision

We have over 200 head, including cows with yearly records up to over 1,100 pounds butter, and daughters of large yearly record cows. Also 10 cows and heifers with records above 30 pounds butter in 7 days, and a large number with records from 25 to 29 pounds butter in 7 days.

EVERY FEMALE IN THE HERD WILL BE GIVEN A
305 OR 365 DAY RECORD

Visitors cordially invited to the farm.

milk, 1,019 lbs. fat.

Practically all cows in Edge-
moor herd have A. R. records or
are on test. Twelve cows with
records averaging 15,056 lbs.
milk and 748 lbs. fat. Six class
leaders with records averaging
15,061 lbs. milk and 734 lbs. fat.

Bull Calves for Sale
at Reasonable Prices

See our herd at
CALIFORNIA
INTERNATIONAL SHOW,
San Francisco, November 1-8.

W. H. DUPEE, Owner
Santee, Calif.

for two-year-old State champion milk-
producing heifer, Dora Walker, with
a record of 664.4 pounds in 7 days.
This is only 10.4 pounds behind the
world record.

Grape Wild Farms, Escalon, owned
by A. B. Humphrey, will have Guern-
seys in line at the San Francisco big
show in November. Mr. Humphrey
goes to all the fair and livestock
shows of importance and gets his
share of the ribbons. Nobleman of
Maple Hill is one of the young bulls
in this herd that it does a lover of
Guernseys good to look at. Escalon
Truotype is another that is liable to
be up at the top in almost any com-
pany.

J. P. Phillips of Fresno, breeder
and importer of Holsteins, will have
some of his favorite breed at the San
Francisco Show to try for some of the
prizes. His stock is strong in the
blood of Pietertje Ormsby. Several
additions of "top" stuff from the East
have been made during the past year.

Jerseys are always a good show if
properly taken care of and when they
come from the Venadera Herd of Guy
H. Miller of Modesto they are always
in thriving condition. He will show
fourteen head at the California Inter-
national.

Ayrshires from the Steybrae Ranch,
San Mateo, E. B. McFarland, owner,
will be out in full force at the San
Francisco Show. They have some
mighty good cattle and always are li-
able to take more than the lion's share
of the ribbons.

Leonard Farm, Ceres, W. J. Hackett,
owner, will exhibit Jerseys at the Cal-
ifornia International this year. Mr.
Hackett will show eight head, with
Oxford's Majesty's Gold Link at the
head of the herd.

J. W. Scudder of Holt is listed to
exhibit Holstein-Friesians. He is a
new exhibitor this fall and we cannot
tell just how they will show up, al-
though we would expect something
good from what we hear.

Edgemoor Farms at Santee, W. H.
Dupee, proprietor, was the whole
thing at the National Dairy Show in
the Guernsey classes. Out of 30 class-
es the Edgemoor Farms won 17 firsts,
and eight seconds. Just think of it!
An Eastern show and where the dairy
classes are supposed to be filled with
the best in the world, and then to
have California come along and take
17 firsts out of 30 classes. Mr. Du-
pee's herd will be at the California In-
ternational and is worth a trip of
itself.

Mossdale Farms and "Jim" Thorp
has stood for Jersey cattle at Locke-
ford, his home, for a long time, and
now everybody is coming to know that
these two names stand for the best in
the Jersey cattle line. Why, if he
keeps on he will have to unload his
ribbons with a Jackson fork at the
end of the show season.

E. F. Smith of Haywards has a herd
of Jerseys headed by "Goldie's Ne-
helem Gold" and will have them at
the big show to help out the Jersey
list. His herd consists of 15 head of
Owl Interest and Rosafre Golden Lad
breeding.

WILL HAVE A BIG SHEEP SHOW

Sheep from all up and down the
Pacific Coast, in large numbers and
by the most prominent breeders, have
been entered in the various classes. In
some breeds the competition will be
keen and decisions close.

The following noted breeders will
exhibit:

Bullard Bros., Woodland, Rambou-
illets.

Calla Grove Farm, Manteca Hamp-
shires.

Conaway Ranch, Woodland, Hamp-
shires.

Butte City Ranch, Butte City, Shrop-
shires.

Vaughan & Fox, Lyons, Ore., Shrop-
shires.

Coffin Bros., Yakima, Wash., Lin-
colns, Romneys, Corriedales.

Ellenwood & Ramsey, Red Bluff,
Corriedales.

J. M. R. Boyd, St. Helena, Shrop-
shires.

An epidemic of colds has struck
town. Henry Bailey and Andy Dag-
gett and two of Hepburn's mules have
it.—Wardsville News.

MOSSDALE FARM HOME OF CHAMPIONS

Jersey Cattle

Herd headed by Jolly Senator Raleigh,
Grand Champion at the 1919 State Fair.
Heavy winners wherever shown. Our
stock meets the admiration of the
breeder and the approval of judges.
Cows tested regularly and many high
records made. Get your next bull
from this herd.

Duroc-Jersey Hogs

Herd headed by Freddie You'll Do, the
great young boar by Johnson's De-
fender. A great lot of brood sows of
Long Wonder, Brookwater, Cherry
King, Principal 4th and Defender
breeding. We have the big-type with
great size, bone and quality. We won
the State Duroc Futurity on sow pigs
three years straight running and won
all three—boar pigs, sow pig and litter
futures, 1919.

ASSOCIATED DAIRYMEN FAVOR MILK AS PUBLIC UTILITY

In an interview, James M. Henderson, President of the Milk Producers' Association, said:

"In a recent editorial of the Pacific Rural Press this expression occurs: 'Apparently it (the Milk Producers' Association) is now organized to give a profit to other people than cow-men, while our other co-operative organizations work for their producing membership only.'

"The fact of the matter is that we have one of the three genuine non-profit-sharing co-operative associations of the State dealing in products of the soil. The constitution and by-laws of the Milk Producers Association prohibit any profit to any one outside of the actual producers. All the co-operative associations provide for organization expenses by an acreage fee or a per capita fee on the animals included. There is no possible chance for any one to use the money subscribed by the members in any way except for the specific purposes mentioned in the constitution.

"I was the first one to advocate placing milk prices under the control of the State. I am still in favor of it if it becomes necessary, so that justice may be done the producer and consumer alike.

"The Milk Producers' Association was formed for the especial purpose of promoting efficiency in production, eliminating waste and preventing profiteering. In years past there always has been at times an enormous waste in skimmilk and buttermilk, always of time and energy in duplication of routes in hauling milk and cream from the producer to the factory. Also the duplication of routes by distributors in the cities, both small and large.

"In the use of skimmilk for the manufacture of casein, milk sugar and albumen, we are making products worth as much as the butterfat. This at times all went into the sewer.

"It is the aim of the Milk Producers' Association to absolutely prevent all profiteering, and sell to the consumer at a lower price than would be possible under the old regime. 'Getting more for the producer for his produce and selling to the consumer for less' is the slogan of the Milk Producers' Association."

Swells of Swinedom at International

(Written for Pacific Rural Press.)

California is fast becoming a swine-raising State, which is due no doubt to several reasons. First and foremost our great asset of a mild climate makes it possible for a sow to produce two full litters a year and grow them out nicely. Again, this is a great alfalfa country and that is another great asset in the swine-raising business, as alfalfa pasture with a little grain will grow hogs rapidly and cheaply. Then, the enterprise of a large portion of the hog raisers finishes the job. They have not, however, gotten out of the notion that they have to go East and pay big prices for their breeding stock.

The entries at the California International are from all parts of the State and as far east as Nebraska as well. Strong contingents from all the leading swine-raising sections of the State insure an unexcelled hog exhibit in numbers, quality and variety of breeds. Be sure and see this swine show if you are at all interested in the game.

Natomario Rancho is rather of a difficult method to spell Berkshire, but it really seems to spell it correctly, for W. F. Sandercock, owner of this beautifully named farm, raises Berkshires supreme and will have them on exhibition at the California International the first week in November with a good deal of confidence in the outcome. Of course, he has sold the grand champion boar, Natomas

Baron Duke, and four good sows since, but you never can tell what a resourceful breeder may have up his sleeve. Anyway, Mr. Sandercock is going to show Berkshires and we all know he will have a creditable exhibit. Look 'em up if you want to see some good ones.

J. E. Thorpe of Lockeford, owner of the Mossdale Farms and breeder of Duroc-Jerseys, is still showing 'em to people at all the principal fairs in California this fall. Sometimes he has competition and sometimes not, but he goes straight along collecting ribbons by the old, time-honored method of having good ones, and it seems as though his senior herd sire was getting better all the time and as though Freddy You'll Do is correctly named. He has a lot of good ones and you will always find him somewhere around his hogs or cows ready and willing to talk and show his stock. That's his business; he will bear investigation.

Fred M. Johnson of Napa, one of the noted breeders of Durocs, is slated to exhibit some of his favorite breed at the big show and you may be sure they will be right or Fred Johnson would not have 'em there. Look him up and see a real show of Duroc-Jerseys.

Anchorage Farms, Orland, breeders of the highest type Berkshires, are coming to the California International. They are people that believe in keeping right up with the times. They have purchased two new herd sires lately. First, it was Champion's Value 10th from the noted herd of E. J. Barker, Thorntown, Ind., and then Natomas Baron Duke, the 1919 grand champion at Sacramento. With the blood of that great sire, Star Leader, in the females, we can look for a continuation of good Berkshires from Anchorage Farms. Their exhibit will be worth seeing.

Harvey M. Berglund of Dixon is one of the coming breeders of Duroc-Jerseys. In fact, it might be said that he has already arrived. At least his hogs look so and sell that way. His herd sire, California Orion King, is right up among the very best in the State. Anyone with Duroc-Jerseys in their mind will surely get an eye full if they will only give his exhibit the "once over." You'll like 'em.

McCarty & Starkweather of Modesto surely will make some show as usual in the Poland-China line. They will have all the good ones they won with at the State Fair this fall and one or two others at the San Francisco Show to make even a greater exhibit. The senior member of the firm is in the East and will return before the show. It has been hinted that he will bring some Polands back with him and if he does they surely will be good ones and nothing but the big kind.

Berkshires bred right, fed right and all right. Whose? The exhibit from Grape Wild Farms, Escalon; A. B. Humphrey, owner. I don't know whether it is worth while going into detail about the exhibit or not, but they had the grand champion sow at the State Fair this fall and she is a good one. Good Lord, she had to be with the competition there. Nothing but what was right could get by the eagle eye of Wyman Lovejoy, and Grape Wild Rose was right. Look them up at the California International and Charlie Maurer will show 'em all to you.

Castleview Ranch of Santa Rosa, J. Francis O'Connor, proprietor, will have his show herd in line at the California International when the first of November comes, and if he doesn't win it will not be because they are not in proper condition. The Castleview herd won at the State Fair this fall in several classes, having in Castleview Premier Belle, the junior champion sow of the show, first on herd under one year, fourth on get of sire, fourth on produce of dam and champion barrow of the breed under 6 months of age. Mr. O'Connor is making a great success of the Berkshire business. If there were a few more like him along promotion lines the Berkshires would soon be at the head of the breed line in California.

Walter E. Graham of Del Paso Heights will have three barrows in the junior feeding contest. He exhibited at the State Fair this year. Miller & Lux are on the entry lists

for an exhibit in both Poland-Chinas and Duroc-Jerseys. They certainly have hogs enough and good enough to win anywhere.

J. E. Moltzer of Van Nuys has

The Hampshire Hog

The Hampshire has become America's most popular hog by sheer force of merit. At the 1918 International he won Grand Championship over all other breeds, and sold for \$2.25 per hundred above his nearest competitor. And when it comes to high dressing percentages the Hampshire is in a class by himself.

Ideal for California Conditions

The Hampshire is a natural foraging, green-feed hog, and thrives particularly well on California's alfalfa and other succulent grasses, therefore requiring less grain than other breeds. Send for free information about the progress of the breed and its adaptability to California conditions.

American Hampshire Record Association

E. C. STONE, Secretary.

THE GARDINER RANCH

ROUTE 4, BOX 735,

SACRAMENTO, CAL.

Berkshire swine entered and he is coming from the South to try conclusions with his brother breeders of the North. The California International is the logical meeting ground for a large territory, being the most centrally located of any place of importance on the Pacific Coast. We know Mr. Moltzer will make a good showing.

Geo. V. Beckman & Sons, Lakeside Stock Farms, Lodi, have Poland-China swine entered and those who know their herd know that they have plenty of prize-winners in it. Matchless Big Bob is their senior herd sire and was first in the aged boar class at Sacramento this fall and he headed the second prize aged herd. Their hogs are of the type that mature quickly, but have lots of bone and substance. Very close to the ideal type.

bone. They dress a high percentage of marketable meat. They are excellent graziers.

Lloyd & Tointon are the only exhibitors of Yorkshire swine, although there are several other good herds in the State. Their herd is a good one and typical of the breed. They have one sow that farrowed 20 pigs in one litter and raised 14 of them. If you want to see a large white hog, somewhat of the bacon type, look up this herd at the California International.

L. J. Belknap of San Jose, who woke up the California swine world by holding a hog auction in a prune district and topping the sales price for purebred sows by several hundred dollars, will have some of his Duroc-Jerseys in the show ring at the California International. He has made several additions to his herd lately

Mammoth Sensation II—Reserve senior and grand champion Duroc-Jersey boar, from Diamond Bar Ranch, Spadra.

R. Heckley of Santa Rosa and Dr. Jas. J. Summerfield of the same place both have Tamworth swine entered at the San Francisco Show. This is a breed that is not as well known in California as some of the others, but is one of the oldest breeds for all that. They are of the true bacon type with very deep sides, great length and strong, arched backs and not too heavy

and will no doubt be in the money.

Conejo Ranch of Newbury Park are coming north with a full quota of both Duroc-Jerseys and Hampshires. A recent addition of the Waltemeyer Bros.' entire herd of Duroc-Jerseys made an already strong herd stronger. Last year they won grand championship with one of their Duroc boars at the State Fair with a good showing

MONTELENA HERD OF LARGE YORKSHIRES

LAKE PARK KING 25211
Grand Champion Boar—California State Fair, 1917.

Due to the ever-increasing popularity of the breed, Yorkshire breeders are almost entirely sold out, and it would behoove the prospective purchaser to place his order soon.

We are only able to offer at the present time a very exceptional lot of fall pigs, some sired by "Lake Park King," others by "Montelena Prince 2d." They are out of such sows as "Deer Creek Nena 8th," present Grand Champion sow of the State, who has averaged a fraction over 17 pigs per litter for nine consecutive litters; "Riverina Nena 9th," one of her best daughters, and "Lake Park Lady Frost 291st," the top sow at the Thomas H. Canfield sale last year.

We solicit your correspondence.

OAK KNOLL Chester Whites

The Breed Progressive Farmers Want

Large Litters--Quick Maturity
Easy Feeders--Top Prices

AT the Chicago International, 1918, this breed again won over all breeds on carcass tests. Either straight bred or crosses, the Chester White has for six years proven superior to all other breeds in Open Competition at these Internationals. Our last carload shipment dressed 72.30 per cent and brought 1½c. above the market price.

We Have the Largest Herd on the Pacific Coast
The Finest Blood Lines in America

HIGHLANDER—The Boar You Can't Forget.

This great boar is at the head of our big herd of over 100 mammoth brood sows. He is a son of William A. and Our Maid 3rd, both undefeated Grand Champions at three International Shows. He embodies all your ideas of a perfect boar, and stamps his pigs with his superior qualities.

This is the blood you need to insure your success. A wonderful lot of tried sows, open and bred gilts, service boars and weaned pigs. Prices reasonable. Write us your wants.

THE CALIFORNIA INTERNATIONAL LIVESTOCK SHOW,
November 1-8.

OAK KNOLL FARM
Lakeport, Calif.

San Francisco Office

601 Balboa Bldg.

CERTAINLY SEE THE SWINE SHOW.

We will have representative types of hogs of the various breeds at this show that I feel certain will make it well worth the while for anybody in the West to make the trip to San Francisco to see. We will have car-load lot classes that will be new to California shows and I think that this class alone will be of immense educational value to growers of hogs in a big way, as well as to farmers who are making up consignments for car-load lots through the various farm bureaus because it will show the kind of carlots that the buyers want.

J. L. THOMPSON, Supt. Swine Division.

all down the line. Their Hampshires are of the best and their herd can be looked for to win its share of the ribbons. They have some excellent specimens of this smooth, compact, excellent killing breed.

The Billiken herd of Chester White swine will be shown by C. B. Cunningham of Mills. Mr. Cunningham has an excellent herd in fine condition, although he has been hampered by labor conditions somewhat. He won practically all the first and all the cham-

pionships at the State Fair this year and will come to San Francisco with a very strong exhibit.

The Wickiup Ranch of Burke, J. H. Rossiter, owner, will have a full exhibit of both Berkshires and Duroc-Jerseys. The Durocs are from the far-famed McKee herd of Versailles, Kentucky. The head of the herd is Beautiful Defender, a son of the original Defender. The Berkshire herd is headed by Rincon Mayfield, with Princess Lee 4th and Wickiup Princess 1st, 2nd and 3rd on the female side, making a very strong showing.

M. & A. L. Bassett of Hanford will show Poland-Chinas of the type that always look well, make wonderful gains for feed consumed, and are ready to top the market as quickly as any hog in the world. The senior member of the firm has probably shown more prize Poland-Chinas of his own breeding than any other breeder in California. Mr. Bassett recently paid the world record price (\$3,175) for an open gilt at a public auction.

S. E. Whiting of Sacramento is a new breeder in the Duroc-Jersey ranks, a new star on the horizon. He has been accumulating a prize-winning herd very rapidly, selecting his stock from some of the best herds in the State. If he keeps on as he has started he will be on a par with the older breeders.

A. L. Stephenson of Los Molinos, one of the veteran Berkshire breeders of California, will have his herd at San Francisco to compete for the ribbons. Wilsonia Chief Leader is the herd sire, with a good lot of females to form the other half of the herd.

Another breeder from the northern part of the State is Mrs. John J. Weber of Yuba City, who will have swine at the California International.

Sandyacre Farm of Modesto, owned by Hale I. Marsh, the prominent Poland-China breeder, will show some of his big ones and probably be in the money if we are to judge by his past record. The herd is strong in the blood of I. B. A. Wonder and Model Major, and of the type that is winning all along the line just now.

Oak Knoll Farm, Lakeport, owned by Lea Bleakmore, breeds Chester White swine that have a habit of winning many of the blues when shown. A full quota will be shown from the herd that had the grand champion boar, Highlander, at the State Fair in 1918. The herd is composed of 100 sows of Combination, Wonder and St. Elmo breeding.

W. F. Dolcini, owner of June Acres Stock Farm, Davis, will show some of his dandy Durocs and be in line for some of the ribbons. His herd is headed by Model Colonel, a grandson of King Colonel; Great Wonder's Model 3rd, by Great Wonder, and University Wonder.

J. F. Lehman of Lodi is coming to the San Francisco Show with some of the good ones from his Poland-China herd of merit that will look good to lovers of this great breed. Mr. Lehman is another breeder that is showing stock of his own breeding and winning with it. He won the big silver loving cup given by the State Poland-China Breeders' Association for best futurity litter, as well as numerous other prizes at the State

Ninety-five pounds of Ne Plus almonds were harvested from a single tree in a Terra Bella (Tulare County) orchard. They were worth \$28.50 to the grower.

JOHNSON'S DEFENDER JR.

Owned by GREENWOOD FARM, Live Oak, Cal.

Is California's greatest representative of Defenders, the greatest Duroc family. At the State Fair he was the smoothest boar shown, weighing 700 pounds at 17 months and carrying it on a perfect set of feet and legs. He won second in the strongest class of boars ever shown on the Coast and was a popular favorite. Three of his brothers won ribbons in the same class, showing the strength of this line of breeding.

Five Ribbons Won on Five Entries.

H. C. WITHEROW, Mgr.

LIVE OAK, Sutter Co., Cal.

Big-Type DUROCS

CALIFORNIA ORION KING.
His sire is by Orion Cherry King.
His dam is by Joe Orion 2d.

HARVEY M. BERGLUND, Dixon, Calif.

If you are looking for size, combined with quality and finish, you cannot afford to overlook getting some of this boar's stock.

My sows are strong in the Colonel and Defender lines, combined with Orion blood. Size and quality are essential. I will not tolerate anything but economical feeders.

Inquiries invited.

Visitors welcome.

FALFADALE FARMS

Home of GREAT ORION SENSATION Jr.

The sensational Duroc-Jersey boar, best son of Great Orion Sensation, the most talked-of hog of the day, Grand Champion at the 1919 National Swine Show.

This outstanding boar, recently imported from Nebraska, is a litter brother of Majestic Sensation, Jr., who won the distinction at the Missouri State Fair this year of being the first Junior Champion that was ever made Grand Champion.

Our herd is rich in the blood of the famous Orion Cherry King strain. Young stock of this big bone type for sale. Boars ready for service—well grown, wide, deep barrels and rumps, heavy bone—just the kind you need. Priced right.

Watch for Announcement of our Bred Sow Sale.

B. H. WILKINSON, Manager Perris, Calif.

EVERYBODY SHOULD VISIT THE SHEEP SHOW.

The sheep and wool industry as represented in this show will be of great interest to the breeders, sheep men, farmers and general public. We will have some of the best specimens of the various breeds, some of which perhaps many people in the country have known only by names or pictures. We will endeavor through this department to encourage the raising of more small flocks by Pacific Coast farmers. It will be a good sheep show and one that everybody should visit.

W. B. CLOW, Supt. Sheep Division.

TREWHITT-NEHLS-VAUGHN POLAND-CHINA SALE.

This was not a sensational sale in that there were no sensational features, although Wm. Bernstein paid \$450 for Miss Orphan 2nd, the Delfelder gilt from Effingham, Kansas.

C. A. Vaughn sold 15 head for \$2,220, or an average of \$148 per head, which was a good price, although no better than his hogs deserved. Mr. Vaughn breeds good hogs.

The Geo. Nehls consignment did not average as high quite as the others, 12 head selling for \$870, or \$72.50 apiece.

\$126.44 was the average for the 38 consigned by W. D. Trehwhitt, which was not high considering the fact that Mr. Trehwhitt has bred the fashionable type for a longer period than almost any breeder in California.

The average for all three consignments was \$121.46, which is good money for hogs. We have gotten into the habit of looking for each sale to go a little higher than the one previous, but we must all remember that the peak has to be reached sometime and it may be that we are just at the high level now.

A CHANCE TO BUY HOLSTEINS.

At the C. A. Miller Ranch, November 30, 7½ miles north and west of Ripon on the French Camp Road, a sale of 100 head of Holstein-Friesian cattle will be held. These cattle consist of the bulk of Mr. Miller's herd, comprising 50 head with a large proportion of them cows in milk; 30 head from the noted herd of Gotshall & Magruder of Ripon and 20 head consigned by H. A. DeWolfe of the same place. These cattle are all registered and are first-class stock.

MILCH GOAT BREEDERS, ATTENTION

A meeting of the Central California Milch Goat Breeders' Association will be held in the California Building during the California International Livestock Show, on Saturday, November 1, at 1:30 p. m.

"Easy is the descent to hell" runs an old proverb. A passenger we were carrying gave us a number of similar remarks to cheer us up while we were patching a blowout. It was his sole endeavor to assist. We "acquired merit" by still carrying him with us.

LIVE STOCK ASSOCIATION MEETINGS DURING CALIFORNIA INTERNATIONAL.

Numerous meetings of the various organizations will be held throughout the show. Some have a definite hour stated and some will supply this item later.

Monday Night at California Building: California Poland-China Breeders' Association.

Western Berkshire Congress.
California Jersey Cattle Breeders' Association.

Tuesday at the California Building:

A meeting at 3 P. M. to complete the organization for the purpose of procuring legislation favorable to the execution of plans for improvement of the State Fair Grounds at Sacramento.

Wednesday at the California Building: California Cattlemen's Association. All day.

Thursday at California Building: California Cattlemen's Association, A. M.

Pacific Coast Hereford Breeders' Association in the evening.

Friday at California Building: California Cattlemen's Association, A. M.

California Shorthorn Breeders' Banquet, evening.

California Sheep Breeders' and Wool Growers' Association.

PORK DAY AT HANFORD.

Another feather in the cap of Kings County tending to "cinch" the title of "Swine Center of the Pacific Coast" for this enterprising community, was held Oct. 15th. At least 2,000 people partook of the free lunch, watched the judging and listened to the speeches and music.

Fat hogs were entered by all the Farm Bureau Centers of Kings County in competition for the prizes. In the carlot contest Corcoran Center won first, which sold for \$16.70 per hundred to Cudahy Packing Co.; second, Hardwick and selling to Western Meat Co. for \$14.75; third, Hanford, selling to Wilson & Co. for \$14.50; fourth, Stratford, selling to Cudahy Packing Co. for \$14.30; fifth, Grangeville-Armona and selling to Wilson & Co. for \$14.05. Best ten hogs won by Hanford Center, entered by M. Bassett 8, and W. Bernstein 2; second by Corcoran; third by Stratford; fourth by Island Center; fifth by Grangeville-Armona.

Best single hog, Wm. Bernstein;

second, G. I. McCune; third, Roy D. Filcher; fourth, J. W. Creelman; fifth, W. D. Trehwhitt.

Many prominent swine breeders and

heads of the meat packing industries on the Pacific Coast attended this contest and contributed to the success of the occasion.

Only Thrifty Stock Pays Big Profit

WHETHER it's cattle, hogs, sheep or horses, the more vigorous you keep them the more money you are sure to make from them. For it's the healthy, vigorous cows that produce the great quantities of the best milk. It's the sound, good-conditioned steers that put on the pounds of beef. It's the well, sturdy horses that can do the big day's work.

You'll make sure of thrifty stock by giving them

THE HINMAN MILKER

For 10 full years Hinman Milkers have been demonstrating in thousands of dairies that they save a vast amount of time, that they are a good thing, a benefit for the cows, that they are so simple anybody can quickly learn to use them, that they are thoroughly dependable—that they are one of the finest and safest investments the dairyman can possibly make. It is the leading milking machine, as proved by the fact that more Hinmans are in use than any others.

LOWEST COST.

Because the Hinman is simple—has no stationary pump, vacuum tank, vacuum gauge relief valve, pipe line and pulsator—its cost is about half that of other milkers.

RANGE CONDITIONS IN HUMBOLDT AND MENDOCINO.

(Written for Pacific Rural Press.)

The ranges in parts of Humboldt and Mendocino counties are in better shape than a year ago. With some exceptions there is more old "tore" left to protect the young grass now showing through since the rains—a very nice set and far enough along to be safe. In the bottoms, feed is likely to be a foot high by Christmas if the weather keeps mild. The winter ranges are in fine shape and there has been enough rain to soften up the browse (which is good) so that no loss is likely from acorn poisoning such as occurred to a great extent two years ago—particularly on Southern ranges. Range cattle have come from the reserves in good condition to winter over and those men who have good winter ranges and a decent supply of roughage will bring their stock through in good shape. We have seen a few lots of yearlings that will need nursing along particularly when the cold rains begin, or they will drop down too far in condition to ever come back. A little shelter to keep off the beat of the rains and a bit of dry stuff for their bellies will bring through yearlings in shape to grow right along at early spring.

MILKING SHORTHORNS A MOST USEFUL CATTLE.

(Written for Pacific Rural Press.)

Dual-purpose Shorthorns that will grow the best steers of any cattle in the world, is what the breeders of these very useful cattle say about them. Then, too, they will give anywhere from 40 to 70 pounds of milk daily with twice a day milking and long enough lactation period to make them profitable dairy animals. This, too, on the kind of pasture and coarse feed that some classes of dairy cattle show no profit on. They are the kind of cattle that the majority of the English-speaking people brought to this country when they came as pioneers.

Thos. Harrison of Santa Rosa, owner of the Santa Rosa Stock Farm, has a herd of these economical dual-purpose Shorthorns that he exhibited at the State Fair this year and is now bringing them to the San Francisco Show for further commendation. He won first in class and grand championship of the males of the breed at Sacramento with the great bull, Foothills Pioneer; also firsts on senior bull calf and junior bull calf, first and junior champion female on Glen Dorothy, with several other winnings besides. He has a great lot of cattle and should win his share of the ribbons at the coming show.

Alexander & Kellogg of Suisun, owners of the Innisfail Herd of Milking Shorthorns, after winning a goodly share of ribbons at the State Fair this year, are coming with 16 head of these great dual-purpose cattle to win some more. They had the grand champion cow, Lady Beatrice, first and second on 2-year-old cows, first on aged herd, breeder's young herd, get of sire, produce of dam and on dairy herd and cows with official records. Truly an excellent showing and great winning of a breed of cattle that are excellent at the pail and on the block.

Leon F. Douglas of San Rafael, owner of "The Pocket Ranch" located in Geyserville, will show some of his dual-purpose Shorthorns at the California International held during the first week in November. Mr. Douglas has been building up a herd of these cattle that help reduce the H. C. L., procuring his foundation stock from W. M. Rutherford of Petaluma and Thos. Harrison of the Santa Rosa Stock Farm, Santa Rosa. The females are of the Kitten Clay and Lee blood lines, which with that notable sire, Foothills Pioneer, grand champion of the breed at the State Fair this year, makes a good combination.

Brighton Farm, Perkins, H. L. & E. H. Murphy, owners, have entered some of their Shorthorns of the dual-purpose type for exhibition at the San Francisco Fair that will be true exponents of this class of Shorthorns. The blood lines of the cows include "Cumberland Type" and "Choice of All" breeding, with plenty of Dutchess blood in the foundation of the herd.

"Can sex be controlled in farm animals?" is a question that is coming up all the time, but has always ended in the same way. A recent article on the subject in Hoard's Dairymen, by R. R. Groves, draws the conclusion that so far the only method showing any success is that of heredity. It may be possible by selecting and mating males and females that have a tendency to produce females or vice versa to have a larger proportion of females or males as the case may be.

abortion booth. All the above is highly educational and is worthy of the closest inspection by all those interested in dairying.

The World's Record Goat.

The poultry, pet stock, rabbits and milch goats, all will be in evidence and given space and attention never allowed before. California Gretel, the milch goat with the highest record of any goat in the world and probably the most economical milk producer in the world, will be on exhibition. The money-making hen, the most economical meat producer—the Belgian, New Zealand and other breeds of hare—will attract and hold your attention, as these departments are going to be more complete than ever.

Then, the livestock show will keep you busy through the day, for you must know that the immense California Building that was thought plenty large enough, is to be filled to overflowing, and pens and stalls built outside to accommodate the excess. All the blue bloods of the horses, cattle, sheep, swine and goats on the Pacific Coast are coming each and every one to make this the greatest show ever held west of the Rocky Mountains. Cattle Exhibits Widely Representative. Cattle from Kansas City, Cheyenne,

Yakima and Phoenix, swine from Nebraska to the Pacific, and sheep from the Willamette valley to that of the San Joaquin. From far and near, for the edification, amusement and instruction of us all, but it will be in vain if we do not take advantage of this opportunity and see what is gathered at the most central point of the country west of the Rockies. Come and see it all and San Francisco will entertain and care for you, instruct you and send you home happy and glad that you could be with her and California in their glory.

An Eastern writer suggests rye and sweet clover as a silage crop for an early use in the spring, and it might be possible to use the same crop in California under conditions where other crops would not produce sufficient tonnage to be profitable.

A few weeks ago an ad appeared in a Scotch paper for an experienced bookkeeper at \$4.50 a week and found. In the same column a boot-then shake the fur to remove all par-black was wanted—wages \$6 a week. It would appear that boots are now more important than books. Some of our maidens packing fruit make this much in a day in California.

FIRST CALIFORNIA INTERNATIONAL LIVESTOCK SHOW

CALIFORNIA BUILDING

SAN FRANCISCO

NOVEMBER 1-8

Largest Exclusive Stock Show in the West

YOU WILL SEE—

The most complete exhibition of the live stock resources of the Pacific Coast ever assembled. The Cream of every improved breed of horses, cattle, sheep and swine and goats will be entered. Every allied industry will be represented.

The Dairy Division, with its world famous cattle and its exhibits of Dairy Products, makes this the "National Dairy Show of the West."

The most complete Poultry and Rabbit Show ever presented on the Pacific Coast will show the best that is offered from the most progressive breeders.

YOU WILL LEARN—

Why and how the best are produced in this State and who owns them. You will learn to recognize the modern type and how better breeding stock can increase your profits.

YOU SHOULD COME—

It is your show. It has much to offer and you will be welcome.

HORSE SHOW—MUSIC—PARADES EACH NIGHT—

World's famous horses will be exhibited in competition in the greatest night horse show ever staged in the West, furnishing educational amusement features that will be made into a different program for each night.

Profit in Dairying Analyzed

(Written for Pacific Rural Press by Geo. W. Fry, La Honda.)

The dairy owner who expects to break even on his 1919-1920 operations is going to have to watch his P's and Q's pretty closely. The consumer who is paying the present long prices for butter will not agree to this, but the man behind the scenes knows that in spite of one dollar butterfat (today's price is 73c, and it's still climbing), the margin of profit is going to be very slim and will in some events disappear entirely and become a deficit instead of a profit.

The Labor Question the Crux.

The labor question is one thing that is bothering the producer at this time. Will there be an adequate supply of help at prices we can afford to pay? A good many thought that with the demobilization of the army hundreds of boys would be seeking farm jobs, but this has not been the case. The factories, the shipyards and the offices took the best of our help during the war and neither they nor the ex-soldiers have returned to the soil in satisfying numbers. The labor question is also complicated in some sections by the return or contemplated return to the old country of some of our foreign help who prefer the conditions there, with liquor, than liberty and prohibition here. We have been advised that this exodus is more real than fancied in a great many of the dairy districts of California. This may be just as well, but it is unfortunate that it comes at a time we have not made the necessary readjustment caused by the war.

Small Herd Must Have Quality.

The dairy farmer, who keeps just enough cows so that he can do the work himself, or with the aid of one hired man, is the fellow that will make the largest net profits next year. But in order to make a satisfactory income from a small bunch of stock they must have quality. No common scrub will earn interest on investment in these days of high costs. A cow does not necessarily have to be a purebred to be a profit-maker, but she should be a well-bred grade, of good dairy shape, free from tuberculosis and other diseases, and she must have the proper feed and care. She should be, by all means, bred to a purebred bull.

The Iowa Experiment Station recently published the results of a long experiment under the title, "Influence of Environment and Breeding in Increasing Dairy Production." Some of the results obtained may be summarized, as follows:

(1) The heifers sired by a scrub bull showed no greater increase in production over their dams than would be accounted for by improved environmental conditions.

(2) The daughters of all except one purebred bull have proved to be larger producers than their scrub dams.

(3) The second generation grades showed larger production than did their dams (first generation grades) or their granddams (scrubs).

(4) In persistency of milk production the first generation grades were intermediate between the scrubs and the purebred cows and the second generation grades approximated the purebreds.

(5) In total feed requirements for milk production the second generation grades proved the most economical, followed by the first generation, while the scrubs proved the least economical.

Scientific Feeding Necessary.

With bran selling at \$50, cocoanut meal practically unobtainable at \$60, alfalfa hay at \$39 (Redwood City prices), the feeder must exercise more than usual care in making up cow rations. If there ever was a time when scientific feeding should be practiced now is the time. The people in the irrigated sections of the State who can raise alfalfa are especially lucky, as are those who have corn land and the necessary silo equipment. However, there are many who for various reasons are denied these blessings. Sweet clover offers to the farmers of the

hills and arid regions a solution of the feeding problem. Sweet clover seed, scarified and inoculated with bacteria and properly planted, will grow practically anywhere without irrigation. Once seeded the plant lasts two years, thus making it a very economical plant to grow. If the seed is gotten into the ground as soon as there is sufficient moisture (about January in this section), two crops can be cut each year, or one crop and one pasturing. This is one of the beauties of the clover—it provides good pasture when everything is dry and gone. Some say cows won't take to the crop readily, and while they may be a little slow in getting to like it, they will eventually learn to eat it and do well.

The Ormondale Shorthorn Ranch near Redwood City has contracted for two hundred acres for the use of their herd of prize Shorthorns. The Redwoods Ayrshire Farm at La Honda is going to try out twenty acres for their purebred dairy stock, and if it proves a success will plant all their pastures or the greater portion to sweet clover.

PURE HAWAIIAN CANE MOLASSES

PORK PRODUCTION

By actual test will increase pork production five-tenths pounds daily over a barley and tankage feed, yet it sells for less than half the price.

MILK PRODUCTION

One of our customers writes: "We are out of molasses and our cows are falling off in their milk badly, hence we would appreciate immediate shipment. Kindly ship us two tons more in addition."

We supply it in barrels or tank cars for shipment anywhere.

Attend the California International Livestock Show, San Francisco, November 1 to 8.

ARE YOU A TOP-NOTCHER?

The first principle of the successful breeder—the top-notch—the one that breeds the "killer" kind—is a thorough knowledge of blood and blood lines, feeds and feeding, and a practical application of that knowledge.

It is the apparently little things that go to make the prominent hog breeder—brains and brain work that develop the big type that produces—that's why 90 per cent of the big breeders—the men with the reputation—feed Economy Stock Powder. They recognize through their years of experience a something in Economy Stock Powder that is dependable as a conditioner—and this recognition is based on the results obtained by a careful tryout.

Economy Stock Powder is not a cure-all—not a medicated salt—it contains no harmful drugs or opiates. It is a conditioner—a worm expeller and disease preventive, and is made up of the following ingredients:

Sulphate of Soda

Hypo-Sulphite of Soda

Poke Root

Bi-Carbonate of Soda

Charcoal

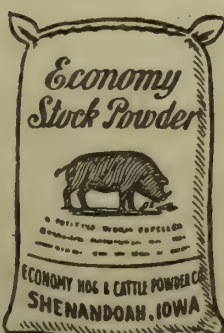

Blood Root

Carbonic Soda

Sulphur

Worm Seed Meal

These ingredients are so blended and so proportioned as to do the work intended for them.

THE MARKET REPORTS

Figures Given Are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO.

San Francisco, October 22, 1919.

BARLEY.

Barley futures were somewhat more active this week with a stronger tendency. Spot barley continues to drag with small demand. Feed \$2.90 @ 2.95
Shipping \$3.15 @ 3.20

OATS.

While there were few sales of oats this week small lots of extra quality sold at \$3. While there is nothing to base it upon a better feeling seems to prevail in the grain markets. Red feed, per cbl. \$2.75 @ 2.85
Red for seed Nominal
Black for seed Nominal
Reclaimed Red or Black for seed Nominal

CORN.

Corn is unchanged at last week's quotations. California \$3.50 @ 3.60
Egyptian, choice \$3.20 @ 3.50

HAY.

Receipts of hay for the past week were 1913 tons compared with 1365 the previous week. These receipts were practically all by water, almost nothing coming in over the railroads. These shipments and those of the present week should about clear up most of the hay about the bay and smaller shipments may be looked for as the car shortage makes it practically impossible to ship that way. The difficulties in the way of future shipments, together with the fact that almost all hay from now on will have to be withdrawn from the warehouses, has caused the market to stiffen up in price. Alfalfa is unchanged, owing to the light inquiry.
No. 1 Wheat, or Wheat & Oat \$17.00 @ 20.00
No. 2 Wheat, or Wheat & Oat \$14.00 @ 17.00
Choice Tame Oat Hay \$17.00 @ 20.00
Wild Oat Hay \$12.00 @ 16.00
Barley Hay \$14.00 @ 18.00
No. 1 Alfalfa Hay \$17.00 @ 22.00
Stock Hay \$10.00 @ 14.00
No. 1 Barley Straw, per bale 50 @ 80

FEEDSTUFFS.

There were no changes in the feedstuff market this week, but it is predicted that if hay continues to advance it will react on the prices of most feedstuffs. There was a little coconut meal on the market this week, but no quotations are made as deliveries cannot be made in quantity for some time to come.
Rolled Oats \$61.00 @ 62.00
Rolled Barley \$61.00 @ 62.00
Cracked Corn \$78.00 @ 79.00
Alfalfa Products \$38.00 @ 45.00

POTATOES, ONIONS, ETC.

There were no changes in potatoes this week, but the price of onions was advanced and this market is very strong with good prospects of further advances. There were few changes in the general vegetable market, which was very quiet.
String Beans 7 @ 9c
Peas 9 @ 11c
Carrots, per sack \$1.00 @ 1.25
Cucumbers, box Nominal
Cauliflower, box 75c @ 1.00
Eggplant, box 75c @ 1.00
Lettuce, per crate 75c @ 1.25
Tomatoes, Early Anna 50 @ 75c
do, Steas 75c @ 1.00
Summer Squash, lug, Alameda \$1.00 @ 1.50
Green Corn, Alameda, sack \$1.50 @ 2.00
Potatoes, Garnets \$2.00 @ 2.35
do, local whites \$2.25 @ 2.50
do, Rivers \$2.00 @ 2.85
do, Sweet, new, lb. 3 @ 4c
Onions, new red Nominal
do, Browns \$2.75 @ 3.00
do, Yellow \$2.75 @ 3.00
do, Green, Alameda \$1.00 @ 1.25
Garlic 20 @ 22c

BEANS.

New crop prices were named this week on most varieties of beans, and as there are so many of the old crop still unsold it is necessary to quote both prices. The price on limas which was named by the Association last week

is being maintained by the Association, but outsiders have sold limas from a cent to two cents cheaper.

Variety	Old crop	New crop
Bayos	\$8.25 @ 8.50	
Blackeyes	\$5.75 @ 6.00	6.00 @ 6.15
Cranberry	\$6.50 @ 6.90	7.25 @ 7.60
Pinks	\$5.75 @ 5.90	6.00 @ 6.15
Red Mexican	\$5.00 @ 5.75	
Tapary	\$2.50 @ 2.75	
Garbanzos	\$5.75 @ 6.00	6.00 @ 6.25
Large Whites	\$6.50 @ 6.75	6.50 @ 6.75
Small Whites	\$6.50 @ 6.75	6.50 @ 6.75
Limas		\$14.50
do, Baby		13.00

POULTRY.

While the prices of poultry have been well maintained during the last week, lower prices are looked for next week on account of the fact that several carloads are scheduled to arrive during that period from the East. Lower prices are looked for especially on fliers and young roosters, which are likely to sell down to 30 cents. Turkeys were higher this week on account of purchases made for the Government account to ship to trans-Pacific posts for the Thanksgiving celebration. Lower prices on turkeys are looked for next week.

Broilers, 1 1/2 lbs. and under	37 @ 40c
do, 1 1/2 to 2 lbs.	32 @ 35c
Fliers, 2 to 3 lbs.	32 @ 33c
Hens, extra, per lb.	34 @ 38c
do, Leghorns	30 @ 33c
Smooth young roosters, per lb. (3 lbs. and over)	32 @ 34c
Old roosters, colored, per lb.	22 @ 23c
Turkeys, dressed, young spring, lb.	50 @ 55c
do, live	43 @ 45c
Geese, young, per lb.	20 @ 27c
do, old, per lb.	22 @ 23c
Squabs, per lb.	60 @ 65c
Ducks, young	25 @ 26c
do, old, per lb.	20 @ 23c
Belgian hares	15 @ 16c
Jack rabbits	2.50 @ 3.50

BUTTER.

In the face of more liberal supplies and in the absence of any pressing demand butter dropped off in price two cents this week. A considerable amount of storage butter is being used.

Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extra	62 1/2	62 1/2	62 1/2	61 1/2	60 1/2

EGGS.

All descriptions of eggs advanced this week on the overwhelming strength of the New York market. In New York today selected extra whites sold from 93 to 95c on the wholesale market and touched \$1.10 on the retail market. The price of extras in this market are the highest of the year, and it so happens are at exactly the same price as a year ago today. Ditties advanced rapidly under the impetus of the demand for extras. Last week they closed 8 1/2 cents below extras and this week only 5 cents. Pullets and undersized were dragged along the up-grade with extras and scored records in prices.

Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	70 1/2	71 1/2	72 1/2	73 1/2	74 1/2
Ditties, No. 1	63 1/4	64	64 1/2	66 1/2	69 1/2
Ex. pullets	54 1/4	54	54 1/2	56	58 1/2
Undersized	51	50	50 1/2	52	53

FRESH FRUITS.

The fresh fruit market was very quiet during the week, with few changes in prices from day to day. Grapes were somewhat higher, and apples were in good demand at current quotations.

Apples, Alexanders	\$1.25 @ 1.50
--------------------	---------------

DRIED FRUITS.

The dried fruit situation changed entirely during the week and a demand from Europe gave strength to the entire list. It is now believed that dried fruits have touched their low mark and any future change will be upward. The trade would not be greatly surprised if the prices prevailing a month or six weeks ago should be repeated.

Apples	16 @ 18c
Pears	16 @ 18 1/2 c

Apricots	21 @ 28c
Prunes	11 @ 13c
Figs, Adriatic	12 @ 18c
do, Calimyrna	15 @ 21c

CHEESE.

The cheese market was weak and dull during the week for the California varieties, although the price of Oregon triplet was somewhat higher.

California Flats, fancy	28 1/2 @
do, Firsts	27c
Y. A., Fancy	31 1/2 c
Oregon Triplet	30 1/2 c
do, Y. A.	32 1/2 c

RICE.

There were no changes in rice quotations either for spot or futures this week. The market is regarded as steady and little variation from present prices is expected before the crop is about ready to move.

LOS ANGELES.

Los Angeles, October 21, 1919.

BUTTER.

A good demand continues for all coming in. At the opening of our review week the market broke a cent a pound, extras selling down

to 64c in sympathy with weaker markets north. Monday it advanced a cent in sympathy with higher markets East and closed the same as last week. Receipts for the week 285,000 pounds.

Fresh California, extra creamery	65c
do, prime first	63c
do, first	62c

EGGS.

But few eggs coming in and market higher on extras and case count, while pullets are a cent lower. Demand good for all arriving. Receipts by rail for the week, 410 cases. Fresh ranch, extras 73c
do, case count 67c
do, pullets 57c

POULTRY.

More coming in the past week and the market not so strong. Broilers in fair demand but lower. Friers and roasters off and dull. Heavy hens scarce and in fair demand. Light hens dull. Turkeys and ducks coming in more freely and slow sale.

Broilers, 1 to 1 1/2 lbs.	38c
Broilers, 1 1/2 to 1 3/4 lbs.	38c
Friers, 2 to 3 lbs.	28c
Roosters (soft bone), 3 lbs. and up	26c

Special Deciduous Market Report

(Written for Pacific Rural Press by J. L. Nagle.)

Sacramento, Cal., October 21, 1919.

Continued light supplies, brought about by the prevailing car shortage, has further stimulated the demand in all markets. There has been an upward tendency in prices of all varieties of fruit arriving sound; in fact, there seems to be no limit for prices paid for certain varieties. If weather conditions remain favorable in California, at least for the next three weeks, practically the entire crop will have been marketed without very serious loss to the growers. Some districts, naturally, have fared better than others, but we think

as a whole, the high prices that have prevailed for the past six weeks will more than compensate the growers for any loss in tonnage that may have been brought about by the car shortage. We look for a steady demand, barring unfavorable weather conditions, throughout the balance of the season.

Averages for the week:
CHICAGO: Malaga Grapes, \$2.22; Tokay, \$2.10; Comichon, \$2.58; Emperors, \$2.00; Alicante Bouschet, \$2.50; Mission, \$2.00; Zinfandel, \$1.65.

40 ACRES—Fine for berries, vegetables, poultry and cows; plenty water and wood; near town. H. Koenig, Fort Bragg, Cal.

Special Livestock Market Report

San Francisco, October 22, 1919.

CATTLE—Market little stronger, notable for large offerings and receipts of cow stuff. Calves very plentiful and lower in price; running mostly to heavy weights. No change from last week on mature stock.

Steers, No. 1, 950-1200 lbs.	10 @ 10 1/2 c
do, No. 1, 1100-1300 lbs.	9 1/2 @ 10c
do, 2nd quality	8 @ 8 1/2 c
do, this	0 @ 7c
Cows and Heifers, No. 1	8 @ 8 1/2 c
do, 2nd quality	6 1/2 @ 7 1/2 c
do, common to thin	4 @ 5c
Bulls and Stags, good	5 1/2 @ 6 1/2 c
do, fair	4 1/2 @ 5 1/2 c
do, thin	3 1/2 @ 4 1/2 c
Calves, under 225 pounds	12 1/2 c
do, 230 to 300 lbs.	12c
do, 300 to 375 lbs.	10c
SHEEP—Sheep and lambs steady to a shade stronger but no notable change in quotations.	
Lambs, Yearling	10c
do, Milk	12 @ 12 1/2 c
Sheep, wethers	8 1/2 c @ 9c
do, ewes	8 1/2 @ 7c

HOGS—Hogs are still declining largely in sympathy with the heavy decline in eastern markets. Indications of still lower market next week.

Hogs, hard, grain-fed, 100 to 150 lbs.	\$13.00
do, 150 to 225 pounds	\$13.50
do, 225 to 300 pounds	\$13.00
do, 300 to 400	\$14.00

Portland, Ore., October 20, 1919.

best, \$9.50 @ 10.50; good to choice, \$9 @ 9.50; medium to good, \$8 @ 9; fair to good, \$7 @ 8; common to fair, \$5.50 @ 6.50; good to choice cows and heifers, \$7.50 @ 8.25; medium to good, \$6.50 @ 7.50; fair to medium,

\$5.50 @ 6.50; canners, \$4.75 @ 5.75; bulls, \$5 @ 7; prime light calves, \$14 @ 16; heavy calves, \$8 @ 13; stockers and feeders, \$7.50 @ 9.25.

HOGS—Receipts, 800. Prime mixed, \$14.75 @ 15.25; medium, \$14.25 @ 14.75; rough heavies, \$12.25 @ 13.25; pigs, \$13 @ 14. **SHEEP**—Easy; receipts, 2900. Prime lamb, \$10.50 @ 11; fair to medium, \$10 @ 10.50; feeders, \$8 @ 9; yearlings, \$7.50 @ 9; wethers, \$7.50 @ 8.50; ewes, \$5 @ 7.

Los Angeles, Oct. 21, 1919.

CATTLE—A scarcity of steers continues. What coming in meet ready sale at steady and firm prices. Cows are still dull and weak. Coming in freely. Calves in good demand and firm.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 @ 1100 lbs. \$9.50 @ 11.00
Prime cows and heifers \$8.00 @ 9.00
Good cows and heifers \$7.50 @ 8.00
Canners \$5.00 @ 5.50

HOGS—In sympathy with a sharp break in the eastern markets prices went off again the past week \$1.00 per cwt. But at this reduction the demand was fair for what arrived.

Per cwt. f. o. b. Los Angeles:
Heavy averages 275 @ 350 lbs. \$10.50 @ 12.00
Heavy averages 225 @ 275 lbs. 12.50 @ 13.50
Light 13.50 @ 14.50
Rough docked 20 lbs. piggy sows 40 lbs. and stags, 40 per cent.
SHEEP—A fairly active market continues to be ad for lambs, and some movement in ewes, but yearlings and wethers dull.

Per cwt. f. o. b. Los Angeles:
Prime wethers \$8.50 @ 9.50
Yearlings \$8.50 @ 9.50
Prime ewes \$8.00 @ 8.50
Lambs \$12.50 @ 13.50

Stags and old roosters, per lb.	19c
Turkeys	40 @ 42c
Hens	30 @ 35c
Ducks	25 @ 27c
Geese	27c

FRESH VEGETABLES.

Lighter offerings. Market for most summer vegetables showed more strength the past week. Demand very good for most fresh stuff but poor and stale is hard to move. Lettuce in very good demand and a little higher. Cabbage coming in more freely, dull and lower. Potatoes and onions a little stronger under lighter offerings and demand fairly good. String beans a little higher and in fair demand. Limas a few sale and lower. Green peppers higher and in very good demand. Celery slow sale and lower. Cauliflower steady and in fair demand. Watermelons and Cabbages were in very good supply. Market steady and demand fair.	
Potatoes, Northern Burbanks	\$2.80 @ 2.65
do, Idaho Russets, cwt.	\$2.50 @ 2.60
Sweet Potatoes	\$1.75 @ 2.00
Onions, Stockton, yellows, cwt.	\$2.90 @ 3.00
do, White Globe, cwt.	\$2.75 @ 2.85
Cabbage, per 100 lbs.	.90 @ 1.00
Lettuce, crate	\$1.90 @ 1.15

Cabbages, lb.	1 1/4 @ 1 1/2c
Celery, crate	\$3.50 @ 3.75
Cauliflower, crate	\$1.75 @ 2.00

FRUITS.

Apples and grapes made up most of the offerings and continue to arrive quite freely. Demand very good for all choice and fancy stock. Poor hard to move. Peaches and plums now out of market. Pears still arriving from the country and meeting a fair demand at old prices. A few berries still coming in, but slow sale at quotations.	
Strawberries	
30 basket crates, fancy	\$5.00 @ 5.50
Poor to choice	\$3.00 @ 3.25
Blackberries, case 30 boxes	\$4.00 @ 5.00
Grapes, Malaga, lb.	.5 @ 6c
do, Carmichael, lbs.	.5 @ 6c
Crabapples	.5 @ 7c
Apples, White and Red Astrakhan, lb	4 @ 7c
Pears, Bartlett, lb.	6 @ 9c
Apples, Bellflower, 4 tier	\$1.35 @ 1.40

BEANS.

A fair demand continues for limas at last week's advance; some little movement in blackeyes. White and Pink continue dull as ever.	
Limas, per cwt	\$12.50 @ 13.50
Large white, per cwt.	\$6.25
Small white per cwt	\$6.50
Blackeyes, per cwt.	\$5.00 @ 5.25
Tepary, per cwt.	\$3.00 @ 3.25
Pink, per cwt.	\$6.25
do, Muscat	4 @ 5c
do, Tokays	6 @ 7c
do, Rose Peru, lb.	3 1/2 @ 4c
do, Hamburgers, lb.	3 1/2 @ 4c
do, 4 1/2 tier	\$1.30 @ 1.40

HAY—F. e. b. Los Angeles.

Steady market the past week. Receipts were good, the country rushing its exposed hay to market in anticipation of the rainy season. Alfalfa in fair demand and that not taken by the dairy people was put in store. Very little doing in grain hay, but prices held steady.

Barley hay, ton	\$18.50 @ 21.50
Oat hay, ton	\$22.50 @ 25.00
Alfalfa Northern, ton	\$24.00 @ 25.00
Alfalfa local, ton	\$25.00 @ 27.00
Straw	\$ 9.00 @ 10.00

Write for free booklet, describing our world's reserve champion STAR LEADER. We are now making a special offering of classy boar pigs.

ANCHORAGE FARM, Orland, Calif.

A SOW THAT FARROWS

10-11-15-17-11-10-9-10

Is worth her weight in gold, particularly so if she is royally bred. This is the record of Symboler Belle. I have a boar pig from her last litter that is a dandy. If you act quickly you can have him for \$75.00. Sandercock Land Co., 23 Montgomery Street, San Francisco, in charge of Natomas Land Sales.

GRAPEWILD FARM BERKSHIRE-Guernsey.—Sire pig sired by Big Leader and Grapewild Farm Leader. A. B. Humphrey, Prop., Escalon, Calif.

BERKSHIRE BOAR PIGS—From large litters. Order one if you want the best. Satisfaction guaranteed. E. J. Merrill, Morgan Hill, California.

LARK MEADOW RANCH BERKSHIRES will make you money. Best foragers. Write me. Geo. A. Stingle, El Monte, Cal.

BERKSHIRES—Sired by Star Leader, the \$1500 boar. Koumas Registered Stock Farm, Modesto, Calif.

BERKSHIRES—Fair Oaks Ranch, Willits, California

WRITE FOR MY BERKSHIRE CATALOG, giving names, ages, breeding of service boars, bred gilts, specially selected trios. Frank B. Anderson, Sacramento, Cal.

QUALITY BERKSHIRES—Young stock of both sexes. Calac Orchards, Geo. P. Upham, Mgr., Martinez, Cal.

CARRUTHERS FARMS BERKSHIRES—Cholera immune. Live Oak, California.

Poland-Chinas.

ELDERLY FARM BIG-TYPE POLANDS—We have a choice lot of big, smooth, stretchy pigs, sired by our 1/2-ton Black Big Bone Wonder and Jumbo Model. They have individuality, with the best blood lines of the breed. We ship only our tops and from mature stock on mail order. Your money cheerfully refunded, if not satisfied. J. H. Ware, Live Oak, Cal.

J. H. COOK

LARGE TYPE POLAND-CHINAS—Fall boars by a great son of Caldwell's Big Bob; also spring boars by the Grand Champion Kiny's Big Bone Leader and other noted sires. Satisfaction guaranteed.

PARADISE, CALIFORNIA.

EL PROFITO Poland-Chinas mean bigger profits for you. This great herd sire puts easy-feeding, money-making qualities into his offspring. Get stock sired by him or bred to him. Prices right. Correspondence cheerfully answered. V. L. Renwick, Hollister Ave., Santa Barbara, Calif.

NOW BOOKING ORDERS for spring pigs, either sex, from my prize-winning, large-type Poland-China hogs. Also will book a few orders for bred gilts, February and March farrow, and a few good, serviceable, aged boars. Hale I. Marsh, Modesto, California.

"SOLD OUT except splendid consignment to Fresno County Breeders' public sale at Fresno, August 20th, and a choice bunch of April gilts and boars. Also one yearling boar who is a good specimen of Big-Type Poland-Chinas." D. H. Forney, Route G, Fresno, Cal.

BOARS—BOARS—BOARS—Big type, from the best sow herd in the State. Stretchy, smooth, good backs and feet. Two fall boars ready for hard service. Choice spring boars sired by King Jones Over. McCarty & Starkweather, Route C, Box 384, Modesto, Cal.

READY FOR SERVICE BOARS—Half-dozen outstanding young fellows of Superior breeding. Gilt edge stuff at moderate prices. Will not have them long the way they are priced. Rough's Greenfields, Arlington Station, Riverside, Cal.

FOR SALE—Bargain—135 purebred, bred, brood sows, 4 purebred boars and 650 head weaned pigs. Price for the lot \$10,500. Or will sell in lots of 25 or more sows, and in lots of 100 or more pigs. Address, Box 128, Lancaster, Cal.

LONE WILLOW FARM offers a few bred and open gilts; also two five-months boar pigs, at prices that will sell them quick. Don't miss this opportunity. P. E. Mitchell, Prop., Atwater, Cal. R. F. D. Box 180.

TOHOQUA POLAND-CHINAS—Strictly big type, Junior and Grand Champion sow at Glenn County Fair. Young breeding stock to sell; bred right, grown right and priced right. Ferguson & McKaig, Orland, Cal.

MARCH BOARS for sale—Sired by Kings Big Bone leader, grand champion at State Fair, 1918. Will stand inspection. Prices right. J. S. Rogers, Chowchilla, Calif.

OXBONE HERD offers March boars for sale from King's Big Bone Leader, grand champion at State Fair, 1918. Write F. E. Fay, Tipton, California.

THE PACIFIC HERD of big-type Polands. Herd sire, Hadly Wonder and an outstanding boar by Golden State King. Nettie E. Andrews, Modesto, Cal.

HOMWOOD FARM—Big type, young boars and gilts. One herd boar; also booking orders for weaning pigs. L. P. Fox, Live Oak, Cal.

POLAND-CHINAS—Young boars and gilts. Prices and description on application. Edward A. Hall, Rt. 1, Box 39, Watsonville, Cal.

WAUKEEN HERD POLAND-CHINAS—Big type herd boar, the \$700 Grand Champion of California. Lee McCracken, Prop., Ripon, Cal.

BIG TYPE POLAND-CHINAS—Stock from the best herds of the Middle West. N. Hauck, Alton, Humboldt County, California.

10 SPRING BOARS—Tops from herd, will be sold at very low prices to close up partnership. Young and Clark, Lodi, Cal.

LAKE SIDE STOCK FARM—Large, smooth and big-boned Poland-Chinas. Geo. V. Beckman & Sons, Lodi, California.

REGISTERED POLAND-CHINA SWINE—Prize-winners. Finest stock in the State. M. Bassett, Hanford, California.

POLAND-CHINAS—If you want perfect type in a March boar or gilt I have it at the right price. J. E. Thomas, Gilroy, Cal.

REAOAKS RANCH herd of registered Poland-Chinas. W. J. Hanna, Gilroy, Calif.

POLAND-CHINAS—Strictly large type. J. F. Lehman, Lodi, Cal.

LARGE TYPE POLAND-CHINAS—Winton Poland-China Farm, Winton, Cal.

POLAND-CHINA PIGS—Bernstein Trewhitt and Ross blood. B. M. Hargis, Tulare.

POLAND-CHINAS—Young stock for sale. H. E. McMahon, Lemoore, California.

BIG-BONED POLAND-CHINAS—Stock for sale. E. S. Myers, Riverdale, California.

Chester Whites

CHESTER WHITES—BILIKEN TYPE—The big winners at the State Fair. 15 extra choice spring boars, sired by the Grand Champion boar and out of Biliken sired sows. A few spring sow pigs; three bred Biliken sows and two gilts; all to farrow in October. Priced to sell; a chance to get the best type in the West at farmers' prices. Write for special catalogue and price list. C. B. Cunningham, Mills, Calif.

BIG-TYPE POLAND-CHINA, sired by a real boar. Pigs of both sex from 3 to 10 months old. W. S. Adams, Gridley, Cal.

Duroc-Jerseys.

FOR SALE

THOROUGHbred DUROC—JERSEY HOGS

Choice boars and gilts of April and May farrowing of Orion Cherry King and Grand Golden Model breeding.

Come and pick these boars and gilts to head your herd if you want large litters of thrifty, quick-growing pigs.

Prices reasonable.

WHITLEY

TU-TOCK-A-NU-LA RANCH
Ventura Blvd. and Hazeltine Ave.
Van Nuys, California.

FOR SALE—Ten registered Duroc-Jersey broods sows, priced right for quick sale. Come and see them. These sows are all bred to Cherry Defender, No. 270741, a boar that weighed six hundred pounds at sixteen months, grand champion stock. Weanlings every month in the year, \$15. Book your orders ahead. Red Rock Ranch, Glen Ellen, Cal.

HORINE'S REGISTERED DUROCS—I have for sale this month a few especially good weaned pigs. Every one is above the standard size for its age and from a litter of not less than twelve pigs. Shipment will be made at ten weeks of age. Prices are very reasonable. Geo. L. Horine, Winton, Cal.

RANCHO RUBIO DUROCS—Two boar pigs, four months old and weaned pigs, both sexes. Stock of Orion Cherry King Pathfinder and Golden Model breeding. Sold on "Money Back" guarantee. Elmer Lamb, Ceres, Calif.

BIG-TYPE DUROCS—Herd headed by California Orion King. Am offering excellent young boars at right prices. Inquiries invited. Harvey M. Berglund, Dixon, Calif.

REGISTERED DUROCS—We have for sale a number of March and April boar pigs sired by King Orion, Crimson Colonel and Pathfinder. Southwest Cotton Co., Goodyear, Ariz.

WE HAVE 100 YOUNG GILTS and boars, bred on the purple, which we are selling for about half their value. Money back if not satisfied. Derryfield Farm, Capital National Bank Bldg., Sacramento.

SWEETWATER DUROCS—The most popular herd in the West. Our Durocs make money for us—they will do the same for you. Winsor Ranch, Bonita, San Diego Co. Address R. K. Walker.

REGISTERED DUROC-JERSEYS—Weanlings, both sexes, from Orion, Defender and Golden Model stock. Pino Vista Ranch, Placerville, Cal. Address H. C. Baum.

DUROC-JERSEYS at Ireland, home of Cherry Volunteer II, and Ireland's Joe Orion. Ranch at Owensmouth, Cal. City Office, 1219 Brockman Building, Los Angeles, Cal.

REGISTERED DUROCS—Choice weanlings of either sex, breeding and satisfaction guaranteed. H. E. Boudier, Napa.

DUROC JERSEYS—Bred sows, gilts, service boars and weanlings. Premium stock. Ray McMillan, Athanas, Calif.

HEAVY-BONED DUROCS—A few service boars for sale. Ormondale Co., Route 1, Redwood City, California.

DUROC-JERSEYS—Fine big type gilts, tried sows and boars Eastern and California bred. H. P. Slocum & Son, Willows, Calif.

BIG-TYPE DUROCS—Gilts and boars of Orion Giant breeding. Falfadale Farms, Peris, Calif.

REGISTERED DUROCS—All from prize-winning stock. W. P. Harkey, Gridley, Calif.

REGISTERED DUROCS—Stock for sale. W. J. Fulgham & Sons, Visalia, California.

A FEW A-1 MARCH BOARS—Jack London Ranch, Glen Ellen, Sonoma Co., Calif.

Hampshires.

REGISTERED HAMPSHIRE—"Belted Beauties." Weaned pigs a specialty. Uneda Hampshire Swine Farms, Gardena, Cal.

BIG-TYPE HAMPSHIRE—Herd headed by "Laddie." Am offering a few boars and gilts. M. J. Ramos, Calexico, Cal.

Yorkshires.

LARGE YORKSHIRES—The ideal hog for the progressive farmer. Young stock for sale. A. L. Tubbs Co., Calistoga, Calif.

DAIRY CATTLE.

Ayrshires.

AYRSHIRES—Registered; all ages. E. B. McFarland, 412 Claus Spreckels Building, San Francisco, California.

ELKHORN FARM AYRSHIRES—Choice young bulls at reasonable prices. J. H. Meyer, 440 Montgomery St., San Francisco, Calif.

NORABEL FARM AYRSHIRES—Le Baron Estate Co., Valley Ford, Cal.

Guernseys.

EDGEMOOR FARM GUERNSEYS—First in the show ring and in official records. A few choice bred bull calves for sale. Edgemoor Farm, Santee, San Diego county, Calif.

BELLA VISTA GUERNSEYS—May Rose Governor of Chene breeding. Bull calves from high record dams. J. W. Gemmer, Ripon, Cal. R. 2.

WANTED—Guernsey bull, age two to three years. Registered. G. Hornby, care Pacific Rural Press.

Jerseys.

SERVICE JERSEY BULL, bull calves, Financial King blood, Chester white boars, prize winners. Best blood, type, production. N. H. Locke Co., Lockeford, Cal.

SUNSHINE FARM JERSEYS—Tuberculin tested. Production counts. E. E. Greenough, Merced, California.

Milking Shorthorns.

DUAL-PURPOSE SHORTHORNS—registered and unregistered bulls. Chas. L. Weaver, Tulare, Calif.

BREEDERS OF REGISTERED SHORTHORNS—Milk strain; choice young stock for sale. John Lynch Ranch, Box 321, Petaluma.

INNISFAIR DAIRY SHORTHORNS—Registered young bulls for sale. Alexander & Kellogg, Suisun, California.

Holsteins.

A PRICE ON EVERY ANIMAL. Herd free from tuberculosis. All sales subject to sixty days' retest. Son of Flanders Soldene Valdesa, whose dam is not only a world record cow in seven-day division, but has two sisters holding world's records for yearly production.

Toyon Farms Association.
679 Mills Building, San Francisco.

YOUNG HOLSTEIN BULLS—Excellent breeding and individuals. Satisfaction guaranteed. Pecho Ranch and Stock Co., San Luis Obispo, Calif.

PALO ALTO STOCK FARM, Palo Alto, breeders of registered Holsteins. Heifers and service bulls. Reasonable prices.

REGISTERED HOLSTEIN BULLS with world's record backing. Koumas' Registered Stock Farm, Modesto, California.

THE VICTORY MEED—Registered Holstein cattle and Duroc Jersey swine. H. E. Spires, Hillcrest Farms, Caruthers, California.

CREAMCUP MEED—Registered Holsteins, Pontiac calves. M. Holdridge, Rt. A, Box 427, San Jose, California.

REGISTERED HOLSTEINS—A. W. Morris & Sons Corp. Importers and Breeders, Woodland, California.

F. M. STENZEL, SAN LORENZO, CALIF.—Breeder of Registered Holsteins. High test producers.

REGISTERED HOLSTEINS—Best blood lines of the breed. R. L. Holmes, Modesto, Cal.

REGISTERED HOLSTEINS and Duroc-Jerseys. Sturgeon Stock Ranch, Tulare, Calif.

EL DORADO HERD OF HOLSTEINS—Alex. Whaley, Tulare, California.

REGISTERED HOLSTEIN CATTLE—E. B. Freeman, R. B., Modesto, Cal.

REGISTERED HOLSTEINS—Best blood production. Leeman and Kilgore, Ripon, Cal.

J. W. BENOIT, Modesto, Calif.—Breeder of registered Holsteins.

GOTHALL & MAGRUDER—Breeders of registered Holstein-Friesians. Ripon, Calif.

CHOICE HOLSTEIN bulls for sale. No females. Millbrae Dairy, Millbrae, California.

HOLSTEIN BULLS and bull calves from A. R. Q. cows. C. A. Miller, Ripon, California.

BEST CATTLE.

RANCHO SAN JULIAN SHORTHORNS—Purebred range bulls, unregistered, for sale. Estate Thos. B. Dibble, Santa Barbara, or Lompoc, Calif., John Troup, Supt.

BEEF CATTLE—Going East again. Send your orders. R. M. Dunlap, Hotel Land, Sacramento.

REGISTERED HEREFORDS—H. H. Gable, Diamond G Ranch, Esparto, California.

ALAMO HERD REGISTERED HEREFORDS (founded by Governor Sparks). Herd and range bulls. Reasonable prices. W. D. Duke, Likely, Modoc county, California.

REGISTERED MILK AND BEEF SHORTHORNS, bulls and heifers for sale; catalogue free. Thomas Harrison, Santa Rosa Stock Farm, Santa Rosa, California.

HEREFORDS—Sierra Vista Herd, Minutun, California. Over one hundred registered animals. Fairfax and Repeater bulls head the herd. On highway.

REGISTERED YEARLING SHORTHORN BULLS—Heavy-boned, thick-meated. Scotch and Scotch-topped breeding. Ormondale Co., Route 1, Redwood City, California.

THE NEVADA HEREFORD RANCH, Jno. H. Cazier & Son Co., Prop., Wells, Nevada. Registered Hereford cattle. Breeding stock for sale.

SIMON NEWMAN CO., breeders of Registered Hereford, Newman, California.

HEREFORDS—Mission Hereford farm, J. A. Bunting, Prop., Mission San Jose, Cal.

GEORGE CALLAHAN, breeder of registered Herefords, Milton, California.

REGISTERED SHORTHORNS—Fair Oaks Ranch, Willits, Calif.

GEORGE WATTERSON—Breeder Registered Herefords. Bishop, California.

SHORTHORNS—Carruthers Farms. Live Oak, California.

SHEEP AND GOATS.

F. A. MECHAM ESTATE, Petaluma, Cal.—Breeders and importers of Shropshire, Rambouillet and American Merinos, both sexes. Also Red Polled cattle. Take electric car at Petaluma or Santa Rosa for Live Oak Ranch.

FOR SALE—One good milk goat, and two fine young Toggenburg does, eight months old. Write or call. P. M. Peterson, R. B., Box 137, San Martin, Calif.

DORSETS AND ROMNEYS—Dorset ram lambs for sale. John E. Marble, South Pasadena, California.

FOR SALE—1500 Merino ewe lambs; 1500 yearling Merino ewes. C. G. Owens, Livermore, Cal.

FOR SALE—About 200 Purebred Shropshire ram lambs in lots to suit. R. J. Curry, Dixon, Cal.

BULLARD BROS., Woodland, Calif. Breeders and importers of Rambouillet sheep.

See CALCO money making products at the Live Stock Show

In the California Building, on the Exposition Grounds at San Francisco, November 1 to 8 inclusive

IF you raise Hogs, Sheep or Cattle for profit—be sure to see the Calco Stock Speciality Exhibit.

Examine carefully these feeding and watering devices made of everlasting metal—and you'll realize

- how their sanitary construction eliminates the deadly disease germ—saves the stock and increases profits.
- how they save valuable time and many foot-steps.
- how, made of rust-resisting "Armco" Iron and Cast Iron, they are practically indistructable.
- how inexpensive compared with the cost of labor, lumber and nails for home-made troughs.
- how, like your plows and tractors, they become an actual asset to your farm.

And if "seeing is not believing" meet and talk personally with Live Stock Men who are using Calco Products—you will find many at this Live Stock Show.

Here is a partial list of Calco Products made especially for Hogs, Sheep, Horses, and Cows—

For Hogs

Calco Automatic Watering Fountain—Connects to water supply pipe—gives constant fresh water supply without overflowing—works automatically.

Calco Hog Watering Tank—Used where water must be carried or hauled. Easily moved about—tank holds up to 147 gallons of water.

Calco Automatic Grain Feeder—Automatically feeds without waste—will hold up to 14 bu. Feed cannot be rooted on the ground.

Calco Hog Troughs—A sanitary, strong and durable trough for general use.

Besides these Calco Farm Products we make a complete line of irrigation specialties.

If it is impossible for you to attend the Live Stock Show, write for descriptive folder and price list of any product desired, but it will pay you to see them at the Show.

New Forage Grasses to Help Cattlemen

Written for Pacific Rural Press by R. E. Hodges.

CATTLEMEN AND DAIRYMEN particularly are interested in any new forage crop which promises more or better feed under certain conditions than the kinds we already grow in quantity. By far the best exhibit of such new forage grasses we have seen anywhere was that of Aggeler & Musser at the recent tractor demonstration. We were told that H. L. Musser of this firm has for years made forage plants his hobby, and that he has a demonstration plot showing many varieties in Los Angeles. We found the plot a wonder-ground; and we found Mr. Musser enthusiastic but more conservative than we had expected.

Though the exhibit and the demonstration plot contained dozens of varieties of little known and more or less promising forage plants, space forbids mention in this article of many of them.

Of the new ones discussed, the variety which has been tried out most thoroughly in California and has found the most general enthusiasm is Napier fodder or elephant grass. We published a six-column article, written by Prof. P. B. Kennedy, about this in our issue of March 29, 1919. The greatly extended practical experiments this summer with Napier grass in various parts of the State have not dampened the ardor of its older friends.

This forage grows wild throughout the southern half of Africa under many varying conditions and produces immense tonnage of green feed. It is only in the past twelve or fourteen years that it has attracted public notice as a cultivated plant and only about five or six years since it came to California. The U. S. Plant Introduction Gardens at Chico were probably the first to try it out in this State. We believe that a major part of the real introduction of this plant here has been due to the efforts of Mrs. Herta Curme Davis of Lakeside, San Diego county. Mrs. Davis has kept in close touch with dozens of ranchers who have tried it out this season throughout southern California, also some in Arizona and northern California.

The Napier grass we saw on the demonstration plot in Los Angeles late in September had been planted in the spring. It stood about 12 feet tall except where it had been cut during the summer. The few seed stems looked like thin-haired cat tails, and we were informed that whereas Aggeler & Musser had sold some seed last spring they were sorry of it, because the seed germinates only two or three per cent. The only object in letting the canes grow so tall is to obtain hardened joints for propagation by the sure method of planting such joints under three or four inches of moist dirt. This may well be done wherever the soil remains warm through October, and wherever enough moisture can be supplied to give the plants a start. After they are well started, frost may kill the tops but not the roots, which are perennial. The roots unprotected have stood temperatures as low as 18 degrees F. and even 13 degrees at Chico.

Mr. Musser's twelve-foot Napier stood in stools averaging 18 or 20 stalks, all of which had developed from one joint. Though planted three or four feet apart, they made an all but impenetrable growth. The stalks averaged perhaps three-quarters inch in diameter at the base. Joints were eight or ten inches long, each with a leaf three or four feet long, looking like a corn leaf. The leaves on the lower four feet seemed to have been killed by shade. Where the clumps had been cut back during the summer the new grass was as tall as a man and much finer, more suitable for hay and full of leaves. It would have to be mowed high from the ground in order to get a mower through it. The plants have high feeding value, as shown in Prof. Kennedy's article, and are greatly relished, as testified by many growers this summer. Mr. Musser does not recommend it for silage on account of its lack of concentrate grain or seed, but he does recommend it as a browsing plant for cattle ranges, provided it can be protected from rabbits, cattle, etc. "Give it six months' start," says he, "and turn cattle in. They won't eat it within three feet of the ground. After browsing down to the bare stalks, if the plants are left alone three weeks, every joint would

have two feet of new growth. I broke off a plant on September 10, and now, less than three weeks later, it has several feet of new growth. The plant is drouth-resistant, but it makes good use of all the water it gets, and it will thrive with water closer to the surface than alfalfa can endure. On the cattle ranges, the crowns live through winter and make six feet of growth on average rainfall before drouth checks it. Then, after fall rains start, it would probably make a couple of feet of growth in many places before frost kills it back. It is not a sorghum, and its second-growth has no poisonous qualities like that of the grain sorghums. On the valley meadows of mountain ranges it could be cut several times during summer for hay to keep cattle in good condition when grass is gone. One joint planted on my irrigated plot the first of April produced 33 stems, which were cut the first of July at eight feet tall. The new growth is taller than that now. The roots make a compound crown which may be subdivided for

new planting, but they have no underground runners and cannot become a pest."

Miss Annie Wheeler of Glendale planted Napier or Elephant grass on the range for goats. This might be inadvisable unless the goats were watched, because they would eat it to the ground. Such close browsing would restrict the possible growth of foliage but would not kill the plants unless long-continued. H. W. Bressler of Gardena had a patch last summer, and because his cow ate it enthusiastically, he is planting two acres this season. Eugene Spencer of Los Angeles has roots at least four years old at home and an extensive younger planting in Antelope Valley. Mrs. Galbreath of Pixley, Tulare county, has been growing Napier grass four or five years and has a fine stand now. Ernest Bucher of El Centro writes that canes planted last April have made a wonderful growth. R. W. McIntyre of Kelvin, Arizona, is increasing his acreage this fall.

H. L. Wagner of Descanso, San Diego county, is one of the pioneers with Napier grass in California, and he has a considerable acreage this year. One plant, reserved for repeated cutting to see how much it would yield, had been planted in July, 1918, and cut three times the first season. Last spring it was allowed to grow until July 1, when it was cut for hay. It grew five or six feet tall during July and was cut August 1 with 157 full-length stems and many shorter shoots and leafage, which was neither counted nor measured, but was weighed. The green fodder weighed 43 pounds. On September 2, at a height between four and five feet, the plant yielded 160 leafy stems, weighing 25 pounds green. This plant is on rather rich garden soil with occasional irrigations. Two more cuttings were expected this season. If plants were three feet apart each way, it would take 4,800 plants per acre, which would yield quite a lot of forage even at a lower amount per plant than that

Napier grass grown by H. L. Wagner in San Diego county. Upper: Planted July, 1918, cut three times in 1918 and twice in 1919. Lower: Planted April, 1919, on hillside. No irrigation after June 10, except a July thundershower. Both pictures taken August 15, 1919.

shown in this case.

Drouth-Resistance Experiment.

A drouth-resistance experiment with several hundred plants set out last spring on a hillside near Descanso seems very encouraging. These plants had no irrigation after June 10, except a thunderstorm about July 15, and no cultivation except hoeing out the weeds after the July rain. Early in August they were five to six feet tall and had 20 to 40 stems each. New shoots were appearing from the crowns, the stems remained succulent, and the leaves a deep green when all native grasses were already dry.

Australian Experience.

Extensive ranch experiments under Government supervision, through two years in Australia, whose climate is similar to ours, have shown Napier grass to be a high yielder, very palatable to livestock, frost-resistant (as to its roots) and drouth-resistant.

Merker Grass.

Merker grass, grown in the same demonstration plot by Mr. Musser but planted later than the Napier, made a growth not so tall nor so leafy,

(Continued on page 553.)

Poultry, Two Acres, and a Tractor

Written for Pacific Rural Press by R. E. Hodges.

Many a poultryman would be getting dozens of eggs more every day from his flock if he fed them plenty of greens. But green feed is a nuisance to maintain throughout the summer. It requires frequent cultivation and furrowing for irrigation. A poultryman with only an acre or two cannot raise feed for a horse to do the cultivating; and in poultry districts land is too valuable to raise horse feed anyway. We have seen many poultry ranches otherwise well maintained, but losing money every day for lack of the effort required to raise greens.

Such is not the case with H. J. and A. J. Hennings of Los Angeles County. Our story of the mechanical facilities used by these poultrymen, which appeared in the Pacific Rural Press of May 6, 1916, has continued to call forth occasional comment even to this day. In that article we declared that if the Hennings place were big enough to turn an ordinary tractor on, they would have one.

Well, tractors have improved since then, and the Hennings', father and son, have been watching them. At one of the southern tractor demonstrations they saw one with a four-horsepower engine delivering 1½ horsepower on the drawbar.

"That's just what we want, if it will work," said they. It was not worked at the demonstration, but the Hennings' looked up the agent at his home and asked to see it do something. The agent did a sorry job of plowing on very rocky ground, but it was evident that the tractor was all right.

So they bought the machine fourteen months ago and sold their horses. Their ranch is no bigger now than it was at the time of our first story, but their tractor gets into all the corners and goes through poultry yard gates too small for a horse. Implements are hitched within 30 inches of the tractor which itself is only about 30 inches long and not much over half as wide.

Two Acres of Solid Productiveness.

The ranch comprises two acres, on which are more than a dozen poultry yards, several strips of alfalfa, some berries, the home, fruit trees in every poultry yard and all over the place except in a half-acre corn patch that is being grown for greens. About 1800 hens are kept healthy, vigorous, red-combed, and full of eggs, for greens are grown a plenty by use of the tractor.

We found Mr. Hennings recently sitting on a box reading a farm paper while the irrigation water ran through a furrow along a row of corn a little over knee high. Several rows had been furrowed ahead of the water and the tractor stood ready for the little kick that would start it down another row when water should have filled the near furrows. Water here and at this season is scarce and expensive, so only one furrow per row was being used. It was a simple matter to set the single furrower over to one side of the drawbar iron so that it made a trench close to the corn without running the tractor too close. It kept a man humping to follow the tractor, though this a matter of regulating its speed. And when the ground is too warm or soft to walk on with comfort, a two-wheel affair with a seat is hitched on so the driver can ride with the tractor implements under or in front of himself.

Later in the season when the corn is bigger, more water is required and an extra furrower is attached at the other end of the drawbar to make two at once. The furrows were six inches deep.

There were five-foot spaces between the ends of the rows and the chicken fence, so green corn could be hauled out by the tractor and chopped by engine power for daily feed as described in our previous article. The tractor in turning at the ends of rows never stamps down a stalk.

Tractor Cultivated and Dug Potatoes.

The corn patch had produced a crop of potatoes last summer. The tractor plowed in the spring good and deep with an eight-inch plow. It cultivated the potatoes and dug them. Mr. Hennings devised a special potato digger, which worked very satisfactorily. He obtained a "wing-furrower" of about two feet spread and had the blacksmith fasten an iron behind its center line so the furrower could be substituted on the plowbeam in place of the moldboard.

Tractor Hauls Crops.

After the potatoes were picked up, they were hauled to the house, eight or ten sacks per load, on a common two-wheel auto trailer to which a long tongue was fastened to the tractor by use of two bolts. Last year beans were hauled in the same way to a small threshing machine which was then operated by belt power from the tractor. The machine exerts four horsepower very steadily on the belt.

The trailer and tractor turn around in a sixteen-foot circle. A smaller trailer is used to haul chicken ma-

the tractor and the eight-inch plow. Alfalfa roots over a foot long and nearly an inch in diameter were pulled out by the plow. This patch will be reseeded or used for garden stuff or poultry greens, for every bit of the two acres serves a productive purpose.

Tractor Plows Alone.

Last winter some of the poultry yards got muddy in large spots. They needed plowing to put the soil in shape to absorb the water. But 'twas disagreeable for the plowman to wade through the muck. So the tractor was started through the mud holes and the driver would turn it loose, hurry around, and catch it on the dry ground on the other side. Mr. Hennings declares the tractor alone will plow a straighter furrow than with a man driving it. Just get the back furrow started straight and run one wheel in the furrow. It will steer itself across the field by feeling along the landside. This requires a firm soil to keep the wheel from climbing out and plowing not over eight inches deep to keep the tractor from tipping over. Two acres have

the hose on his tractor found the centrifugal cleaner cap full of dust after an hour's use. He put on a hose and ran half a day. He was astonished to find practically no dust then.

"Dust also gets into the crank case through the breather pipe. The cap to this pipe has an extension designed to catch the dust by making air zig-zag several times before it gets into the crank case. This extension, however, in cultivating a fine, dusty mulch collects so much dust that it drips with oil-made mud. We prevent this by covering the breather cap with flannel, which is tied tightly around the pipe.

"When grease cups are screwed down to the limit, several threads are exposed inside the caps. These collect dust, and when they are unscrewed the threads are injured. The dust also mingles with grease afterward applied and makes a good grinding compound on the bearings.

"This tractor pulls a disk harrow made of eight twelve-inch disks, working a strip about 3½ feet wide. It was hooked close to the tractor and a two-wheel riding seat was attached to follow. The disk and the riding-seat wheels frequently got tangled up on short turns, so we put a longer tongue on the disk and put the riding wheels in front. That fixed the trouble.

"Frequently we found spots on the place that were so low that they got too much water in irrigation, or made mud holes in winter. Some spots were so high that they didn't get enough water. We had a piece of ¼-inch iron plate eight inches wide and about four feet long made into a land leveler. About six inches of each end were bent forward to act as wings to hold the dirt, and the plate was fastened onto two of the standards of an ordinary cultivator which is built for the tractor.

"We wouldn't be without a tractor if we had only one acre. It does more work in a day than a horse; it does better work; it does work that a horse could not do; it runs any kind of a small belt-driven machine; and it does the work at less expense."

Every man works better with encouragement than with carking criticism. The man that has to be nagged at all the time is not very valuable to anybody.

The difference between eggs and lots more eggs from a flock of hens in summertime is frequently a matter of green feed, which the poultryman thinks is too much bother to grow. The difference between bother and delight in growing greens for poultry is a matter of animal or motor power. A little tractor which pulls more than a horse but takes less care per day than a horse, runs between or a straddle of closely set rows and provides thrifty green feed with least man power.

nure from the various houses to the berries, garden, alfalfa, corn, etc.

Better Than Horse in Small Yards.

It is within the chicken yards that the tractor shines. Three fruit trees in each yard must not be barked. Corners are there in which the soil needs turning periodically to keep it sweet and to keep the fowls healthy.

One hundred to 200 hens are kept in each house, though one colony is much bigger. A yard for each house is partitioned so the hens can be turned into either half as desired. While the fowls are kept on one side, barley is growing on the other side; for "greens make eggs," as Mr. Hennings would say.

After two or three weeks on one side, it has become bare and a bit foul. The barley on the other side is cut by hand and chopped to supply the chickens two or three days. Then the chickens are turned onto the stubble. The bare ground is sprinkled and plowed by the tractor much more conveniently and closer to the trees than was formerly done by a horse. Then barley is seeded and is up three inches within nine days.

Plowed Alfalfa.

The alfalfa patch included five strips of convenient width for cutting. Enough would be cut each day to fill out the green ration for the flock, and by the time the whole patch was cut, the first part was ready again. Part of this got too weedy, so two strips were plowed by

been plowed in 9½ or 10 hours.

Outside Work Paid Well.

Formerly considerable work was done with the tractor for neighbors. It might be laughable to speak of plowing a lawn 30x40 feet in area with a tractor; but one of the neighbors despaired of getting a horse to do it, so the Hennings turned that sod with their tractor. It was Bermuda, four years old, and with eight inches of top growth. It broke the plow once, and several times they had to chop the plow loose from the sod. That was a year ago. The lawn was planted to barley and plowed again this summer by the tractor. Two acres were plowed for one neighbor and one acre for another. The charge was 75 cents per hour.

Experience Develops Good Ideas.

Some suggestions developed from experience will prove valuable to other users of similar tractors. "It is not the tractor alone that gives long service," says Mr. Hennings. "If the man gives it attention according to directions, it is a long-lived machine. That applies particularly to adequate lubrication. But there are other ideas that have been suggested by our experience. The tractor is small and low. It has a centrifugal air-cleaner whose intake opens behind the machine. There is a lot of dust flying behind the machine, so we have put a hose on the intake and turned it so it opens in front where the air is clean. A neighbor who did not use

Farmers Have Become Prosperous

Written for Pacific Rural Press by John J. Fox.

"Some things are more puzzling than others. To illustrate: More raisins are now consumed than when they were cheap. Is it possible that combinations in restraint of trade have the effect of increasing consumption?"

This is a very pertinent remark appearing on the editorial page of one of our great dailies on October 6th. It is, of course, impossible that combinations in restraint of trade increase consumption, but it is easy to explain why more raisins, prunes, apricots, peaches, pears and other dried fruits find a ready market now than the market wanted when these fruits sold at starvation prices—when only half our present tonnage was produced.

Why Are Our Growers Flourishing?

Chiefly because we are advertising our wares. And this can only be accomplished on such a large scale by united effort.

Some years ago, before the dried fruit organizations were formed, the writer asked a friend of his—a packer—why the dried fruit packers did not get together, assess themselves \$25 or \$50 a car and go in for a campaign of advertising so as to create new markets for the thousands of acres of

ous quest for new markets and pushing and extending old ones.

It is by organization of the farmers, each in their own industries, that has at last made farming and fruit-growing a glowing, throbbing industry, instinct with life, energy and hope. The success of the farmer is reflected throughout the State, contributing to the income of every single individual who uses his hands or his brains. Every dollar that comes to the farmer finds its way to town sooner or later—in the pockets of the laborer, to the merchant, the manufacturer and the artisan for improvements—in short, the whole State is enriched by creative effort and constructive investment. What would have happened had not the farmers organized to conduct their own business. Country life would continue to be languishing in nine cases out of ten and the business of the State in every branch would suffer.

There is no undertaking in this State that goes out and pushes business more thoroughly than do our farmers' organizations, from oranges to nuts, from raisins, prunes and peaches to beans.

valry exists in their marketing. The time is rapidly approaching when the production of our dried and processed fruits will be so vast that the same fierce competition in sales will ensue as now exists in any other business. The farmers are organized to create and extend new markets for their ever-increasing production, dividing the expense of administration among themselves, as well as keeping the money in their own pockets that would otherwise go to the speculator.

Those Who Benefit Should Contribute.

At present the money spent by the organizations for advertising gives the packer who doesn't advertise an advantage. For that packer is equally benefited by the new markets created by associations and by "independent" growers, who sell to him. However, the grower doesn't worry about that. His organization is growing as fast as the farmers realize its importance to their industry. As fast as this is recognized the "outside" men "chip in," to shoulder their small share of the expenses as they become conscious of sharing the benefits of the organization.

When 100,000 tons of raisins once

\$100,000,000, the returns to California being about \$75,600,000. And the markets gorged the lot and looked round for more!

How Was This Achieved?

It was accomplished by advertising. The Exchange ranks among the large advertising food products of America, spending now, in normal years, about \$500,000 in national publicity. The annual investment in advertising represents an assessment of less than 2½ cents a box on the shipments of oranges and grape-fruit and less than 4 cents a box on lemons. This great organization utilizes all the major mediums of advertising—magazines, newspapers, trade periodicals, bill boards, car signs, moving pictures, window displays and literature. About 75 per cent of the advertising appropriation is spent this way. Then there are orange, lemon and marmalade recipes distributed, orange calendars sent out, window display material for the retail trade, theatre slides and electrotypes for retail ads in every nook and corner of the Union. Nearly 5,000,000 pieces of window display material, lithographed on light cardboard, were sent out. The weight of this last little bunch alone was about 175 tons.

Other Combinations to Promote Trade.

The Associated Raisin Company is doing advertising on just as extensive a scale as the citrus men, and so are the other selling organizations—according to their magnitude. Could the wealthiest packer in the world advertise on such a scale? Not unless he had cornered the whole business on a 70 per cent basis. For the 30 per cent outsiders would have the edge on him.

But in the organizations we have mentioned, even those men remaining outside do not want to see the organizations suffer because it would injure themselves. It is only by combination that these gigantic advertising campaigns become possible. And every individual in the State is warmed in the glow of prosperity resulting.

Perhaps 8,000 private prune-drying yards like the above—larger or smaller—go to make up the California Prune Growers' Association. The raisin growers represent an even greater tonnage in their Association.

prunes coming into bearing. The base price then was around three cents, I think. On 9,000 cars this would have provided on the lower figure \$225,000 for an advertising fund.

He said: "It has been talked of several times, but we can't get everybody to agree. Now, supposing half of us put up \$140,000 for advertising and the other half nothing. You can see that all would benefit, but one-half would be advertising for their competitors just as much as for themselves. It can't be done. I wish it could, for we could double our markets." It is a matter of grievous history that dried fruits went down in price below the cost of production and broke the hearts of innumerable farmers and their families in their perennial fight for existence.

How the Grower Took Hold.

It was not until the farmers organized to market their own wares that the marketing of the rapidly increasing production of all fruits became possible. Every member of each of these organizations contributes his small quota towards the advertising campaign of his association and his whole industry profits thereby. Our raisins, prunes, and other dried fruits are now carried to every corner of the globe, no matter how remote. Paid agents are thrusting out in a continu-

What Is the Value of Our Creative Effort?

Dean Hunt of the University of California in a recent address at the opening of the Farmers' Short Courses at Davis, said that California's field products might reach \$700,000,000 for the year 1919, divided roughly into \$250,000,000 for field crops, \$250,000,000 for fruits and \$200,000,000 for livestock and animal products. All this mighty sum practically comes out of the ground. Wouldn't it be a plum to hand over to the commission man or the speculator? The commission man, the world over, doesn't leave his stall. Broadly speaking, he makes as much as he can with the least possible effort and expenditure. The individual packer sees a chance and captures the business just as you and I would have done, given the opportunity and the enterprise. He is busy and pushing, but he also has to keep down his overhead and cannot afford individual agents the world over nor can he advertise to benefit his competitor.

Competition of the future.

Now as to prices. Apples and oranges, also apples and prunes, strange to say, are competitors.

All dried fruits are more or less in competition. Already a friendly ri-

surfeited the market to such an extent that the price became mere salvage, the growers, by uniting and advertising, can now sell a 200,000-ton crop at a remunerative price and will, in a few years, be called upon to sell one 50 per cent greater than this, if plantings continue at their present rate.

Our Oldest Farmers' Selling Organization.

Let us take just one of our growers' organizations—the "California Fruit Growers' Exchange" (that sells citrus fruit only), with its 10,000 members. We choose it because it is the oldest. Twenty-five years ago, with the small production we then had, conditions for the grower were hopeless. About 1893 at a public meeting in San Diego, one man said in effect: "Gentlemen, we are in a parlous state, we orange growers. In a few years we may be raising as much as 10,000 carloads of oranges. Who's going to eat them? Overproduction is staring us in the face." When he sat down—gloom! You could feel it pressing you all around.

The California Fruit Growers' Exchange shipped last year 33,174 carloads, slightly over 72 per cent of the State's total shipment of citrus fruits which was 45,896 carloads. The delivered value of this crop was about

California Walnut Assn. Sold the Crop

The following matter is taken from the report of C. Thorpe, General Manager of the California Walnut Growers' Association, to the Board of Directors, submitted October 1. Opening prices were adopted in line with Mr. Thorpe's recommendations and were well received by dealers all over the country. So unanimous was the approval of these figures that within 36 hours after they were wired out, the Association was completely sold up on its total estimated shipments.

California will, in all probability, produce this year 46 million pounds of walnuts as against 38 million pounds last year. The demand for our product, however, is increasing faster than the production. I attribute this increase in demand to the splendid advertising the Association has been doing for the last few seasons, to the thorough method of distribution which the Association has developed, and to the quality of the product we are now delivering. The American public has learned more about the value of California walnuts, and is eating them to an increasing extent in a great variety of ways. The Association has been fully booked up to its estimated output, with the possible exception of No. 2 grade, for several months, and we have had to refuse additional business offered us, totaling perhaps 100,000 bags. The strongest demand is on No. 1's and I feel confident in stating that regardless of what price you gentlemen establish on No. 1's, the demand will exceed the supply.

We have recently been exerting considerable efforts in popularizing the budded variety, and are well sold up on buds also, with a wider distribution on budded this year than ever before—a matter of salesmanship. We have induced the trade generally to take on a percentage of budded on our recommendation, and we will only continue to popularize this grade and keep the demand in harmony with the increasing supply by greatly reducing the former differential price over No. 1's. As the budded variety will continue to show the heaviest percentage of annual increase, the time has now arrived when we must make this variety popular by offering it to the public at a reasonable price. In my opinion the differential this season should not be over 2½c above No. 1's.

It is my opinion that an opening price of 33c on No. 1's would move them into consumption readily, but this would be what the trade calls an odd price, that is, with freight added neither the jobber nor the retailer could make a reasonable profit and sell the nuts to the consumer at 50c a pound, and in many instances our goods would retail at between 50c and 55c a pound. In my opinion a 31 to 32c price would prove much more satisfactory all around, would particularly satisfy the trade, would allow them a reasonable profit, would put the goods into consumption very promptly, and permit us to go onto a bare market in 1920 as we are going this year—and there is certainly a tremendous advantage in offering new crop goods on a bare market. For instance, I have found that all over the country the last sales of No. 1's, old crop, have been made by jobbers at from 38c to 42c a pound. This seems like a tremendous price, but it simply shows that a limited quantity of walnuts will move at almost any figure on a bare market. The trade have been recently paying much higher prices for old crop goods than they will for new. Consequently the new prices will seem reasonable, whereas had the trade been carrying over old crop goods the market on the old crop would have been low and sluggish and the new crop goods would not have gone on a receptive market.

"No. 1 California walnuts usually sell at about a 3c premium over Italian Sorrentos. It has also been true that No. 1 Soft Shells have always heretofore sold at from 1c to 2c a pound above the price of Nonpareil almonds. Notwithstanding the fact that the almond crop this year is double what it was last, the Exchange's opening price on Nonpareils was 32c, which was considered very reasonable by the trade. The Ex-

change's business being entirely booked on an SAP basis, it was necessary for them to receive confirmations which we understand came in to the extent of almost 100 per cent.

"The crop of Italian walnuts, we understand, is about normal, and the quality normal. Thus we may expect that a maximum of 2,500 tons may be imported to America. The crop of Grenoble walnuts is reported very light, and maturity three weeks later than normal. Transportation in France is still in a very chaotic condition and no one really expects arrivals of new crop French nuts before the middle of December, which is too late for the holiday trade."

"The crops of the poorer varieties of French walnuts, Marbots and Cornes, are also reported light, of poorer than usual quality, and those sections have recently experienced some considerable hot weather which has caused further damage to the nuts."

"I feel that it is an even more serious mistake to name the price materially too low than too high. As an illustration: Hawaiian pineapple people this year opened prices approximately the same as prevailed last season. All of their orders were confirmed. Their price was comparatively too low by perhaps 15 to 20 per cent. The result was that every jobber and every retailer found that he could use more pineapple than he had bought. All were in the market for more. The result was that within a month after opening prices were named, pineapple had advanced over 100 per cent. Contracts changed hands at between 100 and 125 per cent over opening. Some jobbers who bought at the opening immediately advanced their prices in accordance with the prevailing market. As a result the consumer will pay this year nearly twice as much for a can of pineapple as she would have paid had opening prices been based on supply and demand. If they had been named, say 15 to 20 per cent higher than they were, everybody would have had the pineapple they needed, would not have wanted more, the market would have remained comparatively stationary, and the goods gone into consumption with only a reasonable profit to both jobber and retailer. Do we want to lay ourselves open to a similar situation on walnuts?"

While the prices I am recommending may seem rather high, in the last analysis I don't think they will average much above last season's prices, because the crop will probably average 17 per cent No. 2's, and it is going to be necessary, in order to move these, to place a differential on them of between 5c and 6c. If a 31½c price is established on No. 1's, I think a differential of 5½c should be established, or a 26c price should be placed on No. 2's. Whenever, in previous seasons the crop has developed a large percentage of No. 2's, there has been a large carryover of this grade. In order to prevent a repetition of this condition, it is going to be necessary this year to name a differential that will make No. 2's attractive to the trade, and that differential must be a large one. It is certain that without at least a 5c differential on No. 2's a large carryover will result, and I am not too sure that even a 5c differential will promptly move this grade.

In conclusion, let me state that it is my opinion that a 31½c price on No. 1's will be well received, that criticism, if any, will be favorable. This price is below opening prices of the principal independent packers and below their present prices. It is a lower one than the trade is expecting, and when the season is over we will stand better with the trade than we ever have before.

The **DEALER** says—
"the **GIANT** mark
protects you from
imitations"

"It pays me to give my customers what they ask for," says the retailer who knows what's what. "When they ask for 'Giant Powders' I give them GIANT Powders—the real Giant, made by The Giant Powder Co., Con. I don't tell them that 'I have the same thing, only under another brand name,' because it is not true.

"The name 'Giant' on a case or a stick of powder is evidence that the powder is made by the company that originated Giant Powders. Remember this: You can't get Giant results when you use ordinary dynamite that look like Giant but aren't marked Giant."

Look into the new, money-saving methods of clearing land, blasting tree beds, ditches, boulders, etc. They are all described in our up-to-the-minute book, "Better Farming with Giant Farm Powders." A post card will bring it by the first mail.

FRUIT EATING WAYS WITH LINNETS.

To the Editor: In regard to red-headed linnets, why not treat them as the wise old lady advised the woman who was troubled as to how to handle her husband. "Feed the brute," she said. Why not feed the linnets by planting mulberry trees in convenient places. I have been told this will greatly minimize the damage to cherries, berries, apricots, etc. Would you advise the large black variety of mulberry, or the small white kind? A boy friend of mine complained that the birds ate all their large black mulberries so that he got none himself.—L. D. B. Yuba City.

[The Persian mulberry is especially commended as a linnet distractor. It has much fruit ripening continuously.—Editor.]

Linnets and Sparrows.

To the Editor: If the small boy is given a bounty for dead birds and eggs of the red-headed linnet, it might help to get rid of them. As the linnets are very fond of the sorghum known as "Egyptian wheat," it might be possible to poison a lot of these pests and the English sparrow also by spraying a small patch with Paris green. We had an acre of this grain three years ago, and the linnets and sparrows destroyed more than half of it. In England the sparrow hawk keeps them thinned out, as the farmers have sense enough to know that these hawks are their friends.—Samuel Haigh, San Jose.

Poisoning Linnets.

To the Editor: I have three or four peach trees that ripen two or three weeks before my main crop of 20 acres. After the birds have eaten three-quarters of the early peaches, I remove the rest of the fruit and select four or five of the best ones which are still firm and juicy, for each of the early trees. I place these fruits on short spurs or stubs on the main leaders about four feet from the ground, and remove leaves near by so they can be plainly seen. Then smear powdered sulphate of strychnine lightly every three-quarters of an hour whenever the peaches are eaten. A hot day is best. All other ripe fruit within flying distance (say one-quarter to one-half mile) must be protected. We have some one under those trees to drive the birds away. We have killed 400 in a day, all except a dozen or so which get scared. They don't come again that year and there are fewer the next year. Pick up the birds as cats will eat them; also rattlesnakes. It kills them.—I. A. Butchers, Santa Margarita.

Thinning the Birds in Advance.

To the Editor: I noted in Press some time ago a number of queries for the best method of getting rid of a large number of linnets. Here in Pleasants Valley we have not only linnets, but a number of other species of "fruit birds." My observation regarding the bird pest is, we don't think of taking any action till the fruit is being destroyed and then it is too late, or we do not have much spare time. It has been demonstrated that concerted action during the winter and spring months will thin out surplus birds and get them back to proper proportions. Particularly at nesting time the work could be carried on with good results, but don't overdo it. I am liable to be scalped for advising a crusade on birds at nesting time, and will state in advance why I advocate so cold-blooded a plan. Legislation has been enacted and societies formed for the protection of bird life, but the natural enemies of said birds—hawks, owls, etc., are not protected. Therefore the fruit-eating birds have increased abnormally, with the result that we are out of balance.

To kill birds get a small bore shotgun so the ammunition will be cheaper, a 22 calibre rifle and several sling-shots using small shot, and go to it whenever you have a spare half hour. Commence on November 1st if you are home from vacation by that time, and by the time fruit is ripe you can have the birds as scarce as you wish.—A. C. Sullivan, Winters.

"Set 'em Snug"

"It's the little things that count, son, when you're blasting for tree planting—tamping, for instance. It takes about three minutes and it's just as quick and easy to do it *right* as to do it *wrong*. The Hercules Powder Co.'s book, 'Progressive Cultivation' tells you all about it. If you follow the directions in this book you'll always get the best results with

HERCULES DYNAMITE

"I tell you—there's nothing like it. Hercules Dynamite gave me my start in the fruit growing business—and I owe a big part of a good sized balance in the bank to the knowledge I got from 'Progressive Cultivation'. This book tells you all about the uses of explosives on the farm and in the orchard. And it tells you *how* to use dynamite to get the best results—gives you full directions illustrated by photographs and diagrams.

"Every orchardist in this township should have this book—and he can have it, *free*, if he'll sign the coupon and send it to the Hercules Powder Co."

TWIN CITY

12-20 Kerosene Tractor with 16-valve engine

Pays Big Dividends

For the first time in the history of the tractor industry, the 4-cylinder, 16-valve engine (valve in head type) is now applied to a tractor. The TWIN CITY 12-20 with its 16-valve motor actually develops 25 per cent more than its rated horsepower.

This new 12-20 is a light weight tractor that will out-pull, out-last, and out-dividend other tractors of equal rating.

Not built down to a price, but built up to a fixed ideal—to do the work assigned to it better than it has ever been done before.

The highest grade tractor will unfailingly prove the least expensive and pay the biggest dividends.

HUMBOLDT COUNTY APPLES ARE UNSURPASSED.

[Written for the Pacific Rural Press.]

Humboldt County apples have not been surpassed in quality, texture and color in the experience of the three judges who represented the State University Farm at Davis, the State Department of Agriculture, and the Pacific Rural Press. The quality was excellent, the display attractive and resplendent with color, the pack alone showing inexperience with the demands of commerce and the new laws governing standardization.

Almost all were late apples and included Kings, Newtown Pippins, Canadian Red, Blue Pearmain, Spitzenberg, Belleflower, Jonathan, Rome Beauty, Ben Davis, Minkler, Northern Greenings, Rhode Island Greenings, Delicious, Bismarck, Wealthy and Seek no Further.

It is impossible to recommend extended plantings of apples or pears in this county until transportation facilities are improved, both from ranch to shipping point and from shipping point to market (at present it costs 40 cents a box to send apples from Eureka to San Francisco); until good roads are provided that shall be negotiable for an auto truck the year round, until commodity rates are obtainable from the railroad and leadership and co-operation are effected among the growers as it now is among Humboldt dairymen.

In the rich dairying sections of Ferndale, Fortuna and Arcata, good roads and unity of action prevail. Here everyone has money and business men prosper. Except for lumber and stock, the rest of the county seems likely to lie fallow till it is made accessible by good roads. Because nobody with money enough to spend on improvements is going into isolation for several months in the year.

It is really up to the business men of the large towns to get together and carry out these improvements unless they are content to sit around and wait for what drops from the lumber pile. The business men of Fresno County voted an additional six and a half millions this year for a bond issue for a system of better roads, and they already had a pretty good one. The interest alone on that will bulge their tax list from new settlers before the money is half spent.

Wherever the business men of any county get together and back the farmer in his great enterprises and undertakings something has to move. Witness Los Angeles, Fresno, Sacramento, Yolo, Santa Clara or any other rich center where they have discarded the "peanut-stand." They are getting in settlers with money in their pockets—settlers who know how to work to make more. And all they make finds its way to the town sooner or later.

Why, if Los Angeles had that little redwood park at the mouth of Bull Creek they would spend millions in advertising it and keep a bunch of "bulls" there to see that no small boy sharpened his knife on the bark!

Humboldt County can grow the stuff. She is the richest county, perhaps, in the State in natural resources and productive possibilities, and it is a joy to be within her splendid borders. Millions will be needed to make her vast empire accessible throughout the year, and then she will be a leader. Nobody knows California who has never visited Humboldt County.

52ND STATE FRUIT GROWERS' CONVENTION.

This convention which takes place at Chico (Butte County) from November 12-15 is preceded by two days' convention of Horticultural Commissioners, meetings that add value to the service and uniform action on the part of the county men.

The Fruit Growers' and Farmers' Convention this year in dealing with the important problems that confront us have left room for discussions by growers whereby valuable suggestions may be offered. The tentative program provides the following themes for discussion: "California Agriculture—the things that threaten it and the need for protection"; "The Accomplishments and Possibilities of Co-operation," in which representatives of all our great growers' associations will take part; "The Standard Packs and Fruit Packing Demonstrations."

On Thursday (Nov. 13) it is proposed to spend the entire day at Oroville considering oranges and olives, with inspection trips through the groves of this district as well as the canneries and olive-packing plants. Maturity standards and orange packing; ripe olives, cultural methods and pruning, and following discussions will provide a meaty session.

On Friday (Nov. 14) "The Effects of Irrigation, Pruning and Spraying as Factors in Frost Control" will be discussed, also "Evaporators for Fruit Drying."

"Standardization and the Consumer," "Community Canneries" and Reports of Committees will wind up this day, to be followed on Saturday by a popular meeting at the Durham State Land Settlement, seven miles south of Chico.

The highway is in good shape and probably a very large proportion of the visiting assembly will arrive in automobiles. Harvest is completed and no rush of work being on hand, everybody has an opportunity to attend the convention, now only three weeks away.

POINTERS ON MARKETING ALMONDS.

[Written for Pacific Rural Press.]

The price obtainable for your almonds depends largely on the ability of the Almond Growers' Exchange to get them into the market early. Almonds are perishable so far as market value is concerned. Almonds will shrink in value if they have to be sold after holiday demand.

September sales are Thanksgiving sales.

October sales are Christmas sales. Almonds should be delivered just as soon as they are thoroughly dry.

Stained almonds must be kept separate. Last year the cost of handling stained almonds was 3½ cents a pound. This year with the equipment and knowledge acquired, they can be handled for about one cent a pound.

If stained almonds are mixed with clean ones, the whole have to be processed.

Best Pump On Earth

For shallow or extreme deep lift; one that will give more water for the power expended; more water from small diameter wells without any pit, and more pump for the money than

*This
Bean product
makes good*

If a canvass were made of California farmers a certain percentage of them would give it as their opinion that, as a rule, no direct connected gas engine pumping unit could be expected to give any great degree of service.

And they would be honest in their opinion, based, however, entirely on their own or their neighbor's experience with a rig put together on the ranch in a more or less hit-or-miss manner—probably utilizing an engine unfitted for the work.

There is real danger to the manufacturer putting out a unit of this type that might not give continuous service for years to come.

Our Bean Universal Direct Connected Engine Driven Unit has made good—

—is making good every day now.

It is a success—a complete success.

It is driven by an extra heavy vertical type engine fully governed for complete safety at all times—connected direct to our Universal 4-inch pump.

It's a flexible rig and inexpensive to install and operate—it consumes but 7 to 8 gallons of distillate in 10 hours steady running.

Here's your pump if your head is not too high. Ask us about it. Use the coupon.

Here and There in the Fruit Business

Dried Apricots Nearly Sold Out.

The dried apricot crop has pretty well moved off, according to the California Prune and Apricot Growers' Association, and there is a probability of a final clean-up shortly. Settlement with growers on the basis of opening prices net to them on the several grades seems pretty well assured. Of late the market has slumped seriously and is very dull, says H. C. Dunlap, due largely to government investigation of high cost of living and some export difficulties. But Association prices, as such, have served to maintain a stability in the market that might not otherwise have been enjoyed.

Prune Growers to Affix Signs.

The Prune and Apricot Growers' Association have placed orders for attractive signs to post on all orchards of members of the association—a fine badge to show the owner is an active member of the fraternity, and a good ad. to the visitor of the unity and activity of the industry. The Associated Raisin Growers, Citrus Growers and Walnut Growers, all have their own respective orchard signs. The Prune and Apricot Growers will already need over 10,000 of them. These will be in baked enamel colors and will reproduce the labels on packages and magazine advertising. A small growers' badge for members to wear at public meetings would add weight to their remarks.

Better Transportation Promotes Improvement.

There is a revival of interest in fruit growing in the Camptonville section of Yuba County, due to the building of a State Highway, which

will permit transportation of perishable crops to market without injury. There are many other sections of the State where things are looking up for the same reason.

Eastern Farmers Recommend 10 Hours.

The recent recommendation by a federation of Eastern Farm Bureaus that a 10-hour day for all be adopted, shows how many workers realize the gravity of conditions regarding the nation's welfare. It signifies a desire to sacrifice personal indulgence for the good of the nation, and is a full recognition of the absolute importance of production to better living conditions and to hold our foreign trade.

Japanese in Kern County.

Fifteen hundred and fifty acres of land in Kern County are owned and controlled by forty-six Japanese, according to a report by T. F. Burke, County Assessor. Senator Phelan had sent to the office for these figures, which show an average of about 33 1-3 acres to each Japanese owner. In Japan a foreigner cannot acquire land, it is said, and if he did it would not do him much good. As one farmer said, "It is better to fence a mouse out of the cheese dish than it is to shut him in along with the cheese."

Where the Apples Go.

About one-half the total apple shipment or from 25,000 to 33,000 carloads were unloaded at 18 leading cities in the past three years, says the U. S. Department of Agriculture. New York City had about one-third of these per season, Chicago used less than one-half as many as New York, Philadelphia and Pittsburgh one-third as many as New York. Six other cities took in the neighborhood of 1,000 cars each, while five other cities used from 400 to 900 cars each. We must send these an appetizer.

This Season's Hops.

The demand for California hops continues strong and the immediate outlook most promising for growers. This year's crop was harvested without loss and without trouble, and the condition of the cured hops is excellent everywhere. The yield was well up to early estimates, the total production for the State will exceed last year's crop by about five million pounds, according to E. E. Kaufman, of the Bureau of Crop Estimates. Some late sales have been reported at 85 cents a pound and a few growers are still banking on dollar hops.

Recognition of Good Service.
The University of California, the State Department of Agriculture and other specialized institutions find that large commercial undertakings are making a continual bid for the services of their trained men in horticulture and agriculture. Chas. F. Collins, Horticultural Commissioner of Tulare County, has recently received a substantial and gratuitous increase of salary in recognition of his service, a step that has been commended by the fruit growers. The manifold duties of a County Commissioner and his value to the fruit growing industry of the State is now getting a belated recognition.

Collecting Parasites for Insect Pests.

E. W. Rust, parasite collector for the State Department of Agriculture, has arrived in South Africa, where he

will be engaged for some time, locating, rearing and packing beneficial insects to be sent to California for the control of black scale and mealy bug.

Mr. Mally, the Cape Town Entomologist, has furnished Mr. Rust with all facilities at his command, including a well-equipped laboratory.

Oil Sprays and Mortgages

All who read this probably know
That there are good and bad mortgages,
But because there are bad mortgages does not
Condemn the mortgage—which is the
Oldest form of investment security known.
So with oil spray—to say oil spray
Means little or much, depending on which
oil spray is meant,—
Who makes the oil spray is not all important—
But the big factor in selecting an oil spray is:
The experience in the manufacture of an oil spray
of those who make it; the length of time it has been
used, how used and where used; and the good
results obtained over a period of years.

ZENO

Is an internationally used miscible oil spray, and
These are some of the reasons why it has proved
The best by years of test.

Olene is the Citrus Spray

MANUFACTURED ONLY BY

Tomato Marketing Troubles Disappear.

One of the Los Angeles city newspapers succeeded in its effort to create a stir by accusing Southern California tomato growers of plowing under their tomatoes and dumping tons of them in order to hold up the price. The persistent publicity led to a Grand Jury investigation, which was recently completed to the great advantage of the growers, who needed the proper sort of publicity. The stimulus of this publicity was seen even before the end of the investigation in the large quantities of tomatoes which resumed their proper course to the public markets and the canneries. No indictments were returned.

The facts, as explained by Secretary J. M. Rittigstein of the Vegetable Growers of California, Inc., are told below.

Peaches Excluded Tomatoes.

The peach crop of Southern California was the largest in history, and was unusually late. Each day also brought carloads of San Joaquin Valley peaches to southern canners. To show one phase of the big business in canned peaches this fall, over \$500,000 worth were exported to the English trade alone from Los Angeles ports during six weeks. The canners were pestered with buyers for export to foreign countries. But the exporters did not want tomatoes very much.

With such a demand, not only abroad but also in American markets, and with profits which you can guess at if you can scrape up money enough to buy a can of peaches, and with heavy supplies to work on, it was no wonder that canners handled peaches to the exclusion of tomatoes, for which the market was comparatively uncertain.

Canned-Tomato Market Uncertain.

One of the chief reasons for uncertainty in the tomato market was the fact as stated by Mr. Rittigstein that the Government threw onto the market 5,000,000 cases of canned tomatoes in July and August. These were sold to the public at about nine cents per

can. Some of the canners asked to be released from their contracts with the growers' association because they could buy from the Government the tomatoes they themselves had canned in 1918 and store them in warehouses cheaper than they could buy and pack the 1919 crop!

Couldn't Ship East.

Eastern markets were well supplied with eastern tomatoes. One Los Angeles firm, which usually ships one to three carloads per day in the early fall, found the carlot demand so weak that the added difficulty of getting cars led them to shut down their plant. The Association itself tried shipping carlots to San Francisco without success. As neither the canneries nor shippers wanted the crop, which was fast ripening, a flood of tomatoes poured into Los Angeles public markets. Prices went down to 25 cents per 30-pound lug box, then to 15 cents, then to ten cents; and produce dealers refused to handle them at all. Twenty cents a lug box would scarce pay the hauling charges plus commissions, shrinkage, repacking, and risk of loss while awaiting sale.

"Help Yourselves."

So growers in certain districts actually posted signs along their fields: "Canneries are closed; it doesn't pay to ship—help yourselves."

At the time of the railroad strike, peaches ceased coming from the north and the Association hoped to get tomatoes packed in their places. But most of the canners found themselves without a can and no way to get any.

Members of the Association who could find markets for themselves were temporarily released from their contracts. Several canneries have been operating exclusively on Association tomatoes, the eastern demand has picked up since the frosts, the Railroad Administration claims that it is now easier to get cars, and pressure has thus been removed from produce markets, which can therefore obtain paying prices.

Orange County Lima Bean Situation

Of the 500,000 to 525,000 bags of lima beans recently estimated by Manager R. L. Churchill of the Cal. Lima Bean Growers' Ass'n to have been grown in the State this year, something like 125,000 were produced in Orange County, according to President W. C. Jerome of the San Joaquin Lima Bean Growers' Ass'n. Yields varied from around 200 pounds per acre on a majority of the acreage (which is high and unirrigated) to 700 pounds on the low, damp, unirrigated lands, and to an average about 1250 pounds on the better irrigated lands, with 2500 pounds as a maximum. Best results were obtained where water was applied plenty and correctly on the sandy and adobe soils both in the uplands and the lowlands.

Irrigation water has been scarce. Mr. Jerome estimates the total gravity water available at about 1500 miner's inches during the driest part of the season. The Santa Ana Valley and the Anaheim Union divide the Santa Ana River between themselves. Most of the water used was produced by pumps, but the water table lowered so much that many centrifugals were left dry in their pits. This is not likely to occur soon again. It is estimated that the average cost of pumping is a cent per inch per hour including wear on the plant. Though many new pumps have been installed, the irrigated bean acreage is probably not much increased if at all, due to the fact that formerly beans were grown in irrigated orchards where the trees are now too large.

Not a great deal of troubles have visited the beans this year aside from drouth. Worms which have bothered

other lima districts in previous years and were rather bad in Orange County for the first time last year have done some damage again this season. They bore holes into the pods and eat along the margins of the beans, sometimes injuring all in a pod or eating some of the beans entirely. They seemed to be worse on the heavy lands. There was two inches of rain in some of the bean districts and some of the beans molded and discolored.

Harvest Cost Lowered.

Harvesting has been cheapened in many localities this season by the multiplication of side delivery rakes. Next season it is hoped that the threshing also may be cheapened and the beans kept more free from dirt. A few pick-up bean threshers have been tried out very successfully this season in Ventura County. It is said that their threshing cost is 15 to 25 cents per hundredweight as against 50 cents to a dollar paid by Orange County growers this fall. Side delivery rakes put the beans in windrows freer from dirt than when raked and bunched by hand, especially on sandy soils. Then the pick-up harvester runs along the windrows and avoids pitching the vines onto a wagon, then off into the thresher. It saves labor, and it is claimed that less beans shatter out. Improvements needed in the side-delivery rakes are a twelve-foot reel instead of ten, and slower rotation of the reel.

Bean Grade Standards Strict.

It is important that less dirt be mixed in the beans, since a great amount (such as the 8 to 15 per cent found in some limas this year) really

The Edges of all

Clark "CUTAWAY"

DISKS are Forged Sharp

EACH Disk is made of toughest special cutlery steel and won't crack, chip or break. The edge is forged. This makes a lasting cutting edge, much better than one that's rolled or ground down. Get a genuine CLARK "CUTAWAY" Harrow with cutout disks and thoroughly cut, mix and pulverize your ground.

Clark Double Action "CUTAWAY" Horse Harrow

Gangs are kept rigidly in place. The special steel rigid main frame does it. Rear gangs can't slue and trail front gangs, but cut midway between front gang tracks. All the soil is stirred and to a uniform depth.

CLARK "CUTAWAY" Harrows save man and horse power—cut time and labor of harrowing in half.

Ask your dealer about them. If he hasn't them some nearby dealer has.

Included in the CLARK "CUTAWAY" line are Heavy and Light Service Tractor Harrows, Horse Harrows, Right Lap Plows, Bush and Bog Plows, Extension Head Harrows, Orchard Plows, and other special disk implements.

Write for free valuable book, "The Soil and Its Tillage"; also complete catalog.

constitutes adulteration. The desirability of holding down the dirt content has been recognized by both the Cal. Bean Dealers' Ass'n and by the Cal. Lima Bean Growers' Ass'n in their requirements for the high grades. The cost of handpicking to remove dirt, worm-eaten, and discolored beans runs from one to three dollars a ton where the crop contains more than 1½ percent of discolored or one per cent of worm-eaten beans, or one per cent of dirt.

TRUCK CROP NOTES.

(Written for Pacific Rural Press.)

October sees the beginning of California celery shipment which will last until March. There are about 4,200 acres in the State, according to R. G. Risser, of the California Vegetable Union. The northern crop, largely from Contra Costa County, moves first; and the southern crop follows when the former has been frosted.

Lettuce planting is well along in Imperial Valley. Estimates are for four or five thousand acres as against 2,600 last year. Quite a few white men are planting, and many lots are not contracted to marketers.

Cabbage is being planted in most all districts and the indications are for a pretty good acreage, especially of the early cabbage. There is a great deal in the San Fernando Valley and considerable acreage will again be planted on the Irvine ranch in Orange County. G. H. Peters is planting 60 acres of the Cannon-ball variety in Kern County. A great deal is being grown in San Mateo County.

"Early" cauliflower will begin to go east this month. The "half-early" and most of the "late" crop has been transplanted to the fields. Cauliflower grown in New York competes with the California early crop, but New York shipments will be lighter than usual, according to Mr. Risser.

NEW FORAGE GRASSES TO HELP CATTLEMEN.

(Continued from 1st page.)

and with stems considerably greater in diameter but succulent. The stems spread out more. Otherwise it is quite similar to Napier grass and may be simply a variation of the same plant due to having grown for many generations in a different part of South Africa.

Wonder Forage.

Wonder Forage is most favored by Mr. Musser though not much tried out in this State. On the demonstration grounds it was well headed out the last of September with seed panicles more compact than sudan grass and with seeds considerably heavier. It, too, was planted about three feet apart each way and was thickly stooled with erect growing stems, six or eight feet tall, round, and about the diameter of Napier that had been cut back once. It was full of long green leaves, which were green to the ground though the lower ones were densely shaded. Birds had been feasting on the seeds. Wonder Forage is a semi-sweet sorghum, an annual, and it gives more summer forage than Napier. A Wonder plant without the seeds was analyzed by a commercial firm. The stems and leaves showed 62 per cent of moisture, 5.72 per cent sugar, 7.63 per cent crude protein, and 0.98 per cent fats. Its advantage over the other grasses for silage lies in its seeds, which are similar to those of the grain sorghums, high in carbohydrates and adding considerable concentrated nutriment to the silage.

Guinea Grass.

Guinea grass looks like it is the most completely eatable green, though its wide, flattened stems are hairy and the edges of the leaves are saw-toothed. This last feature seems not to hurt it for green forage, but prevents its use for hay. Single blades grow six feet from the ground. They may be cut back and will make growth several times repeated in a season. It is claimed to be as hardy as Napier, the plants having survived considerable cold last winter. Mr. Musser believes it would make fine permanent pasture on moist land, for it has a high feed value.

Where the Titan Comes In

IT PAYS to do farm work at the right time. There are only a few days when plowing, seeding, haymaking, harvesting, threshing and other essential jobs can be done to best advantage. To be able to take care of these operations at just the right time often means the difference between success and failure with a crop; between a big profit and, perhaps, no profit at all.

The uncertain factor in most cases is the amount and kind of power the farmer has at his disposal. That is where the Titan kerosene tractor comes in. You can depend upon it to furnish ten horsepower of drawbar power, or twenty of belt power, any time you need it. Many a farmer has told us that even if his Titan cost him twice as much as horses he would use the tractor by preference because of this one advantage of being able to get his work done at the right time.

Instead of costing twice as much as horses, the Titan operates at considerably lower cost than horses or any other kind of farm power. Besides being more dependable and more generally useful for field and belt work, it is also cheaper.

After harvest most of your power needs will be for belt work. The Titan makes it easy. It has a large pulley, high enough to keep belts from dragging, giving the proper belt speed, easy to line up, to start and to stop.

The Titan is our 10-20-H. P. tractor. There are two other sizes of International tractors, 8-16 and 15-30-H. P., all operating on kerosene and other cheap fuels. Write us for catalogues and full information.

Stop Wasting Money On Your Stump Land Turn It Into Dollars

ACTUAL PHOTOGRAPH

GRASP the OPPORTUNITY and put DOLLARS in your pocket by clearing your stump land. Stump land was never so valuable as it is TO-DAY. The "K" Stump Puller will do the work in less time and the least expense. Cost just about ¼ of a horse power machine and about ¼ of the cost of dynamite. One man or woman with a "K" can out pull 16 large horses. One person single handed can pull from 50 to 150 stumps per day.

HAND POWER
K Stump Puller

works by leverage—same principle as a jack—one man can lift or pull 48 tons alone. Works easy as rowing a boat. Works on hillsides or marshes where horses cannot operate. Has 2 speeds and weighs 171 pounds. Made of the best steel. Absolutely guaranteed against breakage. Endorsed by U. S. Government officials. Highest bank references.

HORTICULTURAL JOTTINGS.

Prune markets remain firm at opening prices.

China appears to be the most promising future market for raisins and prunes.

A company of citrus growers have organized and established a bank at Lemon Cove (Tulare County).

Owing to the large new acreage coming into bearing, this year's fig yield will outstrip all previous ones in this State.

The Oakdale district fair will have a balance of about \$3500 to the good after paying all bills in connection with this year's fair.

An average of \$3.56 a box was paid to Tulare County Fruit Exchange members for oranges in 1918, doubling the average for 1916-17.

California fruit shippers claim that the car shortage has already involved a loss to them of over \$10,000,000, and substantial relief is not yet in sight.

1100 boxes of grape fruit were shipped last week from the George Roop orchards at Porterville. \$5 a box f. o. b. makes a record price for this fruit.

Extensive plantings of figs, grapes and citrus fruits are planned for the coming season in Terra Bella (Tulare County). Thompson Seedless and Emperors do well in that locality.

Latest reports place this year's walnut crop at 24,000 tons, or 20 per cent greater than last year. This creates a record for the State and the sale of it created another record.

Lemon picking is proceeding at Porterville (Tulare County). The yield exceeds the past five-year average and is of high quality. About 10,000 boxes will go into the curing houses. Prices range about \$5 a box f. o. b. for first grade fruit.

The Government measure appropriating money to cut the high cost of living specifically exempts labor and

farm and horticultural associations from being prosecuted with funds provided in the act.

This year's yield of Thompson's Seedless in the Dinuba district is said to be a record. The quality is top notch.

A Sutter County peach orchard has just been sold for \$1500 an acre for which \$250 an acre was paid only five years ago.

Some wine grapes in Sonoma and Napa Counties will not be picked it is said owing to the difficulty of marketing, and the hogs will be turned into the vineyard to salvage the crop.

The Merriman olive grove in Tulare County is said to have over two tons to the acre on it this year. The chief varieties grown here are the Mission and Manzanillo.

Amelia Vernazza honors the California Packing Co., who employ her, by ringing and pitting 75 boxes of Phillips' Cling Peaches of average size and quality in 11 hours, thus carrying off the belt.

The process by which grapes can be converted into a non-intoxicating wine while still retaining its bouquet, color and flavor is a trade secret. The wineries at Cucamonga and Etiwanda are producing it.

H. A. Hyde Co., florists and nurserymen of Watsonville, have just issued their new season's catalogue of fruit trees, ornamentals, shrubbery, bulbs and house plants, containing a very full list for all requirements.

Up to Oct. 2 of this year 32,803 cars of oranges had been shipped from Southern California this season and 9,217 carloads of lemons. The total shipments to the same date last season were 13,893 cars of oranges and 5,578 carloads of lemons.

September receipts of prunes at the warehouses of the California Prune and Apricot Growers' Association amounted to 60,000,000 pounds—more than double the receipts of 1917 and many times the receipts of last year.

NURSERYMEN OF STATE TO MEET AT CHICO.

(Written for Pacific Rural Press.)

The California Association of Nurserymen will hold their ninth annual meeting at Chico from November 13 to 15, it is announced by William T. Kirkman, President of the Association.

The selection of these dates has been made so that the nurserymen and seedsmen may meet the fruit growers and farmers at the Fruit Growers' and Farmers' Convention for their mutual benefit. The growers' demands and requirements will be made known and discussed so that they may be adequately met and provided for by the trade. Programs will be ready for distribution about Nov. 5.

There are now some 150 nurserymen members of the association. "Collective Action is the Slogan of Modern Business" has been adopted as their motto. One afternoon (Nov. 12) is to be devoted to the possibilities of marketing in co-operation with representatives of the California Associated Raisin Company, the Peach Growers' Association, Walnut Growers' Association, the Almond Growers' Exchange, the Prune and Apricot Growers' Association and others.

By the nurserymen and farmers getting together in this way it's felt that stock may be improved and standardized, poor varieties gradually discarded and the provisions of the nurserymen with regard to each year's demands reduced from guesswork to a more definite market. A number of growers who are interested in this matter of selection have signified their intention to be present for this very purpose and arrangements of great importance to the industry are likely to ensue.

It will therefore pay every nurseryman, whether he is a member or not, to show up and find out what is going to be done. The growers who will be present mean business and will be a representative body from the great growing industries. Whatever certification of stock is arranged for by the associations and leading growers, if any, is likely to constitute the bulk of the business. Show up and learn what is going to be done.

AGRICULTURAL POINTERS.**To Increase Weight of Baled Alfalfa.**

An effective way to increase the weight of baled alfalfa hay at relatively small cost is to disk the field in spring after the rains. This flakes the dirt into chunks so the haymakers can't keep it out. But beware of the law that went into effect last July. If you want to play safe, harrow well after disking or disk and harrow after the last crop is off in the fall.

Sowed Cabbage on Dry Sand.

Half a pound of cabbage seed broadcast and raked into dry sandy land did not sprout, so the irate planter returned to the seedsman claiming they were no good. As the seedsman keeps two men constantly testing, he knew they were all right. So he advised a little water on the sand. Not long afterward the planter had manhood enough to return and say that his cabbage had sprouted beautifully.

Keep Birds from Garden.

Where birds bother vegetable gardens it may be well to work the scheme practiced by Japanese vegetable gardeners in Los Angeles County. Stakes about two feet long are set up across the gardens every few yards apart and connected by strings. Rags or pieces of paper are tied to the strings so they flap in the wind and scare birds away.

Rotations with Sugar Beets.

A leading potato dealer of the Salinas Valley makes the point emphatically that sugar beets and potatoes cannot be rotated profitably—the sugar beets take out something

that potatoes need. But beans or barley go well in rotation with beets. In fact such a rotation brings greater production to both the beans and barley, which have too long been suffering from old grain farming methods of shallow culture.

Fall Plowing for Beans.

Fall plowing gives best results in bean growing in Lompoc Valley in Santa Barbara County as told by one of the best known growers. It is best to leave the land rough all winter to catch and hold the rain and prevent soil washing. Weeds can be kept down as evidenced by this man's experience. One year one hoeing cost \$3 per acre. Six years later it cost only \$1. No more weeds than possible have been allowed to seed on the ranch during that time. They would not only choke beans and waste moisture, but are a serious hindrance in harvesting and threshing if not kept from seeding at all times of the year.

Better Hay Depends on Seeding.

Early-planted grain hay is best, has more substance, and yields more tonnage, according to a successful hay grower of San Benito County. More seed is required on worn land than where rotation is practiced. Generally this man has planted 100 pounds of barley or wheat per acre on worn land. Eighty pounds is enough on land that had a cultivated crop the year before, because it stools more.

Breed a cow under ordinary circumstances from ten to fourteen weeks after she drops her calf. This will cause her to freshen regularly once a year.

"By-Products of the Packing Industry" is the title of a booklet issued by Armour & Co. that is worthy the perusal of everyone interested in the growth of animals for human food, those dealing in fresh and cured meats

and all those who eat meats and also many others in various walks of life. In fact, it is a booklet full of information for the general public carefully written and plentifully illustrated.

8-foot Extra Heavy Tractor Chisel

KILLEFER
QUALITY

Now is the time to commence deep chiseling and subsoiling. Do it in time to prepare the ground thoroughly to receive the benefit of the winter rains. Break away from the old habit or mistaken idea of scratching the ground and expecting to harvest a crop.

Plow pan, although frequently referred to as mechanical hard pan, should not be confused with natural hard pan. However, so far as crop production is concerned, the effects of plow sole and hard pan are the same. Both must be destroyed before proper cultivation can be had, and the only difference here is in the method required for their destruction.

Plow sole offers less resistance to the available methods of breaking it up than hard pan, and, with the tractor and tool of sufficient

strength now available for tractor use, it can be broken up and subdued, bringing the land back to the point where a full yield may be expected.

Plow sole offers less resistance to tillage implements than does hard pan; both are in many cases impervious to horse teams and ordinary plows, and in some instances are difficult of handling with tractors and modern implements. Yet before a full yield may be expected this condition must be subdued, and to date the only satisfactory means is by use of the chisel or subsoiler.

Send for Catalog and Prices.

A Modern King Canute

The people who lived in the good days of the wise King Canute thought he had the power to make the ocean recede at a mere word of command. Today the Bell Telephone Company finds itself in a position not unlike that of the ancient king. Its mere word will not hold back an ocean of expense.

Rigid economy and the most modern methods of operation have made it possible for the Bell Company to keep its rates at a far lower level than that of the commodities which it must use in construction and upkeep. But it has felt the

rising tide of costs just as certainly as has every business and every family.

The one source of revenue of the Bell Company is the price you pay for service. If this price fails to cover fair wages and necessary materials, then both you and your telephone company must suffer.

For one year the Bell Company was under Government control. The Government analyzed methods and costs; and established the present rates as just. All the Bell Company asks is a rate sufficient to provide satisfactory service to every subscriber.

What Can We Do about Calif. Potatoes?

(Written for Pacific Rural Press by W. V. Shear, State Department of Agriculture.)

Good Heredity for Potatoes.

Having decided that you have a piece of ground adapted to potatoes and are willing to use it for this purpose, the next thing is the preparation of the soil. If the soil is anything but a light sand or a very loose peat, it should be plowed deeply. The roots of the potato must have aeration and mellow surroundings that can be penetrated easily by the delicate rootlets, and the tubers must have room to develop easily and uniformly. Remember, this is the object of the whole season's work, the development of the tubers in the soil, and, if the soil is hard or cloddy, the development must necessarily be uneven and very difficult.

The Seed.

While in conversation with a potato grower at the State Fair recently, regarding the principles underlying potato production, the gentlemen remarked, "Why, that is just like using good dairy stock to build up a productive herd." It must certainly have been brought home to the readers of the Pacific Rural Press that it, without doubt, requires a strong, healthy, productive potato plant to produce a good seed potato as it requires dairy stock of high producing qualities to build up a profitable dairy.

We have almost ceased to wonder at the prices paid for high-grade stock—prices, which a few years ago we would have ridiculed as being beyond reason. It was thought not long ago that no cow could be worth \$1,000, and many of us have yet to learn that, if we wish to succeed with the production of plant products, we must have high-grade seed stocks.

The successful potato growers of today are awake to the necessity of using registered seed and to the fact that the laws of heredity apply with equal force in both plant and animal life. One might as well expect to get four pounds of butter per day from a scrub cow as to expect a two hundred sack yield per acre of potatoes from scrub seed. The problem with the up-to-date potato growers is how to obtain this good seed. Good seed must be produced before it can be sold and there is such unlimited supply that it is by no means possible for all to get even a small portion of it.

Fortunately the California State Legislature at its last session has made it possible for California potato growers to produce good seed. A small appropriation was made from State funds for the use of the new State Department of Agriculture to help establish this industry, and it is now possible for every potato grower in the State to receive assistance in the production of good seed stocks.

Each Season Develops New and More Subtle Diseases.

No doubt, when growers become familiar with the methods of producing good seed potatoes and when the other growers see the necessity for the use of such a seed, they will be willing to pay for it in proportion to its real value. The potato inspection service is now available for all who wish to make use of it. Not only is it still necessary to combat the common diseases, with which most potato growers are now familiar, namely, the wilts, rhizoctonia, blights, etc., but, nearly every season new and more subtle ones are being found. These new diseases we are learning are responsible for great reduction in the yields, sometimes 50 per cent to 80 per cent. They are also carried in the seed, but are of such a character as not to be recognizable from an examination of the tubers themselves. They must be caught in the fields during the growth of the parent plants. These are the physiological diseases, such as curly dwarf, leaf-roll, spindly sprout and mosaic. The only method we have of fighting these diseases is by the elimination of affected plants in the fields, wherever this is practicable, and by discarding for seed purposes fields which are badly affected with these diseases.

Inspection of Plants Necessary.

An inspection system, then, is absolutely necessary for the determination of good seed potato stocks. If you grow your own seed potatoes, you should rogue your fields of the diseased plants; and if you buy seed, you want to know that it comes from inspected fields. Your only insurance in this respect is the inspection tag to be found on every sack of inspected and certified seed. The cost of the inspection is slight, and the demand for this seed should be great, but no doubt the supply for a number of years will be very limited. It requires faith in what you are doing to take out of your fields a considerable percentage of the plants which may be unhealthy, but it is the only road to success.

Value of Inspection Depends on Support Given.

The success of the seed potato inspection work will depend upon the potato growers of the State. If you support it by making use of it, it will mean much for the potato industry, but if you neglect to take advantage of the opportunity offered, then the opportunity will soon cease to exist.

The seed potato is the most important factor for good or evil in the production of profitable crops. It is not uncommon for the writer to hear it remarked, "I have doubled my yield by the use of certified seed." A grower recently said, "If I had used certified seed for all my field instead of only a portion of it, I would have been better off by \$1,000.00." Your potato yields will increase or diminish with the character of your seed. Good seed imparts the vigor to your crop, which nothing else will, and this vigor will make itself felt in spite of unfavorable conditions, over which you may not have control. In the chain of factors which go to make a successful crop, the link of good seed magnetizes all the others.

CARROT AND ONION YIELD YIELDS.

To the Editor: In your paper of Sept. 27th, page 423, we notice an article relative to the yield of onion and carrot this year. We grew this year several hundred acres each of both carrot and onion, and our average yield of onion was scarcely 300 lbs. to the acre, and carrot about 600 lbs.

We also have had the opportunity to go over fields of both onion and carrot belonging to other seed houses; in fact we cleaned large quantities of carrot and onion for fellow seed growers, and are therefore, quite familiar with yields of these items generally in California.

The price for onion seed to the farmer where the bulbs were given him, ran from 40c for the heavy yielding sorts to 75c for light yielding varieties. Therefore, at this rate a grower would have to get considerably over 1,000 lbs. of seed to the acre to make the gross returns \$750. There have been phenomenal yields of close to 1,000 lbs of onion per acre some years, but very, very rarely. The average good yield is 400 lbs. to the acre; on carrot the average good yield is 1,000 lbs. per acre, although carrot has gone as high as 1,500 lbs. to the acre.—Valley Seed Company.

TURKEYS PAID FOR PERRIS HOME.

Five or six years in Perris Valley of Riverside County have enabled Mrs. Fannie Oesterle and her nephew to plant fruit trees, pay for their ten acres, and put money in the bank. They had practically nothing when they bought the place on easy payments. They put up a temporary house which is to be replaced next year by one that will help advertise the valley as a home place. The fruits are apricots, peaches, apples, walnuts, and figs. They are bearing some now; but the chief cash crop has been Mrs. Oesterle's bunch of fine bronze turkeys, of which she has raised several hundred per year.

More than 13,000 men are building your Maxwell

IMAGINE 13,000 men devoting themselves to a single Maxwell. Yet that is the picture which a little journey through the eight great Maxwell plants supplies.

If they built but that one car in a day its cost to you would represent a king's ransom.

But they are so well organized, their work so very definite, they are so expert in the special one thing they do, and they are aided by so many thousands of uncanny and superhuman machines, whose accuracy is down to 1/1000 of an inch, that you pay but a small price for a Maxwell.

A great aid to the economy of manufacture is the use of many, many millions of dollars so that a 10-cent piece saved on a bit of material often runs into amazing figures.

Thus the big staff of purchasing experts for Maxwell become your purchasing experts and the saving goes on to you in the price.

\$985 is indeed a small sum to pay for a great value in a great car like Maxwell.

More miles per gallon
More miles on tires

MAXWELL MOTOR COMPANY, Inc.

What a Tractor Buyer Wants to Know

To the Editor: Having been a subscriber and reader of your valued paper for about twenty years I have learned a few things and also have observed that you are nearly always right or else very silent on subjects pertaining to new things for the good of the farmer. One instance in point was when several years ago people were pulling up their peach trees you told us that you would as soon take a chance on planting peaches as anything else, and time has proved your wisdom. You also told us to go slow on spineless cactus, which proved such a good thing for the selling agents. Now what do you know about the usefulness and economy of tractors? A great many papers are boosting them and a lot of smart agents are laying their plans for getting some of the money that will be paid to the farmers and fruit growers. They will demonstrate them pulling and turning and pumping and doing all the things you want them to do, and they are certainly great. They will tell you how many acres you can plow in a week without expense except for oil and gas. But the thing we want to know is, what will the tractor look like after one year's use and how much will it be worth? How much have you paid out for extras and new parts? How many days have you lost waiting for a part to come from the factory? How many times have you been held up by exorbitant prices for the simplest repair part; how many gears and bearings will have to be replaced and how many cylinders and pistons you have worn out before you got the proper dust strainer? (And that one is only an experiment.) How long will the chains and sprockets last in your kind of soil and what is the price of new ones, also wheel bearings; or if you have a tracklayer how long will the tracks last and how much do new ones cost?

It seems to me that tractors are expensive experiments, and that the farmer does the experimenting and expending while the dealers receive the rewards of good advertising. I believe that over half the tractors that run one year in fruit land and summer dust are worth less than half the price paid for them new, that they depreciate fifty per cent in value in one year and that fifty per cent of the price of any tractor would more than hire the same work done. The time used in making repairs must be taken into account. The dealer may tell you "it only takes a few minutes," but when you are in the further end of the field and everything an inch deep in dust, and you have to go into her insides, it will take all day and maybe the next one to get going again.

One thing that should be emphasized is the prices charged for new parts; that is the fattest good thing the dealer has and he knows he has you over a barrel and you've got to pay it. You are not buying Ford parts nor

anything common, but a very valuable and necessary part made expressly for your kind of tractor.

In closing I will say that dust is the great enemy of the tractor and if we can get one that will keep out the dust or if we can farm land that is not dusty we may beat the mules, but "I dunno."—S. E. Nill, Sanger.

Articles that have appeared in our columns during the past five years have given many instances of ranchers who have used tractors a year or more and we have told how much they have paid for new parts. We have not dwelt much in print on the long time required to get parts from some of the factories and sales agents, but we may do so at any time. That is altogether too common an evil. It has been corrected in a number of cases under our observation. We cannot recommend our readers to buy any machine for which repair parts are not promptly available at reasonable prices. There are too many cases yet where the price of repair parts need not be so high. We have spoken more than once of the need for prospective tractor purchasers to look into these matters before ordering. In regard to air-cleaners, we have recently remarked on the superiority of those which require the air to pass through water and you will notice an article soon to be published which mentions this point among others.

You ask what we think of tractors, and you characterize them as "expensive experiments." Having been studying the tractors available in California for several years we are convinced that however expensive they may be within reason, they are less expensive than horses; and when the writer gets onto a ranch, however large or small and whatever crop is to be grown, or whatever kind of soil, he will do most if not all of the work on it by tractor power. The particular kind of a tractor will depend on the conditions mentioned. We believe that in a large proportion of cases, ranchers of California who are waiting until the time when tractors have become standardized will lose much more than they would by possible difficulties with a machine which has not reached perfection. We have found so many California ranchers who, by reasonable care, have obtained highly profitable results, that we have no doubt that most tractor troubles are due to carelessness of the drivers, or else to their ignorance. We have seen many evidences of this also. There is no need for a tractor to depreciate more than 10 per cent in the first year. We suggest that you look into the dust-proof qualities of the tractors at some of the Fresno demonstrations.

The buttercups out in the glade

Will presently be seen.

This year's, they tell us, may be made Of oleomargarine.

—From the Dallas News.

Fairbanks-Morse
"Z" Engine with
Bosch Magneto

Greater Engine Value

OVER 250,000 farmers bought the "Z" engine. ¶ They know it is powerful, dependable, and practically fool-proof—truly a great engine. ¶ But now we announce the one addition which could possibly improve the "Z" performance—Bosch high tension, oscillating magneto ignition. ¶ So let the "Z" dealer near you show you in detail this greater engine value. ¶ Over 200 Bosch Service Stations combine with "Z" dealers to give every farmer buyer a remarkably complete engine service. ¶ Prices—1½ H. P. \$75.00—3 H. P. \$125.00—6 H. P. \$200.00—All F.O.B. Factory.

TO SAVE TRAMPLED RICE.

We described in detail about a year ago a contrivance by which a binder was mounted on a tractor to cut rice on the borders where it is usually trampled down. The man who used the machine points out several faults which made it fail but which can be remedied. Meanwhile another tractor manufacturer tried a similar stunt and his machine also failed to keep up with horses. Neither of them had power enough, and one had only half of the two-miles-per-hour speed required for good binding. Still another tractor man has a push binder riding in front of his machine for this season's harvest and the results will be noted later.

The trouble which all are designed to overcome is that the first round in each check knocks down a lot of rice which is never recovered. This is conservatively estimated at 5 per cent of the entire crop, which means an awful waste at this time of scarcity and high prices. A device noted by H. O. Jacobsen, an experienced rice grower of Butte county, was designed to pick up lodged barley in Louisiana, but it worked well in picking up our trampled rice with horse binders last year. It consists in fastening an auxiliary guard every 18 to 24 inches on the sickle-bar. This slides on the ground and extends both above and forward from the sickle, but is the same width as ordinary guards.

LOOK OUT FOR THE SPEED COP!

There is one little joke that is practiced over the whole state by the city fathers of every little berg. It used to amuse us up to the time we broke the tenth spring and lost the fifth front tooth. This is the joke: a large sign bears the legend "Business district; slow down to fifteen miles an hour." This sign is placed just when you drop off a nice smooth highway and hit a good long half acre of chuck holes and warts that would shake a five-dollar gold piece out of a Shyllock. Sometimes you strike the same sign with this addition, "Drive slow—congested traffic," and presently you see maybe a blacksmith shop, a garage, an ice-cream parlor and a shack labeled post-office. These are very bad places as they expect you to slow down to five miles an hour. You could cheer up and go through them at 40 miles, probably, without seeing anybody if it were not for those confounded hogwallows they call the street of the business section.

We hear mutterings from fellow travelers on whom this ghastly joke is beginning to pall. We asked one man what it was really done for, and he said: "Civic pride, my boy, civic pride. They like you to slow down enough anyway so you can admire the new municipal 'hitching post.'" But I don't know—what do you think?

SKIDDING SEASON IS DUE.

Pretty soon we shall be able to watch a circus on slippery pavements newly wet by fogs and rain. Ambitious motorists will try to make fast speed and quick stops. They will occasionally feel as foolish and fortunate as one recently observed on a mountain grade. He dug the nose of his machine into the bank with no apparent reason and he looked silly as we passed.

Do not disengage the clutch when you are driving on wet pavements and want to slow up or stop quickly. Brake with the engine engaged. The differential acts as an excellent equalizer and helps the tires make use of any spots which are not so slippery as the rest. Drive carefully enough so you do not have to stop abruptly, for you can't do it.

PULLEY COVERING.

A decoration in the Los Angeles tractor demonstration accessories tent was an iron pulley suspended in mid-air by the end of a canvas pulley covering, which had been stripped back an inch or two so pliers could get hold of it. This was simply to show how tightly the canvas clings. It was applied by warming patented rubber-like cement in a double boiler, applying it to the surface of the pul-

ley, then applying a coat to the canvas and wrapping the latter around the pulley when the cement is nearly dry.

The La Verne Orange and Lemon Association has a Nash Quad motor truck with which they haul fruit for

members, loading up in the orchards and unloading shortly thereafter at the packing house.

BOSCH

ALL Farm Power is most dependable and economical when Rip Roaring Bosch Sparks explode the mixture.

BOSCH Magneto Ignition has proved its supremacy through years of supreme service.

NO Farm Engine is better than its ignition system, and Bosch High Tension Magneto Ignition means absolute Ignition Surety.

THE manufacturer who makes Bosch his standard spends more money than other systems cost in order to give you a finer, more enduring piece of farm machinery.

BE sure all your farm power plants are Bosch Equipt. The nearest Bosch Service Station can install a Bosch Magneto on any engine quickly and easily.

This Folder Tells You How To Make Your Idle Land Earn Money

This is the day and age when you should make every foot of land produce profits for you. If you have any size tract ranging from 80 to 5,000 acres in the Western States that need development you should send for this book at once. It tells you the way to develop your property through the use of Hydro-Electric plants, gravity irrigation systems, pumping plants, grading, and buildings; in fact, it points out the various essentials that are necessary to make your ranch a producing property. Now is the time to act, so that you can get a crop from your land next year. It is a certainty that crops will bring good prices next year, so take advantage of this condition and get your land under cultivation now. Write today, stating location of land and number of acres.

Selecting an Irrigation Pump.

[Written for the Pacific Rural Press by D. J. Whitney.]

There are pumps consisting of a chain of buckets working like the track of a tracklaying tractor, and dipping water out of a pit; there are plunger pumps, operated in underlying principle like the old-fashioned hand pump, or windmill pump, but costing up to thousands of dollars; there are centrifugal pumps, consisting of a rapidly turning runner or wheel in a shell and sending the water upward by the same force that causes mud to fly from a rapid turning wheel; there are rotary pumps, with one or more wheels in a shell, but forcing the water up by actual pressure, not by centrifugal force; there are turbine pumps related in a way to the centrifugal pumps, but sending water up through the rapidly with which a turbine, or screw, revolves in the water. Water is also forced up from wells by compressed air, and in certain other ways.

The commonest pump of all in the average district where the distance the water has to be lifted only a moderate distance is the centrifugal pump. If the lift up to the surface is over 50 feet people get interested in the turbine pumps. Deep well plunger pumps are needed for the greatest lifts.

Centrifugal Pumps.

The commonest pump is the horizontal centrifugal; the kind you see displayed in most pump advertisements.

Cheapness and simplicity are first in its favor. On the other hand, considerable power is lost with it. Ten horsepower applied directly upon the water in forcing it upward, say on a chain of buckets, a plunger pump, or a rotary, would give more water than on a centrifugal pump, but all of these pumps also have disadvantages, and what a man loses on his power bill with a centrifugal pump, he is supposed to more than make up on first cost and simplicity of action.

This Cost Proposition.

Here are some things against the centrifugal pump in cost. They have to be put in a pit and pits cost money, far more than they used to. A shallow pit is a small matter and centrifugal pumps shine in easy pumping locations; but when a pit has to be sunk 40 feet, its cost will go a long distance toward buying and operating a different type of pump.

A centrifugal pump should rest close to the water if it is to give the best service. Say you are in a district of deep pits and there are series of dry years, then each year you may have to dismantle your pump, get it out of the way, lower your pit, and replace the whole equipment. The expense for material is small, the labor expense very great. Then, if a wet winter comes and the water rises, the pump has to be pulled up in a hurry to keep the water from ruining the electric motor, and a platform built for it a little above the place where the water finally rises to. That costs money, too; so, if water rises and falls a great deal in any district and the pump has to rise and fall with it, a centrifugal pump is a very great expense and trouble. In such cases the turbine type of pump becomes quite popular. This requires no pit and can be fixed easily to pump properly if the level of the ground water falls considerably. It is quite a bit more expensive than the centrifugal pump and will not give quite as much water for the power required, but otherwise gives such satisfaction that in the places where the need for one is felt this type is about as satisfactory as anything that can be found. However, when the water is naturally close to the surface, and usually where the change in level of the ground water is not large, the centrifugal pump is the thing.

Power for the Pump.

For continuous operation, nothing can beat a direct connected electric motor for a centrifugal pump. Electricity and a belt are not very satisfactory, though used more or less, for there is a waste of power and a belt is a nuisance.

If the pump is only to be used

occasionally, as, for example, where irrigation is supplied by canal and the pump is to be used only when ditch water plays out, it usually will not pay to stand the expense of electric installation for a short running period, and an engine and pump is to be preferred. So also if electric rates are high. Even in electrically operated districts some people prefer a gas engine to drive a pump. As a rule electricity is favored for its simplicity, and engines are thought to be too troublesome.

If you have a centrifugal pump and the water falls so much in the ground that the lift is a little too much for it, there are two ways to reduce the power required. If, for example, the electric motor can only pull the pump for a certain lift, but through the lowering of the water table has to lift the water five or ten feet more, the flow can be checked, either close to the pump or anywhere up to the point of discharge, so that less water will be pumped. A person would think that to block up the opening from a pump would make more work for the pump. It would for other pumps, but not for the centrifugal (or turbine). The water is simply churned around in the pump a little longer than it otherwise would be and less of it goes out. Similarly, if a man increased the opening in the discharge of a centrifugal pump, it would let more water go off from the runner, more water would be pumped, and more power used. Checking a centrifugal pump can be done at either inlet or outlet of same. The other way to reduce the power used in a centrifugal pump is to trim down the runner, that is, to reduce its diameter.

Naturally any change is likely to result in a waste of power; for each pump is supposed to be designed for a certain lift above the runner and a certain pull up to the runner, also for a certain flow. To increase or decrease that flow by changing diameter of runner (a runner can be built up as well as cut down) or by changing size of inlet or outlet, or by decreasing or increasing speed of runner, will mean that the operation is different from what the experts designing that pump desired, and the efficiency will be decreased.

Likewise if a pump is made for a lift of, say, 30 feet, and the water lowers until the lift is 50 feet, the pump will not be as efficient as a pump designed for a 50-foot lift. So, a man buying a second-hand plant to install under different conditions from those the pump was designed for, is not going to get perfect service.

Put Pump Near Water.

Also, a centrifugal pump gives better service when placed close to the water than when many feet above the water. The greater the suction, the less water pumped and the greater the strain on packing and runner. Theoretically a centrifugal pump will suck water 28 to 30 feet, measuring from center of runner. Actually 25 feet is about the limit. It is clear also that nobody could work a pump standing 25 feet above the natural water level, for the water would draw down below limit of suction provided any stream at all was secured. Also, if the water stood 15 feet below the surface, far better work would be done and much more water secured per horsepower used, if pump was placed within two or three feet of the water than if it were six, eight, or ten feet above the water. All of these points are as a rule well known. Everybody installing a centrifugal pump should know them.

A HANDY COUPLER.

A handy coupler for motor truck trailers was shown in the Brown-truck exhibit at the State Fair. It is simply a hook which is left open when not in use. The trailer tongue has a heavy iron eye on its forward end which is held at the right height by a stick. To hitch on, the truck is backed up so the hook comes against the eye, when the hook automatically closes.

RU-BER-OID and MALTHOID READY ROOFINGS *Built-in Quality*

The only way to know the quality of ready roofing is to put it on your house, barn, or other building and wait for two or three years. You can't tell the good from the poor merely by looking at it or feeling of it. It is the hidden qualities that count. Ready roofing must be carefully made from the best materials if it is to stand the test of time and weather.

Ru-ber-oid and Malthoid have attained their position as the standards of ready roofing because quality has been built into them. With our complete organization, we scour the world for the best materials. We make our own felt from carefully selected rags. We maintain our own refineries in order to get the highest grade of asphalt and similar products. The manufacture of Ru-ber-oid and Malthoid is carried on from beginning to end within the one organization.

No effort or cost is spared in manufacturing Ru-ber-oid and Malthoid. Experts constantly supervise every process. Tests are made continually to see that all material is kept up to the high standard which has been set.

As a result, Ru-ber-oid and Malthoid have those hidden qualities which give them an exceptionally long life. They will not dry out or rot. They are the best quality roofings that can be made. If painted regularly, they will last for years.

When you think of building, remember Ru-ber-oid and Malthoid.

EACH THE STANDARD OF ITS KIND

LOS ANGELES TRACTOR DEMONSTRATION NOTES.

The Bean Spray Pump Co. had planted real trees for their 6-10 Track-pull orchard tractors. They pulled double disks, double corrugated rollers, two-gang mold boards and other implements.

The Beeman garden-orchard tractor of 1½-4 horsepower was shown working here as it has never been shown before. Various Beeman tractors were hitched to various implements, including a four-foot mower, an eight-inch plow, a three-foot single disk, etc. Stakes set in orchard form had been well cultivated.

A Bates Steel Mule was running a moving picture machine, which showed its mates doing everything in the way of hauling, refining seedbeds, harvesting, etc. This show was free to all comers, and proved a good place to rest tired feet.

The only tractor on the grounds which was not working was that built and exhibited by C. L. Green of San Bernardino county to show his hingeless track on a garden tractor fitted with a six-horse motor. The track is a succession of blocks with beveled edges to fit the curvature of the drive sprocket, which is located in front instead of the rear as in most tracks. This construction puts the strain of the tractor's pull on the blocks themselves, pushing one against the next one on the ground, and therefore putting no strain on the four cables which hold the blocks in line. The blocks seem entirely necessary. The tractor has been tried out in Mr. Green's garden, but is not yet commercially on the market.

A map of Southern California had pins stuck in at various towns to indicate owners of Lambert Chain Tread tractors. Threads from the pins led to cards around the map, showing names of owners and roads to take from the towns to their ranches.

The La Crosse tractor has front wheels steered automobile fashion, but designed not to run quite parallel in turning, because the radius of the circle followed by the outer wheel is greater than that of the inner wheel. These tractors were plowing and cultivating business-fashion at the Demonstration.

Explanation of the kerosene gassifiers on I. H. C. tractors held interested audiences. All three sizes were on the job and doing business, and others were on show labeled with their best characteristics.

The new 60 h. p. Best tractors are off the market until the factory catches up with orders which were taken at the State Fair. All that they can make until February have been sold in advance.

An Avery 5-10 fitted with a mower under its engine circled merrily to the tune of its knives.

Toro and Avery motor cultivators were the only kinds demonstrated at the Los Angeles show. These machines deserve more consideration.

A Caterpillar 75 pulled three ten-foot Roderick-Lean automatic double disks hitched to a 24-foot timber resting on wheels.

Yuba tractors of all three sizes plowed and worked their seedbeds and operated various machinery by belt power.

Moline tractors did their customary diversified work with various implements.

The Toro tractor built for vineyardists and owners of small orchards was working down a soft mulch with a 5½-foot double disk. It has a Bennett water clarifier to clean dust out of the air before it goes into the carburetor.

The Wallis 15-25 tractors were run at various speeds from 2½ to more than four miles per hour, depending on the work they were doing. It took one man an hour and 40 minutes to lift the top of one tractor clear from its frame, exposing the transmission and crank for easy adjustment.

Fordsons were hitched to all sorts of implements by drawbar or belt to show their versatility.

The California hop crop went through the season in fine condition. The harvest is finished and the total production will exceed last year's crop by about five million pounds.

Studebaker

THE BIG-SIX

A CAR of attractive and artistic design, with a 60-horsepower motor always within your control; perfectly balanced chassis of remarkable solidity; 126-inch wheelbase insuring generous body proportions; genuine hand-buffed leather upholstery; outside and inside door handles; Gypsy-type top with plate glass windows; curtains opening with doors; compartment in back of front seat for small packages, gloves, etc., and extension light in tonneau. Silver-faced jeweled 8-day clock, and magnetic speedometer, are mounted on a circassian walnut-finished instrument board. 33 x 4½ cord tires.

See it—ride in it—and you will understand why it is probably the most talked of motor car in America today.

New Activities of Alfalfa Association

(Written for Pacific Rural Press by Manager G. H. Emery of Alfalfa Growers of Calif., Inc.)

At a meeting of the Board of Directors of the Alfalfa Growers' of California, Inc., in Los Angeles, October 10, it was unanimously decided to make certain changes in the working plans of the association to meet local conditions in the different communities.

Local Warehousing Companies.

For the past two months the officers of the association have been quietly holding meetings in the different districts of the State, with their individual members, and discussing the past and future workings of the association, and in their opinion, concurred in by the individual members, the time is ripe for the formation of local warehousing companies to be located in the different alfalfa and corn centers, where we have a sufficient number of members to warrant same.

These warehouses will be under the control, and will be owned by the local members of the association, in the district in which they are located. They will be points of concentration to which can be brought all the products grown by our members. Many of our members are without proper storage facilities on their ranches and, in the past, have been compelled to sell their hay before the rains commenced in the fall, in order to save themselves from certain loss that would be incurred by the winter storms, and which also forced them, at times to sell when the market was low in order to avoid this loss. By having warehouses of their own they will be enabled to hold their crops for the advance in price which naturally comes with the winter months.

We have some warehouses already established, and are planning to open many more in all parts of the State before the next season is on. These warehouses will be operated and controlled by the local branches of the association, under the supervision and advice of the home office, located in Los Angeles. The same policies, so successfully carried out by other co-operative associations, will be closely followed.

Great Demand for Alfalfa Meal.

There is a subject which is of great importance to our members, and in which they are very much interested at the present time, and that is the meal of alfalfa hay in certain districts of the State. There is a considerable foreign demand for California alfalfa meal, and this demand is capable of almost unlimited extension. At the present time the association has a mill in operation in the Bakersfield district which is proving very successful and turning out a high quality of meal. The operations of this mill are being very closely watched by our members in other districts, and we are laying our plans at the present time to have several in operation when the grinding season commences in 1920. Our members realize that this can be made a means of removing a certain surplus of hay from the market at times, and will tend to stabilize the market price of hay, as it is only the desire of the association to obtain for our members such a price for their products as will net them a fair return on their investment. We believe that the farmer is entitled to this as well as the manufacturer of any product which is produced. We look upon the raising of alfalfa and Milo maize the same as the economist does and class it as a branch of manufacturing. When a manufacturer places the product of his factory on the market he knows what the product has cost him to produce in dollars and cents, and to this cost he adds a certain percentage for profit. We believe that the rancher who, through the assistance of nature, manufactures an article, is entitled to figure along the same lines.

Grain Sorghums of Association Members.

The association, through its members, represents a considerable acreage of Milo maize in the State, which is receiving careful attention at the

present time as the season opens. The crop this year will be somewhat lighter than usual, and the feeling is that prices will materially advance in the near future.

The early corn crop in the Imperial Valley was very light, and was quickly absorbed by the market, which is now anxiously waiting for the harvest of the main crop, which will commence to move about the first of November. In the Fresno district the harvest of the White Egyptian corn, which is the variety mostly grown in that district, is now in full swing. We have just returned from this district and yesterday completed the formation of a local branch of the association in what is known as the "Island," located near Le-moore, about thirty-five miles south of Fresno. In the past ten days local growers of corn in this district, representing approximately 3,000 acres, have joined the association, and are already warehousing corn in their own warehouses. They are very enthusiastic over what the association has been able to assist them in doing, more so from the fact that this has actually been accomplished within ten days after the first meeting was held. This places the corn growers in that section in the best position they have ever been, inasmuch as they now have their corn in their own warehouses and, if necessary, can secure advances from their banks on it, en-

abling them to hold it for the advance in price that they feel sure will come. This is something which they have always desired, but until the association stepped in with its organization to assist them, they never could get. What the association is doing for its members in the Fresno district is also being accomplished in the Imperial Valley and other corn centers.

AUSTRALIANS VISIT SACRAMENTO VALLEY.

Nearly a hundred Australian and New Zealand soldiers of the European war are studying agriculture as taught and practiced in California. About 65 of them were recently taken on a trip around that part of the Sacramento Valley between Davis and Chico on both sides of the river. Mem-

bers of the University faculty and farm advisers piloted the eighteen or twenty automobiles which showed the Australians something of the developed and undeveloped resources of this State, which is so similar in many ways to their home country. Stops were made at the Durham State Land Settlement, the U. S. Plant Introduction Gardens near Chico, the James Mills Orchards at Hamilton City, the Anchorage Berkshire Farm at Orland, and various places of interest to the men as they passed on the road. A more complete report of the trip will appear next week on account of lack of space in this issue.

California's hop crop is estimated at 65,000 bales; Oregon, at 30,000; Washington, 10,000 bales, and New York, 4,000 bales.

THE PREMIER BURNER

Is no ordinary burner; it is unlike any other burner in design and results.

We make the positive and unqualified claim that the Premier is the ONE scientific burner in the world.

The Premier concentrates the tremendous heat units of Kerosene in a clean gas fire, without smoke, soot or fumes.

Kerosene is saved because every atom is converted into gas and burned.

The Premier works in a smooth, quiet manner.

Buy For Service

BRING home Remington UMC for your shooting if you are modern minded. Your first leisurely and critical examination of your purchases will convince you that you have bought wisely. And use will prove it.

No other equipment the up-to-date farmer or ranchman buys is more typical of modern efficiency than the Remington UMC products he uses to get some game for his table. And in the long list of important Remington UMC inventions underlying this, none has been of greater value to him than the wonderful Wetproof improvement in shot shells.

Wet shot shells will never again bother you if you buy Remington UMC Wetproof "Arrow" or "Nitro Club" smokeless or "New Club" black powder shells. The hardest rain or longest soaking in a leaky boat will not affect them.

In body, crimp (or turn-over) and top wad they will remain hard and smooth as if fresh from the loading machine, and they will work freely through your modern Remington UMC autoloading or pump gun, without a hitch, firing as surely and with the same top speed, best pattern and penetration.

Remington UMC can now be obtained in more than 82,700 leading sporting goods and hardware stores in the United States—another detail of best service.

MY STAR.

I have a gold star on my breast,
A star of strife, a star of rest;
It marks a sword thrust through my heart,
It tells of glory and of pain,
Of bitter loss and wondrous gain,
Of youth that played the hero's part.

O star of gold upon my breast,
Tell of those stars that he loved best;
He bore the stripes, he suffered all
To keep our banner free from stain;
He hath not given all in gain
In answering his nation's call.

O star of hope upon my breast,
Strengthen the faith I have professed!
He died that nations might be free;
Help me to live for truth and right,
And with my woman's soul to fight
Nerved by his immortality.
—Caroline Ticknor, in Boston Transcript.

COURTESY AND CONSIDERATION.

"The greater man, the greater courtesy."

In every home opportunities should be made for the little children to practice consideration and care for something weaker than themselves. The cherishing instinct, both in the individual and the family, needs cultivation and direction. It is manifested in the love of little girls for their dolls and in the devotion of boys to their pets. If this quality of nurture is not exercised or properly directed, it withers; for affections must be exercised if they are to develop. We often see spoiled children in American families, where all their desires are gratified without effort on their own part and they are given no opportunity to serve. Many a mother virtually makes a slave of herself for her children, humoring every whim, and relieving them of all care, trouble and responsibility, only to find when they are grown that they are utterly selfish and inconsiderate.

Unfortunate, too, is the only child or the youngest member of the family, who is overindulged, with no more dependent member of the household to call forth his tender feelings. Herein lies one great value of the kindergarten, where children are given opportunities to help those younger than themselves.

For the child without companions in the home, the parent should provide occasions that require service or sacrifice for others. Arrange to have his friends come frequently to play with your little one, and share his toys, suggesting that the little guests must have the best.

Adaptability is gained through companionship with one's equals. From association with boys, little girls learn something of fair play, and become acquainted with the sturdier virtues; while, from girls, the boys learn to have a chivalrous attitude toward womankind.

The instinct of nurture is developed through the care of a garden or pets, for a child must exercise thought and put it into practice, in order to obtain results. Then, too, generosity and respect are stimulated by sharing the fruits of his care, a little bouquet for mother, a head of lettuce for a neighbor, an extra kitten for a playmate.

If pets have young, the child's mother should call attention to the care of the mother for her little ones, and her courage and self-sacrifice whenever the young are endangered. A child should be taught to take entire charge of his pets, to weed and care for his garden, if he is to receive the full benefit in character-development, and achieve the self-respect which comes from responsibilities accepted.

Then, too, good manners which spring from consideration are as essential to the happiness of the world as are good morals, and parents should be examples of both to their children. How often virtuous people make us unhappy by their lack of tact! Courtesy and graciousness smooth out the rough places of life. A tiny boy of 3 can raise his hat and one of 5 can rise at the table and push mother's chair into place. When older people enter a room, children should rise; in fact, they should be taught to practice all the little daily civilities. But

courteous manners are taught slowly, "for precept must be upon precept, precept upon precept; line upon line, line upon line; here a little and there a little." Many a man of good character has greatly limited his usefulness by his lack of "polish," because his mother, either from stupidity or over-indulgence, neglected his social training!

At this momentous time, it is especially important that all means possible be employed to foster the instinct of caring for the weak and dependent.

It would be well if more children were made to feel responsible for some child of less favored circumstances. It is astonishing how boys and girls will rise to the occasion when responsibility is placed upon them. In 1913 my 11-year-old niece who lived in London, had a "godchild" in another city, to whom she wrote a monthly letter, and sent little gifts at Christmas-time and other holidays.

At the present time the millions of little Allied orphans should make a strong appeal to the childhood of America. Correspondence between them would not only teach our children consideration for others and develop their familiarity with a foreign language, but it would also help cement the friendship of America with her Allies and greatly promote the cause of Internationalism. —Bertha Johnston.

TIMELY TOMATO RECIPES.

Tomato Relish.—Skin 15 ripe tomatoes. Pare and cut into small pieces 6 sour apples. Peel 5 medium sized onions. Put all this through a food chopper and add 2 level tablespoons salt, 3 green peppers, 1-3 teaspoon cayenne pepper, ½ pint vinegar. Boil slowly for 1½ hours, put relish in scalded jars or bottles and seal while hot. This is mild and delicious when served with meats, oysters, or vegetables.

Chopped Green Pickles.—Chop 1 gallon of green tomatoes, 1 gallon of cabbage, ½ gallon of onions, 24 large green peppers, 12 large red peppers. Put in a vessel and cover with water, add 1 pint of salt and let stand overnight. In the morning place in a bag and drain for 24 hours. After draining add 1 pint white mustard seed. In a separate vessel, boil 1 gallon of vinegar with 1¾ pounds of brown sugar. When boiling hot, pour over the chopped vegetables and cook for 15 minutes. Put in jars and seal while hot.

Green Tomato Sweet Pickle.—Slice 1 peck (8 quarts) of green tomatoes and 6 large onions. Sprinkle 1 cup of salt over them and let stand overnight. Drain in the morning, add 2 quarts of water and 1 of vinegar, boil 15 minutes, then drain again and throw away the vinegar and water. Add to the tomatoes and onions 2 pounds of sugar, 2 quarts of vinegar, 2 level tablespoons each of cloves, allspice, ginger, mustard and cinnamon, 1 teaspoon of cayenne. Boil for five minutes. The allspice and cloves should be tied up in a piece of thin cloth and should be removed when through cooking. Put in jars while hot and seal, although this pickle will keep without being sealed.

Ripe Tomato Marmalade.—Two dozen medium-sized tomatoes, 3 lemons, 3½ cups of sugar. Peel and slice the tomatoes thin, removing as many seeds as possible; peel, quarter and cut the lemons in thin slices. Cook the lemons, tomatoes and sugar together slowly until thick. Do not stir, except to keep from burning. Pack in hot sterilized jars.

FASHION NOTES.

Hats this fall are small, medium and large, as you wish, or as the occasion demands. The new line is length across the brim, from side to side. Smart trimming on the tailored hats is well to the front and simple. A half wreath at the base of the crown is becoming on a slightly drooping model, and a single feather, rose or fancy decorates the turned-up brim. Leather is very popular, both for soft sport hats and for trimming on the semi-tailored chapeau.

Suits are long coated and conservative in style. The sleeves and

shoulders are snug and the skirts still adhere to the straight silhouette although wide enough for comfort. Homespuns and serges are still favorites for the strictly tailored suits, while many new soft materials are shown in dressier garments trimmed with a fur collar, buttons or socket flaps. Browns are the favorite although blues are shown.

Coats tend toward the full skirt, many of the models flaring from the shoulders. The straight-lined polo coat with patch pockets and straight belt is popular and always so practical. Luxurious fur coats cling to the dolman style, while short jersey cloth jackets are pinched-backed or

BLAZING-AWAY-IN-COST-DEFENCE!

WINTER COMFORT

Can you honestly say you are ready for winter comfort if the usual discomfort must be experienced? "Hustling" wood, perhaps sawing and splitting too—wood in, ashes out, smoke and soot—all of which you paid for at a price higher than ever before known.

If you can eliminate the discomfort and have greater comfort, cut the cost and avoid all the loss, doesn't it appeal to your better business judgment? It is not a case of investing in a new stove—the same stove is used, not even any changes made in it, but it becomes a real gas stove, clean, cheap and fast, simply by installing a Dreadnaught Burner and using common coal oil as a gas-making fuel. Investigate—write for circular. Get everything good and "comfy" before the cold weather sets in.

THE POEM OF THE TREE.

I think that I shall never see
A poem lovely as a tree.

A tree whose hungry mouth is prest
Against the earth's most flowing
breast.

A tree that looks at God all day
And lifts her leafy arms to pray;

A tree that may in summer wear
A nest of robins in her hair;

Upon whose bosom snow has lain;
Who intimately lives with rain.

Poems are made by fools like me,
But only God can make a tree.

—Joyce Kilmer.

OCTOBER GARDEN WORK.

October is a continuation of the autumn planting season and is much like September, except that light and heat are slightly less and light frosts are nearer. Consequently, in places where fall frosts are expected, the interval may be too short for tender plants to advance from seed to service. But plants which must be rated as tender are few in California, and with these in strictly frostless situations, and with all the multitude of others in places of medium elevation, the month, which is counted late in the fall at the East, is early in the growing season in California. In fact, generally in the valleys and on the mesas, October is one of the best planting months of the year, although many are too slow to realize it, and fail of the best results with sweet peas, pansies and many other flowers because they try to follow eastern seed catalogues and eastern garden literature. California is different from the rest of the country, and October work in the garden affords one of the most striking demonstrations of this fact.

Those who have waited for the rains may now enter quickly upon the operations presented a month ago for the irrigated garden. It is the best time of year for soil enrichment with the ordinary materials, because the ample moisture will induce their speedy decay and assimilation. Make generous application in October so that the rains may carry the soluble richness down to the roots and leave the coarser parts to make mellow the surface soil which may be worn and weary by tillage.

Begin the pruning of deciduous shrubs and trees—do not wait until the leaves fall; when they become

limp and lose their natural pose, their work is practically done for the season.

Continue planting bulbs for winter and spring blooming. Dig up and replant singly such bulbs when they have become massed in too large clumps, else they will pinch each other into inferiority. Fertilize the borders where the rains will awaken the violets to new growth and keep the fall blooming roses and chrysanthemums well fed and watered, so that your garden will be glorious at Thanksgiving. Keep the lawns and walks free of falling leaves, but do not burn anything which can be dug into the soils of the borders. Leaf mold is naturally scant in California, therefore husband carefully the contributions which the plants make for their future thrift. Be active in garden effort.

Scatter seeds of California poppy and the whole range of native wild flowers. The rains will start them. It is nature's way.

Continue dis-budding and care and watering of chrysanthemums if rains are slack—not forgetting cloth shelters from too hot sun and too free dust, if rains are late.

Continue sowing sweet peas, deeply in light soil and finish sowing of stocks and pansies for late winter blooming. Marigolds will also give you warm winter color-masses.

Plant out seedlings and perennials still standing in seed boxes. Pansies, stocks and the whole throng of their associates will bloom for the holidays if now set in places of warm autumn sunshine.—California Garden Flowers.

SOME TIMELY AND EFFECTIVE MOSQUITO REPELLENTS.

Certain agricultural sections may gain undesirable notoriety through the presence of mosquitoes to the extent that it may cause trouble in securing or holding laborers on the farm. As a result of a year spent in New Orleans, where mosquitoes are very bad, the writer evolved the following receipt, which he used with success as a mosquito repellent:

Oil of pennyroyal (or citronella)20 drops
Alcohol or white vaseline½ ounce

Oil of cedar or oil of tar may be substituted for citronella or pennyroyal, "those are objectionable to the user. The mosquito will "feed" twice usually during the night—once about midnight and again about daybreak, when one is sleeping heaviest. In combining the oil used alone, while repellent, would lose their virtue shortly after the alcohol is given off.

THE CHILD'S HANDICAP.

Ten per cent of American children have adenoids, according to a recent extensive survey in population centers conducted by the United States Public Health Service. Excluding defective teeth, experience throughout the country shows that adenoids are among the most frequent of the physical defects in children.

Adenoids may be prevented or cured after development. As one of its contributions to improve the nation's health and strengthen its manhood, the Public Health Service has prepared a booklet on adenoids for distribution to parents and school authorities.

It tells the parents how the first appearance of adenoids may be detected by the labored mouth breathing of the child, particularly while sleeping. Since nature intended that we should breathe through the nose, a provision by which the air thus breathed is purified and warmed be-

fore entering the lungs, it is evident that mouth breathing results in impurities getting into the air passages. The dangers of this alone are many, but there are others, often grave ones. The child with adenoids is almost invariably underweight, hollow-chested and stoop-shouldered, due to the labored breathing. Facial deformity is another result. The upper teeth protrude, are crowded out of shape, and become a fertile field for disease. The children suffer from frequent colds, develop chronic nasal catarrh and sometimes lose the sense of smell and hearing.

Following adequate treatment, improvement is marked. The child regains the lost weight, acquires a healthy color and very soon is the normal person nature intended it to be. Prevention is better than cure, however, and where parents are intelligent and attend carefully to the hygiene of their children, the formation of adenoids will be avoided.

Braender Tires and Tubes

Make Satisfactory Service Doubly Sure

Trademark
Registered

Equip your car with **BRAENDER TUBES** as well as **TIRES** and you will have a combination that is 100 per cent satisfaction sure.

The important track records established by Braender Tires during the racing season of 1919 at Indianapolis, Sheepshead Bay Speedway, Uniontown, Tacoma, and Elgin prove them to be without a peer for **SPEED, ENDURANCE, and ECONOMY.**

These sensational victories are not only a wonderful endorsement of Braender Tires but likewise Braender Tubes.

The terrific grind, the smashing strains of racing speed, not only called for a tire of thoroughbred quality but demanded that the tube which it enclosed be of equally high grade. Braender Tubes—gray and red—are built up of multiple layers of purest rubber and vulcanized into a perfect air-retaining unit. This method gives the greatest possible strength and a uniform thickness.

Buy Braender Bull Dog Non-Skid Tires if you want the best at a fair price, but see to it that they enclose Braender Tubes if you would be without trouble on the road and secure extra mileage.

who are the wholesale distributors and they will tell you where you may procure them. Dealers send for proposition.

Next time you buy tea, don't think of "a pound of tea." Think of the cups of tea you are going to drink.

Think of the pleasure you are going to get. Think of the real tea-flavor.

Then think of tannin—
ugh!

Now do you want common tea or Schilling Tea, the fine economical practical tea?

There are four flavors of Schilling Tea—Japan, Ceylon-India, Oolong, English Breakfast. All one quality. In parchment-lined moisture-proof packages. At grocers everywhere.

A Schilling & Co San Francisco

TRY COOKED CUCUMBERS.

Cucumbers, when in season, are usually cheap—much cheaper than corn, beans, or peas—but the average family grows tired of them served raw and so by early fall comparatively few are being eaten in American homes. Not many American housekeepers know their possibilities as a cooked vegetable, but in other countries they are used in the same way as are eggplant, squash, and corn. They have a flavor all their own and afford a pleasant change in the diet.

The following recipes have been taken largely from foreign cookbooks and are favorites of housewives of other countries. You may find that your family will like them baked, boiled, or fried as well as do the Swiss or the French.

Garnish for Fish and Meats.—Peel and cut a large cucumber in pieces about 2 inches long. Scoop out one end. Fill with meat or fish sauce and use as garnish and serve one with each portion of meat. The sauce and cucumber, eaten with the meat, makes a good relish.

Baked Cucumbers.—Use solid cucumbers of the same size. Peel and cut lengthwise, scooping out the inside carefully and leaving the shell one-quarter to one-half inch in thickness. To four cucumbers use: 1 cup bread crumbs, 1 tablespoon butter, 2 teaspoons salt, 2 teaspoons onion, finely chopped, pepper, and the part of the cucumber scooped out. If seeds are large, do not use the seedy part. Fill cucumbers, sprinkle some buttered bread crumbs on top. Bake until tender—about 30 minutes in a moderate oven.

Stewed Cucumbers with Sauce.—Slice cucumbers into pieces an inch long and cook until tender in salted water. Serve hot with sauce made as follows: 1 tablespoon butter, 1 tablespoon flour, $\frac{1}{2}$ cup rich milk, yolks of 2 eggs, well beaten, 1 teaspoon vinegar, salt and pepper. Mix butter and flour in frying pan. When well blended, add milk and cook until rather thick. Pour over eggs and vinegar.

Fried Cucumbers.—Peel and cut cucumbers in lengthwise slices. Roll in flour and fry in deep fat until golden brown. Serve very hot.

Sautéed Cucumbers and Onions.—1 tablespoon butter or drippings, 2 cucumbers, 1 small onion, $\frac{1}{2}$ cup milk or cream, salt and pepper. Fry onion in butter until golden brown, then add sliced cucumbers and cook until tender. Add cream or milk and season well with salt and pepper.

HOUSEHOLD HINTS.

Iron-colored linens on the wrong side.

Peroxide of hydrogen will remove starch.

Hot drinks are better than cold for old people.

Never soak clothes in hot water; it will set the stains.

Prunes should be soaked for six or eight hours before cooking.

Nothing ruins a hard wood as quickly as scrubbing.

BAKED STUFFED ONIONS.

Boil large white onions for half an hour in boiling, salted water. Drain, cool and scoop out the centers. Mix together two tablespoons of chopped walnuts, $\frac{1}{2}$ cup chopped apple, 4 tablespoons grated bread crumbs and 2 tablespoons of melted fat. This amount will fill half a dozen onions. Set the filled onions in a baking pan and bake for twenty minutes, basting with a little pork fat diluted with water.

WHY ALWAYS MAYONNAISE?

The present-day American cook seems to feel content if she knows how to produce two salad dressings—mayonnaise and French. These are the two most useful of dressings, but for the sake of variety, one should know how to make some other sorts. Here are some well-tried recipes that may add a charm to the menu.

With Pineapple Juice.—Beat two eggs until frothy and add a quarter of a cup of pineapple juice and one-fourth of a cup of lemon juice. Put

in a double boiler and stir constantly until it thickens. Season with a little salt and set away to cool. This is delicious with any fruit salad, but especially so with one made of apples, nuts and celery.

For Potatoes or Cabbage.—Beat slightly two eggs in a double boiler and add a rounded tablespoon of slightly melted butter. Add a half-cup of sour cream, season with mustard, pepper and salt. Cook until it thickens.

For Plain Lettuce.—To a cup of mayonnaise dressing, add a cup of whipped cream. Stir in a little paprika and chili sauce to make it a light pink, also a little sugar.

With Boiled Eggs.—Mash the cooked yolks of three eggs until smooth and then the yolk of one raw egg and work in a half-teaspoon of salt and a dash of mayonnaise. Add a gill of olive oil, drop by drop, mixing in gradually three tablespoons of vinegar. This is good with any sort of salad.

RECOMMENDED BY A READER.

Editor Home Circle: When you have tried all the standard remedies for corns and failed, touch them up with iodine a few times. That's the end of that trouble.

Some one says, keep rice flour to thicken your gravies—it refuses to lump. It's too good to forget. I have tried it with success.—S. J. K., Porterville.

FRUIT TASTE.

Take 1 pound of seeded dates, 1 pound of seeded raisins, $\frac{1}{2}$ pound candied cherries, 1 pound figs, two cups nut meats. Put all of these through the meat chopper twice, spread pulverized sugar on the board, knead the mixture well with the sugar. Roll out $\frac{1}{2}$ inch thick; cut in squares; roll in granulated sugar; pack away in oiled paper.

A "365" Day Liniment

YOU ARE SAYING TO YOURSELF—
"If I only knew of something to stop that Backache—help my Rheumatism—cure my Neuralgia, I would send and get it at once."

Get It. Gombault's Caustic Balsam will give you immediate Relief. A Marvelous Human Flesh Healer and a never failing remedy for every known pain that can be relieved or cured by external applications. Thousands testify to the wonderful healing and curing powers of this great French Remedy. A Liniment that will soothe, heal and cure your every day pains, wounds and bruises.

Gombault's Caustic Balsam

The Great French Remedy Will Do It

It Helps Nature to Heal and Cure. Penetrates, acts quickly, yet is perfectly harmless. Kills all Germs and prevents Blood Poison. Nothing so good known as an application for Sores, Wounds, Felons, Exterior Cancers, Burns, Carbuncles and Swellings.

"I had a bad hand with four running sores on it. The more I doctored the worse it got. I used Caustic Balsam and never needed a doctor after that."—Ed. Rosenberg, St. Ansgat, Ia.

Mrs. James McKenzie, Edina, Mo., says: "Just ten applications of Caustic Balsam relieved me of goitre. My husband also cured eczema with it, and we use it for corns, bunions, colds, sore throat and pain in the chest."

A Safe, Reliable Remedy for Sore Throat, Chest Cold, Backache, Neuralgia, Sprains, Rheumatism and Stiff Joints. Whenever and wherever a Liniment is needed Caustic Balsam has no Equal.

Dr. Higley, Whitewater, Wis., writes: "I have been using Caustic Balsam for ten years for different ailments. It has never failed me yet."

A liniment that not only heals and cures Human Flesh, but for years the accepted Standard veterinary remedy of the world.

Poultry and Rabbits for Profit

POULTRY AND RABBITS AT INTERNATIONAL.

(By Frederick W. D'Evelyn, Superintendent Poultry and Pet Stock Show.)

There is no substitute for sweat, except perspiration. The world is five years behind time in production. This is a deficiency that must be overtaken. Our sin has not been that of entangling alliances, but of entangling limitations. The malady is admitted. The remedy is—"make good." No Californian, not to mention San Franciscan, would willingly be listed—"not of this world." So to make good is a responsibility which has a demand as personal as it is universal.

San Francisco has innate and specific qualities that constitute it a logical center for a world exhibition. All things come to them that wait. We admit a long waiting for just such a demonstration as the forth coming C. I. L. S. Corporation renders possible.

Livestock products are a dominant factor in the balancing up of this five years rear-end slump in the necessities of life. No integer in that classification, be "it ever so humble," can afford to be overlooked or set aside. And as complementary to that claim, the small producer, he of the limited number, or of the backyard lot, must recognize that his share is relatively as necessary and catered for as the exhibit of the carload lots or broad-acre stockman. The success of this show will be a direct output of this recognition and blending of duty and co-operation.

In the small stock, poultry, pigeons and rabbits, it is no exaggeration of prediction based upon evidences of fact, but these will be assembled not merely in numbers, but in quality and variety in all three groups, a display that will outclass any record hitherto reported from any section of the United States.

The show is a necessity independent of viewpoint. Its initial effort must be so endorsed and appreciated, commercially, socially and educationally, that its annual repetition will become an established reality in this great western domain of mighty resources and unlimited responsibilities.

RAISING CHICKENS ON SHARES.

To the Editor: A land owner wishes me to raise chickens for him. He is to get 500 day-old chicks, furnish all feed and equipments. I am to furnish the labor. What salary per month should I receive, or what share of the chickens?—Mrs. E. G. F. Perkins.

It is practically impossible to anticipate what division of profits would be nearly equitable, or what would be a proper salary, until after records of at least one year are established. In order to be able to reply to similar requests, B. F. Kaupp, poultry investigator at North Carolina Experimental Station, summarizes the result of a twelve-month account of 88 hens-run as a profit test at that station as follows: To the supplier of the feed should be awarded 51 per cent of the total receipts; to the owner of land and equipment, including interest and depreciation on same, 24 per cent; and for all labor in handling the flock, including interest on the value of the flock and depreciation of same from death and other causes, 25 per cent. For the reason that labor is much higher on the Pacific Coast, in order to provide a proper share for our correspondent it is possible that labor should be awarded more than 25 per cent.

EGGS HAVE BLOOD SPOTS.

To the Editor: Some of my hens frequently lay eggs with blood spots in them. Have you any idea what causes this, and is there any remedy?—Mrs. A. K. Lincoln.

Frequently the first eggs laid by pullets will have blood-clots in them; but at times the eggs from mature hens will be similarly affected, in which cases it is due to a slight hemorrhage that occurs in the upper por-

tion of the oviduct. This may be caused by feeding large amounts of very rich feed or spice and drugs to stimulate egg production. To correct the trouble feed an abundance of green feed and for a short time feed less meat and other concentrated feeds.

SANTA CRUZ SENDS OUT A CHALLENGE.

Who has a flock of ten pullets which will average 200 eggs per hen or better the coming season? To such we would say, let us see, let us meet you in the arena and take up the challenge. Such an arena is being prepared at Santa Cruz. It will be modern, new, under the advisory supervision of the University of California, all hens will be trapnested, fed a carefully prepared ration, and in every way it will be an up-to-date contest.

And why should you accept such challenge if you have the pullets? First, because if you have such a pen of pullets, unless you advertise the fact your fame will be a candle light under a bushel measure. Second, you yourself want to have the satisfaction of knowing how much better you are than the average man when it comes to raising chickens. But third, and most important of all, you will want these hens trapnested.

It will cost you two dollars per hen to make an entry; it will be worth all of that to you to have these ten hens trapnested.

So, if you are that lucky person, again we would urge you to take some action at once. The contest begins November 1. You can get all the detailed information by writing to the Santa Cruz County Farm Bureau, Santa Cruz, Calif., or by asking your local Farm Advisor.

TURKEY MOPES.

To the Editor: I have a sick turkey; she won't eat, but drinks all the time and just mopes around. The droppings are of a greenish color. What is the trouble and remedy?—Subscriber, Martinez.

The trouble probably originated through indigestion, and the liver, and possibly other organs, have now become seriously affected. Most likely the indigestion was caused by overeating of grains, or other rich feed, and lack of green and bulky feed. A large dose of castor oil and plenty of green feed will help to cure the trouble if the fowl is not too far gone.

ATTENTION, RED BREEDERS!

On Sunday, November 2, at 2:30 p. m., at the California International Livestock Show, San Francisco, in Red Alley, The Rhode Island Red Club of Northern California will meet for a very important meeting. All members are urgently requested to be present and all Red Breeders, whether members or not, are cordially invited. At this meeting we will decide where to place the silver cup offered to our Association by the Oakland Poultry Show, the official show of the Rhode Island Red Club of Northern California this year. Everybody present, please.

REPEATED BY REQUEST.

They all do it, and why not us? This yarn is not original, but it is worth repeating, and inasmuch as a friend sent it in with a request that it be printed, here goes:

The dyspeptic friend was dining with the parents of Bobby, aged 8. Daddy was carving the duck.

"What part of the duck do you prefer?" asked Daddy.

"None at all," was the reply. "I never eat duck."

Whereupon Mother sent the servant to the kitchen for some cold chicken. "Thanks, you're very kind, but I never eat chicken."

Host and hostess were in despair, when the latter remembered there

was some very fine cold roast beef left, so she sent for that.

"No, many thanks," said the visitor; "I never eat roast beef."

Meanwhile Bobby had been growing more and more nervous. At the third refusal he piped up:

"Say, Daddy, maybe the old duffer would like to suck an egg."

"I Hear You Ca-a-aling Me," warbled daughter from the parlor.

"Yes," sang the mother from the kitchen. "I want you to help me with the dis-s-shes."

And then a profound silence reigned.

Poultry Breeders' Directory

Rate 3½ cents per word each issue.

YOU'VE OFTEN THOUGHT—How can I get hens to clear \$5 yearly? Easy. Twenty generations selecting, trapnesting, breeding best, has developed 200-300-egg hens that reproduce their kind. Let our circular reveal the secret of \$2 hens clearing \$3.00; \$3.50 hens clearing \$5. Leghorns, Anconas, Belds, Rocks, Minorcas, Chicks, Turkeys, CHICKS, EGGS, hundreds. LAYING, YOUNGER PULLETS, BREEDERS, near price ordinary stock. Well booked into Spring, yet most weeks open for thousands chicks. 140,000 hatching capacity. Half so to former customers. Returned thousands dollars for chicks we couldn't supply. Learn why. J. Beeson, Pasadena, Calif.

MAHAJO FARM

P. O. Box 597,
Sacramento, Calif.
offers

White Leghorns, Brown Leghorns, White Rock; Cockerels and Pullets.

High-class, standard-bred stock.

PEARLESS WHITE WYANDOTTES—Our 200-egg strain, bred for years for show qualities and high egg production. 50 cockerels, 100 pullets for sale. Trios and mated yards. Eggs for hatching. Catalogue free. J. W. Atkinson, Box 8, 130 Willard St., San Jose, California.

ORDER BABY CHICKS NOW—For immediate or spring delivery. Several varieties. Safe arrival guaranteed. Write for free circular. R. I. Red, Buff Orpington and White Rock cockerels now ready for shipment. Stubbe Poultry Ranch and Hatchery, Box 67, Palo Alto, Cal.

S. C. WHITE LEGHORN CHICKS—by the 100 or 1000 from A-1 Hogenized and Trap-nested stock. Won 1st, 2nd and Special (Utility Class), Oakland and Modesto. Order early for Fall and Spring delivery. A. O. & P. M. Forster, 2918 Ovis St., Berkeley, Cal.

PETALUMA HATCHERY. Can ship day-old chicks to points reached in three days. Four varieties. We challenge the hen, or anybody else. Free fall circular. L. W. Clark, Petaluma, Calif.

WHITE HOLLAND TURKEYS—Young breeding stock. January and February hatch. Chance to get a thoroughbred young tom reasonable. A. P. Ward & Son, Calistoga.

BARRED PLYMOUTH ROCKS—Nothing better in poultry. Prize-winners and wonderful layers. Choice stock for sale. Chas. H. Vadden, Box 3, Los Gatos, Calif.

"EASTMAN'S BRED-TO-LAY" Hogenized and trapnested Barred Rocks. Fall chicks, eggs, cockerels. Fairmead Poultry Farm, Fairmead, Calif.

ROCK, RED OR LEGHORN baby chicks—large or small lots. Right prices. Madera Hatchery, Madera, Cal.

BUFF ORPINGTONS, BUFF DUCKS, BOURBON RED TURKEYS—The Ferns Ranch, Rt. 2, Box 144D, Pomona, California.

GOLDCROFT BUFF ORPINGTONS—Winners San Jose show. Choice stock for sale. Samuel Abrams, Los Altos, Calif.

CHICKENS, DUCKS, GEENES, GUINEAS, Pea Fowl, Pigeons, Wm. A. French, 545 W. Park St., Stockton, California. Stamps.

SUPERB BARRED ROCK and Blue Andalusian cockerels. February hatch at \$5.00 each. Geo. I. Wright, Mokelumne Hill, Cal.

PUREBRED S. C. RHODE ISLAND RED hatching eggs. \$2.00 per fifteen. E. G. Goring, Quail Ranch, Pixley, Cal.

BRONZE TURKEYS—Albert M. Har-

ments, Calif.

RABBITS.

NEW ZEALAND RED BUCKS and does. Start right with does bred to registered bucks. Dixolano Rabbitry, Box 521, Dixon.

For Sick Chickens

Preventive and curative of colds, roup, canker, swollen head, sorehead, chicken pox, limber neck, sour crop, cholera, bowel trouble, etc. Mrs. T. A. Morley of Gallien, Mich., says: "I have used Germozone 17 yrs. for chickens and could not get along without it." Geo. F. Vickerman, Rockdale, N. Y., says: "I have used Germozone 12 years; the best for bowel troubles I ever found." Frank Shuka, Chicago, Ill., writes: "I have lost but 1 pigeon and no chickens in the 3 yrs. I have been using Germozone." C. O. Petralia, Moline, Ill.: "I never had a sick chick all last season." Bernard Herring, Kirksville, Mo., says: "Cured my puniest chicks this spring." Ralph Wurst, Erie, Pa., says: "Not a case of white diarrhea in 3 yrs. I raise over a thousand a year." Good also for rabbits, birds, pet stock.

GERMOZONE is sold generally at drug and seed stores. Don't risk a substitute. We mail from Omaha postpaid in new 25c, 75c and \$1.50 sizes. Poultry books free.

AGRICULTURAL NOTES.

Milo maize is an important new crop in Perris Valley this year.

Scott Valley, Siskiyou county, had an exceptionally fine apple crop this year.

Many 1919 lima beans have been sold in Orange County at \$11.50 to \$12.05 per cental.

The flouring mill at Ft. Jones, Scott Valley, Siskiyou county, is running night and day, grinding the abundant harvest.

A buyer of Napier grass joints for planting complained that they did not grow. It was because he had planted them in dry ground. They need moisture for the young roots.

Eastern soup manufacturers are buying considerable tomato puree in California at fair prices. This relieves an overburdened supply of canned tomatoes held over from 1918.

Martin Kuster, who has 3,200 acres of rice in the Wheatland district, expects 128,000 sacks, which, at prospective market prices, will bring him \$700,000. Not all of that is profit!

The Colusa Rice mill, one of the eight large mills in the Sacramento Valley, commenced operation October 20. It is expected to mill nearly 200,000 bags of rice during its eight months' run.

A big cauliflower acreage in the Compton district of Los Angeles county is signed up for delivery to the Vegetable Growers of California, Inc., who will pack carlots in their own sheds adjacent to the fields for shipment to eastern markets.

Madera county has been busy fighting squirrels. Eleven and a half tons of poisoned barley have been distributed to ranchers through the County Horticultural Commissioner's office, and many ranchers have mixed their own or bought commercial poisoned barley. The county has a carload of carbon bisulphide ordered for use when the rainy season sets in.

The weed war is being carried on vigorously in Yuba county. A beginning infestation of Johnson grass was promptly dug out by the railroad near Wheatland on request of the County Horticultural Commissioner. Officials of the Hallwood Ditch Co. have been notified that water grass, Canadian thistle and other weeds are fouling their ditch banks, and it has been suggested that they fence in and let sheep clean up the weeds.

F. W. Read of the U. S. Bureau of Markets and E. W. Stillwell of the U. S. Bureau of Crop Estimates recently arrived in Los Angeles to report market and crop conditions of commercial vegetables and field crops. Mr. Stillwell succeeds R. G. Risser, who resigned some time ago to do similar work for the California Vegetable Union. Mr. Read succeeds H. H. Warner, who resigned to take up field work for the California Walnut Growers' Association.

The 160-acre ranch of Wm. Jahde on the Klamath River, below Hamburg, Siskiyou county, besides producing hay, grain and stock, has the following fruits: apples, pears, peaches, grapes and strawberries; and an especially fine variety of soft-shelled English walnuts, one fifteen-year-old tree bearing one hundred pounds this season. These nuts are large, many measuring six inches in circumference with hull removed.

STEAM THROUGH THE CARBURETER.

A "super-carbureter" was shown in the accessories tent at the Los Angeles tractor demonstration. Its duty is chiefly to supply steam to the intake manifold. Water from the water jacket is heated on the exhaust pipe for this purpose. A pipe also connects the supercarbureter with the crank case so that the suction draws oil vapors from the crank case and mixes them with the steam. This lubricates the valve seats and helps compression. It also supplies a little explosive vapor from the hot beaten oil which adds to the power. The steam keeps all carbon soft and thus gets rid of it through the exhaust. The device is adaptable to any automobile, tractor, or motor truck.

GOOD RECORD FOR TRACTOR.

A track-type tractor of 20-35 horsepower, which had worked 1,035 hours with a total cost for repairs of \$1.50, was shown at the Los Angeles tractor demonstration. It was owned by J. Reeves of Northam Station, Orange County. He had plowed 173 acres with this tractor; disked 300 acres, chiseled 300 acres, and done other miscellaneous work with it.

Get him with a Stephens Trap

—and ship his hide to DENVER. Stephens will pay you the highest prices for all Western Furs—Coyotes, Skunks, Muskrats, Wild Cats and all others. DENVER is the Closest and Best Market on Earth for Western Trappers and Fur Shippers. Stephens of Denver is the largest exclusive buyer of Western Raw Furs in the world. Stephens charges you no commission—saves you 50c to \$1.00 on express or parcel post and you get your money back 2 to 10 days quicker—because Denver is closer to your town than any other important Fur Center. Every shipment personally graded and priced by a member of the firm.

Why Firestone is Giving Extra Value in Tires

Firestone is giving so much more per dollar this year than the ordinary that our 42,000 dealers want us to tell the public why.

How can Firestone sell the new Standard Oversize Firestone Cord at a normal price?

How can Firestone give the most highly perfected, special molded 3½-inch tire at a price that dealers usually ask for "off brand" kinds?

How can Firestone tubes be sold for less than others of any reputation at all when their very looks and "body" and feel indicate their finer quality and longer mileage?

The answer to all this is Firestone generalship of man power—Firestone organization of brains and capital.

Firestone has built tires since the beginning of motor cars and trucks. Firestone built the first truck tire, and practically all the "firsts" among tire and rim improvements belong to Firestone.

Most Miles per Dollar

Firestone

Plant No. 1. Capacity 20,000 Tires Daily
This vast plant is now concentrated on Cord Tires and Truck Tires. Its efficiency and capacity have been greatly increased by Plant No. 2.

That's because Firestone has thought farther ahead.

So today, Firestone is farther ahead than ever. Year by year Firestone has been laying those foundations of man power and resources which are bearing their biggest fruit in low cost mileage today.

It took Firestone man power to create the factories shown here.

It took Firestone man power to foresee the value of a Firestone organization in Singapore, the source of rubber supply, thereby saving you 3 cents a pound on rubber.

Plant No. 2. Capacity 16,000 Tires Daily
Devoted exclusively to 3½-inch Tires. Firestone is first with a huge separate factory and organization specializing entirely on this tire in greatest demand.

It took Firestone man power to control the fabric from cotton field through the mill, and to design looms for special widths of fabric, thus reducing waste and lowering the cost.

And why is this Firestone organization the most effective in the business?

Because Firestone attracts and holds the men who do things.

90% of Firestone workers own stock in the company. Firestone Park is a unique and attractive home community; the clubhouse plays a real part in the daily life of these workers. The Firestone bank has thousands of depositors. The Firestone insurance fund protects every worker in the organization.

All of these are reasons why Firestone can give more in the Cord Tires, or Fabric Tires, or Truck Tires, or Tubes.

Their personal financial interest in you as a customer makes Firestone men save at every turn, to hold you by giving mileage at lowest cost.

Ask your dealer for a Firestone in your size and type.

When There's Hard Work To Be Done

Folks are getting the kind of service they want and have a right to expect from United States Tires.

That's the one big reason for United States Tire popularity.

Where there's hard work to be done—work that requires tire strength and tire dependability,

—there you'll find United States Tires.

United States Tires are good tires by right of *might*. They are built to give wear and service—to resist hard use—to save money in *extra* work and *extra* miles.

There are five famous types of United States Tires—one for every need of price or use.

United States Tires
are Good Tires

LOS ANGELES

Experimental Orchard on a Large Scale

Written for Pacific Rural Press by John J. Fox.

ALBERT F. ETTER, of Ettersburg (Humboldt county) has originated more varieties of apples and strawberries than any other man in the State. Mr. Etter and his two brothers have 2,000 acres of land between them in the Mattole country, of which 100 acres are in apple orchard. At the Northern California Apple Show his several hundred varieties of new apples constituted a show of color, quality and firmness that could not, we think, be equaled on the Coast or excelled anywhere. We shall here describe two or three of the best of his productions which have a promising future. And as Mr. Etter's methods of culture and marketing are altogether out of the ordinary, they merit description.

Soil and Cultural Methods.

The soil is of excellent moisture-retaining quality, and is varying in texture from a medium sandy loam to a shaly loam. There is no hardpan

is about 50 miles long, with a distance of about 10 miles from the Coast, but protected from it by a continuous mountain range. Practically all the apples produced by him are fall and winter apples—keepers. Not only do they seem most suitable to this climate, but being firm in texture, they are more suitable for drying and with less waste than early apples. In planting, the holes are dynamited—about half a stick being used in a deep drill-hole.

Choice Manx Seedlings.

Two handsome and useful apples, from 50 varieties of seedlings of the Manx Codling, are worthy of mention. They all hold true to type, but there is much variation in quality and color, though they are all of good texture. Those we saw at the Northern California Apple Show and at the Emporium display in San Francisco were as full, crisp and firm as when they had been picked six weeks before. The first one was called "Delilah," a name we

The cut shows the home and a part of the experimental orchard of Albert Etter with beans and truck between the rows of trees. The bare spots show where undesirable varieties have been taken out and planted with others. The trees range from 5 years to 25 years old.

and the soil is the same texture at great depth as at the surface. There is plenty of irrigation water on this ranch, and though Mr. Etter has never practised irrigation he intends to. Part of the orchard has been plowed and a part has not been plowed, and you cannot pick out the cultivated from the uncultivated fruit. Therefore, why cultivate when just as good results are obtained without? The intention is therefore to seed down the whole thing to native grasses, especially rib grass; sheep off the growth and then irrigate in July and perhaps again later.

The rainfall at Ettersburg is copious, to put it mildly—90 inches not uncommon, and even up to 100 inches. Because of this rain, cultivation is put off till late in the spring and plowed ground makes spraying difficult. Rains in the fall on cultivated ground render it so soft as to make it a hardship to haul the fruit out. The water for irrigation will be pumped from Briceland Creek, and will have to be lifted 275 feet, but there is plenty of it.

The Etters keep enough stock to run the place and farm for it. In addition they, together with J. E. French, keep a flock of Toggenberg milk goats—a small flock of purebreds and the big flock are grades.

Experimental Work on Broad Lines.

Mr. Etter's experimental work is broad enough in line to demonstrate suitability of varieties for the whole region around him. The Mattole valley

supposed was chosen because it was fair to look upon but tart to the taste. "No," said Mr. Etter, "it is for the reason that if Samson had known as much about women as I know about apples, he would have been able to handle her." This apple can be baked whole; does not mush up when made into pies or sauce. It is not only a good cooker and keeper, but makes the finest syrup of any apple.

"Epochal Seedling" is also from the Manx, a golden yellow apple, always bears well, and is a good keeper. It's flavor has a slight suggestion of grape-fruit. It is also good for cooking and baking in every way. It is a true oblong shape, like Golden Pippin, fairly deep cavity, rather shallow calyx, which is closely pinched, and medium stem—one of the few apples that will bear fruit on sides of new growth.

"All Gold" is a splendid apple and has, Mr. Etter says, the best characteristics of any. It is a Wagner seedling, having the slight ribbing of that variety, but is more refined by being fleshed out. It is a golden yellow in color when ripe, very firm flesh with a perfect flavor, and has excellent keeping qualities. It has a deep cavity and long stem, shallow end and open calyx. The apples set generally not more than two in a place and generally one. It blooms the least of all varieties, he says, but always bears a full crop. It exceeds the quality of its parent by a large margin. Most Wagner seedlings revert to the wild type, but this is a remarkable exception.

EDITORIAL.

CALIFORNIA: ONE AND INDIVISIBLE.

AS THERE is nothing left of the great war but the treaty ending it, and that will pass with reservations; as the little wars in Europe which have followed the great war are too distant to excite local interest on this edge of the world; as we have no State election next month and no legislature next winter, it is perhaps to be expected that the great molder of public opinion in Southern California should be warming-up their old left-overs on the subdivision of the State of California. It is an inane proposition and as piffling as it is lifeless, but it has to be kicked as often as momentum by gravity and be credited with inherent force which it does not possess—especially by newcomers who have never given the subject any attention.

The only novelty in the proposition as it now emerges from the editorial cold-storage tanks of the Santa Barbara Press, is that California should be divided into three States instead of two, and that in itself is interesting. This is the way of it:

California is logically divided into three parts; especially so, if a strip of southern Oregon could be added to the northern third of California. Within recent months, Klamath, and Jackson counties asked the Oregon legislature for permission to annex themselves to California for geographical reasons; and while the petition was frowned upon and shelved, the fact remains that if California should seriously take up the issue of realignment for the purpose of meeting present and future needs, Oregon, no doubt, would see the wisdom of the step, and encourage it, even at the expense of losing a bit of territory. The Southern California counties form a state within themselves. The Tehachapi is a natural boundary. A new state comprising that section would have sufficient population, and great diversity of interest.

The writer, in support of a tri-partite division, speaks thus definitely of a north and south division, but neglects to mention a central division—taking it for granted, probably, that if his readers should find a head and a pair of feet about six feet apart they would infer that there was a body between them, and of course it would be shocking if they did not, but we of the central part of the State have objections to existence merely as an inference. We write this objection in the effort to produce something as inane as the proposition against which we lodge it!

WHY TRY TO DIVIDE CALIFORNIA?

In one way the reopening of the question of State division by the Santa Barbara Press has a unique and refreshing feature, and that is the claim that it would be good for the whole State and the whole coast. As we remember, former propositions for division have rested on the claim that Southern California is so different in people, in climate and productions that it ought not to be indissolubly linked to the clod-hoppers inhabiting the rest of the State and busying themselves with the products which the south side of the North Pole permits. We are glad that argument has been dropped, for it never deceived anybody but the few who came into California by the southern route, and

have never risen above the Tehachapi mountains, and it was distressing to think that we had any Californians who were so provincial. The only vestige of the old claim is found in the words quoted above: "The southern California counties form a State within themselves," and the untruth of that statement needs no argument beyond the citation of the fact that the southern metropolis, Los Angeles, of which the whole State is proud, has constructed a great system for her future water supply and captured a stream of water far beyond the counties south of Tehachapi and is now irrigating a considerable area of land with water which the proposed division would place under the taxing power of another State! Surely, our Santa Barbara geographer has forgotten how valuable the water supply of a metropolis may become as prohibition progresses!

But the new proposition is based by its proponents upon more statesmanlike grounds, viz.:

California is handicapped by inadequate representation in Congress. This is shown in many ways, one of the most pronounced instances being the national attitude towards Asiatic-American problems.

Our population is rapidly increasing, and our interests so extended and varied that one State government can scarcely do justice to itself or the people.

There is surely force in this suggestion, but the way to enforce our claim for the preservation of America as a home for the white race must not rest upon the chances of doubling or tripling the number of senators from our piece of geography. We must appeal to the sense of fitness and fairness of the senators of other States and the sentiment now ruling in other states is so strong and manifesting itself so clearly that the conception that we must depend upon a little local arithmetic to support it seems trivial. It would, of course, be desirable to have the far-western point of view more fully recognized and supported at Washington, of course, but we must wait until we secure more people and thus advance our strength in the branch of Congress which is representative of population. That is the way other States advance in national legislation, and the only way they can advance. California, with her two senators and a lot of surplus geography, is surely no worse off in the way of representation than is New York with two senators and her great surplus population.

WHY CALIFORNIA CANNOT BE DIVIDED.

But the chief reason why it is idle and inane to talk of dividing California is the fact that it cannot be divided. Proponents of the idea always seem to infer that all we need to do is to agree that it be divided, and perhaps have an election to declare such an agreement. They forget that in only one case in our history has a state been divided and that was the split of Virginia as a war measure, and we devoutly trust that such an occasion may not arise again in this country. In all other states which have a geographical division, as in the Carolinas and the Dakotas, both were admitted as states or created as states and not divided into states after admission. No wish of a state will move Congress to its subdivision unless some very clear national advantage can be discerned. For the reason now advanced, the multiplication of senators from our geography, the more populous states would oppose and not approve it. Even if carried by our own legislature and popular vote (which is itself inconceivable) the U. S. Senate would kill the proposition by its conservative attitude and the House of Representatives by its representation of their excess population of other states. The very same considerations which might lead us to ask for it would induce the people of all the populous states of the Union to deny the request.

We have said that the prevalence of the question before our legislature and at the polls is inconceivable. Supposing that increased representation in the United States Senate and greater influence in national affairs did commend themselves strongly to our people, they would not work or vote for these advantages at such cost of increased taxation as would arise in all the states into which California might be subdivided. Even with prorating to the different parts the present value of state buildings, etc., the taxation to maintain two

or three executive outfits instead of one would frighten support from the proposition even in the section where it would be presumably most strongly urged by local pride and political greed and yearning.

It occurs to us to suggest that our Santa Barbara contemporary who has just challenged discussion of this old and infirm question of state polity could use his strength to much better advantage if he should urge widespread and generous efforts to develop all of California to the ideals of single statehood with which her birth into the Union was endowed. All California is a unit, and no part of California is. The same natural endowments, the same productions and the same local patriotic purposes extend from end to end of our territory and they constitute California different from all other states. Let us, therefore, devote our resources and energies to the advancement of our great and unique commonwealth with devotion and enthusiasm. Let us use our income to more closely connect our great industries and interests by grand highways and improved inland waterways and to unify our people by localized branches of educational institutions greater than those of any other state. California is constituted a great state that she may develop a great people—great in prosperity, in moral standards, in intellectual achievements. The piffling proposition that California needs more senators at Washington and more opportunities for place-seekers and tax-eaters at home is a conception unworthy of a Californian.

AN UNFORTUNATE ATTITUDE.

The triple alliance of capital, labor and public interest, by which industrial peace was designed to be realized in this country, has dis-allied itself by the secession of the labor element thereof. In spite of all the repeated appeals of President Wilson, the labor representatives withdrew—apparently because they could not have their own way in every particular. That seems to be the prevailing attitude of those who rule the labor organizations. To be sure to state their case fairly, we give the declaration which they submitted as the reason for their refusal to try longer to find a basis of settlement of current difficulties and of future understanding. These are the last words on leaving the conference:

"The right of wage earners to organize without discrimination; to bargain collectively; to be represented by representatives of their own choosing in negotiations and adjustments with employers in respect to wages, hours of labor and relations and conditions of employment is recognized."

Apparently, however, it was not this declaration in itself, but what the labor representatives intend to make it mean, which they considered it hopeless to contend for in the conference and prompted their withdrawal. It was not that they considered their right to organize and to represent themselves as they see fit endangered, because very few deny that right now: it was not that they were denied right to confer and agree together upon wages and hours of work, for their right to have their own ideas and to propagate them among those willing to receive them, is now generally conceded. What they seem not willing to concede is the right of other men to work as they desire and of employers to proceed with their enterprises as they plan and contract to do. In short, their idea seems to be that if work is not done as organized employees desire, work shall not be done at all, and they propose to prevent it being done as they see fit. And because those representing employers in the conference would not agree to such a handicap upon the business of the country, and because those representing the public interest in the conference proposed that definitions be drawn to show what is meant by "collective bargaining"—the labor delegates, summoned by the President of the United States to conference to secure what would be fair and equitable to all interests involved, including that of the general public, struck, walked out, or whatever else it may be called—treating the American people, as represented in this solemn, patriotic conference at the national capital, just as they propose to treat the owner of a cross-roads blacksmith shop who might think he had a right to have something to say about the conduct of a business which he had built up. We apprehend that the representatives of

organized labor have gone a little too far toward the line beyond which is disorder and unrighteousness.

THE GREAT STOCK SHOWS.

This issue of our journal appears in the interval between the two great live stock shows to which particular attention has been given in these columns for several weeks past. Last week the show in Los Angeles justified expectations in all the essentials of amplitude of exhibit, high quality thereof, and generous public patronage.

On other pages this week important records of the Los Angeles event may be found. Next week the San Francisco show will be in full swing from its opening on Saturday, November 1. We make this particular reference in case the special treatment given the San Francisco show may have been too ample for readers to carry in their memories. This last appeal for public interest and patronage of the show we make so small that even a vest-pocket memory may enclose it. Even if you have no higher motive than to see whether we have told the truth about the charm and significance of the affair, we urge all readers who can, to rally in the California Building, Panama-Pacific Exposition grounds in San Francisco, at any convenient time before the closing on Saturday, November 8.

WHAT THE FARMERS ARE GETTING.

There was no adequate representation of agricultural interests in the conference, which is to proceed without representatives of organized labor, unless President Wilson should find some willing to serve in defiance of the decision of the American Federation of Labor. But no number of farmers could have saved the collapse which occurred, nor would they desire to retain in the conference an element so self-willed and inconsiderate of others. There are no employers who are more considerate of hired help nor more desirous of giving such help a square deal than American farmers as a class, but they are not any more willing that the help shall run the farm than other employers are that the help shall run the shop. There can be no doubt that by the increase of farm wages during the last few years, the help has netted more than the farm owner or operator has, as a rule. But though he has been running the farm for the help, the farmer cannot maintain his self-respecting manhood and consent that the help shall run the farm and himself. Therefore the farmer cannot but regret the action of the labor representatives at Washington for he could not conscientiously have done anything to prevent it by accepting such terms as they insisted upon.

In this unfortunate matter, which seems to be little less than a strike of organized labor against employment and the public interests, the farmers, as a class, the largest employers in the country, have their consciences clear of contributing to conditions which may be urged as an excuse for it. There is no doubt that instead of profiteering or otherwise contributing to the hardships of labor, which are so freely alleged, the farmers, as a class, have sacrificed their own earnings and endangered their capital to meet laborers' demands. In an address on the high cost of living, in the U. S. Senate last week, Senator Capper of Kansas made these statements:

As a result of the effort to reduce high prices by breaking down entirely the cost of food, we have a remarkable spectacle of a rise of 1 per cent in the cost of living, coincident with the market drops that are putting livestock raisers out of business and causing serious losses to other producers. The government, through the grain corporation, profited \$23,000,000 at the expense of farmers last year, the farmers selling from 20 to 70 cents less than the guaranteed price.

The situation of the live stock farmer is even more deplorable. Farmers are selling their grain-fed beeves and hogs for less than it cost to produce them, but the consumer finds little or no change in the price of meat. The recent decline in live stock prices cost producers \$80,000,000. Live stock growers do not control the markets, and, like other agricultural producers, must accept prices fixed by others.

Without visibly helping the consumer we have brought about a crisis in our most fundamental and vital industry by forcing the producer to accept prices at which he cannot continue to produce, while he and the consumer are compelled to pay prices at which they are forced to curtail the home demand.

Farm wages have doubled, land values have risen enormously, and everything the farmer buys has risen from 50 to 300 per cent.

Under these conditions farmers, as a rule must follow a conservative course for, in their unorganized condition, they cannot do much to secure justice for themselves nor to protect the consumers who are on the other side of the great gulf of exaction and extortion which prevails in the handling and distribution of products. How little of the consumer's dollar the producer really gets is shown by Senator Capper in this way:

Farmers are selling their wheat at a loss. It takes four and a half bushels of wheat to make a barrel of flour. The wheat raiser gets about \$8.37 for the wheat, the miller \$12.70, the baker \$58.70 and the hotel keeper here in Washington, as it is doled out in thin slices, \$587.

It is fortunate that we all do not have to try to live in a Washington hotel, but they are not the only places where a producer can easily learn what happens to his product after he gets the little return for the cost and effort which he puts into it.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Clover for a Sandy Bottom.

To the Editor: What variety of clover would do well on land where bur clover thrives? I want a higher growing clover and one I could irrigate through the summer to get a larger production. The land is rich bottom land, sandy loam three or four feet deep with adobe sub-soil. On account of the adobe sub-soil alfalfa dies out after the first year.—G. J. R., Sebastopol.

We would be slow to give up alfalfa on that depth of soil because it will give you more feed than all other clovers put together. We would prospect the soil carefully by digging holes, etc., and see if there is not some place where a ditch can be cut in to draw off excess water and thus make the land safe for alfalfa. If, however, you have satisfied yourself by sufficient trial that alfalfa will not do, your recourse must be to Eastern clover, alsike clover and white sweet clover. The first two are fibrous rooted and will thrive above the wet. The latter, though rooting deeply like alfalfa, seems to take water better, for it may be found growing on river bars and rooting in submerged gravel. We would sow a mixture of all these; let the best win.

Which are Best Pruners?

To the Editor: Please tell me what make of tree pruners are most powerful and at the same time easiest to operate on lemon and orange trees.—R. E. S., Baldwin Park.

We presume it would be possible, by a proper arrangement of dynamometers and magnifiers, to determine what form of leverage and of cutting edge would sever a branch with the smoothest slice, least injury to the bark and least push on the part of the operator. That is a job for the mechanical staff of an experiment station. But if those things are determined the result will be immediately upset by the personal equation, because no two men will keep the blades equally sharp and the work depends chiefly on that. Besides the personal equation will stay with it. The best pruning tools are those which the pruner likes best—barring of course cheap, cast-iron things, which are the most expensive no matter how little you pay for them, and if you consult experienced pruners they will no more agree which tools are best than other men will agree as to which is the best woman to marry or the best agricultural paper to pay a dollar for. Your question is unanswerable. Of the many good tools in the market the best for you is the one you keep sharpest and learn to like best.

Fertilizer for Alfalfa.

To the Editor: Advise me what is the best fertilizer for alfalfa other than stable manure. Also the best time to use the fertilizer, whether in the fall or spring and would you use the spring-tooth harrow after spreading it?—O. M., Sonora.

Probably the best and quickest acting stimulant for alfalfa would be 500 lbs. of gypsum and 100 lbs. of nitrate of soda to the acre—applied as growth starts in the spring and while you still have some showers coming, or just before any of the summer irrigations—preferably at the beginning of the growing season. It is not necessary to use

the harrow unless the surface needs loosening up; the water will carry the fertilizer in with it.

Limas in a Hot Valley.

To the Editor: Next season I expect to plant three thousand (3,000) hills of pole lima beans. What is the prospect of getting a crop? Is the climate suitable in this part of the Napa Valley for growing lima beans? Some people here tell me I can't grow them in this locality. Is this true?—A. H. K., St. Helena.

You take some chances, for Limas do not like much heat and drouth and are not much grown where coast fogs and moist air are shut out. Still, in garden practice they do come through—probably because atmospheric conditions are modified somewhat by shelter and watering. You evidently intend to pole the beans which is not done in field growing, and this may mean that you intend to secure garden conditions. If that is the case and you start as early as frost-freedom permits, we presume you will get some beans. But your neighbors are right that your part of the Napa Valley is not suited to Limas as they are usually grown.

Bluestoning Seed Grain.

To the Editor: Has it ever been definitely proven that bluestoning seed wheat or barley before sowing has any beneficial result on the following crop, and if so what is the object?—E. W. H., Hopland.

Yes, it has been amply demonstrated that bluestoning seed, if properly done, will reduce the amount of smut on the crop which grows from that seed. It is done for the purpose of killing the spores (seeds) of the smut fungus so that they cannot germinate and penetrate the tissue of the growing grain. Bluestoning is not an absolute preventive of smut, because the spores can get to the plant in other ways than by the seed which carries them to the soil in which it is sown, but experience has amply demonstrated that sowing clean seed reduces the injury by smut so much that seed-treatment should always be carefully done.

Let's Bind to Us the Heart of Australia

Written for Pacific Rural Press by R. E. Hodges.

A hundred men picked from the veteran Australian army of the European war—who can picture their future—who can measure their influence on the future of Australia! Train them in California methods of agriculture and who can foresee the value of the closer bond between these two empires of such similar topography, soil, climate, and relation to the rest of the world!

Australia, whom we follow in many of the advanced practices of modern governments, is yet practically undeveloped agriculturally. Her area, as great as that of the United States, contains approximately the same agricultural possibilities, for she lies in the southern hemisphere about as the United States does in the northern hemisphere.

Undeveloped, but Important.

With only five million total population, including several cities of major size, the agricultural population is yet small in numbers but large in operations. California has for several years felt tangible effects of those operations, particularly with regard to wheat, wool, butter, and more recently with eggs, which have been imported to this State. Moreover, our apples compete in a small way with Australian apples in British markets.

Why Aid Agricultural Competitors?

The competition will increase as the Commonwealth is developed.

From a selfish standpoint, there might be some question as to the profit to us of helping in that development. But it is a question with another side particularly interesting to us of California. In Australia no Orientals may obtain any kind of a hold such as they have in California. Here we already see signs of a general upheaval in public sentiment that will swiftly and surely accomplish something when it occurs. The public sympathy of the people of the "white men's land," whose shores are washed by the same Pacific, which sustains our own commerce—that sympathy may one day be of definite value to us. If there is any Oriental menace, as many people believe, it affects Australia even more than it does ourselves, and we may count on their active support.

Splendid Allies They Would Be!

Such support as that would be! In the European war every Australian soldier and sailor was a volunteer. Magnificent records they made—magnificent men they are, who survived that struggle! We speak from first-hand acquaintance with a large number of the hundred picked soldiers mentioned at the beginning of this article. They fought in Egypt, in Palestine, France.

When the war was over there was still urgent need for ships to carry food to Europe from the nearest source of supply—America. Australian soldiers 13,000 miles from home had to wait for boats to be released to carry them back. It was at this time that Prof. Elwood Mead, now of the University of California, but formerly high in the agricultural councils of Australia, received a cablegram at Washington asking him to place 600 of the Australian soldiers in America—one hundred where they could learn the best practices of American agriculture, and five hundred in the factories and industrial centers of the nation. Union labor was then fearing an oversupply of returned American soldiers and had even proposed that they be held abroad at army wages until they could be gradually "infiltrated" so they would not disturb the wage conditions of the man who had stayed at home. Under such conditions union labor objected to the bringing of 500 Australian defenders of democracy into our country, and to our shame be it said they were kept out.

One Hundred Study Our Agriculture.

For the hundred chosen to study agriculture, however, Prof. Mead ob-

tained telegraphic confirmation from Dean T. F. Hunt of the California College of Agriculture of the proposal to place them at the University Farm School at Davis, whence they could make appropriate diversions and excursions to the best ranches of the State. Practically all of those men, chosen first for their interest in agriculture, and second for merit, are now

same purpose—they are brothers-in-battle to our own sons, and we owe them homage as we owe it to our own fighting men. We owe them the best that they ask, for without their sacrifices our best would be but poor satisfaction under German whips.

Australians on Trip through Valley.
The University faculty and the

LEVELING LAND WITH TRACTOR AND POWER SCRAPER.

One of the most absorbing features of the Australian soldiers' trip through the Sacramento Valley was the tractor land leveling which was being done for one of the colonists on the Durham State Land Settlement. Irrigation is one of the chief studies of the hundred soldiers at University Farm. The importance of exact land leveling before any perennial crop is planted is impressed upon the men. The State has until recently been doing this for its settlers, and the State still owns the tractor and power leveler at Durham.

at Davis or on ranches where they can absorb the best we can give them. They are learning the things that will help develop their country into a stronger competitor of California; but we may well remember that we will be competing with white men of our own race, whose competition will not lower our own standards of living.

Looking at this proposition from another standpoint than immediate selfishness, we may well remember how these men sprang to arms years before we entered the struggle for the

ranchers to whom these hundred men at Davis look for instruction are giving the best that they know. One instance of this was the automobile trip arranged for them October 18 and 19, whereby they were taken up the east side of the Sacramento Valley and back to Davis on the west side. Their first major stop was made at the State Land Settlement at Durham, where a farm dinner was followed by a trip around the colony. It will be remembered that this project was put through largely under the influence of

Prof. Mead and based on his experience with similar work in Australia. Herein we follow and learn from that Commonwealth.

The soldiers were liberal and apparently unanimous in their commendation of the work done in so short a time at Durham. A visit to the U. S. Plant Introduction Gardens near Chico was made especially pleasant by the freedom with which they enjoyed grapes of a thousand varieties, Chinese jujubes of several varieties, and watermelons. The night at Chico was followed by a breakfast, which cost some of them \$1.25 each without satisfying their appetites. At Hamilton City and Orland they saw private herds of fancy Berkshires—the breed best and almost exclusively known in Australia.

All along the way, they stopped as suited the fancy of each auto load to examine irrigation works, rice harvest and threshing, etc.

Reminded of Homeland.

The similarity of the country to their homeland made it easy to get them to talk about Australia with an eagerness that betrayed a trace of homesickness, which was not otherwise shown. No invidious comparisons passed their lips, but probably not one of them could be induced to remain here permanently. They know that they have greater opportunity on the cheaper lands and the newer agriculture of Australia amid natural conditions as good as we have here. One of them remarked that Australia is situated with respect to the rest of the world in all natural conditions as California is situated with respect to the rest of the United States.

Now when they go back to their native homes after six months or a year here, may they carry a warmth of cordiality and friendliness, and may they leaven the whole of Australia with a feeling of brotherhood that will endure through all the tempests

SAVING TOMATO SEED COMMERCIALLY.

(Written for Pacific Rural Press.)

The average gardener who buys a few packets of tomato seed has little idea how they were separated from the tomatoes, but he realizes that they cost a lot more than they used to. The grower who saves his own seed will be interested in the operations of the old-established Havens Seed Co., who put up a large new plant near Santa Ana last year. They contracted a large acreage to be grown for seed this year and the writer was privileged to see the various steps in preparing it for sale. The tomatoes are hauled from fields to the plant in tank wagons; for no attempt is made to keep them from mashing. The driver shovels them into a crusher operated by a small gas engine. This empties by way of an adjustable trough into barrels kept on a platform out-of-doors. The pulp and seeds and juice are left in the barrels about 24 hours to ferment. Then they are dumped into an 8x12-inch flume about 150 feet long through which a good stream of water flows rather rapidly. Partitions about 20 feet apart in the flume catch the seeds as riffles catch gold in a miner's flume. Sound seeds are heavier than water, but the pulp floats away with lighter seeds. When a batch of the pulp has been washed out, all of the partitions are removed and the clean seed washes down to a tank at the lower end. The tank is drained and the wet seed are put in a screw press which takes out excess water. Then they are placed in thin layers on screen-bottomed trays set on frameworks which keep them off the ground to give wind free play, and slope them slightly toward the south to get more direct rays of the sun. They are stirred occasionally as they dry, the last bits of pulp, etc., being removed by hand.

Coachella Valley cotton men are claiming 650 pounds of lint per acre.

A TWO-YEAR GROWTH OF

ALFALFA

IN ONE SEASON

Alfalfa sown in the fall under the right conditions has shown a growth next season nearly as heavy as two-year-old alfalfa. Fall seeding is worth knowing about.

SEND FOR BOOKLET

which tells about it, explains the conditions under which it pays, and contains much valuable alfalfa information. Sent free with Price List and Booklet describing Bomberger's Seven Kinds of Alfalfa.

YOUR SOIL NEEDS

Humus and Nitrogen Bacteria

MELILOTUS INDICA Supplies Both

Now is the time to plant it. Buy your seed from

Aggeler & Musser Seed Co.

620 S. Spring St., Los Angeles, California

Buy only Mellilotus seed that has a quality tag on each sack. It protects you against the low germination seed so general on the market this season. This seed is above 99 per cent pure and above 90 per cent germination.

Judges of the different classes of livestock at the California International, November 1-8, including draft horses, beef cattle, dairy cattle, swine, goats, poultry and pigeons.

THE LIGHT HORSE AT THE CALIFORNIA INTERNATIONAL

This class of horses will be in evidence chiefly in the horse show. This certainly promises to be one of the chief attractions of the week from Saturday to Saturday.

The following breeders and lovers of the light horse will exhibit their beautiful animals:

American Saddle Horses—H. C. Ahlers, San Francisco; Merritt-Bowers Co., Tulare; E. M. Simpson, Hood.

Thoroughbred Horses—Edward Cebrian, San Francisco; J. H. Rossiter, Burke; Merritt-Bowers Co., Tulare.

Standard Bred Horses—University of California; Merritt-Bowers Co., Tulare.

Arabian Horses—J. H. Rossiter, Burke; S. C. Thompson, Concord.

The tools and facilities for keeping harness in repair are comparatively simple and inexpensive. A considerable portion of the repair work on harness can be performed by the aid of tools required for other purposes, but there are a few special devices that are desirable.

In advertising livestock the race is to the steady runner, not to the swift starter. Keep it up. It pays.

THE DRAFTER IS COMING TO HIS OWN AGAIN.

The horse department of this show will be one of the largest and most complete of any show in the country. We will have good showings in the draft breeds, ponies and light horses. The drafter is coming into his own again and the demand for good breeding stock far exceeds the supply, so I know that the people of the country will be greatly interested in this department.

E. W. WESTGATE, Supt. Horse Division.

THE DRAFT HORSE AT THE CALIFORNIA INTERNATIONAL

All the prominent breeders of these massive and intelligent transportation assistants of man will have their beauties in the show ring at the crack of the whip. Some say that the day of the horse is over, but that has been prophesied before, and they still have a large place in even this tractor Heaven of the Great Southwest.

Prominent breeders from all over the State of Percherons, Clydesdales, Shires and Belgians will have their horses at the show. Among them we note U. W. Thompson, Patterson, Percherons, and Belgians; Merritt-Bowers Co., Tagus Ranch, Tulare, Percherons, Belgians and Shires; Easton & Ward, Diablo Stock Farm, Diablo, Shires; E. M. Simpson, of Hood, Clydesdales; estate of Thomas B. Dibble, Lompoc and Santa Barbara, Clydesdales; (Miss) Ruth Maxwell, Sonoma, Percherons; Palo Alto Percheron Farm, Palo Alto, Percherons; L. A. Hall, Mountain View, Percherons; Ratto Stock Farm, Napa, Belgians.

In advertising livestock remember that it is better to interest a few than to merely attract a multitude.

HEREFORDS

of Royal Quality--at Public Sale

EXPOSITION GROUNDS, SAN FRANCISCO,
FRIDAY, NOVEMBER 7, AT 1 P. M.

This is an offering of high-class Herefords selected by a Committee appointed by the Association, with the purpose to present in this sale the most notable offering of the breed yet made on the Pacific Coast.

Contributors to Sale:

J. H. CAZIER & SONS CO., Wells, Nevada. CHAS. RULE, Jenner, Calif.
H. M. BARNGROVER, Santa Clara, Calif. J. A. BUNTING, Mission San Jose, Calif.
W. J. BEMMERLY, Woodland, Calif. DIABLO STOCK FARM, Danville, Calif.
HEREFORD CORP. OF WYOMING, Cheyenne, Wyo.

THE FEMALES

The list of females includes many first-prize winners and proven breeding cows, a large number of them bred to such great bulls as Cazier's \$10,000.00 BEAU BLANCHARD 76th; Bunting's ANXIETY FAIRFAX and ALEC; Barngrover's PATRICIAN 5th; Bemmerly's NEW ERA 2nd and BONNIE BRAE 96th; and Diablo Stock Farm's BERTRAM FAIRFAX and WITCHFORD.

THE BULLS

Two Grand Champion bulls, SONOMA, winner at Denver, consigned by Chas. Rule, and CALIFORNIA PRINCE DONALD, consigned by J. A. Bunting, are included in a list of bulls that is rich in quality and breeding throughout. You can buy a real herd sire in this sale. Every animal guaranteed to be a breeder; every animal over six months old tuberculin tested.

Sale under auspices of

SONOMA, 625,000

A proven herd header of royal breeding and weighing over 2400 lbs. will be sold at the

HEREFORD BREEDERS' SALE, NOVEMBER 7
at the California International Live Stock Show.

Meet me at San Francisco, November 1-8

(Will show a lot of young stock by this great bull.)

I am also consigning to the sale a few choice bred heifers.

FOR PRIVATE SALE, a carload of young bulls sired by Sonoma and out of good breeding cows. I have just sold a carload of these cows to an eastern breeder, without calves and in range condition, for \$1500 each, and refuse to sell more at the same price.

Meet me at San Francisco, November 1-8

CHARLES RULE

Duncan Mills,

Sonoma Co., Calif.

One Method of Drying Prunes and Grapes

(Written for Pacific Rural Press.)

"We only have six or seven acres of prunes so we dried them in short order and delivered them to the warehouse," said J. H. Coops of Sonoma. "We installed a Sebastopol apple-drier this year at a cost of about \$600—for we did the work ourselves—and had good success drying our prunes with it. It only holds about one and a half tons of green prunes to a charge. We half-dried our prunes in the sun and then finished them in 10 hours. Others took two days of ten hours each, but we had no mouldy or burnt prunes. We only have about 10 acres of grapes left, but we shall probably dry them as there seems to be a market for dried grapes and transportation on green ones is uncertain. This apple-drier does good work excepting on pears. They take too long and are apt to become dark."

5,000 Cherry Trees.

Mr. Coops has a good useful packing-house in connection with the drier, for he has apples, figs and pears, besides some grapes and prunes. But he will need it all ere long, for of his hundred acres of fruit, the greater proportion is cherries—about 5,000 of them of varying ages—enough already in bearing to keep on 20 pickers this spring.

The trees had good, full, green foliage when we saw them the last week in September and were very clean. He and his two stalwart sons run the place—one of them being just back from service in France. We asked Mr. Coops how he had kept his trees so clean of red spider for their old

haunts were still in evidence. He said we gave them a thorough spraying in the swelled bud last spring just before they broke.

The Spray We Used for Red Spider Was as follows: Soluble sulphur, 12 pounds to 100 gallons of water and 15 gallons of miscible oil. We put it on under good pressure. The miscible oil is very penetrating and even a few gallons of it makes a good spreader.

A Tractor Instead of Horses.

"We manage to get through with our work now that we have a tractor with very little trouble," said Mr. Coops. As you see we work right up to the trees and then work the ground down in good shape." If horses had to be relied on to take care of 100 acres with three men they would be very busy people for awhile, and if the Spring was late—followed as it so often is here at that time by north winds—the plowing and working down of such an area would be no snap with three teams.

Early Days.

Mr. Coops recalled the days, happily now passed, when they used to take their butter to the store and get 15 cents a roll for it (but you had to take it out in trade), and when eggs sold for 8 and 10 cents a dozen, with pork at 5 cents and hay \$5 a ton. It is difficult now to realize how farmers and their families managed to even exist when it took nearly all they made to pay the interest on the mortgage. Those days, like other slavery days, are gone, we hope, never to return.

The Fair Harvest of Raisins

(Written for Pacific Rural Press.)

At a meeting of the board of directors of the Associated Raisin Company it was resolved to make an initial payment of five cents a pound on Muscats, Thompsons, Malagas and Sultanas, instead of the 3½ cents provided by contract for the first payment, and eight cents will be paid on Bleached Seedless. The Associated is enabled to make these large payments because of the large volume of business already consummated with the trade. These first payments on all raisins will amount to nearly \$15,000,000, or about \$4,500,000 more than the contracts call for at this time.

This has been the greatest season ever known to the industry and will help to recoup some of the grievous losses sustained last year—particularly in the Northern counties—from rain. In view of the exceptionally heavy cost of production this year, the directors made a special effort to turn the money over to the growers as rapidly as possible so that they might meet their obligations without delay.

The Association will be able to market the entire crop of its members, amounting to some 150,000 tons, by the first of the year. Its financial position is now stronger than ever and its ability to handle the rapidly increasing output keeps ahead of the extra tonnage. The crops of members are insured on their own premises free of charge where such holding is done to relieve packing space at the company's warehouses during the rush season, now congested additionally by

car shortage.

The season of delightful weather has arrived in the great country centered by Fresno. And now plans are being laid for constructive investment. New trays in thousands are to be provided for next year, while tractors and cultural tools are to be bought in enormous quantities.

The unity of endeavor by farmers and business men has made this great center what it is. The facility of transportation by road and rail, the nearness of markets and delivery stations in all centers, the carrying out of great drainage and irrigation projects—all these things have been made possible by united effort and organization on the part of farmers, loyally backed and pushed by the business men. They have spent money by millions, and because of this every business prospers—you can feel it, it would stir the blood of a Florida cracker to life.

In every district in California where the grower is backed by the time, money and energy of live Chambers of Commerce and Business Men's Associations, that district finds it has a bonanza and money for improvement drifts that way. Los Angeles started it and all other rich centers are following suit—or remaining on the dump for a negligible few prospectors to exploit. Any great undertaking that benefits the farmer is a goldmine for the business man. Fresno is game and will chip in on every deal—except a raw one.

MELONS MARKETING BY AUTOMOBILE.

L. E. Wright of San Bernardino county has the reputation for having made a scad of money this summer from 3¼ acres of watermelons. He sure had a big crop, but that would have been poor consolation without proper marketing facilities. It wouldn't be profitable to dump the whole production into Los Angeles. Most of the crop was sold from two touring automobiles, one driven by Mr. Wright and one by his wife. A half-ton or even 1200 pounds of melons would be loaded onto each machine and hauled to nearby towns, such as Chino, San Bernardino, Ontario, Pomona, Redlands, Riverside, etc., and quickly sold at retail. The surplus was hauled by truck to Los Angeles on a motor truck.

DISTINCTIVE PLACE OF TRACTOR.

A tractor newly placed before the public, but not shown at any of the demonstrations or fairs, is the Union Tractor, the first model of which was exhibited at the California Land Show in San Francisco recently. It is of standard design except for the tracks. There are no steering wheels. The tracks are made of manganese steel, tough, unbreakable and all but unwearable. The distinctive feature is that the track does not sag but arches outward between the drive sprocket and idler wheel. This is due to the beveled contact faces of the track shoe-links. Their fitting together makes the track rigid. The weight of the tractor is entirely on the drivers and idlers with no truck wheels between them. A three-point suspension device gives flexibility to the frame.

HORTICULTURAL JOTTINGS.

A seedless fig has been developed at Pomona by W. F. Bollinger.

The Federation of California Farm Bureaus has been completed.

John Solus, north of Yreka, reports gathering two thousand pounds of apples this year from a single tree.

Car shortage continues to hamper shipping of fresh grapes. Some wine grapes were reported to have been sold at \$90 a ton in New York.

A Gridley (Butte county) grower is said to have taken a crop of Thompson Seedless raisins from 10 acres that will bring \$8,000.

Attempts have been made to damage citrus and walnut groves in the vicinity of Pomona, Puente and Covina, it is reported, and that quantities of fruit and nuts had been stolen.

California walnuts are always a better buy than imported nuts because of the way they are handled. All light, undeveloped and imperfect nuts are taken out with a blower.

The Federal Land Bank at Berkeley, up to September 30, had approved 5,036 loans, totalling \$15,749,100, of which 4,546 had been closed to the amount of \$14,065,400 loaned.

A record price for a citrus orchard is claimed to have been established at Whittier last week with the sale of ten acres of 11-year-old Valencia oranges and lemons for \$60,000.

The growers have a community apple-drier in the Upper Mattole Valley (Humboldt county). Another drier has been started near Fortuna with a capacity of two dry tons a day. They will be running up to the end of January.

The fruit consignment of new season grapefruit arrived on the San Francisco market two days before the Tulare county fruit showed up. Arizona's first shipment consisted of 1200 Los Angeles lugs, which were offered at \$1.75 to \$2 a box, or about 6 cents a pound.

Eighty-four per cent of British ex-service men applying for small holdings of land have been approved as suitable. They number 7,763 men. Nineteen thousand acres is held by the Board of Agriculture for this purpose, and 41,000 more is offered by owners in response to the government appeal.

The California Associated Raisin Company is still short of layer raisins. In addition to the extra \$15 a ton offered for hand sorts a further offer was made of \$5 a ton for slip layers. Men with raisins still on the trays have been carefully examining them so as to make all layer raisins possible. A more humid atmospheric condition makes things more encouraging and the rush of work is through.

The California Walnut Growers' Association sold up to 23,000 tons of walnuts by confirmation within 36 hours of opening prices being published. Within three days they had to decline orders aggregating 93 carloads more in spite of heavier importations from Europe. The crop may run up to 2,000 tons more than earlier estimates, in which case they will all be snapped up by the trade.

Sixteen carloads of honey have been shipped out of Imperial this season and four more will follow. This will make up the average crop for this valley, which is about 20 carloads. A carload of honey contains from 300 to 350 cases of 120 pounds net. There are estimated to be 47,000 colonies of bees in Imperial county apiaries now, probably an extra number raised for sale, as colonies have been selling well this year.

One hundred carloads of Watsonville apples have been bought for the British Christmas trade by four firms in London. Two dollars a box f. o. b. Watsonville is the price mentioned. Difficulty is being encountered in supplying the necessary number of refrigerator cars. Transportation costs are 62½ cents a box railroad rate, and 85 cents steamer rate. With handling the cost is \$3.90 a box in London. The British Food Law prevents the sale of apples at higher than \$5 a box, which leaves a profit of \$1.10 for marketing and taking chances.

"There's A Right Way"

"Some folks think that when you blast for tree planting you've got to shoot the earth up to the sky—that's *wrong*. A good shot for tree planting just raises the surface earth two or three feet—then the force of the dynamite is properly used—it breaks up the earth all around the hole and gives the young tree's roots a chance to spread.

"The best dynamite to use for tree planting is

HERCULES DYNAMITE

and the best way to find out how to use it most effectively is to send to the Hercules Powder Co. for the 68 page illustrated book, 'Progressive Cultivation'. This book not only tells of the many things that dynamite can do to help you with your farm work but it gives detailed *directions* for every blasting operation.

"And the best part is that any farmer or orchardist can get this book *free*. The Hercules Powder Co. will send it to you if you will sign and send in the attached coupon."

The Standardization of Fruit Varieties

(From an address by A. D. Shamel to the California Associated Nurserymen.)

One of the main reasons for the commercial success in the marketing of the California citrus crop is that only a few standard varieties are grown. The Washington Navel orange is the winter and the Valencia the summer orange. The Marsh is the only successful grapefruit variety. The Eureka and the Lisbon lemon varieties complete the list.

In looking over the commercial plantings of deciduous fruits and the production of these varieties in the United States as presented by H. P. Gould, I have been greatly impressed with the fact that there are only a few important apple varieties.

On the other hand, in going over several eastern nursery catalogues recently I was utterly bewildered by the multiplicity of varieties offered. With my limited knowledge of the subject, I could not determine in those catalogues any particular distinction of varieties, and after finishing reading the glowing descriptions of the many sorts I felt absolutely helpless. Some of the varieties were apparently new and were being introduced with most extravagant claims as to their value.

Opposes New Varieties for Commercial Planting.

I do not believe that any new fruit variety should be introduced and recommended for commercial planting until it has been proved to be commercially valuable and superior to existing varieties. I am a firm believer in experimenting with new forms and varieties, but I am seriously opposed to pushing and selling a new variety just because it is something new. I feel sure that this kind of business is the curse of the legitimate nurseryman and of fruit growers in general.

I have been told that some years ago there was a craze amongst certain nurserymen for calling their trees "pedigreed" without any foundation in fact. This false and misleading use of the term "pedigreed" has brought the word into such disrepute that we are still struggling to give its legitimate use a clean bill of health. This effort to get something for nothing resulted in some horticulturists turning against the idea of bud selection, and it will take a long time for us to overcome this handicap.

While I am a firm believer in the use of genuinely pedigreed trees I am as deadly an enemy of the fraudulent use of this term as anyone in America. But because some persons have abused the word this is no reason, to my mind, for condemning and discarding it. Such practice is not confined to horticulture. I went through the very same thing in my early work in corn improvement. As soon as the use of select seed corn became popular some seedsmen began to offer "pedigreed" seed corn, which they secured by backing a sheller up against a corn crib and taking any old corn that they could buy at the cheapest price.

The scandals in connection with fraudulent pedigrees in live stock are still fresh in our memories. Stock-selling promotion schemes for separating the unsuspicious purchaser from his money still flourish in many sections.

The peculiar difficulty in the nursery business is that many varieties of trees do not come into bearing until several years after the trees have been planted. By that time, in many cases the connection between the sources of buds and the trees has been lost. I think that this condition is largely responsible for the lack of progress in bud-selection work. The purchaser of seed corn finds out the value of his seed within a few months. With some fruit trees it takes a long time to get a line on their value. For this reason, care in propagation and bud selection in fruit varieties is all the more important.

I believe that we have reached the time when more careful attention should be given to varieties and only those of established value and importance should be propagated commercially. Furthermore, I feel sure

that we should now center our efforts for the improvement and standardization of these varieties.

Some Recent Developments in Bud-Selection.

The most striking recent development of the effort to introduce bud selection into the commercial propagation of fruit varieties has been the action of the California Fruit Growers' Exchange, in establishing a department of bud selection as a branch of the Fruit Growers' Supply Company. C. S. Milliken is in charge of this work and the first year supplied about 300,000 buds to citrus propagators. These buds were secured from superior parent trees, which were selected on the basis of their performance records. Fruit-bearing bud wood has been furnished propagators at the time it was needed for use and as it was used, in the nurseries or other places. I want to say here that in my opinion this is the greatest step forward in the improvement of any fruit crop ever undertaken in the entire history of horticulture. I feel certain that it will be looked upon in time as the beginning of a new and better era in tree-propagation work. It is significant that it has been done in California by the active, progressive, and forceful men of the citrus industry, who have been primarily responsible for many other vitally important reforms in fruit growing and marketing.

Success of Bud Selection Astonishing.
The immediate success of the bud-selection department under the present conditions is astonishing and more than many of us expected or dared hoped for. During the past two or more years little propagation of fruit trees has been done in California, owing to war conditions. Many of us feel that now that we have won the war there will be a great revival in fruit-tree planting. The holding back of planting during this period, together with the increasing knowledge of the value of fruits in human nutrition and the consequent increasing consumption of fruits for food and health, will be likely to result in the very active development and planting of fruit lands.

In facing this new era here and in our allied countries, where much replanting as well as new planting is in prospect, I want the California nurserymen to lead in the propagation of reliable trees grown from carefully selected buds of standard, established and thoroughly proven varieties.

ASCOLANO OLIVES UNSATISFACTORY.

(Written for Pacific Rural Press by D. J. Whitney.)

Olive varieties are paired off: Missions and Manzanillos for medium-sized, heavy-bearing, all-purpose olives; Queens (or Sevillanos) and Ascolanos for large-sized, fine-appearing pickles. However, on the Honora Realty Co. ranch at Lemon Cove, the Ascolano is held to be much the poorest of the lot, not on account of inferior yield, for it sets fruit well, but because it is excessively delicate in every way. "We have found," says Chas. Goodale, manager of the ranch, "that if the trees get pinched for water the slightest bit during the summer a lot of the fruit will shrivel and never will fill out, which is not the case with the other varieties. Frequently, for example, we do not pick more than half of our crop on that account. A touch of frost will ruin the Ascolano, while the Mission can be shriveled a little by frost and will firm up again if damp weather follows, though of course a serious freeze will ruin it. The Ascolano is very delicate to handle also; you almost have to pick right into water to keep from bruising them, and a little bruise will cause the fruit to turn soft and black.

"The Queen will not yield as heavily as the Manzanillo and Mission, but the much higher price makes the net returns per acre considerably higher as a rule, provided frost conditions are good.

[This is one of a series]

Early Spraying The Best

Ten years attention to detail has proved that those who spray with

ZENO

As soon as the leaves are off in the Fall,
Have better trees and fruit—because it controls
Scale when it is least resistant and barely started;
Destroys the eggs of aphids and red spider,
Preventing millions of insects from hatching;
Softens the bark, cleans off the black smut,
Kills the moss and lichen,
And generally renovates and stimulates the tree.

A clean, rested tree will be more resistant
and more productive.

And these are reasons why ZENO has
proved the best by years of test.

Olene is the Citrus Spray

MANUFACTURED ONLY BY

Standard Chemical Co., Inc.

of Emeryville [Oakland] California

RESULTS OF CROSS-POLLINATION OF CHERRIES.

(Written by Warren P. Tufts, Assistant Prof. of Pomology, University Farm, Davis.)

In the issue of the Pacific Rural Press of March 29, on page 481, I note what you have to say with reference to the pollination of the Napoleon (Royal Ann) variety of cherries. You might be interested in learning of the results of our experiments conducted under somewhat similar climatic conditions (as those in Soquel, Santa Cruz county).

During the season of 1917, we made a large number of cross-pollination experiments with the sweet cherry in the orchard of A. B. Carey at San Leandro. In these experiments we found that the "normal set" of the Royal Ann was only 5.8 per cent, and that the poorest set by hand pollination was 24.7 per cent. Below are recorded briefly the results of the season's work on the Napoleon:

Napoleon X Black Republican	32.9%
Napoleon X Black Tartarian	48.3%
Napoleon X Burr Seedling	58.7%
Napoleon X Pontiac	24.7%
Napoleon X Rockport	24.7%
Napoleon X Governor Wood	47.2%

It would seem from the above figures that the Burr Seedling is a very satisfactory pollinator for the Napoleon. However, the Burr Seedling variety itself is of little commercial importance, it being a variety which is very shallow-rooted and one on which there is much difficulty to secure a commercial set of fruit. The Rockport, although a variety of good quality, is not commercially desirable, and the same statement might perhaps be made of the Wood variety. The Pontiac is of little commercial importance.

Both the Black Republican and Black Tartarian varieties are suitable for securing good results with the Napoleon. However, the Tartarian, as a rule, blooms earlier in the season than does the Napoleon and for that reason is not always satisfactory, although most growers feel that the Tartarian overlaps sufficiently with the Napoleon to secure a set of fruit on both varieties. The Republican, on the other hand, overlaps well with the Napoleon in time of bloom. In working with these various varieties, we find different strains existing within the variety, and these strains exhibiting various differences so far as their pollenizing abilities are concerned, which leads us to be rather careful in making recommendations for the planting of pollenizing varieties for the sweet cherry. However, it is necessary to give the growers the best of our information, and so at the present time for the Royal Ann we are recommending either Black Tartarian or Black Republican, and possibly the long-stemmed Waterhouse variety. The Oregon Station has secured best results with the long-stemmed Waterhouse cherry as a pollinator for the Napoleon. There is another strain of the Waterhouse having a relatively short stem, which is unsatisfactory as a pollinator.

WINTER SPRAY—ORCHARD NOTES.

(Written for Pacific Rural Press.)

H. B. Hopkins, Horticultural Inspector at Watsonville, recommends the use of crude oil emulsion as a winter clean-up spray on apples. The best time to apply it in his section, he says, is from mid-December up to not later than February 10 on apples and not later than the first of February on apricots.

Every young tree that shows itself to be an "unprofitable servant" for any reason should be top-worked this winter to a strain or variety that will pay. But you want to make sure first that it is going to remain an unprofitable servant. Any young tree that shows itself to be permanently stunted should be dug up without any more delay and a good vigorous youngster planted in its place after preparing a thoroughly good hole for it.

Look out for gophers and get them now. In well-drained orchards they delve deep this time of year and sometimes nest under the root-crown of your best cherry-tree without giving much evidence of it.

Dormant spray must be used to insure Top Price Fruit

The Sap is a Tree's Life

The Sap-Wood may be called its Arterial System. This is the vital part of a tree. It must be protected, to yield vigorous growth. That demands thorough spraying before foliage appears. Sap-Wood pests must be prevented from draining a tree's vitality. The full flow of sap should be saved for bud and foliage points. Nothing known to growers equals Lime Sulphur for this work. Sherwin-Williams now make lime sulphur in dry powdered form.

S-W Dry Powdered Lime Sulfur

Is the regular standard 33° Baume, but sold to you *dry*, without the water. It does absolutely everything the liquid formerly did. It is not an experiment. For four years leading growers have used it. Millions of pounds have been sold, and users steadily re-order in greater quantities. It is well-known in every U. S. and State Test Station. It embodies every progressive advance in chemical science and agricultural research, invariably shows maximum results in actual orchard use.

For Scale and Fungus Diseases

S-W Dry Lime Sulfur is very effective against San Jose Scale, Oyster Shell Scale, etc., and is an equally efficient preventive against Rot, Scab, and various fungus diseases attacking apples, peaches, pears, grapes, etc. It is also of great value to citrus growers.

Combination Summer Spray

S-W Dry Lime Sulfur and Dry Arsenate of Lead combine with the greatest effectiveness as a mixed spray, for spring and summer use against leaf-curl, rot, scab, and against chewing insects.

Arsenate of Lead,

Arsenate of Calcium, Paris Green, Tuber-Tonic, Fungi-Bordo and Pestroy,—and a complete line of germicides, vermicides, dips and Wood Preservatives. For 53 years we have been selling Paints and Varnishes on their covering and protective powers. We are now the largest makers of insecticides in this country and sell them the same way, on their covering qualities, killing action and permanence.

Here and There in the Fruit Business

Advertising Our Almonds.

The California Almond Growers' Exchange has started on a nationwide campaign of advertising the "California Blue Diamond Brand Almonds" on a scale commensurate with the magnitude of its business. That is, on a scale equal relatively to that practised by the Orange, Raisin, Prune and Apricot, and Walnut Associations. On the top of each bag of almonds is an advertising tube containing two window posters, a talk to the retailer on the value of display, and a return postcard asking for free window decorations. Sixty-one thousand prominent retail stores will have the booklet, "From the Valleys of California," mailed them, followed by letter reminding them of the value of laying in their stocks for the holiday trade (the chief market for almonds). Full page ads will be run in the National Magazines. About two million pieces of advertising matter will be distributed by the Exchange during the shipping season. A large part of this advertising campaign will be paid by the price only obtained by reason of such activities. The united growers alone can push their markets on such a princely scale. Out of a world's production of 400,000 tons of almonds we only average 6,000 tons, but this will soon be doubled. It is necessary to hang together to capture our share of the markets.

Growing Apples with Clover.

There are certain localities in the Coast regions of Mendocino and Humboldt counties, especially in protected areas where redwoods stood, where apple orchards are very successful with clover and rye grass covering the ground. Geo. E. Wrigley of Elk River (Humboldt county) has such an orchard—results being eminently successful. His varieties are King (Thompson), Delicious, King David R. I. Greening, Wagner, Bismarck, Maiden Blush and Fall Gravenstein. In this ten acres, all the apples were very firm, symmetrical and brilliantly colored. No codling moth—the only spraying being done for scab. About two or three sprays are necessary for this. The only noticeable pest was apple aphid, a few trees showing bad infestation, but this Mr. Wrigley will control in another year by timely applications of oil sprays in early spring. The trees were green and fresh in mid-October, a small number of brilliant yellow leaves, showing the first sign of fall. The clover and alfalfa beneath the trees is regularly mown and fed and the manure returned to the land. It is only in a few localities that this plan is feasible.

Future Markets for Dried Grapes.

In a recent address to growers, Col. Harris Weinstock, State Market Director, who has been investigating foreign markets for dried wine grapes, said that an interest had been aroused in exporters, both East and West, who are ready to help in developing foreign markets for dried wine grapes, but they must have samples to show. These samples will now be forthcoming as a lot of grapes were dried from the 1919 crop. Colonel Weinstock said that in his survey good marketing possibilities were visible and European headquarters would be necessary for distribution. Samples will be sent to London, where considerable interest is shown with a fair prospect of future development. In the survey of foreign markets, Japan was found to be encouraging wine-making and there are great possibilities in China. More data will be available shortly with regard to canning must, concentrating and holding syrup and curing wine grapes and providing a market for these products beyond our own borders.

How Walnuts are Pushed.

How did the Walnut growers sell the bulk of the largest crop ever produced in the State in a few days, and at a record price? It was by pushing and advertising the nuts with the persistency of a chewing-gum manufacturer. Full page ads of the shelled nuts will appear in the Ladies' Home

Journal, Saturday Evening Post, Literary Digest, Good Housekeeping, and other national channels. One issue of the above magazines will reach 6,000,000 homes. In addition to this a vigorous trade paper campaign to retailers is carried out and artistic card displays for dealers' windows and offices are furnished, bearing a representation of "Diamond Brand" shelled walnuts. Such a campaign is only possible by the union of growers, 90 per cent of whom are members. Now that the speculator has been eliminated the grower gets all there is in his crop minus only the bare cost of marketing.

Almond Exchange and Fire Loss.

The Oakdale Almonds Growers' warehouse was destroyed by fire October 15th, with a fire loss of nearly \$50,000. Members of the Association have received notice from the California Almond Growers' Exchange that they would be compensated for every pound of almonds lost in the fire as they were full covered by insurance carried by the Exchange. The owner of the warehouse is the only loser, as he had cancelled his policies only a few weeks ago and was not covered by insurance. There was a total of 80 tons of nuts burned in the fire—all fancy varieties. Growers in this district are now shipping their nuts to Lodi for sulphuring and reshipment.

Apples in West India Market.

Under the preferential tariff apples from Canada are duty free in the British West Indies if accompanied with a certificate of origin. Otherwise the duty is 2 per cent ad valorem. There are no regulations in regard to insect pests or diseases. The cheaper classes of apples are shipped in barrels and sold on consignment, but the better classes, such as Canada Red, Spitzenberg, etc., are shipped in boxes and are placed in cold storage. These are generally in fulfillment of firm orders and the pack runs about 138. The season for best markets is from November to February.

Uneasy about Transportation.

Orange shippers at Porterville and district continue to be uneasy about the shortage of cars, which is delaying shipments. The copy of a statement, recently issued by Edward Chambers, director of traffic of the Railroad Administration, says the fault lies with the shippers who "delay the cars at destination" and who will not promise that any further steps be taken to expedite traffic as a more rapid freight service "will mean largely increasing the number of trains in the roads with a greater consumption of motive power."

National Standard Fruit Pack Law?

A bill is to be presented to Congress for the standardization of fruit containers, it is announced by the National Basket and Fruit Package Manufacturers' Association, which recently held its annual meeting at Atlantic City (New Jersey). The bill will require that all fruit packages and baskets shall be of uniform size and specifications, so as to make secure packages and prevent loss in transit. It will also insure the consumer full weight.

Riparian Rights Sustained.

James J. Stevenson, Inc., received a verdict giving them \$200,000 damages in a suit in which the San Joaquin and Kings River Canal and Irrigation Co. (Miller and Lux) sought to condemn the riparian rights to 500 second feet of water of the San Joaquin River owned by the Stevenson Corporation. This was the fourth trial of the suit—one of the most famous in the history for water litigation in California.

Here we are, we Americans, sitting around with our hands in our pockets half the time, bragging about being the richest country in the world. And the "bankrupt" countries of Europe are getting us over a barrel while we are letting our opportunities of production slide. We could be amused if some other country were acting up this way, but Americans—!

ELASTIC KNIT
UNDERWEAR

Warning to the Trade—Any garment offered as "Hanes" is a substitute unless it bears the "Hanes" label.

Quality and care put into Hanes Underwear will astound any man!

You'd rate Hanes winter Men's Union Suits and Shirts and Drawers *sensational value* if you followed the bales of fine, long-staple cotton from the moment they entered the Hanes Plant until you saw Hanes Underwear packed into boxes for shipment all over the nation!

What goes into Hanes in quality and workmanship comes out to you in extra-wear, extra-comfort, extra-warmth!

Read every detail and compare with the circles in the diagram figure above, because you should understand that Hanes hands you: *Guaranteed* unbreakable seams, with reinforcements at every strain point; buttonholes last as long as the garment; elastic knit collar that won't gap; shape-holding elastic knit shoulders; snug-fitting three-button sateen waist-band; elastic knit wrists; pearl buttons sewed on to stay!

Hanes Union Suits are the best at the price. They have the desirable features of Hanes Shirts and Drawers with a closed crotch that stays closed!

If your dealer cannot supply you with Hanes write us immediately.

Union Suits for Boys are as wonderful value as are our men's garments. To mothers and fathers Hanes boys' Union Suits are superb. Cozy, fleecy warmth and the finest workmanship put these boys' suits in a class distinct from all others. They certainly do stand the wear and wash!

PRUNE DELIVERIES BY THE ASSOCIATION.

(Written for Pacific Rural Press.)

The car shortage which affected the Prune and Apricot Growers' Association, in common with other industries, materially affects the extent of participation in September premiums. For the fruit could not be delivered. The heavy delivery of prunes extra early naturally increased the congestion of the associated warehouses caused by the car shortage—"plants that were never designed to store the majority of the largest crop ever produced in the State," says H. C. Dunlap, manager of the Organization Department.

Labor shortage also affected the expeditious handling at some of the plants. "Box-shook for packing has also developed shortage, due to a tie-up of traffic and cars on Oregon line to mills."

"This year, so far as deliveries and gradings have been reported, payments have been readily attended on an 8 cent basis. The accounting department has been at no time more than two or three days behind in grade sheets forwarded from packing houses. There has been delay in packing houses, owing to the vast quantity of deliveries—but where specially required, a very material payment on door receipts is made, to assist present needs."

"Financing has been attended with apparent ease. Shipments to date, along with our unsecured credit as a corporation, have developed sufficient funds without recourse in any instance to warehouse receipts on stored fruit. We even have hopes of completing the season without such necessity."

"More than the ordinary portion of fruit is now in process of distribution and will go early into consumption. Of late all dried fruit operators have been inclined to revise upwards their estimate of the present crop, and the possibility of hold-over into another season will certainly be materially minimized by the advantage of the greatest possible consuming period."

"All shipments we could make in September brought one cent a pound premium. Calculating by car shortage our premium loss amounts to \$39,000."

HORTICULTURAL JOTTINGS.

The trade prefer to pay a fair price and have the market maintained, rather than pay a low price with a fear that with low prices there would be demoralization.

Sixty-four carloads of apples left Watsonville centers in one day (Oct. 13), most of them for Eastern points. Forty-one were refrigerator cars. The car situation is improving.

The 100 tons of Nonpareil almonds that were bought in Chico early this year by the speculator at 21 cents indicates why it is possible for him to cut the Association price and unsettle the market.

T. J. Steves of Los Angeles county alone does the work of two or three men in an orchard. He uses a tractor whose operating cost while running is less per day than hay alone for the horses it displaces would cost while they are idle.

Of the two fires at almond warehouses this year, one of \$35,000 and one of \$50,000, members will be paid in full by the Almond Growers' Exchange for every pound of almonds, without cost to these members. Insurance is taken care of by the Association.

Ninety-eight per cent of sales made by the Almond Growers' Exchange, subject to buyer's approval of opening price contracts, were confirmed in full as booked as soon as prices were announced. Perhaps three-fourths of the crop have been sold at opening prices.

The trainload (of 42 cars) of grapes which left Turlock the first week in the month and was valued at \$75,000, was given the right of way East over everything except passenger trains. This was a fast box-car shipment of 550 tons of Zinfandels, Malagas and Muscats.

Market Growers Sell at Their Own Prices

(Written for Pacific Rural Press by R. E. Hodges.)

At last tomato growers are setting prices for the fruits of their labor, f. o. b. ranch, and are getting their prices! That is for tomatoes to be shipped East. The Vegetable Growers of California, Inc., have arranged a contract with a produce-shipping concern of fifteen years' experience to take the tomatoes of Association members at their ranches at a price to be determined weekly. Similar arrangements are in operation with cauliflower, of which the Association controls more than half in Southern California, and the same is planned for cabbage and lettuce later.

During the week ending October 18 the Association price was 47½ cents per packed lug box f. o. b. ranch. Independent buyers were paying 40 cents to non-association growers. During the week ending October 25, due to a strong demand and diminishing supplies, the Association price rose to 62½ cents, while outsiders were paying 50 cents.

Practically all of the shipping tomatoes at this season are from Southern California. Eight or nine districts, including Puente, Chatsworth Park, Hansen Heights, Pacoima, Compton, Gardena, and Santa Ana will be shipping in quantity until about Christmas. Two or three carloads a day are moving to market under the Association agreement which, according to Mark Grimes, member of the Association Executive Committee, covers between 50 and 60 per cent of all shipments.

Growers Use Marketing Intelligence.

This is the first time tomato growers have had a firm, intelligent hand on the distribution of their products. Each Saturday a representative of each district meets in the Association office at Los Angeles with the Association marketing agent and a representative of the shipping concern. They discuss market and crop conditions throughout the country and the probable demand. Then a price is set for the coming week. This price is designed to return to growers a fair profit, above costs of production. Probably when the demand is good, the growers will figure on recuperating some of the losses encountered in the chaotic period a few weeks back. They ought to. Growers cannot continue producing crops unless the year's work produces a profit. If production drops because producers are forced out by low prices, consumers will perforce pay higher prices than if producers continuously get living returns.

The price can be intelligently set now as never before. The U. S. Department of Agriculture has offices in Los Angeles reporting both crop and market conditions throughout the nation daily. The Association, with its

large acreage, can make use of the information furnished by the Government. Individuals have the same information available, but are powerless to make it useful in getting proper prices. The Association also gets reports from Eastern growers' associations which help. In addition, the shipping concern is vitally interested in furnishing the best information it can get from its eastern representatives. This information is given at the price conferences as correctly as possible; for if the price set for the coming week is too high, competitors can undersell him on the markets. If the price is too low, the growers kick hard, and some of them sidestep their contracts. As there are some 45 speculative buyers in Southern California, some of them very powerful, and some very desirous of undoing the Association, it behooves the price conference to set the right prices.

Economies in Operation.

However, the Association has a great advantage over the independents in its possibilities of greater economy in operation. It can ship in carlots, which most of the others cannot. Its shipper can send motor trucks to the ranches and haul full loads with relatively short hauls because the trucks do not have to travel so far to get their full loads. The Association cost of hauling averages about three cents per box from ranch to packing house. Then, knowing that they will have a certain amount to pack each day, packers can be assured steady work with a minimum of waste time. Mr. Grimes figures that the packing for Association members costs four cents a box less than that for outsiders. Every avenue of waste is being eliminated as much as possible.

All economies in handling are important to the growers, even though they get their price for tomatoes at the ranch, for their price at the ranch is set on the basis of selling in competition on the markets at the growers' price plus the shipper's cost of operations plus the shipper's commission, all of which are known in detail by the price conferees.

Here is another great economy. The shipper knows it is good business to handle so large a quantity practically certain to be delivered. He does it for eight per cent commission on gross sales, whereas the ordinary commission for selling is said to be 15 per cent, except to the biggest growers who get a rate of 12½ per cent.

Growers marketing through the Association shipper also have a much better chance to dispose of their entire shipments promptly. They have copies of the sales accounts and can trace their tomatoes to the retailers of each lot. They have intelligent and profitable control of the prices and marketing of their own products.

Wheat or Barley for 1920

To the Editor: In your issue of August 30, you wrote an article on the prospective profits from barley and wheat for 1920 harvest. In one sentence you say, "Wheat planting this fall is a better bet than barley where wheat may reasonably be expected to make half as many sacks per acre." When writing that sentence, did you have in mind that 75 per cent of the land in this State on which the 1920 wheat crop will be grown has been growing wheat ten to fifty years and almost continuously? Furthermore, did you have in mind that the chances of growing twenty sacks of barley to the acre on said land is twenty to one greater than growing ten sacks of wheat? Also can a farmer grow less than ten sacks of wheat at a profit at present prices and cost of labor and other items entering into the cost of growing wheat? Admitting the foregoing to be facts, is not 20 to 1 rather strong odds for a poor devil of a farmer to play against by playing your favorite "wheat"?—C. M. Barney, Monticello.

What we did have in mind when we wrote that sentence was that a great deal of barley land might well be de-

voted to wheat for the coming season. We also remembered the diverse conditions in this State and preferred to let each individual barley grower judge for himself whether his fields could produce half as many sacks of wheat as of barley. We feel quite sure that if ten sacks of wheat can be grown per acre this season, the prices will return a reasonable net profit to the growers, considering the facts stated in the article. More recently, an attempt has been made to dampen the ardor of wheat enthusiasts, and thus to restrict the area to be planted in U. S. this fall and next spring. But still more recently the U. S. Wheat Director expressed sentiments that lead us to believe that he is not in harmony with the wet-blanketers. Moreover, even if it might be well for American wheat planting as a whole to be reduced, we maintain that until we raise enough wheat in California to feed ourselves, it will still pay better than barley so far as anyone can see now. It is barely possible that ten sacks of wheat per acre on such land as you describe has about one chance to be realized where twenty sacks of barley has 20 chances.

Tomato Seed at Less than \$2.

A great quantity of tomato seed grown in 1918 is for sale by the Vegetable Growers of Cal. Inc. at less than \$2 per pound, according to Sec. J. M. Rittigstein. These sold at \$4 per pound last year. They are of the New Stone, San Jose Canner, and Hammer Globe varieties. Delivery can be made at Santa Ana, Los Angeles, Sacramento, San Francisco, or Santa Rosa. The Association has enough for two years.

Vegetable Side-Issue Pays.

War necessity started P. R. Canady of Huntington Beach, Orange county, into gardening in 1918 as a side-issue to his jewelry business. This season, besides furnishing a fine exhibit for the county fair, Mr. Canady sold \$365 worth of vegetables between Feb. 27 and Sept. 30 from one-half acre. These cost him \$111 besides his own labor.

Beans Make Bigger Barley Crop.

H. G. Hansen of Monterey County raised about 200 acres of beans in 1918 and still had the beans at planting time in 1919. However, he planted 300 acres for this year's crop because he has found that beans are better than fallow or pasture to increase the barley that is grown the following season on the bean land.

Bean Crop Estimates.

October reports to Field Agent E. E. Kaufman of the U. S. Bureau of Crop Estimates indicated that with practically all of the planted area harvested, the average yield of lima beans for the State was about 450 pounds per acre this year, making a total production of about 540,000 sacks as compared with last year's crop of 1,545,000 sacks. Ventura county produced about 60 per cent of the total crop on practically half of the total acreage. Beans other than limas show only 60 per cent of a normal crop in the Santa Maria and Lompoc district. As this district is the largest producer of small whites, it means a material decrease in the production of this variety. In the Salinas Valley, conditions are better. A heat wave, September 18 to 20, in the Sacramento Valley put still another crimp in the beans of that district, and conditions are only about 60 per cent of normal, which on reduced

acreage means a greatly lessened production. San Joaquin Valley fares but little better, and the estimated yield per acre for the State is about as low as ever recorded. The production forecast is for about 3,487,000 bushels. This gives a total for all beans of 4,387,000 bushels compared to 8,584,000 bushels last year and 8,091,000 bushels in 1917. Bean production in the United States is estimated at 12,690,000 bushels compared to 17,437,000 bushels in 1918.

Only \$2.36 for a Name!

Fourteen cents a gallon is the cost of preparing a chemical weed killer, whose formula was recently published by Prof. Geo. P. Gray of the University of California. An enterprising body designed a label with a name and added about eight parts water to one of the formula and has offered it to the gullible for \$2.50 per gallon—guaranteed to do the same work!

Save Seed Potatoes Now.

With a short U. S. potato crop in sight, seed sellers may boost prices next spring. Save your own seed at half the cost and know that it is from uniformly productive hills free from disease.

Bean Movement from San Francisco.

On September 1 there were 236,110 sacks of beans in San Francisco warehouses. During September 146,289 sacks were received. At the end of the month there were 216,840 sacks on hand. Shipments out of San Francisco during the month were 19,270 sacks more than the receipts during the same time.

Sweet Onions—New Vegetable.

C. O. Watts—farming 12 acres of the R. H. Middleton ranch—is now harvesting a crop of Spanish sweet onions. This is one of the only two fields of this onion in the United States—and finds a ready market at \$6.00 per hundred pounds, f. o. b. the ranch. Mr. Watts will harvest over 200 sacks to the acre. The seed was imported from Spain by Kirkpatrick of Riverside, and 2 pounds of seed was used per acre. The product is finding a ready sale in Los Angeles markets retailing at 15c per lb. It is estimated about 50 acres will be planted next year by this ranch alone.

Some Seed That Will Be Scarce

(Written for Pacific Rural Press.)

What we may expect in the way of prices for seeds of various sorts can be provisionally estimated from the supplies as shown in the table below for the United States. Most of the figures do not include the 1919 crop, however. The figures are adapted from the latest issue of the "Seed Reporter," published by the U. S. Bureau of Markets. June 30 is the season of lowest stocks and January 1 about the heaviest stocks normally. Figures represent pounds.

Kind	Total receipts for year ending June 30.		Stocks on hand June 30.		Stocks on hand.	
	1919	1918	1919	1918	Jan. 1	Feb. 1
Alfalfa	46,048,277	44,760,630	4,242,443	11,320,640	18,903,988	26,682,259
Common vetch	1,984,507	5,244,308	254,572	2,119,976	797,185	2,869,968
Sudan grass	6,242,488	4,415,611	136,041	669,780	1,055,841	850,740
Beans (snap)	40,169,329	24,196,871	14,974,514	5,688,906	26,187,252	11,915,254
Mangels	1,112,431	819,342	799,059	693,536	692,030	742,561
Cabbage	649,917	711,296	593,203	610,358	613,318	750,783
Carrot	3,073,243	2,106,009	1,055,673	573,262	1,466,078	751,871
Cauliflower	15,473	9,037	10,820	8,064	8,465	9,674
Lettuce	1,395,063	1,578,257	913,143	879,169	1,155,831	1,049,038
Onion	2,947,497	2,324,079	828,311	348,400	1,416,172	854,872
Peas	76,302,941	59,397,675	9,795,056	8,892,940	49,770,739	35,667,246
Spinach	3,382,031	1,474,866	1,508,561	511,558	1,790,060	520,590
Tomato	762,069	439,069	388,774	190,603	460,447	286,768

It will be noticed that the total stocks on hand June 30, 1919, show only one-third of the alfalfa seed this year that there was last. Of vetch seed, there was only a tenth as

spinach seed had trebled; and tomato seed in stock was double that of June 30, 1918. These data would be interesting in connection with figures on this year's crop which are not yet available.

FOR ORCHARD WORK

—this is the only power lift plow that actually does the work! It goes right up close to the trees—to within eight inches, even when throwing the soil away. Your tractor isn't complete without a

Knapp Tractor Disc Plow

behind it. It has a real Power lift, too. A slight tug at the rope and up comes the plow CLEAR of the ground. No drag!

There are no levers to come into contact with the limb—no projections to catch and give trouble.

Plows in any soil that can be plowed, turns the heaviest cover crops completely under, and does everything that a thoroughly good plow ought to do.

SEND FOR NEW FOLDER

California Federation of Farm Bureaus

Delegates from thirty California counties, representatives of 20,000 members of California Farm Bureaus were convened at Berkeley, October 23, to organize as a State Federation. This was done and W. H. Walker of Willows (Glenn county) was elected President, and presided at the sessions at the conference at the College of Agriculture following his election. J. K. Macomber of Tipton, Tulare county, was elected vice-president, the offices of secretary and treasurer being left open till a suitable appointee is found by the president.

The conference decided on a definite program for the first year, under the leadership of seven regional directors

representing various sections of the State.

The Livestock Committee, headed by J. W. Schmitz of Madera, will put in a State-wide campaign for the use of purebred sires throughout. The plan is to have a Dairy month, a Hog month, a Sheep month, and a Horse month, during which the united efforts of the county bureaus will be exerted to secure the exclusive use of purebred sires in their respective counties. Boys' Pig and Calf Clubs will also be promoted through this committee.

The Irrigation and Drainage Committee, R. L. Moorhead of Sutter county, chairman, will attempt to correlate all the local irrigation projects now under way in the State into a campaign for a greater irrigation area in California and to mitigate, prevent, or reduce injury to the soil from alkali by proper systems of drainage.

A Marketing Committee, under J. A. Teagarden of Placer county, will study the marketing conditions of the State, promote livestock auction sales now held in a number of counties and cause their spread in other districts. This committee will also inaugurate a wool pool among sheep raisers of the State and will maintain an inter-county exchange for high-class products, such as pure seed.

The Grain Growers' Department, George H. Sawyer, of Stanislaus county, chairman, will determine a plan for handling the grain crop. It is hoped that grain may be graded into lots of like quality under a state system of grain standards and be pooled.

The Fruit Committee, under Sheridan Baker of Sonoma county, will promote pruning demonstrations and investigations of tree and plant pests and diseases and investigate the question of fertilizers, their application, and results.

The Educational Committee, Volney H. Craig, of Los Angeles, chairman, will have charge of publicity work, improvement of rural schools, and the spreading of information relative to production and cost. The Committee for Community Improvements with Fred J. Hart of Salinas, Monterey county, as chairman, will work for the improvement of rural social life.

The California Farm Bureau Federation is to become a unit of the American Farm Bureau Federation, which is to hold its organization meeting in Chicago on November 9 and 10. The three delegates named by the conference to attend the national federation are: President W. H. Walker of Glenn county; Volney H. Craig of Los Angeles county, and George H. Sawyer of Stanislaus county.

NOTES ON THE BLOOMING OF SQUASHES.

To the Editor: Why are all the blossoms on my eight hills of Hubbard squash male? Last winter I saved the seed from a squash taken from a plant growing in a corn field the previous summer. It made a very rank growth, but had only four squashes, though it made many more blossoms. The vines I grew this year were all fine, but up to August 1st not one female blossom appeared. I planted fifty hills of squash and pumpkin. The summer varieties are satisfactory and I see some Boston marrows developing, also a few pumpkins, but Hubbard seems a flat failure.—J. G. A., Napa.

(Answered by E. B. Babcock, Professor of Genetics, University of California.)

In general, I know that some members of the squash family sometimes produce almost no male blossoms, for reasons unknown to me; but they usually will produce at least two or three before the vine stops growing. Dr. A. L. Hagedoorn who has done experimental work on squashes which made it necessary to use the female flowers only, tells me that some varieties produce almost no female flowers, and those they did have come just at the end of the growing period. Furthermore, he observed that his difficulty was more pronounced when working in Holland

TRACTION

Power on a tractor is of little relative value unless it is applied to afford maximum traction. Traction is what counts. It is the primary reason for a tractor and TRACTION is the outstanding feature of the MONARCH Tractor. It has power—plenty of it—mechanical perfection, strength, ruggedness and, most essential of all, it has maximum traction delivered by means of the endless MONARCH tracks. These tracks enable the

MONARCH Tractor

to get over the ground with a greater grip than a dozen drive wheels. They have an irresistible creep that laughs at hills, grades and loads. In addition, the weight is so distributed that, inch for inch, it is no greater than the weight of an average man's foot. This means that the MONARCH Tractor will not pack the soil.

Where the Grades are Heavy and the Going is Hard

You can use the MONARCH Tractor everywhere. The secret of MONARCH power and success is in the TRACTION principle. Before you buy a tractor you should see the MONARCH 16-9—the logical tractor for the average farm—a combination of power and convenience. The rating is 16 H.P. on the belt pulley and 9 H.P. on the drawbar. Powerful enough to pull from two to three bottoms. It will turn in its own length and work where horses cannot go.

Do not confuse MONARCH Tractors with the so-called "track-laying" types. The track on the MONARCH is made of wear resisting manganese steel. We guarantee to duplicate for MONARCH Tractors any written warranty put out by any other responsible tractor manufacturer.

MONARCH Tractors are made in the following sizes:
16-9 H. P., 20-12 H. P. and 30-18 H. P.

Write for our Performance Booklet and full particulars.

How to Pay Debts--Keep More Livestock

(Written for the Pacific Rural Press by Thos. F. McConnell.)

In the current issue of a very popular farm paper there is a very able article on "How to Borrow Money." This is a very widely discussed subject, but it seems as though in reality it is not nearly as important to know "how to borrow money" as it is to be able to pay a person's debts. In fact, there is no question but what the idea of most farmers who want to borrow money is generally with the purpose to pay off a number of small debts, to buy more land, machinery or livestock. It has been the observation of many authorities, and the writer as well, that the farmer or rancher who keeps livestock and even cares for it in a reasonably good manner, does not have to borrow money, and if he does think it necessary he has no difficulty in getting all he needs at his bank on as long "time" and at as reasonable a rate of interest as anyone.

Swine Solves Some Problems.

The hog is known as the "mortgage and tax-payer," and has pulled many a farmer out of the "slough of despond" of debt for the reason that pork fresh, and more particularly the cured, is so universally used on the tables and in the kitchens of the American housewife. Not only is there always a ready market for the hog, but the rancher's land is not made appreciably poorer by selling hundreds of hogs from off the place, but if feed is bought the farm grows richer with the farmer, for the larger proportion of the nitrogen, potash and phosphorus in the feeds consumed are retained on the farm in the form of manure. Then, too, if the swine are handled properly, at intervals of two or three months there are hogs ready for the market, and in this way money is coming in at frequent intervals, instead of once a year, as is the case with the majority of the grain and fruit ranchers.

The hog is somewhat of a scavenger and will eat waste that otherwise would be lost. Some weeds, if the ground is mellow enough, will receive somewhat of a set-back if not actual eradication by the busy "rooters." This is true of the "wild morning-glory" that is such a pest. Do not expect the hog that is given all he will eat of concentrates, or has good alfalfa pasture, to pay much attention to the "morning-glories," but if forced somewhat the young growing shoters will "root out" many of the bad weeds.

Sheep as Scavengers.

The sheep also is somewhat of a scavenger and will eat almost anything, even to its detriment sometimes, and eat some of the poisonous plants. The same thing is true of the sheep that is of the hog, only more so, and that is that the mutton carcass or the wool contains but little of the fertility content of the food consumed. The fertilizing constituents are returned to the soil through the manure. In fact, sheep are noted for cleaning and reviving weedy "and run down" farms.

Lewis county, Idaho, was a wonderful barley, oat and wheat region, but through constant cropping to small grains became very badly infested with all sorts of weeds from the most luxuriant annual to that very persistent perennial "quack grass" (*Agropyron repens*). Summer fallowing helped some, but sometimes the "fallow" ground would be neglected and enough of the weeds grow to cause some trouble the following year. Some of the ranchers procured small flocks of sheep that kept the ground clean "as a whistle" and yielded an income as well. There are many ranches in California where sheep could be used as weed scavengers, as well as in Idaho and other states. It does not take much of a woven wire fence to "stop" sheep either, so the expense in that direction would be of the smallest.

The income from sheep is bunched more than with hogs, but the income is distributed somewhat, as there are several sources, such as the fat lambs for market, fat yearlings and even "two-year-olds." The wool that is generally considered the main source

of income is clipped from twice a year to three times in two in California. A flock of sheep is always considered a reliable source of income by bankers.

Dairy Returns Come Often.

The dairy cow that furnishes a constant, almost overflowing source of income, is always to be considered as one of the mainstays of the livestock industry. They are not the scavengers that either the swine or sheep are, but they certainly furnish one, or we might more truly say, several of the principle articles of food for the people of the United States. Again, we can say that the fertility is retained on the dairy farms and grain crops continue to be abundant and even with proper management gradually increase in yield until the maximum is reached. While there have been some arguments against the prosperity of the dairy farmer by some good authorities, still, taken as a whole from one end of the country to the other, the communities in which dairying and hogs are kept are generally communities in which the banks are noted for large deposits.

The cream check comes twice a month and if a milk route is supplied more or less, all the time. Where hogs are kept there is an added source that makes the banker even more willing to lend money if it is necessary, for the simple reason that they can see a way for the dairyman to pay his debts if he has reason to contract any.

Beef Cattle an Excellent Resource.

The dairy cattle are not the only ones that offer a more certain return than just plain grain and fruit ranching. We must not forget the beef and the dual-purpose cattle. In the same county of Lewis, Idaho, mentioned above there was a certain rancher who wanted to borrow some money. He called upon a banker and enumerated several hundred acres of grain that would be ready to harvest in 60 days and would be almost certain to yield heavily. However, the banker could not quite see his way to make the loan until the rancher mentioned the fact that he had quite a bunch of Short-horns from calves up to cows that were looking well. The banker told the borrower that he should have mentioned the cattle first. Suffice to say that the money was loaned because the banker could see an almost positive asset in the livestock.

It might also be well to mention that the particular locality was visited by a hail storm that very materially reduced the yield of grain on this ranch, as well as others in the vicinity, and was used by the banker mentioned to emphasize his position with regard to the safety of loans made to ranchers carrying a reasonable number of cattle.

Therefore, when we see the wise men of the nation telling us "How to Borrow Money," just remember that the banker is really willing and glad to loan money for a long time and at a low rate, if there is a good lot of stock to back up the rancher in his work, or even if he wants to borrow money to start in the livestock business, if there is evidence that the purchase is to be a reasonable and a just venture.

In support of what we have said above there are bankers that are backing boys on their individual notes, without the signature or O. K. of the parent or guardian, to the extent of \$200 to each boy for the purpose of buying purebred hogs. This is not in one locality alone, but is increasing and promises to be a very excellent demonstration of "how to pay debts."

There is no greater cause for loss and drudgery on the farm than a lack of business principles. System and good sense make long days shorter, hard work easier, mortgages lighter and the family life more easy and free.

Quicklime is good to put in the graves of animals that die from contagious diseases. In using it the carcass should be surrounded and covered with twice its weight of the quicklime.

PUREBREDS, CROSS-BREDS, OR GRADES?

(Written for Pacific Rural Press by Thos. F. McConnell.)

The question as to which of the classes of livestock is the most profitable to feed is an old one and has been discussed pro and con ever since the purebred animal came into existence, particularly among the breeders and growers of the meat-producing animals. The same question has been brought up regarding the dairy animal, but it is not as persistent as it is in the meat-producing animals because it is possible and also has been even compulsory to a certain extent to measure the results of feeding dairy cows a certain amount of feed, and the yield therefrom generally reduced to the form of butter fat. As the feeding for records has gone on year in and year out with the dairy animals and results are generally in favor of the purebred, we do not hear so much about the value of the grade or cross-bred in this direction. Again, it is generally conceded that a purebred sire of any of the dairy breeds used on grade herds will show improvement in the milk production in the offspring so marked as to leave no question as to the value of this practice.

Purebred Superiority Generally Recognized.

Another indication that the value of the purebred is becoming more evident is the agitation in favor of laws compelling the use of purebred beef sires on the range, showing that many of the range men have become convinced of the importance of the use of registered sires.

It has also been quite a fashionable thing for some swine raisers to cross-breed for one generation, claiming better results in growth by this method. At a recent sale a former advocate of cross-breeding made the statement that six purebreds in a carload of cross-breds raised the price on the carload three points; and that it was the purebreds for them after this. A carload of purebred hogs at Hanford some time ago topped the Farm Bureau Auction Sale of market hogs due to their uniformity in every way.

It is conceded that in the past, and it will probably happen again in the future, that certain breeds of livestock at times have deteriorated from their one-time excellence, due to their following some color fad or other characteristic really foreign to the economic value of the particular breed. This in most cases has been corrected and the breed returned to their former position of usefulness and popularity.

The Chief Objection.

The chief objection on the part of the owners of grade herds to the use of purebred sires is the initial cost as it is commonly admitted that it costs no more to grow (in fact really costs less) and maintain the purebred than it does the scrub. The extra ten to one hundred dollars first cost looks too large and the grade or scrub sire that may look very fine and good but has not the generations of prepotent ancestors back of him is bought instead. For this really paltry amount the sire that would produce more and quicker growing offspring is turned down when in one crop of pigs, calves or lambs, the difference would be made up ten times over by the use of the purebred sire. There is an old saying that "blood will tell," and there is no place where it is more certain of demonstration than in the use of a purebred sire in a grade herd or flock or by the use of a well-bred registered sire in a purebred herd or flock over one of more or less indifferent breeding.

Sore and watery eyes of animals may be relieved by a solution of ten per cent boric acid and ninety per cent pure water. Apply it on absorbent cotton and use a fresh piece every time the eyes are treated.

Advertising livestock is not a gamble. The breeder who tries to get along without it is taking all the chances.

Santa Anita Rancho

ANOAKIA BREEDING FARM

ARABIAN THOROUGHBREDS

Out of our choicest Thoroughbred mares, and sired by our famous imported Arabian stallion, Ibn Mah-russ, we are offering some splendid two and 3-year-olds. Also some especially desirable young saddle stock sired by Ibn Mah-russ, world renowned Arabian desert stallion, and by Don Castano, five-gaited saddle stallion, winner in many prominent shows.

REGISTERED PERCHERON HORSES

The Percherons at Santa Anita were selected with strict regard to quality, and the type to meet California demand. Our stallions and mares have been prominent and consistent prize-winners wherever shown, and we are now in position to offer a few very desirable young stallions at attractive prices.

REGISTERED MAMMOTH JACKS

The foundation of this herd was laid with big, broody jennets and headed by "King Bersheba," the best jack that money could buy. We now have for sale a number of two and three-year-old jacks of exceptional breeding and quality.

REGISTERED HOLSTEIN CATTLE

The herd is headed by PRINCE WALKER CORNUCOPIA, the highest record son of Prince Gelsche Walker. Prince Gelsche Walker justly ranks as the greatest Holstein sire yet developed on the Pacific Coast. His daughters have broken more state and world's records than those of any other Pacific Coast sire, and have proved themselves producers and breeders of the first rank. In public sales in California, seven sons, seven daughters, four grandsons, and five granddaughters of Prince Gelsche Walker, have sold for a total of \$28,670.00, or an average of \$1,246.00 per head for the twenty-three head, an average not closely approached by a like number of descendants of any other bull in the West. The dam of PRINCE WALKER CORNUCOPIA is Alba Sadie Cornucopia Creetia, the only cow in California with a record above 36 lbs. butter in 7 days having a previous record above 34 lbs. butter in 7 days. She also has a record of 866.28 lbs. butter from 18,849.4 lbs. milk in 338 days. She is sired by Sir Sadie Cornucopia, whose dam was the first cow to make over 30 lbs. butter in 7 days, Sadie Vale Concordia, and she is the dam of the 40-pound cow, Sadie Vale Concordia 4th, who is the dam of one 38-pound daughter, and the great sire King Korn-dyke Sadie Vale, who has also sired a 40-pound daughter.

Among the females in our breeding herd are twenty-three daughters of Prince Gelsche Walker, some of them just now coming into milk; a large number of good record cows and heifers of substantial breeding; and a choice lot of granddaughters of Winnie Korndyke Cornucopia De Kol, the first cow in California to make over 1200 lbs. butter in one year.

We are blending and developing the blood lines that have produced some of the greatest animals of the breed, and offer a number of young bulls that should work improvement in your herd.

REGISTERED POLAND-CHINA SWINE

Our swine breeding is not confined exclusively to one breed—Poland-Chinas. The herd is headed by "Quality Bob"—1st and Junior Champion at Wisconsin State Fair. Same at La Crosse. 5th at National Swine Show. Miss Big Price, 3rd at Wisconsin State Fair. 1st Senior and Grand Champion La Crosse. 6th at National Swine Show. Miss Big Price 2nd, won 6th at Wisconsin and 3rd at La Crosse. "Quality Bob" will be used on daughters of "Superba" and "Banker's Boy."

Santa Anita, California

Los Angeles Livestock Show a Big Success

(Written for Pacific Rural Press.)

The attendance on the last three days was lessened somewhat by rain, that old bete noir of fair managements east of the Missouri River. However, the show was so good, from massive stallion to the miniature doe and from the harness racer to the "galloper," that nothing but success can be made out of it. Drafters, dairy and beef cattle, sheep, swine and goats were all looked at by the public, inspected by the judges and pronounced "good and perfect" and awarded ribbons to the glory and edification of their owners and friends. Manager Thomas deserves a great deal of credit for the way he planned and carried out this immense undertaking and every one knows that he is a wonder when it comes to making a show a success.

Hampshires Have High-Class Stock.

Exhibitors: L. A. Denker, Saugus; Roy E. Fisher, Lincoln, Nebraska; C. J. Gilbert, Lancaster; Gordon and Langdon, Ferris; Fairbanks Ranch, Redlands; Conejo Ranch, Newbury Park; Geo. I. Lytle, Perris; I. F. Stone, Perris. Judge, C. R. Doty, Charleston, Ill. Prizes in the blue were pretty well distributed with Conejo Ranch winning five, Denker, four; Fisher, three; Gilbert, two; Gordon and Langdon, two and Fairbanks Ranch, one.

Senior champion boar, Harvey's Choice, Fairbanks Ranch. Reserve senior champion boar, Liberty, Conejo Ranch, Junior champion boar, Chong, Denker.

Senior champion sow, Florine 2nd, Conejo Ranch. Junior champion sow, Mother's Choice, Gordon & Langdon.

Grand champion boar, Harvey's choice, Fairbanks Ranch. Reserve grand champion boar, Chong, Denker.

Grand champion sow, Florine 2nd, Conejo Ranch. Reserve grand champion sow, Mother's Choice Gordon and Langdon.

Aged herd: First, Conejo Ranch; second, Fisher; third, Gilbert; fourth, Fairbanks Ranch. Young herd: First, Denker; second, Fisher; third, Gilbert; fourth, Gordon and Langdon.

Breeder's herd: First, Gilbert; second, Denker; third, Gordon and Langdon; fourth, Fairbanks Ranch.

Get of sire: First, Conejo Ranch; second, Fisher; third, Gilbert.

Produce of dam: First, Conejo Ranch; second, Gilbert.

Guernseys Are Good Ones At Los Angeles.

Exhibitors: W. H. Dupee, Santee; A. B. Humphrey, Escalon; James Marwick, Santa Barbara. Judge, Ed Carey, Carlton, Oregon. Three exhibitors only, but then if quality is considered at all Los Angeles had the greatest Guernsey show so far this year. W. H. Dupee's herd fresh from winning at the National Dairy Show at Chicago won the most blue ribbons with the Grape Wild Farm herd closely following. Marwick won first on senior yearling bull.

Senior champion bull, Imp. Itchen May King, Dupee. Reserve senior champion bull, Escalon Challenger, Humphrey. Junior champion bull, In-

spiration of Edgemoor, Dupee. Senior champion cow, Cheminante 11th, Dupee. Reserve senior champion cow, Merry Lady of Edgemoor, Dupee. Junior champion heifer, Victorius of Edgemoor, Dupee. Reserve junior champion heifer, Patroness of Edgemoor, Dupee. Grand champion bull, Imp. Itchen May King, Dupee. Grand champion female, Cheminante 11th, Dupee.

Aged herd: First, Dupee; second, Humphrey. Young herd: First, Dupee; second, Humphrey. Calf herd: First, Dupee; second, Humphrey.

Get of sire: First, Dupee; second, Dupee; third, Humphrey.

Produce of dam: First, Dupee; second, Humphrey.

Cows in milk: First, Dupee.

Los Angeles Has Big Jersey Show

Exhibitors: Grant A. Brown, El Monte; E. S. Haas, Downey; Frank Reed Sanders, Chandler, Ariz.; J. E. Thorpe, Lockeford; University of California, Davis; J. E. Wherrell, Riverside; Winsor Ranch, Bonita. Judge, Ed Carey, Carlton, Oregon. J. E. Thorpe of Mossdale Farms won the most blue ribbons, with nine to the credit of his herd; F. R. Sanders winning four; Grant Brown, three and University of California, one.

Senior champion bull, Jolly Senator Raleigh, Thorpe. Junior champion bull, Biddy's King of Mossdale, Thorpe. Reserve junior champion bull, Jolly Ben of Mossdale, Thorpe.

Senior champion cow, Shy Lady Viola, Brown. Reserve senior champion, cow, Desert Honeysuckle, Sanders. Junior champion heifer, Owl's Mermalden Fern, University of California. Reserve junior champion heifer, Oxford's Nora's Pretty Daisy, Sanders.

Grand champion bull, Jolly Senator Raleigh Thorpe. Reserve grand champion bull, Biddy's King of Mossdale, Thorpe. Grand champion cow, Shy Lady Viola, Brown. Reserve grand champion cow, Owl's Mermalden Fern, University of California.

Aged herd: First, Thorpe. Young herd: First, Thorpe; Calf herd: First, Brown; second, Thorpe.

Get of sire: First, Sanders; second, Thorpe; third, Brown; fourth, University of California.

Produce of dam: First, Sanders; second, Thorpe; third, Sanders; fourth, Thorpe.

Cows in milk: First, Thorpe.

Excellent Hereford Show At Los Angeles.

Exhibitors: Conejo Ranch, Newbury Park; Wm. Henn, Kansas City, Mo.; D. H. Ogden, Alpine; The Hereford Corporation of Wyoming, Cheyenne, Wyoming. Judge, Wallace Good, Kansas City Mo.

The Hereford Corporation of Wyoming won all firsts except one. Will Henn won first, second, third and fourth on senior yearling bull and second, third and fourth on bull 2-years-old. The Conejo Ranch won second, third, fourth and fifth on heifers 2-years-old with a beautiful string and second and third on get of sire. D. H. Ogden gathered in second

MILKING SHORTHORN BREEDERS' MEETING CALLED.

Santa Rosa Stock Farm, Santa Rosa, Oct. 27th, 1919.
Pacific Rural Press, San Francisco:

Gentlemen: As a result of my advertising in your paper, I have received so many letters from people all over the Pacific Coast desiring to purchase Milking Shorthorns, that I have been unable to supply the demand. I have taken the matter up with Alexander & Kellogg, and other well known breeders of this strain, and found the same condition to exist.

We have, therefore, come to the conclusion that it would be best to call a meeting of all interested to discuss ways and means for supplying the demand, either through the organization of an association or club, and would, therefore, request that you run a notice in your paper requesting all owners of Milking Shorthorns (no matter whether they own one bull or a herd), and all those who contemplate purchasing Milking Shorthorns, to meet with us at Convention Hall in the California Building at the International Live Stock Show on November 4th, at 2 o'clock.

W. B. Ayre, President of the Eastern & Western Lumber Co., of Portland, Ore., the veteran breeder of Milking Shorthorns on this Coast, has consented to be present at this meeting, and will, undoubtedly, be able to make many suggestions of great value to all who attend.

THOMAS HARRISON.

GEO. A. SMITH & SON'S DISPERSAL SALE

CALIFORNIA'S LARGEST SALE OF
Registered Holstein-Friesian Cows

At Geo. A. Smith Ranch—CORCORAN, CALIFORNIA

Wednesday and Thursday
November 5 and 6, 1919

OUR FOUNDATION HERD

100 Young Registered Holstein Cows. Not One Over 3 Years Old.

GETTING BETTER ALL THE TIME.

Some Fresh—Others Will Freshen Soon.

ALL TUBERCULIN TESTED

They Are Real Holsteins

measured by every standard you wish to apply, including TYPE-BREEDING and ACHIEVEMENT. Visitors who have seen this herd pronounce it "One of the Best They Have Ever Seen." They are the CREAM of 140 Head that we purchased in New York, Ohio, Wisconsin and Michigan.

BREEDING

They are sired by Sons of KING OF THE PONTIACS, HENGVERELD DE KOL, PONTIAC, AAGGIE KORNDYKE, RAG APPLE KORNDYKE 8th, PONTIAC KORNDYKE, COLANTHA JOHANNA LAD, KING SEGIS PONTIAC, SIR PONTIAC RAG APPLE, BEAUTY PIETERTJE BUTTER KING, JR., and MANY OTHERS whose names are famous for Great Milk and Butter Production. YOU may PAY MORE but You will GET NO BETTER.

PROVEN WORTH

Is what thinking men tie to no matter what they buy. It is something real—it's dependable, and you can rely upon it when you want results. If you are building a FOUNDATION HERD of REGISTERED HOLSTEIN CATTLE for Both Pleasure and Profit, it will PAY YOU to secure Cattle that have PROVEN THEIR WORTH at the PAIL and CHURN.

68 of these Cows are NOW on YEAR'S TEST. Several have FINISHED THEIR TEST and MADE GOOD RECORDS on ordinary Herd Feed and Care.

THE BULL

Nearly all of these cows are bred to Our Great Herd Sire—FINDERNE SOLBENE PONTIAC VALDESSA—the Bull with the Phenomenal Backing—a son of a WORLD'S RECORD COW, and his Sire is a Son and Grandson of WORLD'S RECORD COWS. Calves with this breeding will be very valuable.

COME — IT'S YOUR OPPORTUNITY — COME

A Sale that will please you, no matter whether you want ONE or a CARLOAD. SEE the Cattle before the Sale—SEE their Records—SEE their Calves. We are keeping their calves for our future Foundation Herd.

Autos will meet all trains sale days.

Good Hotel Accommodations.

TERMS

Arrangements can be made for Time by Responsible Parties before the Sale.

Universal natural milker

Right now good dairy help is hard to get and wages are mighty high. Why stick to the old-fashioned, laborious, time-wasting, hand-milking method while other dairymen are saving time and making bigger profits by using the Modern Universal Natural Milker?

One Universal lasts a lifetime. It alternates, milking two teats at a time, while it is massaging and relieving the other two.

Write for Catalog

Learn about this simple, dependable mechanical milker that enables one man to do the work of three, and do it better.

FLEMING BROS., Chemists, 327 Union Stock Yards, Chicago

REGISTERED HOLSTEINS

Creamcup Herd offers service bulls and bull calves of 34-lb. breeding. Females offered for foundation stock. Tuberculin tested.

M. M. Holdridge, San Jose, Cal
R. D. "A," Box 457.
Two miles out North First Street.

Ariz.; J. Henry Meyer, Watsonville; University of California, Davis. Judge Ed Carey, Carlton, Oregon.

The Elkhorn herd owned by J. Henry Meyer, San Francisco and Watsonville, was very much in evidence, taking all firsts except one, all seconds except two and all championships as well. The University of California won first on produce of dam. The winning of nearly all ribbons by one herd is not interesting and exciting as where the competition is more keen, but in this case it was a great Ayrshire show, as the cattle of the Elkhorn herd are typical of the very best of the breed and always in show shape. We hope to see more of these excellent Scotch "coos" in the state in the near future.

BERKSHIRE BREEDERS SHOW AND SELL AT LOS ANGELES.

Exhibitors: Mrs. F. M. Connor, Pasadena; F. L. Hall, Perris; A. B. Humphrey, Escalon; Italian Vineyard Co., Guasti; J. Francis O'Connor, Santa Rosa; University of California, Davis; Mrs. A. B. Walters, Perris.

Judge, E. J. Barker, Thorntown, Indiana.

The first prize places went nearly all to two breeders, with A. B. Humphrey winning the most, J. Francis O'Connor coming next, with F. L. Hall and Italian Vineyard Co. getting one each.

Senior champion boar, Grape Wild Emblem, Humphrey. Reserve junior champion boar, Choice Goods 10th, Italian Vineyard Co. Junior champion boar, Escalon Type, Humphrey. Reserve junior champion boar, Grape Wild May Star 2nd, Humphrey.

Senior champion sow, Emblem Escalon Belle, Humphrey. Reserve senior champion sow, Leader's Invincibella 2nd, O'Connor. Junior champion sow, Castleview Premier Belle, O'Connor. Reserve junior champion sow, Castleview Rival Duchess, O'Connor.

Grand champion boar, Grape Wild Emblem, Humphrey. Reserve grand champion boar, Escalon Type, Humphrey. Grand champion sow, Castleview Premier Belle, O'Connor. Reserve grand champion sow, Escalon Emblem, Humphrey.

Aged Herd—First, Humphrey; second, Italian Vineyard Co.; third, Humphrey; fourth, Hall. Young herd—First, O'Connor; second, Humphrey; third, Italian Vineyard Co.; fourth, Hall.

Breeder's herd—First, Humphrey; second, Humphrey; third, O'Connor; fourth, Hall.

Get of sire—First, Humphrey; second, Humphrey; third, Hall.

Produce of dam—First, Humphrey; second, Humphrey; third, O'Connor.

Barrow—First, Humphrey; second, O'Connor; third, University of California. Pen of three barrows—First, Humphrey.

On the afternoon of October 22, at the Los Angeles Live Stock Show, the Western Berkshire Congress held one of their promotion sales. Generally stockmen will advise and vote against holding a public sale at a fair where its varied attractions are pulling the buyers and bidders away from the more necessary business of purchasing hogs, but the Berkshire men held one on the above date and it was a good one, too.

Some of the finest individuals coming directly from the show ring, where competition was of the keenest, carrying the highest ribbons, with best of breeding, the kind, too, that speak for themselves were offered and sold. The public were given an opportunity seldom found of buying at their own price, champions of the show.

The sale averaged \$135.51 with 29 sold. The top of the sale was J. Francis O'Connor's grand champion sow, Castleview Premier Belle. This sow was also junior champion at the State Fair. She was bought by F. L. Hall of Perris. Three from Mr. O'Connor's consignment sold for an average of \$380, but at that they were worth the money. The gilt, Superior May 59th, consigned by Anchorage Farms, Orland, brought \$300. She was bred to a son of Star Leader and was bought by Geo. A. Stingle of the Lark Meadow Ranch, El Monte.

BLACK AND WHITE BREEDERS BANQUET AT LOS ANGELES.

One of the most enjoyable affairs of its kind ever held anywhere was the banquet of the Holstein-Friesian breeders at the Los Angeles Athletic Club, Los Angeles, Wednesday evening, October 23.

Fifty guests were present, including prominent breeders of Holsteins and their wives, officials of the livestock show, newspapermen and others. R. A. Condee, superintendent of livestock at the California George Jr. Republic, Chino, acted as toastmaster.

The need of a Southern California Holstein-Friesian Association working as an auxiliary of the State Association, was manifest from the sentiments expressed by the various speakers, and Geo. M. Brown of Burr Farms and R. A. Condee were appointed as committee to work up such an organization.

Among those speaking were John B. Irwin of Minnesota, judge of Holsteins at Los Angeles; C. R. Thomas, secretary-manager of the Live Stock Show; Ed Carey, Carlton, Oregon, judge of

CALIFORNIA WOOLGROWERS ASSOCIATION.

Please be advised that a Special Meeting of the California Woolgrowers Association will be held at San Francisco, in the California Building, on Friday, November 7th, at 2 P. M., for the purpose of discussing and taking action on the Kenyon Bill, and other legislative matters.

The California International Livestock Show will be on at this time and you are urged to attend both the Show and this Special Meeting.

FRED A. ELLENWOOD, President.

Tulare Co. Poland-Chinas Sell Well

(Written for Pacific Rural Press.)

The initial sale of the Tulare County Poland-China Breeders' Association was well attended, both by breeders of registered swine and those interested only in raising hogs for market. This is not to be wondered at when we look over the list of the consignors. Some of them are young breeders, but have old heads on their shoulders. Therefore, with their initial sale behind them, and it is a success, they will go forward with the assurance that they are on the right road and that they in the future may rest confident of the support of the public that are interested in purebred Poland-China swine.

The total number sold was 52, bringing an average of \$153. The top of the sale was the sow, Big Jane, consigned by Hugh C. Shinn of Tulare and bought by Paul Sheppa of Tulare for \$405. The next highest priced sow was a gilt consigned by A. J. Elliott of Tulare and bought by H. G. Ball of

Tulare for \$330.

The highest average of the sale was obtained for the consignment of Hugh C. Shinn, nine head selling for \$2,110 or \$233.33 each. A. J. Elliott obtained the next highest average with his consignment of seven head, bringing \$1,330 or \$190 each. R. F. Guerin of Visalia received \$350 for nine head or \$150 each. W. E. Martin of Visalia consigned twelve head, receiving \$1,525 for them or \$135.42 each. Thos. E. Jacob & Bro. received \$630 for five head or \$126 each. F. E. Fay of Tip-ton sold five head for \$500 or \$100 each.

The sale was a success of the kind that lasts. The stock was good and the averages of some of the consignments were high and none of them low. They certainly have laid a good foundation for future business.

Col. Geo. W. Bell of Tulare cried the sale with Col. Cy N. Clark of Modesto assisting.

Poland-Chinas' Great Showing

(Written for Pacific Rural Press.)

While the exhibit of this breed was not as large as might be, they were represented by some of the best herds of the State and were of the very highest quality. One of the most noted herds of California, that of M. & A. L. Bassett of Hanford, was the only herd from north of the Tehachapi. Mrs. Viola L. Renwick of Santa Barbara showed her widely-known El Profito herd. Baldwin Park Pig Bassett of Hanford, was the only J. L. Hall, Lomita; M. L. Montgomery, Simi; University of California, Davis, and E. Avery Newton of Los Angeles, also made good exhibits. C. R. Doty, Charleston, Ill., awarded the prizes. M. & A. L. Bassett of Hanford won most of the blue ribbons. Mrs. Viola L. Renwick won first and grand championship on the senior yearling boar, El Profito. The University of California won first on fat barrow, and Bassett won first on pen of barrows.

Senior champion boar, El Profito, Renwick. Reserve senior champion boar, Model Fellow Jr., Bassett. Junior champion boar, Big Smooth Gerst-

dale, Bassett. Reserve junior champion boar, Golden Model, Bassett.

Senior champion sow, Hopeful, Bassett. Reserve senior champion sow, Bobdale Edith, Bassett. Junior champion sow, Big Princess Model, Bassett. Reserve junior champion sow, Gerst-

dale, Bassett. Grand champion boar, El Profito, Renwick. Reserve grand champion boar, Big Smooth Gerstdale, Bassett. Grand champion sow, Big Princess Model, Bassett. Reserve grand champion sow, Hopeful, Bassett.

Aged herd—First, Bassett. Young herd—First, Bassett; second, Newton. Get of Sire—First, Bassett; second, Newton.

Produce of dam—First, Bassett; second, Newton.

The breeder who adopts close culling will add to his reputation, get repeat orders, and extend his business continually.

Promote Pork Profits

With Better Poland-Chinas breeding

I have a few young boars by Joe's King just ready for service. They will make your spring crop of pigs profitable in spite of high price of feed and labor. They are the big type, with easy feeding and quick-maturing qualities. I have priced them very reasonably for a quick sale. Write at once for prices and particulars or call and see them.

WAUKEEN FARM

LES McCracken, Prop.

RIPON, CAL.

California State Fair, 1919, says "that outside of one ring the Berkshire exhibit surpassed the exhibit at the Illinois State Fair of two weeks ago."

The Chester White Will Start You Right

Large litters, easy feeders, quick developers, low shrinkage in slaughter, premium carcasses—these are a few of the features of the Chester White, the profit-making hog.

Our last carload shipment dressed 72.30 per cent and brought 1½c above the market price.

Largest Herd on the Coast

Over 100 mammoth brood sows, headed by **HIGHLANDER**, the \$1,000 Grand Champion boar, whose sire and dam were both undefeated Grand Champions at three International shows. His pigs are corks—the kind you want.

ORDER NOW—AVOID DISAPPOINTMENT

The demand is keen. Get your order in early. We have a wonderful lot of tried sows, open and bred gilts, service boars and weaned pigs, representing the finest blood lines in America. Prices reasonable. Write us your wants.

FEEDING RAISINS FOR FINE, CHEAP PORK.

(Written for Pacific Rural Press by D. J. Whitney.)

The vineyards of the Fresno district do not provide satisfactory places for hog raising unless some land is taken out for alfalfa, but there are a lot of hogs in Fresno and neighboring counties that are hard to beat and raisins have a big lot to do with it. However, the raisins are cull raisins from the packing-house and now that bad raisin prices are a thing of the past, they do not come direct from the ranch. As a result many of the finest herds of swine are near, but out of, the vineyard district, where alfalfa is grown.

One successful breeder is Guy McClune, a few miles west of Fresno, who has some finely bred, fine-looking Durocs. They run on about an acre of alfalfa, get the milk from a small dairy, and, except that the brood sows are given a little middlings, their only other feed is raisins, and they are a fine-looking, quick-maturing, prolific bunch of animals. McClune's herd boar is Model Dell 2d. He has now only three aged brood sows, but has litters from several younger animals. Two of his old sows are from Iowa stock; the third is Satisfaction, a first-class daughter of Elmer Lamb's great show sow, American Beauty.

McClune thinks raisins are hard to beat as a concentrate. They are rich in sugar and other valuable materials, make an ideal combination with alfalfa and milk—as the animals prove—and are not so heating as corn and barley. In addition, they are extremely cheap. Cull raisins, exactly as good

for swine as any raisin, are secured at the packing-house at about \$10 a ton; stems, which usually contain a lot of raisins and so provide good food, can be had at \$1.50 a load. McClune buys stems only when they are rich in raisins. If fertilizer was a big item, as it would be with the fruit-grower, stems would be excellent.

To indicate the merits of the raisins for swine one bunch of pigs averaged 136 pounds when three months old on the feed described. If a man would raise that kind of hogs for the pork barrel he could slaughter 200-pound hogs at six to eight months old and a hog killed a short time ago a few days over a year old, weighed 335 pounds. The sows raise practically 10 pigs per litter and farrow twice a year. The Satisfaction sow had farrowed 48 pigs by the time she was 2½ years old; one of the other sows farrowed 16 two litters ago, but only ten the next. Combine such prolificacy with such quick maturity and present prices and it is easy to see why hog-raising in the Fresno district, whenever a man will provide a little alfalfa pasture for his animals, is the next thing to a gold mine.

H. H. Allen, a few miles beyond McClune, also has some A-1 Durocs which he handles in the same way and also figures that the combination of climate, feed and good breeding is hard to surpass.

That Fresno hog men are awakening to their possibilities is indicated by the recent organization of two flourishing county breed associations, the Poland-China and Duroc men both organizing to promote the interests of their respective breeds to the best of their ability in blood lines and in methods of production and sale.

Livestock and Dairy Notes

Dairy.

J. W. Benoit recently sold a fine registered bull to Mrs. Wallis of Modesto.

H. E. Cornwell is showing 6 head of his superb Holsteins at the California International the first week in November, including Ciruela Walker, grand champion at the Fresno and San Joaquin county fairs.

California George Jr. Republic of China has a 4-year-old Holstein cow, Juliana Darrington of Rock, that has just completed a very creditable yearly record of over 19,000 pounds of milk and 612 pounds of butter.

Desert Honeysuckle, first prize two-year-old Jersey heifer, and the first prize junior heifer calf from the F. R. Sanders herd, were purchased by "Jim" Thorpe of Lockeford as an addition to his already noted herd.

The "aviator calf" carried from the Jeffries Ranch at Burbank to the Los Angeles Live Stock Show attracted much attention, but did not seem to realize its importance. Quite an advertisement for good cattle, though.

May Altoana Pontiac, a 5-year-old cow, owned by Santa Anita Rancho, has just completed a 27.60 pound 7-day record and a 111 pound 30-day record, averaging 80 pounds of milk daily. They have 12 head on semi-official test.

C. A. Miller, Holstein breeder of Ripon, has a bull that sires a very large percentage of heifers. Out of 19 calves 15 are heifers. One cow that had formerly produced nothing but bull calves dropped twin heifer calves sired by this bull.

Leeman & Kilgore of Ripon have recently bought 3 pure-bred Holstein cows and a heifer. One of the cows, Fayne Spring Farm Pontiac De Kol, has a 4-year-old record of 24 pounds for 7 days. This cow sold for \$1,055 at the Packwood Farm sale last spring.

W. Rhode has purchased the Evergreen Ranch at San Jacinto and is making extensive improvements, intending to eventually have a model dairy. He has completed a 36x16 feet and is building a new dairy barn and milk house. He will go in for pure-bred Holsteins.

Eleven calves shown and being awarded 12 ribbons at the Los Angeles Live Stock Show is some record. This is what happened to this number of youngsters exhibited by James J. Jeffries, and sired by his bull, King Segis Pontiac Jannek. A sire that is as prepotent as this fellow is a good one to keep.

J. E. Wherrell of Riverside has delivered two bulls since the Southern California Fair. One went to Winsor Ranch, Bonita, and the other to Mr. Rett of San Diego. Beauty of Walnut Park goes to Winsor Ranch and You'll Do Oxford Lad to San Diego. Mr. Wherrell reports starting 3 cows or semi-official test that are doing well.

Frank Reed Sanders of Chandler, Ariz., who took his share of the ribbons at the Los Angeles Show, has sold his entire herd of Dutch Belled cattle to Mr. Heaton of Las Vegas, Nevada, at a very attractive price. Mr. Sanders has sold his ranch at Chandler and has to dispose of his cattle. Holstein and Jersey breeders are getting some excellent values for their money from these herds.

The A. W. Morris & Sons Corporation are making an exhibition of fifteen head of Holstein-Friesians at the California International. Among them, as noted in another place, is the world's champion cow, Tilly Alcarra. Also the young bull, King Korndyke Pontiac Acme, whose seven nearest dams average over 30 pounds in 7 days and 1,000 pounds in one year, including the junior two-year-old record of his dam, Miss Aagie Acme Burke. Entering test at 27 months of age she produced 15.67 pounds of milk and almost 700 pounds of butter in the first 7 months. She is expected to run very close to the world's milk record for her class.

James McGillivray, owner of the Willowmead herd of Holsteins at Sacramento, is making preparations for testing on a large scale. Since

taking over the well-known Harlan herd of Woodland, Mr. McGillivray has one of the largest and finest herds on the Pacific Coast comprising over 300 registered animals.

W. M. Weigand, formerly in the dairy business at El Monte, has recently purchased a ranch at San Jacinto which will be known as the Cottonwood Dairy. He has just completed twin silos of 200 tons capacity each; also new dairy barns. He intends to be milking two full strings in the next 30 days and is installing the second Pine Tree milking machine. Mr. Weigand is enthusiastic over his prospects in this section.

One hundred and twenty-two head of dairy cows, three bulls, 15 heifers, 6 horses, a tractor, truck, milking machine, feed, etc., were sold this month by a dairyman, Eugene Biondini, lessee of the W. W. Stone ranch on Arcata Bottom (Humboldt County) for \$45,000. The buyer was another successful dairyman at Ferndale. The price was for the dairy and equipment alone and did not include the lease, which is \$4,200 a year for this cow-to-the-acre ranch. Mr. Biondini leased this ranch 6 years ago with total assets of about \$5,000. He is only giving up now as he needs a change after an illness involving an operation. Humboldt and Channel Island stock seem to agree pretty well.

Swine.

Donald Graham of Rancho del Sur, Lancaster, sold an Orion King Gano sow to F. Perkiss of Santa Maria.

Les McCracken, the Poland-China breeder of Ripon, reports the sale of a bred sow to Edwin Henry of Ripon.

Lord's Orion Cherry-King, first prize senior yearling Duroc-Jersey boar at the California State Fair this year, was sold recently by Joe N. Chinoweth of Visalia to W. M. Way & Son of Roc Stein Ranch, Modesto.

The Superior California Farm Lands Co. of Willows will have a carlot of 34 hogs at the California International. W. S. Guilford is Director of Agriculture for this company and he is the one who made the entry and will have charge of the exhibit.

W. A. Young of Lodi, the well-known Poland-China breeder, has bought of Henry Fessenmyer a boar which he has named Young's Timm Jones. This young boar is a son of the 1919 grand champion at the Iowa State Fair. Mr. Young reports an excellent demand for Poland-Chinas and states he has sold 27 head for \$4,579 since July 22.

M. & A. L. Bassett of Hanford have just received a boar from the Erhart & Sons herd of Missouri. He is one of the best to be found. He is Sensation bred from a sire that weighs over 1,200 pounds and 1,000 pound dam. Crossed on the \$3,150 gilt that traces back to Caldwell's Big Bob and Panama Black, in only two generations ought to produce something better than anything ever brought out from the East.

Diamond Bar Ranch of Spadra sold \$6,000 worth of Durocs during the first 6 days of the Los Angeles Show and not one of these was from the exhibition herd, but the orders were to be filled from the home herd. Among those sold were 6 sows, two of Pathfinder, two of Gano and two of Sensation breeding, for \$500 each. These sows were sold to the Winsor Ranch at Bonita, which herd now contains three grand champions.

In a news note of the Kings County Poland-China Breeders Association sale the consignee of the choice of Edith Rose's litter was credited to John M. Bernstein of Hanford, when this exceptionally fine litter in both breeding and individuality was consigned by H. D. McCune of Lemoore, with ranch near Stratford. The choice of the litter was bought by Les McCracken for \$1,275. The litter is really owned by Earl McCune, a son of H. D. McCune.

Santa Catalina Rancho at La Habra, E. N. Whittemore, superintendent of the Berkshire department, is planning a large breeding farm with 240 ft. farrowing barns containing 40 pens each. They expect to have at least 110 brood sows, with Kintyre Laird

and Royal Longfellow as herd sires, D. J. Bestanchury, the owner, expects to put Orange County on the map as a Berkshire center.

R. E. Smith of Delano, a new recruit to the ranks of the Poland-China breeders, has bought a boar from the herd of C. L. Newport & Son of Han-

ford. He is a litter mate to Jumbo Chief that was bought by Wm. Bernstein at the last Kings County consignment sale.

R. E. Davies of Delano, whom we will hear of later in the Poland-China world, has just received a herd sire from Paul Wagner of Norfolk, Ne-

braska. This boar is out of the sow, Kings A. Wonder, and by Col. Jack, a son of Surprise Prospect.

The Santa Anita Rancho has just brought out from the East a Poland-China herd sire, Quality Bob, first in class and junior champion at the Wisconsin State Fair and La Crosse Wisconsin Fair. Also fifth in class at the National Swine Show at Des Moines. With this prize winner came three premium winning young sows that will form an excellent nucleus for a herd of big type Poles.

Swine have added over \$1,000,000 to the wealth of the farmers of six counties in the Farm Bureau Marketing Association of the upper San Joaquin valley. At least, so says D. H. Bitner of Bakersfield, and he ought to know, for he is secretary-manager of the association and "keeps cases" on the hog marketing game in Kings, Kern, Tulare, Fresno, Madera and Stanislaus counties. The association has auctioned off 39,933 hogs, making up 496 carloads and bringing in "cold cash" or its equivalent, \$1,328,847.74. Some business, huh? At the annual meeting held in Hanford lately Roy M. Filcher of Corcoran was elected president; C. A. Melcher, McFarland, vice-president; D. H. Bitner, Bakersfield, secretary-manager; L. C. Trewitt, Hanford, assistant manager and grader.

Beef Notes.

Cattle loans made by the War Finance Corporation to cattlemen of the Southwest to carry them over the drought of last year have been called and only in exceptional cases will extensions be granted.

Wm. Carruthers of Carruthers' Farms, Live Oak, the home of the Shorthorn, is advertising a 30 day sacrifice sale of bred cows and cows with calves at foot. This is made necessary by the recent leasing of the Live Oak ranch and the consequent necessity for the reduction of the large herd of excellent Shorthorns. Now is an excellent chance to get into the Shorthorn business right.

Miss Dale, a cow owned and exhibited by the Hereford Corporation of Wyoming, dropped a heifer calf while at Los Angeles last year and duplicated the performance this year while at the Live Stock Show. The heifer last year was named Dale's Liberty and the arrival of this year will be registered as Dale's Victory. The dam of these calves with patriotic cognomens will be shown in San Francisco this week and is consigned to the Hereford sale of November 7 during the California International.

R. H. Dunlap of Sacramento has gone East to bring out a carload of Hereford bulls for the Parrott Grant at Chico and for James O'Neill of the Flood Estate of Santa Maria.

R. D. No. 1

Cattlemen Glad He Bought Alfalfa Land

[Written for the Pacific Rural Press.]

"A year ago last winter I scratched my head many a time where it didn't itch, trying to figure how to save my cattle from starving," says R. M. Diggs of Monterey County. "It didn't rain till the middle of January. I lost some cattle and sent others across into the San Joaquin for feed.

"I now have 1000-acre ranch with 225 acres of alfalfa. I aim to put up enough hay to keep the cattle from losing flesh in any year until grass comes. Last fall I had about 800 head on beet tops when the rains came. About 200 were fat enough to sell. About 400 were turned onto the range. These lost 100 to 150 pounds each before they began to gain about two months later. During the same two months we fed 200 head on alfalfa and rolled barley and some cottonseed meal that we had on hand. They gained 100 pounds on the average in the first 30 days and about the same the next 30 days, after which they were shipped to Eastern markets. That shows the difference between feeding and turning onto the range."

But the cottonseed meal was too expensive and it wasn't necessary anyway. It is excessively high in protein which is not necessary when we feed

alfalfa hay, for alfalfa supplies all the protein needed for fattening cattle on barley and alfalfa. Mr. Diggs tried feeding 6 pounds of barley and about 30 pounds of hay per day, omitting the cottonseed meal, and was convinced that results were just as good.

This winter he is not figuring on fattening any cattle, but he needs the alfalfa to keep them from going back while grass feed is short. Then when the grass comes on they will be in good shape to make quick gains and he can get them off early. That will make the risk less and will shorten the time his money is tied up." The extra feed is "the best kind of a paying proposition at the prices of cattle now." There is a ranch near King City where a cattleman has been feeding silage and is well pleased with the results. On the basis of this experience, Mr. Diggs planted corn this season and would have put up a silo if the corn had turned out good. He expects to try it again next year, because corn provides so much feed per acre when it is handled right. The silage also is intended simply as a carryover feed to keep the cattle in good condition until range feed is strong enough to put gains on them.

Livestock Queries and Replies

Probably Worms.

To the Editor: I have a bunch of pigs which are afflicted with some kind of a disease. They are just beginning to eat and seem to be well and hearty, then in an hour or two we may find one that can't get around right; it does not have the right use of its legs. It will stretch its front legs out ahead of it with its throat on or near the ground trying to pull itself along. A little later they will get down on their sides, stiffen out and have an awful fit which last for a few minutes. Then they get up again, but don't seem to have their right minds. By putting them up to the feed they eat very heartily. Some of them seem to partly lose control of their legs, especially the back ones. We take the sick ones up and treat them, giving them a couple of drops of turpentine and a small tablespoon of Epsom salts, feeding them diluted milk and rolled barley, which they seem to relish. Some of them have died and some are improving slowly. The mothers are being fed some skim-milk, rolled barley, green sorghum and green alfalfa. Can you tell me what is the matter with the pigs and what to do for them?—W. H. L., Rio Bravo.

(Answered by Dr. E. J. Creeley, San Francisco.)

You are describing the symptoms of a severe intestinal irritant. I am inclined to believe it to be worms. First, give a purge of castor oil in which you have placed 10 to 20 drops of turpentine. Mix the following

1 lb.; areca nut, ¼ lb.; kamala, 2 ounces; jalap, 2 ounces. After five mornings repeat the castor oil and turpentine. It is advisable to stop treatment for several weeks. Repeat if necessary.

Abortion in Cows.

To the Editor: What are the symptoms of abortion among cows? Is there any test to be made to tell for certain that they have it. If so, explain how the test is made.—W. W. P., Standish.

(Answered by Dr. E. J. Creeley, San Francisco.)

Abortions cost the stockowner millions each year. The Bureau of Animal Industry issued a bulletin describing fully preventative measures. Dr. John R. Mohler, Chief of the Bureau of Animal Industry, has worked long and zealously along these lines, and he is considered the peer of all American veterinarians in his particular department. It is hardly necessary to describe the symptoms. If one cow aborts almost every pregnant cow in the herd will do likewise, unless the aborting cow is removed and all precautions taken to thoroughly sterilize and disinfect everything connected with the cow and her secretions. Scrub, burn, cleanse and disinfect everything. Ergotized food and cryptograms may cause or predispose to abortion.

Powder thoroughly and give ½ to one teaspoon each morning, depending upon the age and size: Sulphate iron, ½ lb.; bicarbonate soda,

ripen in this section.

This is a little sample of what can be done and how it is done in Humboldt County's rich dairy section around the bay, where the dairy business is in a high state of organization, and really scientific farming by rotation prevails.

THE UNIVERSITY OF CALIFORNIA AT THE SAN FRANCISCO SHOW.

The University of California as usual is going to make probably the finest exhibit ever staged at any show or fair by an institution anywhere. It would take a whole issue of the paper to go into detail about it. Those who saw their exhibit at the State Fair cannot help but remember the magnificent four-horse team of Percheron mares and their no less magnificent colts. They are certainly a show in themselves. Then after the horses, taking the typey California breeding animals in the beef and dairy cattle, the sheep and swine and last but not least, the fat classes. Their exhibit will really beggar description. After all is said and done, California Gretel, the greatest milch goat in the United States, must not be

forgotten. Everyone that is interested in any circumstances miss seeing this in livestock at all should not under great exhibit.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

HUMBOLDT COUNTY FOR COWS AND HOGS.

[Written for Pacific Rural Press.]

I. T. Smith of Fortuna has a white Yorkshire sow 8 years old that has produced 138 pigs in 8 litters. She raised about 100 of them. Her progeny run true to type and she looks like a good bet for several more litters.

Mr. Smith keeps 15 cows on 16 acres in addition to his hogs. His dairy is a Jersey one throughout, though he has just bought a Guernsey bull which captured the ribbon at the Fortuna District Fair.

It probably sounds like a fairy-tale—this cow-to-the-acre stuff, where no irrigation is practiced, but it is true. Mr. Smith rotates his crops somewhat in this manner: clover and alfalfa 3 years, then carrots, marigold or some root crop. Then vetches and oats are sown in the fall following the roots, and these are consumed in time to seed the ground again to clover and alfalfa. The seed is sown at the rate of one-third red clover and two-thirds alfalfa. He grows from 20 to 50 tons of roots to the acre. Sometimes a patch of fodder corn is grown. This is fed green, as corn does not

BRAZIL ASSISTING ITS LIVESTOCK INDUSTRY.

The Brazilian government has instituted a method by which cattle raisers wishing to import purebred cattle for breeding purposes may receive government assistance. According to a law passed by the Brazilian Congress, one-half the cost and freight of such animals imported would be borne by the government. However, the popularity of such a movement was under-estimated and an appropriation equal to only about one-third enough to cover the applications for such assistance was made.

In years past cattle were allowed to become 6 to 10 years of age before slaughtering, but "the world do move" in Brazil as well as elsewhere, and recently cattle from 3 to 5 years of age have been used by the butchers with very few of the latter age included. As indicated by the above paragraph the demand has increased for a better class of beef animals somewhat the type known so favorably in this country.

Brazil is somewhat of a swine-raising country also, although not so extensively in the business as the United States. The demand there is for an animal producing a large amount of lard rather than lean meat. The swine of the country have been developed therefore along lines of size rather than quick maturity.

There are two leading breeds in the country, one somewhat larger and coarser than the other, but the smaller yielding fully as large an amount of the desired fat. These hogs are marketed at rather an advanced age from our view-point, as most of them are 3 or 4 years of age before attaining the desired size and condition.

THE OTIS HERD

WILLOUGHBY, OHIO.

Milking Shorthorns

LADY OF THE GLEN.

Bred by us and acknowledge the best and most valuable individual of the breed.

Brighton Farm Herd Shorthorns and Berkshires

We have a very fine yearling bull for sale sired by Sir Type and out of a Laurel Frantic cow. This is an ideal bull for a breeder of Dairy Cattle. Also some very choice cows and heifers.

H. L. & E. H. MURPHY,

6 miles east of Sacramento.

Perkins, Calif.

BIG DOUBLE DISPERSAL SALE

Mr. G. W. Emmons, Proprietor of Diablo Stock Farm, Danville, Calif., has instructed us to make a complete dispersal at public auction of his registered herds of horned Hereford cattle and Duroc-Jersey hogs at

WESTERN HORSE MARKET

297 Valencia Street,
SAN FRANCISCO

MONDAY, NOVEMBER 10, AT 9:30 A. M.

We shall start selling the Duroc-Jersey hogs promptly at 9:30 A. M. on the above date and sell the Hereford cattle immediately afterward. Come early, as some of the best things will be sold first.

52—REGISTERED HEREFORDS—52

The Hereford offering consists of 20 cows, 15 heifers, and 17 bulls, of excellent breeding and some good show prospects among them. Mr. Emmons is selling these only to make room for the development of his herd of registered Polled Herefords, upon which the farm will specialize hereafter.

BERTRAM FAIRFAX, by a son of the famous Perfection Fairfax, will be sold, together with some of his sons and daughters and a large number of cows and heifers bred to him. These cattle will be sold in just good thrifty range condition, and they should prove first-class investments for foundation purposes. Every animal positively guaranteed to be a breeder; every animal over six months old tuberculin tested.

100—REGISTERED DUROC-JERSEYS—100

Seldom has a better bred offering of Duroc-Jerseys been made in the West. There are 60 sows and gilts of breeding age in the sale, and practically all of them are daughters of the great show and breeding boar, CALIFORNIA'S DEFENDER, Junior Champion boar at P. P. I. E. Many of the sows and gilts are bred to CALIFORNIA ORION CHERRY KING, a richly bred boar of good type who will himself be in the sale.

Everything immunized against cholera by the double treatment.

Remember the Sale Starts at 9:30 A. M.

ORLAND, CAL.

PROGRAM SAN FRANCISCO LIVE-STOCK SHOW.

People who are interested in agriculture or any of the phases of livestock industry should not fail to visit San Francisco during the days (November 1 to 8 inclusive) that it will be in existence. Over 1,000 head of pure-bred livestock, including all the principal breeds from giant draft horses to the Lilliputian milk machines, the milk goats, poultry and rabbits. Those who live at a distance and contemplate a visit to San Francisco in the near future should make it a point to make the trip at this time and see the stock exhibit in the daytime and the horse show at night. It will be a trip much enjoyed and never forgotten. You will have to hurry, though, as by the time you read this the gates will be open and the show in full swing.

Following is a list of the various breeders' meetings to be held throughout the show. All meetings will be in the California Building, Exposition Grounds, unless otherwise noted.

Saturday, November 1.—Central California Milk Goat Breeders' Association, 1:30 P. M. Important.

Monday, November 3.—California Poland-China Breeders' Banquet, 7 P. M. Western Berkshire Congress Banquet, 7 P. M. California Jersey Cattle meeting, 7:45 P. M.

Tuesday, November 4.—Milking Shorthorn Breeders' meeting, 2 P. M. A meeting of the breeders of pure-bred livestock for the purpose of procuring legislation favorable to the execution of plans for improvement of the State Fair grounds at Sacramento, 3 P. M. California Swine Breeders' Association, 6:30 P. M.

Wednesday, November 5.—California Cattlemen's Association, 9:30 A. M.; all day. California State Agricultural Society.

Thursday, November 6.—California Cattlemen's Association in A. M. Shorthorn sale, 1:30 P. M. Pacific Coast Hereford Breeders' banquet, 7 P. M. California Shorthorn Breeders' Association banquet at Palace Hotel, 7 P. M.

Friday, November 7.—California Cattlemen's Association, A. M. Pacific Coast Hereford Breeders' Association sale, 1:30 P. M. California Wool-growers' Association, 2 P. M.

Saturday, November 8.—American Bankers' Association.

SMITH HOLSTEIN-FRIESIAN SALE AT CORCORAN.

Geo. A. Smith & Son of Corcoran in announcing their coming Holstein-Friesian auction sale of 100 cows, say that "The sale of 100 registered Holstein-Friesian cows to be held by us on our ranch at Corcoran, Wednesday and Thursday, November 5 and 6, is the largest sale of exclusively registered cows ever held in California. A few sales have been larger in point of numbers, but in every case there have been young cattle included. Neither are these cattle old cows, but all about three years old. Sixty-eight are now on semi-official yearly test. "The animals are free from tuberculosis, having been tested five times during the past 2 1/2 years."

MILKING SHORTHORNS ARE GOOD BUT SCARCE AT LOS ANGELES.

There was but one exhibitor of this worthy and deserving strain of the great breed of Shorthorns, F. L. Hall of Perris. He showed an aged herd that was truly deserving of the prizes awarded them by Ed Carey of Carlton, Oregon. It is to be hoped that a larger showing of the dual-purpose cattle will be made another year.

The Grand Champion Berkshire boar of the State Fair this year was Natomas Baron Duke, 272313, owned and exhibited by the Sandercock Land Co. This boar was sold to The Anchorage Farms, Orland, for \$1,000. Mr. Sandercock sold a great boar, and the Anchorage Farms are to be congratulated in getting this animal.

The Fresno County Poland-China Breeders' Association have another auction sale scheduled for Wednesday, November 19. Their consignments will include 60 head of bred sows and gilts, open gilts and boars.

Attend the California International Livestock Show, San Francisco, November 1st to 8th.

Poultry and Rabbits for Profit

POULTRY ON THE SMALL FARM?

To the Editor: In your issue of October 11 you say that farm poultry, and not poultry farming, is the proper thing. In Tulare it is necessary to have 40 to 70 acres of alfalfa to make poultry pay, or, in other words, by this system a man makes double pay. Now, do you mean to say with four acres of run, fenced around, and one acre of alfalfa to be cut all year round and fed by hand, a person cannot keep 500 laying hens and make money when he sells in the open market and buys feed in not less than ten lots? "One who wants to know."—P. McG., Oroville.

(Answered by D. J. Whitney.)

You rightly judge that the sentiments of the writer of the article referred to are in favor of making farming pay double by keeping a proper number of hens on free range in connection with regular farming, rather than trying to go into the poultry business on a few acres and doing nothing but look after hens; but that is not saying that a person might not make a good living on the plan you suggest. It seems to be done in poultry centers like Petaluma and Haywards. However, it is the judgment of the writer that it would be far simpler and better to have alfalfa on the five acres and to let them harvest it themselves than to carry green stuff in by hand. Also, for all we can see on five acres, and doing nothing but attend to fowls, a man ought to be able to keep 1,000 hens instead of 500. Our advice would be for you to visit successful five-acre poultry farms and get exact methods in detail. Our own taste, considering your location and with a good five acres, would be to keep about four good cows, the cream from which should, at present prices, bring in about \$80 a month, and the skim milk could supply animal protein for your hens. Being in a real farming center you ought to be able to get milo maize in the head from the grower at a moderate price; also wheat and barley from the same quarter, with some loose hay for your cows, if necessary, to make up what you could not otherwise grow, and then you would be better off than the strictly poultry raiser buying through middlemen. You see we like to boost for regular farming, with poultry an important side line. Of, if you could get about four of your acres into fruit of several kinds, so arranged that you could turn the fowls from parts where the fruit was being harvested, you would provide shade for the fowls and make the land work double. If a man has not pasture enough to provide free range for his fowls, it is a convenience if they can range partly off the neighbors' land. It all depends upon the location of the piece (and more yet, on the man who is running things). A little later we hope to describe the way other Tulare fowls are kept.

THE RABBIT AS A FUR-BEARING ANIMAL.

Heretofore Great Britain and Ireland have enjoyed pre-eminence as rabbit-producing countries. California now threatens the supremacy of these countries in this line of production. Our native wild fur-bearing animals are decreasing very rapidly, while on the other hand the demand for furs is becoming greater year by year. Modest bunny is now producing furs that imitate very closely and rival in beauty the costly furs of the fox, the chinchilla, the ermine, the electric and Baltic seal and other skins of that class. The "ermine rabbit" grows a pelt that very closely resembles and white-furred weasel of Siberia. In richness of quality and color it can hardly be distinguished from the original. Other types of fur which it closely imitates are the lynx, silver fox, and red fox. Some of the best specimens of these fur-bearing rabbits were exhibited at the "California Industries and Land Show," recently held in this city, and will be shown at the California International Livestock Show, which opens in San Francisco today (November 1) and

remains open to November 8.

Hitherto it has been customary to ship the raw pelts to France and England for dyeing and dressing. This preliminary preparation is now being practically transferred to this country, and the industry gives great promise for the future.

EGG-LAYING CONTEST — CHANGE OF DATE.

In order to allow Poultrymen from all over the State to make entries, the California Farm Bureau Egg-Laying Contest will begin at Santa Cruz on November 15 instead of November 1st as previously announced.

New modern houses are being completed, and Max Kortum of Calistoga has been induced by Prof. J. E. Dougherty of the University of California to take charge of the contest. The contest is under the Advisory Supervision of the University of California.

Each entrant will send a pen of twelve pullets of one breed, two of these birds to be alternates, but all to be trapnested. This feature, alone, is worth the entrance fee of \$2.00 per bird. Advertising the fact that he has good birds and knowing how much better his birds are than the average are both matters that the careful poultryman considers.

Detailed information can be obtained from S. L. Gibson, chairman in charge of the contest, Santa Cruz, or direct from the Farm Bureau office, 4 Cooper street, Santa Cruz, Calif.

TURKS HAVE SWOLLEN EYES.

To the Editor: About a month ago I noticed one of my turkeys with swellings in front and below the eyes, especially noticeable on one side. On opening the swellings the mucus was discharged from the wound, mouth and nostrils. Afterwards the swelling remained and in about five weeks the turkey died. Now there is another one in the same condition. The flock is fed wheat night and morning and have open range. Please advise treatment.—F. B. N., Vacaville.

We cannot determine what caused the swellings and the mucus. They may be due to a local cause, such as catarrh, or from internal disorders. At this season of the year it is not likely to be from catarrh. As they are fed nothing but wheat and what they can find on the range it seems reasonable to attribute the trouble to unbalanced ration. Both wheat and dry grasses, etc., are fattening and lack the elements of meat, bone, bran and most green feeds, that are necessary in providing a ration that promotes health and vigor. Growing and breeding turkeys require bulky feed and an abundance of greens.

A NIGHT MARAUDER.

To the Editor: Can any of the readers of your paper tell me how to get rid of a pest which I think is a chicken tick? They look about like bed bugs, only larger. They are never seen in daylight, but take a lantern about nine of ten and visit the chicken house and they are crawling by the million on the whitewashed walls.—Mrs. C. S., Escalon.

These insects are ticks. When a house becomes so badly infested with them the best remedy is to saturate the house and nearby ground with oil and burn it, unless it is quite a valuable building. We advise sending to the U. S. Department of Agriculture, Washington, D. C., for circular No. 170, which contains many suggestions and plans for exterminating these pests and to prevent their breeding in poultry houses. It is sent free on request.

So many grasshoppers invaded the mills orchards in Glenn county last year that they stripped 40 acres of trees, even eating the bark from younger ones. About twelve hundred turkeys were bought or hatched and they have been fed nothing since the youngsters were able to pick up the half-grown hoppers last spring. Only ten acres of trees were badly injured this season and the turkeys which protected the rest will have grown into a

big wad of money when the holiday marketing is past. Next year the Mills people hope to have enough turkeys to protect their entire planting of some 850 acres of orchard.

SPECIAL RABBIT CONGRESS.

Will be held November 2, 1919, at 7 p. m. in Rabbit Exhibition Hall, California International Live Stock Show. All breeders and those interested in the rabbit as an aid in the reduction of H. C. L. are cordially invited to attend.

TEACHING HEALTH TO GIRLS.

The establishment of health centers in communities is a step toward improving the health of the entire community.

The object of the health center is to point out the dangers to the health and to teach good living habits.

The new health center for women in New York city is preaching a novel doctrine—that of keeping well.

Dr. Meredith, who is director of the health center, has had the experience to make her an authority on the health of working women and her experience has led her to believe that heredity and environment play relatively a small part in the health of the average individual.

She contends that there is no excuse for not feeling fit, that anybody can achieve a maximum of health if she really puts her mind to it.

Keeping well, as taught by the Health Center, is by no means easy. It consists in maintaining unrestricted circulation, through proper carriage, bathing and exercise; drinking at least eight glasses of water a day; getting lots of fresh air and at least eight hours of sleep out of the twenty-four; eating substantial food (not necessarily expensive); and above all, cultivating the will to be healthy.

Dr. Meredith contends that some diseases are hereditary, but that the feature of heredity has been greatly exaggerated. Many girls have what they consider inherited disabilities, that are nothing but the results of the bad habits of their parents, which they are continuing.

When necessary, applicants at the Health Center are directed to clinics or hospitals for surgical treatment, but most of the causes of low vitality and poor health are corrected by changing the mode of living.

Much interest has been aroused in this Health Center movement and a movement is on foot to establish these centers on the Pacific Coast.

The establishment of the Health Center would tend to subdue epidemics or diseases among the classes

who do not feel at liberty to call a physician for slight disorders.

The Infirmary on the Campus, at the University of California, is an example of how a college community is kept free from epidemics. Each student must pay a small Infirmary fee, each year. This fee entitles him to free medical attention, if he does not feel well. Now, many of the cases treated there would have gone on to a satisfactory finish anyway, but occasionally there are serious diseases detected that would spread into epidemics and seriously cripple the work of the school.

The principle of the Health Center is somewhat similar to teach the community how to keep well and be in such physical condition as to be of value in the world.

UNDERFED CHILDREN.

There have been disquieting disclosures of late regarding the malnutrition of many American school children. Recent researches show that about 5,000,000 of them are suffering from nutritional defects.

Other defects are noticeable among the children of America, but underlying all of them and of most importance as a key to the general problem, is the question of malnutrition.

The great majority of babies come into the world healthy. Helpless, it is true, but with a capacity for vigorous growth, if a fair chance be given. Then, too often, follow malnutrition and the long list of nutritional disorders.

Many of these children lose ground physically, because of a deficiency in the milk ration. Milk is a food which children must have, if they are to develop properly. It is not only a splendid food in itself, but it possesses a protective value in the dietary—making up for various deficiencies in food elements. It is a great balancer of the child's diet.

To substitute tea and coffee for milk in the case of growing children is, in the eyes of the medical profession and food experts in general, one of the meanest kinds of neglect, if milk is procurable, and one of the saddest, if it is not procurable.

HOUSEHOLD HELPS.

A delicious dessert for winter is made with a crisp, short biscuit crust. Bake, cut with a hot knife, butter and spread with any favorite jam as you would spread a larger cake.

Egg stains can be easily washed from dishes if a little salt is sprinkled over them before washing them.

Sweet potatoes fill a very real want in sugarless dinners—they can be used

for pies and puddings as well as vegetables.

To clean white enameled furniture, use a solution made by dissolving one tablespoonful baking soda in a pint of warm water. Saturate a soft cloth and wipe the furniture.

Blankets which are not in use should have small pieces of thoroughly dried yellow soap scattered in the folds when they are put away. This will keep moths out.

Candle grease on a carpet may be removed by means of blotting paper and hot irons.

To keep cheese fresh, wrap it in a cloth that has been dipped in vinegar and wrung as dry as possible. Keep in a cool place.

Grass stains on clothing should be soaked in paraffine. The garment may then be washed as usual.

Carpets or rugs may be brightened by first sweeping thoroughly and then going over them with a clean cloth and clear salt water. Use a cupful of coarse salt to a large basin of water.

MORE LIGHT THAN 20 OIL LAMPS

AT LAST—the light of lights—A beautiful lamp that lights with common matches just like oil lamp, but makes and burns its own gas from common gasoline, giving a brilliant, steady, restful, white light of 300 candle power.

MOST BRILLIANT LIGHT MADE
Brighter than the brightest electricity
More light than 20 oil lamps. Cheapest and best light made. Costs less than one-third of a cent per hour. Safer than the safest oil lamp. The

MAIL THIS COUPON

Find out how to save tons of fuel this winter and yet enjoy better heating!

PUT in a Mueller Pipeless Furnace and flood your house with moist, healthful heat at a saving of $\frac{1}{3}$ to $\frac{1}{2}$ on fuel cost.

The Mueller Pipeless is guaranteed to heat every room in your house comfortably. And thousands of installations prove the sincerity of this written guarantee. The Mueller

Pipeless is so designed and constructed that it never fails.

Mueller heating engineers designed a better pipeless furnace because they had 62 years' experience in the building of heating systems. No wonder then that the Mueller Pipeless scientifically and correctly applies the laws of air circulation and gives the utmost satisfaction to home owners.

MUELLER PIPELESS FURNACE

It is properly and accurately proportioned throughout. Eight sizes—one to fit every home. Easy and inexpensive to install. Burns all fuels.

The interesting book, "The Modern Method of Heating Your Home," explains in detail the many features of construction that make it possible for the Mueller Pipeless Furnace

to give such dependable heating service and still save you tons of fuel. We'll gladly send it to you FREE—just fill out and mail in the coupon—NOW!

DREADNAUGHT
BLAZING AWAY IN COST-DEFENCE!

LABOR SAVING THRIFT

We have yet to learn of a family that would be willing to go back to wood after using our Burner and enjoying the comforts of its clean gas. That is but a natural result for several good reasons—the Burner always works, it is always ready. A piece of paper and a match starts it quicker than a wood fire. There is no pumping to do—the natural "fall" of the oil is the pressure, just natural, and that is why the Burner works

year in and year out, because it is natural in every detail. Give the oil a chance, and it will naturally turn to gas—properly dry this gas and you have the most wonderful, clean and satisfactory fire it has ever been your privilege to enjoy. Best of all, you keep the same stove, making no changes in it whatever—the heat is even and needs no watching. All of this for less money—do you wonder why they never go back to wood? No work, more comfort and pays a dividend. Write for our circular. Remember, we are the inventors, sole owners and manufacturers of everything we sell to meet every need from the home stove to steam boilers.

Richmond and San Pablo, California

DIRTY POWDER PUFFS.

Now that the use of powder is so general and sad to relate, the public application of it so common, the traveling public even may criticize the condition of the powder puff used.

There are still some people who consider that powdering a shiny nose should be done in private, just the same as cleaning one's finger nails or combing one's hair. But the consensus of opinion is against them, if one may judge by the number of young, attractive, well-bred girls who use a powder puff on any occasion.

If it must be done, let the puff or chamois skin be clean, not resembling in color a cloth to wash windows.

There is a trick about washing them that is worth passing on that will leave the puffs light and fluffy and the chamois soft.

Make a rich suds of any good soap and when the water is warm, not hot, stick the puffs in; let soak for a couple of minutes and wash; then rinse in warm, soapy water. This last feature is the thing to remember. If you rinse in clear water, the article will not be pliable and fluffy.

Wash the puffs frequently for the protection of the skin—using a dirty puff ruins the pores of the skin.

A SUGGESTION CONCERNING POMEGRANATES.

Editor Home Circle: Some time ago I read an article concerning pomegranates. Some one was asking what to plant on alkali land, stating that some one had suggested pomegranates; and you stated that they were not profitable—in fact, no market for them. I have had very little use for them, and know of no one who has; but recently my husband and I experimented as to their food value and we found they would make a splendid juice, such as grape juice. This juice contains a lot of sugar and would be splendid for fruit punch, lemonade, etc. We crushed the pomegranates and strained the juice. Would be glad to learn of the experience of others in this line.—M. G. S.

APRICOT AND PINEAPPLE MARMALADE.

Wash and put through meat grinder ten pounds of dried apricots; cover with water, when almost cooked, add eight pounds of sugar and let simmer for two hours. Take one large or two small pineapples, core and remove the eyes, cut in thin pieces and put on stove with just enough water to keep from burning. When tender, weigh and add three-fourths of a pound of sugar to one pound of fruit. Cook half an hour, then add to the apricots and cook until thick. Canned pineapple may be used if more convenient.

EASY MONEY FOR MAGGIE.

"My sister Maggie is a very fortunate girl."

"Yes? Why?"

"Dunno. But she went to a party last night, and played blind man's buff all the evening. The gentlemen hunt around and find a girl, and then they must either kiss her or give her a shilling."

"Yes?"

"Maggie came home with thirty shillings and a war bond."—Tit-bits.

THE refreshment tray can always thank Ghirardelli's Ground Chocolate for its magic aid. Creamy hot chocolate to drink; cakes with possibly a chocolate filling and frosting; waxy squares of chocolate fudge—not to mention countless other "goodies"—appear in a twinkling when the hostess summons the ever-ready can of Ghirardelli's.

Never sold in bulk—but in cans only.

In $\frac{1}{2}$ lb., 1 lb. and 3 lb. sealed cans—at the store where you do your trading.

Say "Gear-ar-delly"

Since 1852

"THE FUEL QUESTION SETTLED FOR ALL TIME" BY THE SIMPLEST THING IN THE WORLD

The Premier Burner

You're going over in your mind just how to meet the fuel situation. This has been a burning question for the past few years, and is getting more serious all the time.

The Premier makes its own gas from Kerosene (common coal oil)

Does not smoke or soot, Operates on gravity feed,
Is guaranteed indefinitely, Starts with a paper.

COMPLETE OUTFITS:

\$12.50—for No. 6 and smaller stoves.

\$22.50—for No. 7 and No. 9 stoves.

VAUGHAN & MATTISON,

Pacific
Coast
Rep.

San Francisco, Calif.

225 Market Street,

NEVADA NEWS NOTES.

P. A. Simon of Mina has made application to the State Engineers' office for the right to use the East Walker River for the generation of electric power. It is estimated that 6000 horse power can be generated. The water is to be impounded behind rock and concrete dams at a cost of \$600,000, the plant to be constructed within three years.

The State Engineer is to investigate the feasibility of hooking this project up with the proposed storage system promoted by the Smith and Mason Valley ranches.

A private dam is being constructed on the East fork of the Carson River by the H. F. Dangberg Company, Fritz Schacht, G. Fetic, F. Settlemeyer and F. W. Cook. This dam is to be a permanent division dam to replace the one of rock and willow construction, which has been washed out many times in years gone by.

A recent report of the State Tax Commission shows that Agriculture and stock raising furnishes the majority of the funds for meeting the expenses of the State government.

The tax rolls show that there are 1,778,827 acres of privately owned lands, 304,118 head of cattle, and 1049,999 sheep.

Richard Kirman of Reno and Chas. Lewis of Carson City have ordered three pair of foxes from Canada, which are to be placed on the Pomine Ranch near Tallac, where it is thought conditions of altitude, climate and water will be ideal for fox farming.

This being rather a dull period on the hay farms in northern Nevada, Mr. Frank Eston of Battle Mountain has just leased 100 head of work horses to the rice farmers of Colusa, California.

Owing to a shortage of rail stock cars many cattle and sheep are being trained to Battle Mountain from points in Nye and Lander counties.

J. M. Barry of Santa Rosa, California, has just shipped 90 head of range horses to his California ranch. The horses are of a very cheap class and will be slaughtered for chicken feed. The shipment was made from the Battle Mountain country.

Geo. B. Williams of Fallon sold and delivered 4000 head of prime mutton lambs to the Western Meat Company of San Francisco. It is said he received in excess of \$30,000 for the entire lot.

The Gorat ranches on Bull Run Creek, near Whiterock in Elko County, has gathered and shipped forty-two cars of beef cattle, which were sold to the Western Meat Company of San Francisco.

Mr. Geo. W. Short of Nevada will have a public sale of Shorthorns on November 28, at Sacramento. The cattle consigned will consist of heifers from 10 months to 2 years old and 10 head of young service bulls. Those who wish to purchase something for foundation herds should not miss this opportunity. Details of the sale will appear in a later issue. Col. Leachman will cry the sale.

LIVE STOCK DATE SALES.

November 6. California Shorthorn Breeders' Association, San Francisco. Consignment sale.

November 7. Pacific Coast Hereford Breeders' Association, San Francisco. Consignment sale.

November 11. W. D. Hollingshead & Sons, Duroc-Jersey boar sale.

November 28. Geo. W. Short, Shorthorn Cattle, Sacramento.

January 15. California Duroc-Jersey Breeders' Association, Davis. Consignment sale.

January 16. Harvey M. Berglund, Dixon. Duroc-Jersey swine.

January 31. Ireland Ranch, Owensmouth. Fifty bred Duroc-Jersey sows and gilts.

February 12. San Joaquin County Poland-China Breeders' Association, Lodi. Sixty bred sows and gilts.

February 14. Castlevue Ranch, Santa Rosa. Fifty bred Berkshire sows and gilts.

February 17. Sandercock Land Co., Sacramento. Berkshire sale.

February 21. J. F. McSwain, Merced. Poland-Chinas.

February 23. J. H. Cook, Paradise. Poland-Chinas.

April 17. Butte City Ranch. Shorthorns, Berkshires, Shropshires and Shetlands.

THE MARKET REPORTS

SAN FRANCISCO.

San Francisco, October 29, 1919.

BARLEY.

There is so little business in barley that the street does not agree on quotations. If one wants to sell the quotations below would be all that a dealer would offer. On the other hand, if a buyer appears in the market, the price asked is likely to be from 10 to 25 cents higher, according to what the seller thinks he can get. The market is entirely one of bargaining.

Feed \$2.90 @ 2.95
Shipping \$3.15 @ 3.20

OATS.

The same condition prevails in oats as in barley. Some dealers are offering red feed at \$3 flat, but the buyers claim that no sales except possibly for a few sacks have been made at higher than \$2.85.

Red feed, per cwt. \$2.75 @ 2.85
Red for seed Nominal
Black for seed Nominal
Recleaned Red or Black for seed Nominal

CORN.

Like the other grains there is no activity in corn. While some Egyptian sold a week or two ago as high as \$3.50 it is reported that \$3.25 was the best offer of the past week.

California \$3.50 @ 3.80
Egyptian, choice \$3.15 @ 3.25

HAY.

Receipts of hay for the past week were 1,338 tons compared with 1913 the previous week. The drop in receipts was caused mostly by lack of transportation. As the fields are practically cleaned up by this time, hay from now on will probably come from warehouses. This hay must command a better price to pay the expenses of storage, otherwise it would not be withdrawn at this time. With the car situation as acute as it is, very small receipts may be looked for and no doubt firmer prices on the hay placed on the market will result.

No. 1 Wheat, or Wheat & Oat \$17.00 @ 21.00
No. 2 Wheat, or Wheat & Oat \$16.00 @ 18.00
Choice Tame Oat Hay \$19.00 @ 22.00
Wild Oat Hay \$15.00 @ 18.00
Barley Hay \$15.00 @ 19.00
No. 1 Alfalfa Hay \$17.00 @ 22.00
Stock Hay \$12.00 @ 15.00
No. 1 Barley Straw, per bale 50 @ .80

FEEDSTUFFS.

While there were no changes in the feed-stuff market this week higher prices may be looked for as the price of hay advances. However, if the grains continue as dull as during the past few weeks little advance may be expected on this description of feedstuffs.

Rolls Oats \$81.00 @ 82.00
Rolled Barley \$81.00 @ 82.00
Cracked Corn \$78.00 @ 79.00
Alfalfa Products \$38.00 @ 45.00

POTATOES, ONIONS, ETC.

Onions have been strong throughout the week and registered several advances in prices, both on the wharf and on the street. Potatoes are somewhat firmer, but as yet show little change in price. The market is practically bare of garnets and no more shipments in quantity of these are expected. Oregon potatoes will be on the market within the next week or so. Tomatoes were not in such great quantity and an advance of 25 cents was made. Some extras sold even higher. Hubbard squashes and pumpkins are becoming plentiful and range from \$1.25 to \$1.50 per sack for the former and 75c to \$1.00 for the latter. The season for green corn is about over and only a few sacks remain on sale.

String Beans 8 @ 12 1/2 c
Peas 9 @ 11 c
Carrots, per sack \$1.00 @ 1.25
Rhubarb, Strawberry, box Nominal
Cucumbers 75c @ 1.00
Eggplant, box 75c @ 1.00
Lettuce, per crate 75c @ 1.25
Tomatoes, Early Annas 50 @ 75c
do, Stone 1.00 @ 1.25
Summer Squash, lug, Alameda \$1.00 @ 1.50
do, Hubbard \$1.25 @ 1.50
Pumpkins 75c @ 1.00
Green Corn, Alameda, sack None
Potatoes, local whites \$2.25 @ 2.50
do, Rivers \$2.25 @ 2.50
do, Sweets, new, lb. 3 1/2 @ 4c
Onions, new red Nominal
do, Browns \$4.00 @ 4.25
do, Yellow \$3.50 @ 4.00
do, Green, Alameda \$1.00 @ 1.25
Garlic 20 @ 22c

BEANS.

Prices on the new crop of Mexican reds were announced this week. There was some demand for new cranberries and a slight advance was made. Limas are still held at \$14.50 by the association, but outside growers are selling them freely at \$13.50. The market as a whole is quiet.

Variety Old crop New crop
Bayos \$6.25 @ 6.50
Blackeyes \$5.75 @ 6.00
Cranberry \$6.50 @ 6.90
7.50 @ 7.75

Pinks \$5.75 @ 5.90
Red Mexican \$5.00 @ 5.75
Tepary \$2.50 @ 2.75
Garbanzos 9.50 @ 10.00
Large Whites \$5.75 @ 6.00
Small Whites \$4.50 @ 6.75
Limas \$14.50
do, Baby 13.00

POULTRY.

Three cars of Eastern came in during the week and another is scheduled to arrive before the end of the current week. This has had the effect of lowering the price of smooth young roosters and these prices may go still lower. There is something of a scarcity of small broilers, and all broiler prices are firmly held. Hens are inclined to be stronger, but higher prices are hardly looked for in the immediate future. Dressed turkeys came in somewhat in excess of the needs of the market and the top prices were shaved to move them promptly. A good demand for young ducks developed during the week which caused that description to advance. On the whole the market is in a healthy condition.

Broilers, 1 1/2 lbs. and under 37 @ 40c
do, 1 1/2 to 2 lbs. 32 @ 35c
Fries, 2 to 3 lbs. 32 @ 33c
Hens, extra, per lb. 35 @ 36c
do, Leghorns 31 @ 33c
Smooth young roosters, per lb. (3 lbs. and over) 31 @ 32c
Old oostes, colored, pe lb. 22c
Turkeys, dressed, young spring, lb. 50 @ 52c
do, live 43 @ 45c
Geese, young, per lb. 26 @ 27c
do, old, pe lb. 22 @ 23c
Squabs, per lb. 60 @ 65c
Ducks, young 26 @ 28c
do, old, per lb. 23 @ 25c
Belgian hares 15 @ 16c
Jack rabbits \$2.50 @ 3.50

BUTTER.

Trading in butter was quiet during the week and there were no changes in conditions noted. Prices showed but little change from day to day and the high of last week. The high price day and the high of the week was not in effect for butter for the month of October was 65 cents, which compares favorably with the high price of 64 1/2 for the same period last year. However the low price this month was 61 1/2 compared with the low of 56 1/2 a year ago. So the average price will show somewhat higher for October this year.

Thu. Fri. Sat. Mon. Tu. Wed.
Extra 61 1/2 63 1/2 61 1/2 62 1/2 62

EGGS.

Extra eggs continued on their upward path, reaching 79 1/2c to the growers on the 28th. This high price of the month is still 2 cents less than the high of October a year ago. Like butter, however, the low of a year ago was much lower than the low of this year, and the average price for this October is therefore higher than a year ago. As the price of extras continued to advance the dirties were withdrawn from the market, the accumulation of this description apparently being exhausted. A remarkable feature of the market is the differential between extra pullets and extras of the highest grade. A year ago there was a difference of only 9 cents between the two descriptions. This year the difference was 18 1/2 cents on the day each touched the top prices. The most plausible explanation of this seems to be that the pullets are not shipped East, and the home consumption is not enough to push them ten cents higher than their present quotations. This explanation is weakened by the fact that last year these pullets brought ten cents higher than the high of the present year, while to date extras brought only two cents higher last year.

Thu. Fri. Sat. Mon. Tu. Wed.
Extras 73 1/2 73 1/2 77 75 1/2 77 1/2
Dirties No. 1 69 1/2 69 1/2
Ex. pullets 60 1/2 61 61 63 1/2 62 1/2
Undersized 54 1/2 54 1/2 55 1/2 57 57 1/2

CHEESE.

The cheese market continues quiet with slow movement at the quoted prices.

California Flats, fancy 30c
do, Firsts 27c
Y. A. Fancy 32 1/2 c
Oregon Triple 30 1/2 c
do, Y. A. 33c

FRESH FRUITS.

There were few changes in the prices of fruits during the week. Apples continue to grow in favor, and with grapes practically dominate the market. Berries continue to come in and strawberries sold at higher quotations this week.

Apples, Jonathan \$1.50 @ 2.75
do, King \$1.80 @ 2.00
do, Bellflower \$1.50 @ 1.75
do, Pippins \$2.00 @ 2.25
do, Oregon \$3.00 @ 3.50
Quinces \$1.00 @ 1.50
Pears \$2.00 @ 4.00
Strawberries \$18.00 @ 20.00
Raspberries \$13.00 @ 15.00
Peaches, Oregon \$1.25 @ 1.50

Special Deciduous Market Report

(Written for Pacific Rural Press by J. L. Nagle.)

Sacramento, October 27, 1919.

There has been very little change in Eastern markets this week from the week previous. Prices on sound fruit of all varieties have ruled high, with a continued strong demand.

There is every indication that conditions will remain about the same throughout the remainder of the season and though there has been a little inactivity in the purchase of drum and keg Emperors on account of the high prices asked by the growers, considerable stock has been placed in storage, which will probably be put upon the market as soon as crate and lug grapes have been disposed of.

Shipments of grapes from California are lightening up and there will be a noticeable decline in the offerings from now on. Ship-

ments, however, should continue, with favorable weather conditions, for at least three weeks.

Averages for the week:

NEW YORK: Malaga Grapes, \$2.32; Emperors, \$2.10; Cornichon, \$2.44; Alicante Bouschet, \$2.78; Tokaya, \$2.07; Mission, \$2.31; Muscats, \$2.12; Zinfandel, \$2.24; B. Clairveau Pears, \$3.70; Winter Nelsa, \$3.94; Comice, \$4.38; Glout Moreau, \$3.60.
BOSTON: Tokay Grapes, \$2.22; Emperors, \$2.47; Malaga, \$2.18; Cornichon, \$2.25; Zinfandel, \$1.77; Alicante Bouschet, \$1.82; Muscats, \$1.56; Mission, \$1.92; Clairveau Pears, \$5.30.
CHICAGO: Malaga Grapes, \$2.12; Zinfandel, \$1.49; Cornichon, \$2.51; Tokaya, \$1.92; Emperors, \$2.30; Mission, \$1.60.

Grapes \$1.50 @ 2.00
Figs \$1.50

CITRUS FRUITS.

Arizona grapefruit continues to arrive in good quantity and is selling better than the first arrivals. The rest of the citrus market is unchanged.

Oranges, Valencia \$5.25 @ 5.75
Grapefruit, old \$6.00 @ 6.50
do, Arizona, Los Angeles lug \$1.75 @ 2.00
Lemons, fancy \$7.00 @ 7.50
do, choice \$6.00 @ 6.50
do, standard \$5.00 @ 5.50

DRIED FRUITS.

The dried fruit market continues strong and while there have been no advances in prices changes to a higher level may be expected any day.

Apples 16 @ 18c
Pears 16 1/2 @ 18 1/2 c
Apricots 21 @ 28c
Prunes 11 @ 13c
Figs, Adriatic 12 @ 18c
do, Calimyrna 15 @ 21c

HONEY.

The Honey Association is reported to have been shipping some honey and the market for light amber was firm up a cent in consequence. Local conditions in honey show no change.

Water White 18 @ 20c
Light Amber (Mountain) 16 @ 18c
do (Alfalfa) 14 @ 16c

RICE.

There were no changes in rice quotations either for spot or futures this week. The market is regarded as steady and little variation from present prices is expected before the crop is about ready to move.

LOS ANGELES.

Los Angeles, October 28, 1919.

BUTTER.

This market is down 1c since quoted last week. Receipts also slightly under a week ago, but demand is keeping up at quotations. Receipts for the week, 267,900 lbs.

Fresh California, extra creamery 64c
do, prime first 62c
do, first 61c

EGGS.

Receipts for the week show a slight increase since last report. Offerings are light, but demand is very good. Receipts for the week, 501 cases.

Fresh ranch, extras 73c
do, case count 87c
do, pullets 57c

POULTRY.

Receipts are only fair. Broilers in good demand and hens selling fairly. Turkeys are lower and slow sale for them. Ducks reported in fair demand.

Broilers, 1 to 1 1/2 lbs. 42c
Broilers, 1 1/2 to 1 3/4 lbs. 43c
Fries, 2 to 3 lbs. 32c
Roosters (soft bone), 3 lbs. and up 33c
Stags and old roosters, per lb. 19c
Turkeys 35 @ 37c
Hens 31 @ 35c
Ducks 25 @ 27c
Geese 27c

HAY—F. O. B. Los Angeles.

This market reports lighter receipts, but the demand is fair for all offerings. All prices remain the same as quoted a week ago.

Barley hay, ton \$18.50 @ 21.50
Oat hay, ton \$22.50 @ 25.00
Alfalfa Northern, ton \$21.00 @ 23.00
Alfalfa local, ton \$25.00 @ 27.00
Straw \$ 9.00 @ 10.00

FRESH VEGETABLES.

Offerings are lighter since last reported. The demand is very good for all fresh stuff at quotations, while stale is very hard to move. Potatoes still advancing, and onions are also higher. Lettuce higher and scarce. Slow sale on limas. Green peppers in good demand.

Potatoes, Northern Burbanks \$2.70 @ 2.80
do, Idaho Russets, cwt. \$2.60 @ 2.70
Sweet Potatoes \$1.75 @ 2.00
Onions, Stockton, yellows, cwt. \$3.75 @ 4.00
do, White Globe, cwt. \$3.50 @ 3.80
Cabbage, per 100 lbs. 90c @ 1.50
Lettuce, crate \$1.40 @ 1.25

do, 4 1/2 tier	\$1.30 @ 1.40

Special Citrus Market Report.

Los Angeles, October 28, 1919.
The Valencia orange market showed a steady demand this week for sound fruit. There has been a big improvement with regard to refrigerator car shortage. With probably 3,200 cars remaining the trade is assured of a good supply of oranges well along toward the middle of December. Due to present labor

conditions lumber mills have been somewhat handicapped, and have been unable to turn out the needed amount of box shooks.
Judging from the present outlook the new crop of navel in Tulare county will be much better than what was first anticipated, which will probably mean an increase of from 15 to 25 per cent over last season's production. Prices have ranged from \$4.75 to \$5, f. o. b., on best grades.

Prices have eased somewhat with regard to lemons, due to the fact that the foreign lemon markets have entered into competition with the southern markets. Prime lemons have sold from \$5 to \$6, f. o. b. California points. The total number cars of oranges shipped for the season commencing November 1 have been 34,605 and 9,564 cars of lemons.

Special Livestock Market Report

San Francisco, October 29, 1919.

CATTLE—Cattle prices have receded a fraction of a cent in the past week. The proportion of prime stock in the beef cattle receipts on this market is not large, and buyers are beset with a redundancy of cow stuff and other undesirable varieties. The cattle markets East continue to be congested, and the price trend is downward.

Steers, No. 1, 1200-1200 lbs.	10 1/2 @ 11c
do, No. 1, 1200-1400 lbs.	10 @ 10 1/2c
do, 2nd quality	8 1/2 @ 9c
do, thin	6 1/2 @ 7 1/2c
Cows and Heifers, No. 1	8 1/2 @ 9c
do, 2nd quality	7 @ 7 1/2c
do, thin	4 1/2 @ 6c
Bulls and Stags, good	5 1/2 @ 6 1/2c
do, Fair	4 1/2 @ 5 1/2c
do, Thin	3 1/2 @ 4 1/2c
Calves, lightweight	11c
do, medium	10c
do, heavy	8 @ 9c

SHEEP—The sheep market is quiet and steady. A fair trade is being done over the retail counter, and good fat lamb stock is especially in demand. Quotations are practically unchanged.

Lambs, yearling	10c
do, milk	12 @ 12 1/2c
Sheep, wethers	9 @ 9 1/2c
do, ewes	6 1/2 @ 7c

HOGS—Hogs are still on the toboggan, though the decline is less rapid than a few weeks ago. It is felt in some quarters that prices cannot go much lower at present in the face of high feed prices, labor costs and transportation charges. The widespread strikes and corresponding scarcity of money in circulation has restricted demand somewhat. A slight lowering of quotations is noted.

Hogs, hard, grain fed, 100 to 150 lbs	\$13c
do, 150 to 225 lbs.	12 1/2c
do, 225 to 300 lbs.	11 1/2c

PORTLAND LIVE STOCK.

Portland, Ore., October 28, 1919.

CATTLE—Market steady; receipts, 31. Care is never wasted on stock. Sheep are particularly quick to respond to kind treatment, and there is more money in the tame flock than in the wild one.

11.50; pigs, \$12 @ 13.

SHEEP—Market steady; receipts, 20. Eastern lambs, \$11 @ 11.50; valley, \$10 @ 10.50; feeders, \$8 @ 9; yearlings, \$7.50 @ 9; wethers, \$7.50 @ 8.50; ewes, \$5 @ 6.50.

Los Angeles, October 28, 1919.

CATTLE—Prices are firmer and good demand. Cows are plentiful and the market for them is dull.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 @ 1100 lbs. \$9.50 @ 11.00
Prime cows and heifers \$8.00 @ 9.00
Good cows and heifers \$7.50 @ 8.00
Canners \$5.00 @ 5.50

HOGS—Sharply lower. Receipts reported only fair. Demand is fair at the decline.

Per cwt. f. o. b. Los Angeles:
Heavy overage 275 @ 350 lbs. \$8.50 @ 10.00
Heavy average 225 @ 275 lbs. \$10.50 @ 11.50
Light \$11.50 @ 12.50

Rough docked 20 lbs., piggy sows 40 lbs. and stags, 40 per cent.

SHEEP—Lambs in good demand. Wethers and ewes reported to be slow sale. All prices the same as last week.

Per cwt. f. o. b. Los Angeles.
Prime wethers \$8.50 @ 9.50
Yearlings \$8.50 @ 9.50
Prime ewes \$8.00 @ 8.50
Lambs \$12.50 @ 13.50

EASTERN.

Chicago, October 28, 1919.

HOGS—30,000; estimated tomorrow, 20,000; estimated tomorrow, 20,000; mostly 25c higher, closing weak. Bulk, \$13 @ 13.85; top, \$14. Heavy, \$13.25 @ 13.75; medium, \$13.15 @ 13.85; light, \$13.35 @ 13.75; light light, \$13 @ 13.50; heavy packing sows, smooth, \$12.75 @ 13.25; packing sows, rough, \$12.50 @ 12.75; pigs, \$12.25 @ 13.25.

CATTLE—27,000; estimated tomorrow, 17,000; weak. Beef steers, medium and heavy weight, choice and prime, \$16.75 @ 19.50; medium and good, \$10.75 @ 16.50; common, \$8.25 @ 10.50; light-weight, good and choice, \$14 @ 19; common and medium, \$7.50 @ 13.75. Butcher cattle—Heifers, \$6.75 @ 14.75; cows, \$6.50 @ 13; canners and wethers, \$5.25 @ 6.50; veal calves, \$17 @ 18.50; feeder steers, \$6.75 @ 13; stocker steers, \$6 @ 10.25. Western range—Steers, \$7.75 @ 15.50; cows and heifers, \$6 @ 13.

SHEEP—37,000; estimated tomorrow, 35,000; firm. Lambs, \$12.25 @ 15.35; culls and common, \$6.50 @ 12; ewes, medium, good and choice, \$6.75 @ 8.25; culls and common, \$3 @ \$6.50; breeding, \$6.75 @ 12.50.

"In Humboldt County, where there is one acre of apple land there are ten acres of land suitable for pears," says Albert Etter, Horticulturist. He says the Snyder pear does very well there and he finds it a good canner.

MISCELLANEOUS.

REMANUFACTURED PIPE.
All sizes standard pipe and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices. Welshbaum Pipe Works, 160 Eleventh street, San Francisco.

RAISE SILVER FOXES—Exceptional opportunity. Large profits. Easy to raise. New syndicate plan. Will not interfere with your regular occupation. Particulars free. Dryz Silver Fox Syndicate, 5244-46 S. Maplewood Ave., Chicago, Ill.

FOR SALE—Complete refrigerating plant; 6 H. P. gas engine, compressor, shafting, piping, milk cooler. Everything nearly new and in first-class condition. Reasonable terms. Write Coast Dairies & Land Co., Davenport, Cal.

FOR SALE—California Wonder Corn for seed. A new white Dent. Has averaged as high as six good ears per stalk. The greatest yields of any corn known. Order now. Prices quoted. James McKee, Riverside, Calif.

RANCH FOREMAN, married, two children, will be open for engagement after November 15. Fourteen years' experience in citrus and general farming. Must be near school. References. G. R. Koenig, Berenda, Cal.

BERRY PLANTS—Strawberries, Raspberries, Blackberries, Currants, Gooseberries, Dewberries and Loganberries. Order now to assure delivery. Write M. J. Moniz, Berry Specialist, Sebastopol, California.

MADE OF REDWOOD, Hawley's Perforated wooden well casing, the best and cheapest well screen made. Send for descriptive circular. G. M. Hawley, La Mesa, California.

ALL SIZES OF PIPE and screw casing, both new and second-hand, dipped and undipped. Guaranteed. Prices right. Shecter Pipe Works, 304 Howard St., San Francisco.

CROLEY'S BALANCED HOG FEED—The cheapest feed to fatten hogs. Write Geo. H. Croley, Townsend St., San Francisco, Calif.

FOR SALE—Two-hole power corn-sheller, extra large blower, with sacking elevator and chaff catcher, good order. Shells quick and clean, delivering corn into sack. Price \$30. Address Orden Bolton, Jr., Route 4, Box 447, Santa Rosa, Cal.

FOR SALE—Beeman tractor, full set implements, nearly new, fine condition, cheap. Joseph Moore, 1327 College Ave., Santa Rosa, Cal.

FOR SALE—Bean Tractor, has latest improvements; in A-1 condition. Will sell cheap Gibson Development Co., Oakdale, Calif.

WANTED—Married dairyman, experienced in A. R. O. fitting for shows; calf raising, etc. Sunnybrook Ranch, Willits, Calif.

BOYS, YOU CAN MAKE MONEY saving Pumpkin seeds. Write for particulars. Bomberger Seed Co., Modesto, Cal.

A NEW ALFALFA—Investigate now. Our great "Hardy Hybrid" alfalfa. For facts, write J. L. Lawson, San Jose.

MAMMOTH JERSEY KALE SEED—2 oz., 15c, by the pound, \$1.00. A. P. Ward & Son, Calistoga.

SUDAN—We want to buy Sudan grass seed. Send us samples. Bomberger Seed Co., Modesto, Cal.

COUNTRY LANDS.

AGED OWNER SELLS 345 ACRES

4 Horses, 23 Cows and 9 heifers, bull, calves, poultry, wagons, engine, binder, drills, complete implements, milk cans, crops, included to quick buyer—all for \$7,000, easy terms. Convenient railroad and banking town. 150 acres strong soil tillage. 75-cow wire-fenced pasture, wood and timber should pay for farm, milk checks running \$500 monthly. Good 10-room house, big basement, barn, corn, hog houses. Details page 23. Strout's Fall Catalog, 100 pages equipped bargains; copy free. STROUT FARM AGENCY, 831AF, N. Y. Life Bldg., Kansas City, Mo.

FOR RENT—Ninety-acre apple and pear orchard on shares; location, Paradise, Calif. Dr. C. A. Oliver, Chico, Cal., Box 942.

FOR SALE BY OWNER—Ten-acre apple orchard 3 miles south of Bishop, Cal., in Sunland District. Just coming into bearing. Lays under head of Mesa canal with ten inches of water—none better in America. Climatic conditions are unsurpassable. Orchard is in good location on main traveled road with ideal view of mountains and valley. Varieties of fruit are Winesaps and Jonathans, the leading varieties for Owens Valley. Phone 5F4. No trade. Clyde Hall.

480 ACRES FOOTHILL LAND—Frostless belt, 20 acres ready to plant trees, holes already blasted; 20 acres pasture; balance brush; altogether 350 acres tillable when cleared. Figs, apricots, olives, should be planted. House, barns, horses, implements included for \$35 per acre. Value will double in a short time. Cash needed. Location and soil excellent. Gottfried Friedrichs, 721 Bush St., San Francisco.

FOR SALE—\$3,000.00—120-acre chicken and poultry ranch, four-roomed house, barn, windmill, two wells, small irrigating plant, twenty-five acres cultivated land, ten acres wood lot, balance pasture, 150 fruit trees and vines, chicken house and yard. Apply H. W. Yolland, Paicines, San Benito Co.

120 ACRES IRRIGATED LAND—52 acres cleared, 35 acres in orchard, 17 acres hay land, balance timber. Price \$4,000; one-half cash; terms on balance. Abstract title water with the land. Located in Happy Valley, Shasta Co., Cal. Write Box 133, Cottonwood, Shasta county.

FOR SALE—188 acres fronting State Highway for over 1/2 mile near county seat, land lying in Iron Canyon irrigation district; will double in value. For particulars and terms, address Box 324, Proberta, Cal.

40 ACRES—Fine for berries, vegetables, poultry and cows; plenty water and wood; near town. H. Koenig, Fort Bragg, Cal.

A Size for Every Engine and Motor

McQUAY-NORRIS

LEAK-PROOF

PISTON RINGS

Increase Power—Decrease Carbon Save Gas

The design and construction of these rings assures uniform pressure all around the cylinder wall—power producers because they leave no place for the power to slip past.

Wherever you are and whatever your motor, you can get immediate service on these rings. Complete stocks of standard and over-size rings are carried by over 300 jobbers and supply houses throughout the country. Many thousands of dealers can extend to you our service, which enables them to specify your size requirements for practically every make or model of motor without delay. You don't have to wait.

Send for Free Booklet
"To Have and to Hold Power"—a simple, clear explanation of piston rings, their construction and operation.

The hard-hitting Winchester pattern is evenly distributed. No game gets through and no game is mutilated.

A patchy pattern often means a miss, many times a cripple, and sometimes badly mutilated game.

GAME GETTERS

THE steady game-getting qualities of Winchester Loaded Shells have made them the favorite shells of experienced shooters.

Under all weather conditions they play true to form, shooting a strong, even spread of shot. The Winchester waterproofing process prevents swelling from dampness; special lubrication of the paper fibres prevents brittleness and splitting in dry weather.

The secret of the famous Winchester Shot Pattern is in the control of the gas blast from the exploding powder. This in turn depends upon the wadding in the shell.

The Winchester gas control system

The Winchester system of wadding and loading is the result of repeated experiments to determine the most effective control of the gas blast. The base wads of Winchester Shells are constructed to give what is known as progressive combustion to the powder charge. The ignition spreads to the sides, in all directions, as well as forward.

Under the heat and pressure of this progressive combustion, the tough, springy driving wad expands and fills the bore snugly, completely sealing in the gas behind. In being driven through the bore this wad offers just enough resistance to the gas blast to insure complete combustion of every grain of powder, so that

the full energy of the whole powder charge is developed at the muzzle. Thus none of the shot charge leaves the gun until it is being driven by the maximum energy and velocity possible from the load.

At the muzzle, the expanded, snug-fitting driving wad is slightly checked by the muzzle choke or constriction, while the shot cluster travels on unbroken by gas blast or wadding, making the hard-hitting uniform pattern for which Winchester Shells are world famous.

Uniform shells. From primer to crimp, Winchester Shells are so balanced in construction as to insure the maximum pattern possible from any load. The broad fish-tail flash from the primer gives even and thorough ignition; the driving wads completely seal in the gas behind the shot; the stiffness of the crimp or turnover at the shell head is varied exactly according to different loads, great care being taken never to stiffen it to such a degree that it offers undue resistance to the powder explosion.

Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps, be sure your shells are Winchester Leader and Repeater for smokeless; Nublack and New Rival for black powder. Leading hardware and sporting goods dealers in every community carry Winchester arms and ammunition. They will be glad to assist you in determining the particular load best suited to your purpose. Upon request, we will send you, free of charge, our interesting booklet on Winchester Shotguns and Loaded Shells.

The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where the wadding is checked by the "choke" or constriction. The shot cluster travels on ahead unbroken. Actual test target 320 pellets out of 431 or 74% of the shot charges (1 1/4 oz. of 7 1/4 chilled) inside a 30-inch circle at 40 yards.

THE PACIFIC RURAL PRESS

SAN FRANCISCO

NOVEMBER 8, 1919

LOS ANGELES

A Livestock Show Which Surpasses

Written for Pacific Rural Press by Thos. F. McConnell.

FOUR ACRES of purebred livestock and there was not space enough. When the use of the California Building on the old Exposition ground was secured for the show there were many who wondered how it ever would be filled, but some of the stock had to be housed in tents outside. Draft horses, light horses, scores and scores; beef and dairy cattle, sheep and swine, milk goats poultry, rabbits and pigeons, until it was impossible to rest and see it all in one day. Even the space intended for one of the judging rings had to be given up for pens. Never again will it be said that California can not have a real livestock show, for the demonstration has been made.

All undertakings, large and small, first have their beginning in thought and in this case the minds of the breeders of purebred livestock in California and the business men of San Francisco combined in planning and working out the detail of this wonderful exhibition. From the very start there has never been a moment but what the organization as a whole knew we were going to have this great stock show. Individuals may have thought differently, but it has all come out as it should, and we have had a glorious show and a glorious time, and now can go ahead with the confidence begotten of success to a livestock exhibition that will be looked forward to and talked about by breeders of purebred stock on the Pacific Coast from Alaska to the Panama Canal. The First California International Livestock Show has passed its way.

We are not going to stop here and say, "This is perfect," but soon we will have stock coming to this event from all over the western half of the North American continent to the best show of its kind west of Chicago. Neither will exhibitors be confined to this territory, but will eventually come from eastern United States and Canada. There is every reason for California to be included in the itinerary of breeders exhibiting at other big shows.

The first event of the show was really the combined luncheon of the San Francisco Advertising Club, Rotary Club, Home Industry League and Downtown Association at the Palace Hotel on Wednesday, October 29, at which

Top picture—Wyoming Prince, 1st prize Hereford bull at Los Angeles, property of Hereford Corporation of Wyoming. Left center—Little Sweetheart, Grand Champion Shorthorn female property of T. S. Glide, Davis. Right center—Jewel of Tintagel, Junior Champion Jersey heifer, property of M. Fortini, Orland. Bottom—Big Kate 4th, \$3,150 Poland-China gilt, property of M. & A. L. Bassett, Hanford.

Tilly Alcartra, the world's record Holstein cow, California Gretel, the world's record milk goat, a champion sow and pigs, and a blue-ribbon sheep were guests — which was a feature in creating and keeping up enthusiasm for the great stock show. The animals were attended by an attractive corps of farmerettes from the Fairmont Follies. As a boosting and advertising scheme, this was a crackerjack stunt and helped the big show amazingly.

From Saturday to Saturday, a full eight days of livestock, dairy and horse show enjoyment, with two great cattle sales to add profit to the game, in which the best of Shorthorns and Herefords passed under the hammer to the advantage alike of vendor and vendee. Such a show and such sales are great stimuli to the purebred stock business, and as such should receive the hearty support of the stock breeders.

One of the features of the Dairy Products exhibit was the "Milk Bar," where all the latest drinks of milk and its derivatives dispensed by beautiful bar maids, prettily costumed, could be obtained, so both the palate and eye were pleased at one and the same time. This exhibit, or demonstration, as it might be called, was intended as largely educational, without the idea of making anything directly from the sale of the milk. This is part of a campaign of advertising and education that is being carried out by the Associated Dairymen of California, to show the

possibility of substituting healthful, nourishing beverages with economical esthetic advantages for those formerly passed over the bar.

The great advantage of such a show as this was this year, and will be in the future years, cannot be too forcibly impressed upon the minds not only of the breeders of purebred livestock, but also the business men throughout the State. The livestock business is so large a part of the economic life of the nation and world that every chance of placing the best side of it before the public should be taken advantage of and made to do its part to the utmost. We have had this one opportunity here at San Francisco this year, and now we must keep it up in the future. There is no limit to the development of our livestock interests by this means.

STOCK SHOW SCORES SUCCESS.

AS WE write on Tuesday the California International has played three diurnal innings and is piling up a great score. It has everything in its favor, but that is just what it is entitled to have and that also is just what its constructing directorate built upon in their generous lay-out. The weather is glorious: for November gives San Francisco days which of all the year are best deserving the epithet "delicious." November days in San Francisco are full of zip and sparkle—all the sunshine which is clipped from the beginnings and ends of them is heaped up in the middles; or, speaking astronomically, all that the southern ecliptic denies us is gathered on the equatorial. It is a very interesting meteorological phenomenon—giving us the unique characters of California's autumnal springtime. But the show has more than weather for the sun shines upon throngs of people eager to patronize the industrial objective which is involved and the moon illumines the pathways of the throngs which gather to enjoy the exhilaration of the evening horse-shows—than which San Francisco has never before seen a series of events so socially and equinely brilliant. And the show has also a wealth of exhibits which, in volume and quality, were never surpassed on this side of the Rocky Mountains—more than a thousand of the larger animals with blood as blue and predominating as the azure of the sky which canopies them. Thus the event gathers beneath and above it the three great fundamentals of success in a livestock display, viz.: good weather, generous, popular patronage and richness and amplitude of exhibits. Each one may arrange them in order of precedence as he sees fit; the show has them all, and therefore scores a great success!

We are glad to write thus joyfully of the success of this significant event in the history of California, which will be counted a starting point of progress for many years to come. It is a new and greater demonstration of the attitude of the metropolis toward rural development than has been had hitherto, and will be the first of a series of demonstrations which will be greater as they grow into the future. We are proud of the effort which this journal has made for months past, both by its proprietary and scriptorial staffs, toward the success which is now realized. The Pacific Rural Press is gladdened by the thought that, as it approaches the close of its 49th year of continuous and progressive effort to knit together true manhood and real prosperity in the urban and rural development of California, its servants of the present day have been enabled to assist in a public enterprise which the founders of this journal would have enthusiastically promoted. As we write these words we feel the glow and impulse of our predecessors of half a century ago: fervor and effort for the full and enduring upbuilding of the commonwealth of California!

GOING DOWN INTO THE SEA IN SHIPS.

As one muses beside the California Building in which the stock show of 1919 is spread, the thought

turns irresistibly to the sea for the structure almost overhangs the beautiful waters of the Golden Gate, and its window-views are of this wonderful pathway of maritime commerce and travel. As one recalls the history of this gateway to the greatest and most secure harbor of the Pacific Coast and thinks of how for several centuries it was a question as to which of three maritime nations of the olden time—Spain, England and Russia—should gain it to have and to hold, and how, through prompt, dramatic venture, it became the western portal of the United States, and thinks also of the efforts of two generations of American poets and artists to adequately express appreciation of its beauty and importance to mankind, the consciousness comes that at this moment a new era in the realization of the commercial potentiality of the Golden Gate is dawning. The opening of the Panama canal five years ago was really the dawn; but the clouds of war, strangely enough, both delayed and brightened it. The opening of the canal scheduled direct sailings of steamers from several Atlantic and Mediterranean ports to San Francisco, and there would have been great growth of traffic forthwith, but the war cancelled this and at the same time developed ship-building and interest in maritime undertakings to such an extent that the coming of world-peace will give the port of San Francisco immediate entrance into a volume of ocean-coursing which would have probably come dawdling through several decades under the old piping times of peace. We are no sailor nor even a striking stevedore, and therefore claim no expert knowledge of the sea and doings upon the surface of it. We can get seasick over a picture of a storm-tossed ship, if it is reasonably realistic. But we have, frequently, landsmen's dreams of the greatness of our geographical sitting by the sea, and in them can picture its importance to our seashore industries in both producing and manufacturing lines. And it seems to us very significant that Californians are taking such a leading place in the maritime affairs of the whole country. Take, for instance, the management of the shipping corporation through which the United States government managed everything that floats—except Secretary Daniels' grape-juice flotillas. One would, of course, suppose that some rolling mariner from Cape Cod or Sandy Hook would be selected for such a job, but was it not wonderful that a Golden Gate tar should have been endowed with this wave-riding job; that is, Mr. Rosseter of San Francisco? And surely, when Mr. Rosseter goes officially to the bottom, some Atlantic sea-lawyer would get his berth! But no, Mr. Cushing, another San Francisco sea-dog, is chosen to do the government barking! And recovering from this blinding phosphorescence on the Pacific side, what do we see but Captain Robert Dollar of San Francisco staking off the water-front of New York City to get a landing for his outfit, which makes all oceans one and inseparable! But we find our interior becoming restless with so much sea motion. All we know about the whole bunch of marine phenomena is that California mariners are doing things in a world-way as they never did before, and so long as they keep active in moving products in and out through the Golden Gate to the world-parts which need them, we can go on developing our agricultural industries in all lines with confidence that all the apprehension which we have had in the past about our pent-up condition may be abandoned.

BARLEY AFTER BEANS.

Turning now from the waves of the Golden Gate to the pens of finished steers which are anchored on the sands near by, one comes naturally to thoughts of barley—which has always been the feed-grain in California and likely always to largely be. We overheard recently the conversation of a bright cattle-man of the northern Santa Barbara district in which barley was glorified beyond all other feeds for finishing cattle and hogs, and great satisfaction was expressed that the southern coast bean district would go largely to barley this winter and determination was asserted to have a good bunch of feeders to benefit by the crop. It struck us that the declarations were very rational from several points of view. The fact is that all kinds of beans but Limas are "in the soup" this fall—which may be a very good place for a few pounds

of beans but not for the thousands of tons which are now lying in warehouses, either after being soaked for all the loans they will absorb or otherwise, as the case may be. It is, of course, possible that some one may make a good turn on beans if the reports which are now current are true, viz.: that the Orient will ship no beans of 1919 crop because Orientals must eat them up to fill the deficiency in rice. If that is so California beans may be worth something, but we are distrustful of tales told by the Orient and nothing but a good and sufficient protective tariff, such as the California Bean Growers' Association is not working for, will make California safe for any such free production of beans as we have recently been indulging in. Aside from all that, however, is the current disposition in the bean belts to change to barley. It will be fortunate for all kinds of stock-feeders whether they grow their own feed or depend on buying it, because the turn from beans to barley is right in the line of rational crop-rotation and has been demonstrated by ample experience to result in record yields of barley whenever moisture is adequate. If, then, we have plenty of fair-cost barley to use wisely in connection with generous allowance of alfalfa hay, we shall have a good foundation for turning out produce from everything that grazes—from carloads of meat or milk to crates of eggs or fur-rabbits! And we can make a lot of barley profitably for a fraction of the labor-money blown in to bean crops and never blown out again. It really looks as though barley might be the "thanksgiving bird" for 1920, and though we are not in the prophetic line there are two things which gladden us about barley in addition to the rotation and feeding advantages already mentioned. One is the fact that the less drunk-seed they put in beer the more beer and therefore the more barley and hops the thirst of the country promises to require and the farther the middle west and mountain states turn away from barley (as they are likely to do) the more chance there is to sell the grain from California, the State which can grow most of it at least cost—when the season is favorable.

WHAT WILL THE SEASON BE?

We should think the weather-prophets would be tired of their job, and we are surely tired of their prophecies and are very glad of it. For some of them prophesied that the early rains would swamp the State and others denied it—which is the normal way with prophets. The result of it all is that on all good ranges which are not over-stocked there has been a good bite of dry feed and some cattlemen say they never saw their herds look better or handle better on the hair and hide. Even as late as this they do not want rain unless it is heavy enough to carry the new grass which it will start. The result is that, except in starvation camps where last winter's shortage of rain scanted the season's growth, there has been an unusually good run of dry feed, a good lot of market cattle and a grand time for the live stock shows and sales—all of which rather a late beginning of the rainy season favors. Although some are waiting for rain to start the plows, according to the old system, there has been a vast amount of tractoring done during the run of fine days and the area already plowed and seeded or held for disking out weeds before seeding is larger than usual. The signs are set for a good year so far as one can now see them, and all the work that can be done in the dry for field, orchard, vineyard and garden should be pushed to completion while the sun shines.

A FAR-SEEING DEACON.

We apprehend that the traditional New England deacon must be absolved from the charge of penuriousness in connection with his well-known preference for home-made hard cider over all brands of boughten booze. He may now be credited with great foresight in choosing that which cannot be taken away from him. E. C. Yellowley, internal revenue collector, who has charge of the prosecution of offenses under the new law of Congress to enforce aridity, is credited with saying this:

"Cider, if made of pure apple juice, with no added alcohol or other fortifying substance, is a lawful beverage. If in the process of time it becomes otherwise than non-alcoholic and does so without the artificial addition of alcohol, it remains a lawful beverage, and any one may make it."

This is, of course, pretty good for the deacon and for the price of apples, because it will be practically impossible to get an apple for eating if the juice of it can be allowed to get as hard as it likes, providing it does it all by itself in nature's way. But really we cannot see why the apple should have this advantage over the grape. Grape juice can become wine all by itself, just as apple juice becomes hard cider. It is not necessary to add "alcohol or any other fortifying substance," and the "setting up" which one can get from hard grape cider has less craziness and less durability than the same state of mind produced by hard apple cider. We apprehend that Mr. Yellowley's decision will not hold long, and that if one wishes to get full of hard apple cider he should be reasonably quick about it.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Almonds and Underflow.

To the Editor: I am wanting to plant almonds this winter. I have good soil, but water gets within three feet of surface for a month or six weeks during the irrigation season. The moisture has never come to surface. Will that be too much water for the almond on the almond root? Do you think they would do at all? I have understood that the almond on the almond root makes a longer-lived tree than on the peach root. When the water lowers in winter will the roots go on down, and then when the irrigation seasons opens, do you think the water rising will injure the root or tree?—G. B., Modesto.

One cannot always predict what will happen to fruit trees over underflow. Sometimes they seem to be greatly advantaged by it and show great growth and fruiting; sometimes they quickly show die-back and soon afterwards perish. The former case is manifested by the great success of orchards on what is called "sub-irrigated land"; the latter is shown by groups of dead trees or empty spots in irrigated or swampy-land plantings. Whether this diversity of behavior is due to the amount or duration of the underflow or to the nearness to the surface of the rise of ground water or whether it is determined by the fact of whether the water stands and excludes air, or whether it is "live" or moving water, and therefore brings in air with its movement, has never, so far as we know, been experimentally determined, but the difference is clearly demonstrated by experience as the trees themselves have shown what they would do in different places. It is common experience that the almond and the peach are very sensitive about excess of moisture on their roots—under conditions which cause fruit trees to rebel, and therefore you will take more chances of failure in planting almonds on either root on such soil as you describe than you would in planting pears on pear root or prunes on myrobalan root—for both these roots are more tolerant of underflow than any other roots used for deciduous trees. For these reasons we cannot tell what will happen to the almonds you propose to plant. We should be inclined to give the trees a chance to declare it for themselves if you are sure that they will have three feet of soil above the water. As for the water never overflowing the surface, it might be safer if it did for a brief time—provided it was drawn by drainage so as to soon free the soil to a depth of three feet. A short run of mud on the surface is less injurious to a tree than a long standing of mud below.

Fertilizing Orchard Trees.

To the Editor: When is the best time to apply a commercial fertilizer to an old peach orchard, with the especial object to make the fruit grow larger? The soil is a sandy loam? What is a good combination of fertilizer to use? Is dry kaffir corn, or milo maize fodder of much value as a fertilizer?—M. W. X., Hemet.

For deciduous trees operated by rainfall, it is best to apply slowly-soluble fertilizers just before the fall or early winter plowing, or in cases where no plowing is done until the heaviest rains are over (late winter or spring), it is desirable to apply early in the rainy season so that the rains may act upon them and carry down into the soil what they dissolve. This early surface application also encourages growth of natural weeds and clovers to be plowed in by later plowing. Soluble stimulating fertilizers, like nitrate of soda, should usually be applied toward the end of the rainy season. On

irrigated orchards later application of slowly soluble materials (spring or early summer) may be made because moisture to render them available is provided by the irrigation.

A good combination of fertilizing materials for orchard use may be: nitrate of soda, 150 lbs. (or sulphate of ammonia, 100 lbs., or dried blood or high-grade tankage, 300 lbs.); superphosphate, 300 lbs.; sulphate or chloride of potash, 200 lbs.; sulphur, 100 lbs. It is the nitrogenous fertilizers (the first three named above), which are chiefly promotive of growth and of size in fruit. For example, for this particular purpose, nitrate of soda may be used at the rate of two to five pounds per tree (according to age and size of it), evenly scattered over the area covered by the spread of the branches and chiefly away from the trunk itself. But to get size in the fruit any such application will be ineffective unless the soil has adequate moisture. The application of a fertilizer to a tree which is famishing for moisture is as unreasonable as to give a man a dose of bitters when he needs a square meal—for water is really not only the chief food of the plant, but it makes all other foods available.

Coarse fodders, like corn and sorghum stalks, are more likely to do harm to trees than to help them unless there is surplus water to cause them to decay. They are much more likely to benefit a heavy soil than a light one, because they decay more rapidly and there is less danger of their drying out the soil.

Family Orchard in Alfalfa.

To the Editor: I have a small family orchard of deciduous trees planted in alfalfa. There is a plot of ground about each tree that is four feet square that we cultivate and add manure from time to time and irrigated when the alfalfa is. The trees are 2½ years old. Is it best to leave the trees growing in the alfalfa or had we better plow alfalfa up and put in a crop that requires cultivation. Will alfalfa choke out the trees? They are doing well and the soil is a rich, sedimentary loam, well drained.—B. G., Menlo Park.

It is perfectly feasible to grow a family orchard as you now have it on such soil as you describe. The alfalfa will not choke out the trees so long as you keep the cultivated plot well dug and summer hoed. There is no need of fertilizing these trunk-plots unless you use the manure as a mulch to check evaporation. For the growth of the tree it will be better to spread the manure over the alfalfa-middles. The alfalfa will keep the soil in better condition than the cultivation you are likely to give an inter-crop. This suggestion is largely based upon what you say of the soil as a well-drained loam, which will readily distribute excess of water which would otherwise perhaps occur in irrigated alfalfa.

One Dose for Three Pests.

To the Editor: What is the best formula to spray for peach blight and red spider on prunes, and scab on pear trees? Can I get a good one for all three? If so, what is it and what time to spray?—H. M., Hopland.

You can come nearer to getting these three with one spray than you can most other pests, and the one stuff which will do it is lime-sulphur. For peach blight (providing you mean the blight which makes gumming pustules on the new twigs) spray with lime sulphur (1 to 10) as soon as the leaves fall and up to December 15. For apple scab, spray with lime-sulphur (1 to 20) just before the blossoms open and again with lime-sulphur (1 to 35) when the blossom petals are falling. These treatments will get a good many red spider eggs, but you will have to watch for the mites early in the summer and if they are showing up well give them lime-sulphur (1 to 50), or use dry sulphur instead, if you prefer.

When Does Tar-weed Sprout?

To the Editor: When does our tar weed start in this locality? Some say in the summer or late spring, and others say it is one of the first grasses to sprout in the fall and come right up.—H. M. B., Hopland.

We are not sure about your "tar-weed," for there are many different plants which are called "tar-weeds," because of their glutinous excretion or their smell, and they have different times of growing. Our tar weeds in Berkeley start growth late in the spring or early in the summer and keep growing all during the dry season when they are

about the only green things on dry slopes. We discredit your neighbors who attribute such direct action to tar weeds. Any one who will call a tar weed a "grass" ought to be watched.

Crop for an Old Feed Lot.

To the Editor: I have a small piece of river loam land that has been used for a number of years for a feed lot for winter feeding cattle. Last spring I broke this ground in February, reseeded in May, and planted to corn, but was too dry to germinate the seed. Would you advise seeding either wheat (club) or rye on this land in the next few weeks? Some say if it is a wet winter I will have a crop of poor straw.—R. D. W., Colusa.

Why, yes; if you have too much water and manure you are apt not to get much of anything and pretty yellow, too. With average rainfall you are apt to get a whale of a crop of straw which will either lie down on you or get rusty, or both. It depends also upon how long the piece was used as a feed lot and how much excess manure has leached out because the soil favored it. You will have to take some chances. We should chance it on wheat or oats rather than rye, and aim at a hay crop getting in the mower ahead of the rust or of lodging and if it looked well for grain in the spring keep the mower out and get the grain. If you cut for hay and there is moisture enough left you can get a corn crop. We should cut out the rye because the land is probably too rich and rye does not give you a chance for a hay crop though you may feed it off green.

Old and New Land for Fruit.

To the Editor: I have in mind a farm that had a twenty-five-year-old Bartlett pear orchard. The trees were taken out and grape vines planted instead. When the vines were eight years old they were taken out and prune trees planted instead. Will the prune trees bear as well as they would on new land?—H. M., Santa Rosa.

We cannot answer definitely. There is possibly some new land which is poorer than the piece you have in mind has become by a third of a century of fruit growing. In that case the prune trees might bear better than they would on the new land. If you mean to ask whether they will bear on this land as well as they would when it was new, the chances are that they will not—though they may still be profitable, for we have some deep, rich land which is still strong for fruit after about two-thirds of a century of it. It depends on the land how long it can stand it. The trees will have to show you that. If you have an idea that changing from one kind of fruit to another will help the land to come through, there is not much in that. Land does not get much help by changing from one kind of fruit to another; they are all too much alike in their requirements for that.

Picking Oranges—New Maturity Tests

Written for Pacific Rural Press by D. J. Whitney.

The law properly tells the orange shipper how ripe his fruit must be before it will qualify for the market. This protects the consumer and assures him that the fruit he buys will be really fit to eat; consequently, it also protects the producer by keeping premature shipments from disgusting the consumer and injuring the market.

Naturally, therefore, the navel orange grower is anxious to know how soon he can ship, particularly when he is in an early district. As the early bird catches the worm, so the first shipments usually catch the high prices, and the grower wants to get his fruit into the market as soon as it will stand the legal test; and he does not want to pick a lot of fruit before it will be good.

Legal requirements are based on two things: the proportion of sugar to acid in the juice; and color. Formerly only the first qualification was required—there must have been eight parts of sugar to one of acid in the juice. Certain flaws existed in this standard and to remedy them partially a color test was added: that an orange must also be 25 per cent colored. Quite immature oranges could occasionally creep in by the sugar test alone, just as they could by a color test alone; but the combination was adopted to overcome the weak points in both tests.

How to Tell Maturity.

The 8 to 1, or sugar test is definite; it is a chemical test and absolute for the fruits selected as average. The color test in one respect is guess work, or conjecture. One man will say that a certain orange is half-colored, that is, has half of its full color, while another will say it is two-thirds colored and a third person with strict views of ripeness will think it a quarter or a third colored. According to the official method in such cases a color standard is adopted to prevent such difference of opinion. This standard indicates what the best authorities think fits the proportion of color that the law names. A colored plate is prepared and the living fruit is compared with it. Such plates are being prepared by the State Department of Agriculture and will doubtless be in use by the time this reaches our readers. The old "substantially colored" orange was supposed to be 70 per cent of full orange color, in spite of the fact that it was merely a sickly yellow; so people familiar with that standard can figure about what present standards are.

An orange will show color under the outside gloss. This is not true color, according to the law of the case. The true color is color that has broken through the surface, indicating that actual ripeness is beginning.

When to Begin Picking.

The law tells a man what fruit is unfit to ship, but he himself has to decide when he cares to risk his crop. Sufficient color is absolutely essential. No matter how the juice will test the grower should wait until enough gold shows on his fruit to suit the packing-house manager. Then, when safe in this respect, he should gather samples for a test.

There is an unavoidable attraction of the ripest fruit in gathering samples. Unconsciously a man will select the best when he thinks he is getting average samples, unless he watches himself very closely. To be safe he had better pick fruit from the northern half of the trees, here and there all over the orchard, and pick it rather low, for the higher fruit is usually riper. Outside fruit is usually riper than inside, but by keeping to the north side of the trees and taking outside fruit, a fair sample is usually obtained. Enough for three tests should be taken and if the packing-house manager says, "Pick," it is safe to pick.

Ship Early.

For best results financially, at least early in the season, it is usually

profitable to get the fruit off as early as possible. If, however, there is already a rush of fruit to the market, a man oftener is wiser to wait a while. The longer he waits, the better his fruit gets, and the higher the price it should bring; for although the law allows an eight-to-one fruit to be shipped if the color is right, much additional ripeness adds immensely to the eating value and also to the appearance.

Frost naturally is a big factor just here. If a man is in a cold place, safety suggests that he hurry his fruit off whenever he can satisfy the law and the shippers, whether he thinks prices might be better later or

trees and it will become a valuable product.

However, it is poor policy to risk too early picking. First, the fruit loses quality by being held in boxes to ripen. Second, in all probability its progress toward legal qualifications will be slower than if it remained on the tree. Third, there will be the extra handling and storage to pay while awaiting legal maturity. So it is best to let Nature take its course and have the oranges ripen where they grow.

What the delay will be in waiting for early picked oranges to get more sugar, it is difficult to estimate. Horticultural Inspector F. R. Brann of

enough different from good navels so that the tester could reject them, but if there are coarse navels there too, he cannot tell between them and Australians, and it is very proper when there are coarse fruits in the lot to select one or two for his test in order to strike a true average. Production and quality both demand the elimination of Australians and off-type Washingtons from every navel orchard. Then the fruit will be soonest fit for shipment and most likely to pass a good test.

Thompson's Improved navel passes a shipping test earlier than the Washington, but it is not likely to be mixed with the Washington in the boxes.

The Insufficient 8-to-1 Test.

The 8 to 1 sugar test has developed some surprising and significant facts. Through the great size and importance of his district for early shipments, Horticultural Inspector Brann of Lindsay has been in an excellent position to get valuable information. In the past three seasons he has tested for ripeness 3,000 different lots of oranges for ripeness and can easily classify the fruits into three types of quality. Of these types the earliest in some ways to reach the 8-to-1 test is the poorest type, and the latest to reach it is the finest. These types grow on the three ranges of soil nature.

The 8-to-1 test is not for the amount of sugar in the juice, but the proportion of sugar to acid. Consequently, if there is little acid, a comparatively small amount of sugar will be enough to meet the test, but if the acid is high, the sugar must be very high in order to let the fruit pass. However, low acid with low sugar means poor or indifferent quality, while a fruit with lots of acid and enough sugar to make that acid pleasant makes a fruit fit for what a king was supposed to be before the big war broke out. Consequently, the 8-to-1 test alone used to permit low acid-sugar fruits to start off while the superior, high acid-sugar fruits were waiting for still more sugar to develop. Mr. Brann advocated a sliding scale test, which would require the thin-juiced fruits to have a higher sugar test than the rich-juiced fruits. This is reasonable and the addition of the color test to the 8-to-1 sugar test is a step in that direction.

As an illustration of the difference in the three grades of fruit tests can be given. What might be called normal, or typical, or average, navels would give a 9.5 to 10.5 Brix spindle test when the sugar test would be 8 or 9 to 1. The Brix spindle shows the amount of matter, both sugar and acid, dissolved in the juice. These fruits, therefore, had juice of that degree of richness when reaching a condition of legal maturity for shipment. The second type of fruit, and the poorest for eating of the three, though from the outside they might appear smooth and nice, is usually grown on sandy loam soil and is abundantly irrigated. When the Brix spindle will show not a particle more material in the juice, such fruit will frequently test as high as 10 to 1, sugar to acid, that is, appear fairly ripe when really there was not a great deal of substance to it.

On the other extreme are the fruits grown on the heavy, dry bog soils, usually on the slopes, which normally ripen early and display a high color, but have such rich juice, with so much acid to it, that an immense amount of sugar is needed to meet the legal ratio to acid. These, for instance, frequently, will give a Brix spindle test of 15 to 16 before meeting the 8-to-1 test. Naturally, with such rich juice they are a very fine fruit and are fully as good eating when they meet a 7-to-1 test as thin-juiced fruit is when it meets an 8-to-1 test. However, since the latter are slow in coloring as a rule, the new requirement of natural color as well as sufficient sugar, helps even things up.

Interior of properly pruned Washington navel tree on ranch of Mrs. K. E. Johnson, Lindsay, Cal. Only a well-pruned tree will have much interior fruit, which almost invariably is fruit of the finest quality. Although when this view was taken, very little fruit could be seen from the outside of the tree, three boxes were harvested. The normal yield of these trees is suggested by the wires that can be seen holding the branches in place.

not, for the risk of losing all is more important than the chance of making small additional profits. This matter is one for each individual to decide for himself. It is always hard to guess when the first freeze will come and the man who has a warm slope for his trees, where he is quite well insured against frost, is fortunate both in the lack of probable injury to his fruit, and in his ability to hold his fruit until they have reached the pink of condition and the market is, in his opinion, in the best shape.

Mature Poorly After Picking.

There is one way that the orange grower is fortunate. If he guesses wrong and picks his fruit before it will satisfy the law; he still has a lot of valuable fruit. The grape grower who picks grapes too green to eat is out of luck; he has nothing but hog feed, or other cheap material. The orange grower who picks too green merely has his fruit shoved to one side until it gets ripe enough to qualify for packing. This it will do with some delay. Both color and sugar will develop when the fruit is off the

the Lindsay district in Tulare county, where the heaviest early shipments originate, states that oranges are very irregular in developing sugar after being picked. Sometimes they come along rapidly; other times they drag along very slowly. He has seen some lots develop half a point in four days—that is, go from a 7½ to 1 to an 8 to 1 test—and he has seen other lots delay for two weeks in developing only a little more than that amount of sugar. He strongly advises delay in picking until a proper test is almost certain to be obtained.

What Fruit to Use.

There are some funny angles in testing and the moral of them all is: have the finest possible fruit, in other words, rule out Australian oranges and off-type navels. A man may have a few Australians in his orchard. There is far more acid in them than in the Washington navels, but if they are mixed with them, one is very likely to be selected for the test. Then it will add so much acid to the juice that the lot will be considered very immature. Of course, Australians are

Biggest Cauliflower Ranch in the World

Written for Pacific Rural Press by R. E. Hodges.

The largest cauliflower growers in the world are the Williams Bros. of Los Angeles county. They are men of generous stature and of wide interests; but their success with cauliflower, as told by J. H. Williams, is due to a knowledge of detailed requirements of their crop and the ability to supply those requirements promptly.

"We don't count the cost. We do the work when it needs to be done. This is our fourth year with cauliflower and we are only beginning to learn," said Mr. Williams, "but we do know that promptness in doing the work when it needs to be done is the cardinal element of success with this crop."

A hundred and fifty acres of this one vegetable they are growing for themselves. Another 150 acres they are growing on shares. Besides that, because their home place is so far from the cauliflower fields, they have leased a great deal of the land around the home and the tenants are producing cauliflower. The August electric bill for pumping irrigation water was \$999.84. Electricity alone costs an average around \$900 per month throughout the irrigating season.

When we visited Williams Bros. late in September, they had already spent \$15,000 for labor and water this season on the 300 acres they are working for the 1919-20 crop. Not a head had been sold, though the early crop began to go about mid-October to the Eastern markets. To get work done at the times appointed by the cauliflower plants themselves, the Williams Bros. frequently have forty men working at once.

Succession of Planting and Maturing.

Forty men could not begin to do the work were it not for the fact that this vegetable is planted through a long season and ripens correspondingly. The "early" crop is mostly planted in June, transplanted in July, and ready for market by mid-October. The "medium" crop goes to market in November; the "late" crop is ready in January and February. The "very late" crop (broccoli) was being planted by Williams Bros. on about 50 acres around the first of October to be marketed as late as possible in spring before warm weather spoils the heads.

The crop goes East in carload lots under ventilation or refrigeration, depending on the weather en route. About 22 days is the normal time in transit. The heads, when well refrigerated, will keep perfectly for 50 days, but many a car has rolled into New York "looking like a flower garden." Such growth en route of course spoils the heads and ruins their sale. During the war, and especially in 1917-18 season, it took 36 to 43 days to carry cauliflower to New York. With imperfect care en route, growers suffered heavy losses. Williams Bros., who that year shipped 50 carloads, plowed under 50 acres because they couldn't sell it for enough to pay the cutters. The pickle makers offered prices so low that they wouldn't pay for the hauling. Yet, with all the risk of such disastrous years, Williams Bros., in their best years, never netted above 10 per cent on their investments after paying the expenses of production. Most growers borrow money to help bring their crops to maturity and market. For this money they pay seven and eight per cent interest where the bankers are satisfied as to the personal reliability of the man even in event of crop losses.

Growing Conditions.

Any good soil will grow cauliflower. This statement was repeated by Mr. Williams. But he emphasized and repeated the fact that cauliflower must have all the moisture it wants immediately when it shows the need. A day or two later will not do—the heads would be stunted. Water could be run between the rows every day for a month and not damage the plants if none is left standing on the

surface.

But conditions and seasons of planting make a virtue out of the varied soil conditions in the Los Angeles district. For summer transplanting, adobe gives the best results, partly because it holds moisture longer, and partly perhaps because it does not heat so deeply during the day. Cauliflower transplanted into sand in the heat of summer is very likely to make a poor stand even though plenty of moisture is supplied. Many plants rot off at the surface of the ground. Then if not enough water is applied, the hot sun on exposed light soil stunts the heads that attempt to develop. It makes no difference how fine are the plants you set out, they must not be neglected for a day when they need anything.

Williams Bros.' early crop from seed planted in June and transplanted in July onto heavy ground was three feet tall September 30 with many leaves 14 inches wide, growing so thick that a horse could scarce get through them and the rows could not be distinguished. Still, the best crops they ever grew were on medium loam.

The average cauliflower field shows great variation in thrift of the plants. We were easily shown the difference between plants which showed they had never lacked anything, and other plants of probably equal weight of leaves which were pointed out as defectives. The thrifty plants had big flat leaves about eight inches across and two feet long 70 days from planting of the seed. The others had more leaves, smaller, less uniform in shape.

Growing Good Seedlings.

The best seedbed is a rich loam. Six acres are required to produce plants for 150 acres in order to allow for losses, poor plants, poor stand, etc.

It is a good idea to start preparation of the seedbed in the spring. The first operation is to get it as nearly level as possible, for it must be irrigated with a sheet of water that has the same depth all over and does not miss high spots nor stand in low spots. Irrigate after leveling and then plow. If weather and time permit, irrigate and cultivate several times at intervals to sprout all the weed seed possible. Plow after the first irrigation and cultivate and pack the ground into the finest, most level seedbed practicable. Then sow for the early crop in Los Angeles county about June or July—later for the other crops. Drill the seed with a drill that does not require horses, for horses make holes in the ground. It is a well nigh universal mistake to put the seedling rows too close together. They should be no less than twelve inches apart. If closer together, they do not make the best plants, and a poor cauliflower plant is a bad investment however good the later care given it.

Williams Bros. planted 50 pounds of seed which could not be bought at less than \$10 per pound. They have raised most of their own seed and will raise all they need this year. Fifty pounds would transplant a thousand acres, if all went well, but provision must be made for at least twice as many seedlings as are to be trans-

planted. Several irrigations between the rows and cultivation with hand cultivators must follow the planting.

Transplanting and Culture.

Only the best ones are selected for transplanting to the fields. Furrows are laid out 32 to 36 inches apart, and a man walks down each one dropping plants about 30 inches to 36 inches apart. A man with a hand hoe follows and plants as fast as the first one drops. He lays a plant on one side of the furrow with a motion of one hand and covers it with two motions of the hoe in the other hand. Water is started down the furrow directly behind the planters to avoid setting back the plants due to drying out of the roots. Three to five irrigations follow before cultivation can be done, for 90 per cent of all the planting is done before the rains, and at this stage the seedlings must not be set back.

Cultivations follow, each one throwing some dirt into the furrow so that the third cultivation leaves the plants on a ridge with their roots deep buried from summer heat. Irrigation alternates with cultivation. After about the third cultivation, as an average, water is given as it is needed, but cultivation should cease. Leaves shade the ground and help prevent baking. Feeder roots ("breathing cells") grow from the stalks near the surface; and they must not be destroyed.

Packing and marketing is another story. Profits and loss would make many more stories that would justify growers in getting an occasional bonanza year.

Alfalfa Warehouses Will Stabilize Prices

(Written for Pacific Rural Press by Mgr. G. H. Emery, Alfalfa Growers of California, Inc.)

The Alfalfa Growers of California, Inc., the state-wide co-operative association of growers of alfalfa and milo maize, report splendid progress both in organization and extension work and in the actual sales service rendered to members.

The activities of the Association in assisting and organizing warehouse facilities in the producing centers for taking care of the milo maize crop have met hearty approval and co-operation on the part of the growers. This sort of constructive work is concrete evidence to the grower of the inestimable value of the association, and the whole membership is becoming imbued with the spirit of co-operation and beginning to realize that the possibilities and abilities of a strong, close-knit, aggressive association are greater than the scope of any privately-owned distributing concern could possibly be.

Before another season has rolled round the whole membership will have been provided warehouse facilities, which will prevent waste and make unnecessary the usual sacrifices of the growers in the immediate sale of their crops. One of the great handicaps of past methods has been this necessity for immediate sale on the part of many growers, resulting in exorbitant and useless profit to the dealers and warehousemen. Savings in distributing cost are for the benefit of producer and consumer.

Maximum Selling Cost \$1 a Ton.

Distributing under the association plan is at cost, not to exceed \$1 per ton. In past practice every cost and profit of the dealer and speculator has been an actual part of the selling cost, and what these costs and profits have been no one knows, but it is needless to say that \$1 per ton would be but a mighty small fraction. Economy and efficiency are the watchwords of modern business; waste is deplorable, whether it be loss and destruction of the product itself, unfair grading, or useless profits, or useless movement. The right way is the straightest line between producer and consumer, and by this is meant the shortest haul through direct sale. It is not

possible to work such a revolution overnight, and certain services of dealers will long be required, but that purely speculative element which adds to the cost without contributing a real service in the process of distribution and sale will quickly be eliminated.

The Association is not competitive. It is in the business of serving the producer by serving the consumer; it has one reason for its existence, and that is best expressed in the word "Service." The market quotation is seldom a true index to what the producer receives; the Association is not directly interested in quotations, it is interested in net results to members. Quotations can be oftentimes manipulated, but when the cost of the product is known and a price which is necessary to be fair is known, then it is the business of the association to prove the right of the producer to receive that price and to get it. The Association proposes to forestall and prevent the exploitation of its members, it proposes to avoid profitless competition—if the so-called market price is too low, if it will not permit a fair profit above cost of production, then Association products will be withheld from market, and facilities for this will be provided in all dis-

tricts.

Gamble Taken Out of Production.

Conservation of every seasonal crop is an economic necessity. A product that has intrinsic value, actual food elements of definite value, should not vary radically in price in the market. In final analysis this variation should move in harmony with general commodity prices. If the production is seasonal and the consumption constant then conservation and storage of excess should later supply the constant demand. A fluctuating market with wide and sudden changes is the joy of the speculator and the despair of the producer. Co-operative marketing will take the gamble out of production, by applying factory methods to production and business system to distribution and sale.

Growers are studying the principles of co-operation as applied to these two crops, alfalfa and milo, and today nearly 2,000 producers are enlisted in this association. The service is growing with the growth of membership, the results are becoming more apparent as the weight of influence is felt, and the satisfaction of the membership is resulting in a rapidly growing enrollment.

Potato Prices Advanced 1994 Per Cent

(Written for Pacific Rural Press by Albert Lindley, Farm Owners' and Operators' Assn.)

Almost daily, through the metropolitan press, charges are given publicity that, to a great extent, the high prices for the necessities of life may be traced to the "greed of the farmer." To establish the falsity of the charge, the California division of the Farm Owners' & Operators' Association sent out from its headquarters in Stockton several of its best men into the markets of San Francisco to buy and sell the products of the farmer wherever in that city they might be sold or purchased, wholesale or retail, or prepared for use in the hotels and restaurants. These men were instructed to submit their reports on positive and proven facts only. They were first

to obtain the contracts for the sale of his products by the farmer to the produce dealer, and then follow that product through each successive agency until it was in the hands or stomach of the "ultimate consumer." Proceeding under these instructions, contracts of sale were obtained covering a shipment of potatoes from a delta farm on the San Joaquin river below Stockton. Before following this shipment through to the consumer it was discovered by the investigators that the regular printed form of contracts supplied by the produce dealer, and which must be signed by the farmer if he would sell his potatoes to any member of the San Francisco Potato (Continued on page 636.)

State Fruit Growers' Convention

This convention, which meets at Chico (Butte county), November 10-15, under the auspices of the State Department of Agriculture, provides the following program:

November 10 and 11—Meetings for County Horticultural Commissioners.

November 12—"California Agriculture: Its Importance; the Things That Threaten It; the Need for Protection," by James Mills, Hamilton City; "Accomplishments and Possibilities of Co-operation," by George W. Pierce, President of the California Almond Growers' Exchange; "California Peach Growers, Inc.," by F. H. Wilson, President; "California Associated Raisin Company," by Wylie M. Giffen, President; "California Pear Growers' Association," by Frank T. Swett, President; "California Fruit Growers' Exchange," by G. Harold Powell, Manager; Discussion, led by George C. Roeding, Fresno; "Standard Pack and Packages," Chas. E. Virden, Sacramento, followed by discussion; "Fruit Packing Demonstration," by Dr. W. L. Howard and Prof. W. P. Tufts, University Farm, Davis; "The Status of the Rice Growers' Association," by J. H. Stevens, President; "The Function of the Junior College in Its Relation to Agriculture," by Dr. E. B. Copeland, Chico; Will C. Wood, Sacramento and Elizabeth Hughes of Oroville.

November 13—Entire day at Oroville, entailing a trip through the orange and olive groves of the district; also the canneries and packing plants.

"Packing Oranges and Maturity Standards," by F. J. Mason, Suisun; "Packing Ripe Olives," by E. W. Ehmann, Oroville; "Olive Culture with Special Reference to Pruning," by Prof. F. T. Bioletti, U. C., Berkeley. All subjects followed by discussions.

November 14—"The Effects of Irrigation, Pruning and Spraying as Factors in Frost Control," by Dr. J. C. Whitten, Berkeley; "Irrigation," Prof. F. J. Viehmeyer; "Red Spider," by E. R. De Ong; "Evaporators for Fruit Drying," E. M. Sheehan, with discussion led by Prof. W. V. Cruess; "Standardization and the Consumer," A. S. Hoyt; "Community Canneries," by Ralph W. Crary. Banquet at which the speakers will be Col. Harris Weinstock, State Market Director and Chas. Bentley of San Francisco.

November 15—Entire day at Durham, State Land Settlement, 7 miles south of Chico. Address, "Live Problems in American Agricultural Development," by Dr. Elwood Meade; Professor H. E. Van Norman; Al. Lindley, Stockton; Col. John P. Irish, Oakland. Followed by discussion.

Automobile tour of inspection of the Durham State Land Settlement.

Here and There in the Fruit Business

Profitable Orchard in Humboldt Co.

J. F. Benton will net \$5,000 from his 12 acres of apples near Rohnerville (Humboldt county) this year, the particulars of which may be both interesting and instructive. There will be well over 200 tons of apples, which Mr. Benton sold to the local drier at \$35 a ton "orchard run," picked and stacked at the roadside. The apples are clean—no worms and practically no scab, and the orchard would pack 75 per cent California Fancy. There will be 400 boxes of Bellflowers, 1800 of Greenings, 2000 of Red Pears, 800 Minklers, 400 Spitzenbergs, and 200 Wagners—practically all A-1 keepers and of rich glowing color. Our desire is to show that, given good transportation facilities, such a handsome crop of apples could have been packed to net 50 per cent more than this sum. Organization on the part of growers alone can get them anywhere in competition with organized commodities. The difficulty is that nobody wants to launch out much till they can see a chance of getting their stuff to market at reasonable rates and without an expensive fight. The writer sent an enquirer, who wanted 300 tons of apples, to Humboldt county this year with the assurance that he could buy the fruit. The freight rates were approximately \$20 a ton to his station in Sonoma county, and it knocked the deal. At present, the only thing to be done seems to be to establish individual or community evaporators, such as they have in the Mattole valley and let it go at that. But the gods only help those who help themselves, and even the gods like to draw a crowd.

Huckleberries Are Popular.

Huckleberries have been in greater demand than ever on the San Francisco market, although the supply has been above normal. Shipments from the northern counties have yielded 17 to 18 cents a pound. Huckleberries are indigenous to the thin yellow "prairie" land of the Mendocino coast where they grow among the rhododendrons and scrub cedars. Many more could be picked and shipped if there were more hands to do it. Shipments out have to be made by express or parcels post. This is an interesting region for the auto tourist to visit in summer.

A Good Apple, Well Packed.

In the market, if you sell ungraded or mixed fruit, you are paid the price of the lowest grade for the whole lot. We know one man who keeps what he calls a "Free Market," whose whole business is repacking. He gets more

for the culls than the farmer gets for the mixture. Because the culls look real good when they are graded and well packed. We heard of another man who bought quantities of mixed apples, repacked them, and sold them to the trade at two and a half times as much as the grower could get, though they contained 13 per cent of culls. That looks big, doesn't it—to make 150 per cent on your money in the pack? It demonstrates the value of standardization to meet the demands of the market. Every man that has an acre of apples should learn standard methods of packing and what the law requires. And having learned these methods he should put them faithfully into practice. Some small mountain sections that grow the choicest apples, get the bottom price because of a poor pack.

An Elaborate Prune Drier.

Ninety tons of prunes were cured in

the new drier on Mrs. Gertrude Cochran's ranch at Healdsburg (Sonoma county)—a Perfection. The operation of curing occupied an average of from ten to twelve hours per charge. We saw the cured prunes which were a fine quality of fruit. This drier consists of two ranges of compartments with a tunnel between in which green prunes are stacked for the first break. They are run in on cars the whole length. This tunnel is to utilize the returning heated air after it has passed through the drying chambers. The foreman told us that temperatures were maintained at 160 to 180 degrees—a heat which would be enough to caramelize prunes without the returning moist air. This drier takes about 12 green tons to a charge. There are 20 compartments holding 21 8-foot trays each. There is a 60-inch blast fan and a 72-inch vacuum fan, running at about 500 revolutions per minute. Stove distillate is used at the rate of 8 gallons an hour and costs 8 cents a gallon. The invest-

ment of the plant expense is an item that has to be considered in capacity tonnage.

A Profitable Pioneer Peach Tree.

Twelve dollars worth of Lord peaches were sold the past season from one of the first peach trees planted in San Bernardino county. It is now owned by Geo. M. Cooley. This tree bears fruit that is lovely to see, luscious to taste, and whose fragrance is noticeable "a quarter of a mile away." The tree grew to a foot diameter and declined, apparently due to old age. Mr. Cooley cut back, severely, part of the tree each year. In three years he had brought it back to the heavy bearing mentioned and the new growth promise as well for next year.

If we want to warm ourselves by the glow of prosperity we had better get to sawing wood right now.

This is a good time so save or spend on improvements. The sun can't shine forever.

Orchard to Be Ruined in Three Years

(Written for Pacific Rural Press by Philip O. Keeney, Orland.)

In your issue of July 26 you answered a question of mine about orchard cultivation. I told you I was going to adopt a policy which would make my neighbors think I ought to have a guardian appointed, and you said you could judge better about that if I told you what I proposed to do. Here it is:

Most of the orchards in the "Orland System" are plowed each spring, but many are being double-disked instead of plowed. Either of these operations turns under the green winter growth. The orchards are irrigated during the summer at least twice and the majority more than twice. After each irrigation the orchard is cultivated thoroughly to hold the moisture. In this cultivation everything that is growing is destroyed, if possible, thereby cultivating the orchard as clean as possible. If any cleaner cultivation could be practiced I would like to see it. This deep stirring of the ground several times each summer helps to destroy the humus. I believe that if the orchard is only disked in the spring it will only be a few years before the humus is absolutely gone, because disking brings up no new soil from year to year. A well kept, healthy orchard is a pleasing sight to the eye of a newcomer.

Bur clover is indigenous to this soil, but its growth depends on the season. Some years it will make a wonderful growth, but this growth occurs in late March and early April, which is too late to plow under. I inoculated Whippoorwill cow-peas and planted 15 acres this year, but the ground is too poor to make them succeed. Wherever there is the least particle of manure the peas are splendid. The roots are well-covered with nodules irrespective of the size of the plant. I was in hopes this would solve my soil troubles, but a little humus is needed before cow-peas will grow. If

I had a full pocket-book I would keep planting vetches, etc., because I am certain they would grow well after a few years.

I intend to plant my olive orchard in September with barley and vetch. This crop I will let mature, and next year, spring of 1920, cut it down, leaving everything on the ground for a mulch. I find that the more water my olive trees get the better they like it, and I shall mulch my furrows with straw from the barley and irrigate as often as possible. In the fall I shall thoroughly disk all the litter remaining on the ground and repeat a similar course.

While I am doing this my orchard will look as if it were going to wrack and ruin and I can hear real estate dealers telling their clients that "there is an orchard sadly neglected."

I have given this matter careful consideration and the conclusions are these: First, give the trees all the water they will stand until humus can be supplied. Second, a mature crop, disked or plowed under, is much more beneficial to this soil than a green crop. Third, mulch your orchard with straw and as long as you cannot get the straw, raise it yourself.

My orchard is going to be neglected the next three years as far as plowing and cultivating are concerned, but the trees are going to have plenty of drinks and the soil is going to be getting humus. Do I need a guardian?

[You are starting on a course which will be of incalculable value as a demonstration. You will give your orchard a soil like that of a garden. You can do it for two reasons: first, because you have water enough to do it; second, because your Orland soil will take water like a fish and never hold a drop too much of it. You do not need a guardian, but we shall stick around and try to get the job of administering your estate.—Editor.]

HORTICULTURAL JOTTINGS.

Fruit shipments from the Vaca Valley totalled 1,045 carloads this year.

It is stated that Henry Nelson planted the first orange tree in Chico in 1852. He claims to have purchased the tree from a sailor for six dollars, and that it yields a wonderful crop of oranges each year.

Four hundred and sixty-five dollars per ton was paid to a Santa Rosa prune grower for his Imperial prunes this year. Experts state they have never seen such large ones; as twenty-four of these prunes weighed one pound.

The three principal orchard crops of the Chico district this year, worth practically \$3,000,000 to the growers, are almonds, prunes, and peaches. The crop estimates and valuations

are: almonds, 2,000 tons, average price 25 cents a pound, value \$1,000,000. Prunes, 4,500 tons, average price 12½ cents a pound, value \$1,250,000. Peaches 2,000 tons, average price 17½ cents a pound, value \$700,000.

A. B. Caldwell of Soulsbyville has several acres of 50-year-old Winesap apple trees that will average about 25 boxes to the tree this year, giving an income of \$2500 per acre. This is the result of thorough spraying, pruning and orchard management.

Great care should be given to young fig trees now to protect them against the early frost. As trees usually freeze worst just above the ground, that part should be well wrapped with corn stalks or milo maize stalks. Injury to the tips is not serious.

It is reported from Porterville that \$2.80 a box f. o. b. is being offered for Navel oranges of the coming crop by speculative buyers, they presenting labor unrest and car shortage as an inducement for the grower to relieve himself from risk by selling outright.

The hard working cannery-committee of the Salinas district are deserving of great praise for the way they accomplished what they went after in regard to the Salinas cannery. This means that Salinas will be on the map in the canning industry.

There have recently been 50 prosecutions in Oakland for violations of the fresh fruit standardization laws. The minimum penalty is \$50 for each conviction. It is a misdemeanor to "offer for sale apples which are not free from insect pests." Only spraying and doing it right will insure this.

California fancy stock grapes are being purchased by eastern buyers at the rate of \$3,200 a car. C. B. Bills of the Pioneer Fruit Company said today: "The growers are receiving for their fruit on the cars from \$1.50 to \$2.00 a crate, according to quality." The total fruit shipments for the season now exceed those of last year by about 2,000 cars. The grapes exceed last year's record by 1,600 cars. Here is a record to date. The shipment for 1918 was: Cherries, 351 cars; apricots, 433½ cars; peaches, 2,662 cars; plums, 2,389½ cars; pears, 4,424

[This is one of a series]

Early Fall

The crop is in, the leaves are off,
Now is the time to spray.
Every day's delay toughens the scale.
Your trees have served you, now
Is the time to serve them,—give them a rest;
Save their strength that the scale is sapping.

ZENO

Will kill the scale;
Destroy the eggs of millions of future insects,
Such as aphids and red spider; and will
Stimulate and renovate the tree.

ZENO

Is an internationally used
Miscible oil spray, and these are reasons why
It has proved the best by years of test.

Cutting Off the Trees' Feeding Roots

(Written for Pacific Rural Press by Jno. J. Fox.)

We once asked a prune grower what his object was in plowing his orchard so shallow in the spring. He had fine stock that walked right along with the plow without apparent exertion, yet he only shaved off from two to three inches, cutting through the grass roots and not turning enough to bury a fair cover crop. The ground looked fine when it was done. There were no large clods, and a roller run over the ground to wind up which put a billiard-table finish on the orchard. Later cultivations were done with a weighted harrow which, of course, reduced the mulch each time instead of maintaining what there was of it.

His reply to our question was, that if he plowed deeper he cut off too many of the fine feeding roots of the tree, and thereby reduced its vitality and powers of reproduction. He had more or less of a cover crop to plow under each year; fertilized well and got good results from his trees—still does. He sprays faithfully, and cuts out his dead wood, but—we maintain that he had to cut out too much each year.

What Was the Reason?

He had splendid river bottom soil, ample rainfall any year to insure his crop and excellent orchard management in every respect that could be seen, except more thorough tillage. We then suggested that it might be more profitable to plow five inches deep instead of two or three even if a thin mat of feeding roots were shaved off. For it is generally considered better to cut them off than to let them dry out and stay on when they not only cease to function for the trees' benefit, but transpire moisture from the tree itself.

If the ground remains undisturbed, the feeding roots of a tree gravitate toward the grass roots during the moist warm growing season. Failing a good mulch of some kind or frequent application of moisture and stirring, those surface roots will surely dry out. The more they dry out the more results of such starvation will be observed in the tree tops. And the principal cause of dieback in otherwise healthy trees is lack of sufficient moisture to support the head.

Feeding Roots Are Reproduced Rapidly.

With the exception of the cherry tree, feeding roots are reproduced with great rapidity during the growing season, even after they have been sliced off with the plow. The cherry instead, if a root the size of your little finger is sliced off near the surface, a sucker is likely to appear, but

with other trees new feeding roots are very rapidly formed. Take a lemon tree for instance and make a basin round it and fill the basin with manure. Water this down until it forms a mat-like mulch and then take a fork and lift it up. It is hard to tell where the mulch leaves off and the mat of roots begins. Now let that mulch dry out till no moisture remains in it—perhaps only one week longer than you ought to in hot weather, and decide for yourself how to handle it. For those rootlets which have commenced to dry are exhaling moisture instead of supplying it.

How Deep Shall I Plow Then?

That is for every man to decide according to the best results attained in his own locality and on his own character of soil—only, it must be more than two or three inches. On heavy soil few men can maintain over a five-inch mulch without heavy tools and a tractor, neither does it seem necessary. A four-inch mulch is a mighty good average to hold on a strong loam.

Nothing appears to be gained by plowing too deeply in an orchard, though it will probably benefit by a few rounds with a subsoiler every few years or when a plowsole forms—so as to keep the drainage in condition. But five or six inches of plowed ground is needed to come out with a four-inch mulch. Sandy soil in hot sections may be left ridged as the cultivator leaves it instead of being harrowed or rolled, as it does not absorb heat so readily.

Six Inches of Plowing Is Safe.

Any surface roots that are cut off by plowing to a depth of six inches can safely be dispensed with, with the assurance that they will quickly be replaced at a depth from the surface that will reduce possible injury by drought or burning. Having obtained a good mulch that is dry enough not to settle back too quickly, let it alone for a while. Probably all of us have suffered from "overwork" on our land—corn men can tell you all about that.

Now as to the "bleeding of the rootlets" from being cut off. It does not amount to a row of pins. Why, an average vine pruned early in April, will bleed more from its spurs than your whole tree from its myriad rootlets being cut, yet it has been proved to suffer no injury therefrom. And it is rare to get the cultivator down any deeper or as deep as the plow ran. Doubtless it is better to cut the little roots off before the chief growing period is reached, if possible, because it always pays to avoid waste of energy, even on the part of a tree.

California Fancy Apple Pack

(Written for Pacific Rural Press.)

Because so many small growers all over the State innocently violate the Standardization Act as amended in 1919 and suffer loss and inconvenience therefrom, we publish below the requirements of the act:

The box must be a Standard box, measuring 10½ inches deep, 11½ inches wide and 18 inches long—inside measurements.

The apples must be: (1) well grown; (2), properly matured; (3) one variety only; (4) hand-picked; (5) stems retained (except Gravensteins); (6) well colored and normally shaped for variety and locality; (7) uniform in size; (8) well packed.

They must be free from insect pests and diseases, visible rot, visible dry rot, visible Baldwin spot, insect bites, bruises, frost marks and virtually free from dirt.

A variation in size not to exceed three-eighths of an inch, measured through the widest portion of cross section, shall be allowed. No apples less than 2¼ inches, similarly measured, allowed in "California Fancy," except Lady and Winesap apples, when the smallest size shall be two inches.

Three per cent of any one defect and not to exceed ten per cent of total defects shall be allowed. An exception will be made of bruises necessarily caused in packing.

A variation of five apples more or less than the number stated on the box will be allowed.

Box Marking.

Such a pack only may be marked "California Fancy." But they must also be marked on the ends as follows: Number of apples in the box or net weight; variety (or if variety is unknown, "Variety unknown," must appear on the box); name and address of packer or repacker; date when packed or repacked; no misleading statements.

B Grade.

These apples call for the same requirement as "California Fancy" except that in "B Grade" apples, insect bites which have healed in the process of maturing and which do not cause serious deformity and slightly misshapen apples shall be permitted; the stems need not be retained and color is not insisted on.

"Easy Digging—Eh?"

"Just put a couple o' shovelfulls of rich top soil in the hole and it'll be ready for the tree. A good shot with dynamite not only digs the hole but makes the ground around it as soft as a flower bed. And how the trees will grow in that mellow earth. They'll shoot up like weeds and be bearing before you know it. Nine-tenths of the work is done when you've blasted the holes with

HERCULES DYNAMITE

"It's great stuff—and I thank my stars I've learned to use it. I'm mighty glad, too, that when I started I didn't experiment—I sent to the Hercules Powder Co. for their book, 'Progressive Cultivation'. This book tells not only what dynamite will do, but how to use it to get the best results. —And I get pointers out of that book today, although I've been using dynamite for years.

"'Progressive Cultivation' is worth its weight in gold to any farmer or orchardist and they can get it free by signing and sending in the attached coupon."

TREE PLANTERS

The Fancher Creek Nurseries have played an important part in the production of fruit in this State. For 35 years we have made it our business to grow "True Trees," vigorous trees, well-rooted trees, trees that would bear.

Thousands of fruit growers owe their success to the fact that they planted "Fancher Creek" trees.

A SUGGESTION

A larger acreage should be planted to Nectarines. They are fine for either drying or shipping.

FIG GROWERS' FORTHCOMING MEETING.

(Written for Pacific Rural Press.)

The next meeting of the California Fig Growers' Association will probably be held shortly after the first of the year. An extensive exhibit is planned in connection therewith to comprise figs and fig products of every description. The processing industry is increasing to keep pace with the heavy new areas coming into bearing, and the fig industry is growing like the bloom of a century plant—right up and branching out.

The meeting of fig growers will be their big event of the year, for the best-informed men will be there to speak. The exhibit will be both instructive and of great advertising value. Various methods of canning, preserving, pickle and jam-making, syrup and candy-making will be shown by manufacturing concerns and canners as well as by individuals who can at home. All will be welcome with their exhibits, and now is the time to make a special effort to turn out something good, ready to exhibit when the time comes.

Building Up Markets.

California has competed with raisin, peach, prune and citrus growers of other countries; started under a handicap, and has come out a world-beater in every instance. Now she has to build up a large market for our figs and fig products for it will not be many years before we shall insist upon supplying the world's markets. To begin with, we have to establish our superiority in the Eastern markets. Quoting from a letter by I. J. Condit, the Secretary of the Association, and well-known authority, he says:

"One well-known importer and broker in Chicago wrote as follows in January, 1918: 'The Calimyrna fig, we think, in the opinion of the trade at large, compares very favorably with the Smyrna imported fig in quality and by many is preferred, because of the assumption that conditions in the packing plants in California are more hygienic than those existing abroad. The California Adriatic fig, as you know, has a poor flavor, and though it is largely used even in some instances for fancy packages that sell at high prices, it cannot, in our opinion, ever supplant the imported article except for manufacturing purposes because of its inferior flavor.'"

Must Improve Quality and Pack.

Another importer writes from New York city: "Summing the whole matter up in a few words we would suggest that the growers try to eliminate entirely the smut which unfortunately seems to be a condition in both Adriatics and Calimyrnas and endeavor to produce a fig with a thinner skin and increase the quality of actual meat inside."

Mr. Condit says: "There is no room for argument over the need for improvement in the California pack of dried figs." And it is to consummate such improvement that fig growers assemble in conclave. So much money is now invested in the industry and in a few years the tonnage will be growing in volume so rapidly that it is imperative that every grower of figs take an active interest and try to attend the fig meetings in person.

It is said that spraying fig-trees with whitewash before the buds break in spring is an aid in preventing the rotting of figs later. In any event it would protect the tree from possible sunburn and lime is cheap. A little tallow helps it to stick. Linseed oil is likely to kill the tree if used as a "sticker."

Why Mohawk Tires Do Not Deteriorate

Sometimes a tire will give a fair mileage if it is used up quickly, but deteriorates rapidly when the car is standing idle.

This may have been your experience. And you are not the only one to feel the loss—rubber deterioration is costing car owners millions annually.

This is particularly true of cars owned on farms where, of necessity, they stand idle for long periods at a time.

One thing to remember about Mohawk Tires is—they do not deteriorate.

Pure rubber, and a generous quantity of it, only is used to make them.

No "fillers," no shoddy, no rosin, no glue, no whitening—nothing that can deteriorate ever gets into them.

For that reason, you will find Mohawk Tires strong, tough and wear resisting season after season until they are entirely worn out.

Add to this advantage an extra ply of fabric in most sizes—hand-building by expert, veteran tire builders—and you will understand why Mohawks do give better mileage and why they do not rot when standing idle or lose their life when baked by the sun.

If you are like eighty-five out of a hundred motorists who use Mohawks, you will buy no other make of tire.

Plain or ribbed, cord or fabric tires and an extra ply, hand made, Ford size, too

Fresno Farm Bureau Picnic

(Written for Pacific Rural Press by O. J. Whitney.)

Co-operation is the big word in farming, particularly in California. Fresno, with its wonderful Associated Raisin Company and Peach Association, is away up in co-operation. Farm bureau work is just one form of co-operation, consequently it is not surprising that the annual picnic of the Fresno county farm bureau, on the Kearney ranch, October 30, should have co-operation as its keynote, and that the turnout should amount to a full 700 or 800 persons, in spite of the morning being windy and cold. The program included plenty talk, plenty grub, music, lots to see, lots to learn, and an election of officers. The talks were upon matters of most importance to Fresno farmers; the things to see, which were mostly parts of the Kearney ranch work, took in nearly every important crop of the county.

The talks included reports of accomplishments of the Farm Bureau for the year; an address by W. Flanners Setchell, president of the Valley Fruit Growers' Association, which has accomplished results of the highest interest and value in labor matters, and a discussion on farm management by S. P. Frisselle, manager of the ranch. Wylie Giffen, president of the raisin company, gave what was said by some to be the finest talk they had ever heard on co-operative marketing, and he emphasized particularly co-operation in hog auction sales!

Among the farm work activities were demonstrations of vineyard problems by A. E. Way on the Kearney experimental vineyard; demonstration of various field crops on the experiment station of the ranch, by J. A. Denny; judging of Poland China hogs under the auspices of the County Poland China association; judging of Durocs by the Duroc Association; judging of dairy cows by H. E. Vogel and R. N. Davis. It was said of one of these demonstrations by a visitor that it alone was worth the full day's work to him and the others were equal to it in their lines.

The Animal Husbandry class of Reedley high school worked the Babcock test all afternoon to show how boarder cows could be quickly detected; the fifty acre field of Pima cotton was shown by W. B. Camp of the U. S. Department of Agriculture; alfalfa hay was chopped and blown into the barns by the regular ranch methods; the fig processing plant explained in detail and other matters of importance seen and explained.

Farm Bureau Accomplishments.

The Fresno farm bureau has been in existence less than two and a half years, Farm Adviser Leroy Smith being the first adviser. He has three assistants: R. N. Davis, working with livestock; H. R. Keller upon horticultural matters; and J. W. Maston on agricultural clubs. Membership has ranged from 700 to 1400. There are 14 flourishing farm centers. Last year 14 special experiments in farm methods to discover best local practices were carried on, to say nothing about many private, informal experiments, of members. In one month 13 tree-pruning demonstrations were held with 457 fruit growers in attendance, and 18 vine-pruning demonstrations, with 884 vineyardists on hand to learn best methods. There are 250 boys and girls in the county working hard in agricultural clubs. Special success has followed this work.

The bureau has been working for permanent pruning experiments in different parts of the county with both trees and vines; it is working hard toward the elimination of scrub stock on the farms, with excellent success. The stock judging demonstrations at the picnic were a part of the work. In one demonstration a purebred animal in name and a scrub in fact was shown as a step in urging the purchase of quality animals in purebred ranks.

The bureau is making a special effort in the maintenance of soil fertility so that crops will both be large and permanently large. It is also working closely with the Valley Fruit Growers' Association in stabilizing

and improving labor conditions and supplies.

In the actual dollars and cents achievements, D. H. Bitner, general manager of the California Farm Bureau Auction Association, reported that the farm bureaus of the State had sold in the hog auctions from November 1, 1918, to October 31, 1919, 42,000 hogs, worth \$1,500,000. The Fresno bureau alone, beginning December 1, 1918, had sold \$150,000 worth of hogs by co-operative auction, and on August 1, 1919, a sale had achieved a price of \$21.30, the highest price ever obtained west of the Rockies. Total sales in the San Joaquin valley have numbered 155, with 4,300 owners participating—a sign of its public value and of the co-operative feature of it.

King Cotton in California.

New crops are good to be suspicious of, but there are exceptions. California boasts of her capacity to grow things that other states cannot and to grow them better. Just to grow cotton is one thing; to grow a surpassing fine and high-priced cotton is quite another thing. That is what is done on the Kearney ranch, with the long-stapled Pima strain of Egyptian cotton, worth now in the market 72 cents a pound and going a bale of 500 pounds to the acre. Get paper and pencil and do some figuring.

There are 50 acres of this on the Kearney ranch, now being harvested. It is grown on land formerly in alfalfa, pastured so long that Johnson grass was as rampant as only Johnson grass knows how to be. This hurt the stands in spots and fighting the grass kept down the yield, but the cotton over most of the field is going a bale to the acre. If planted early in April the maturing season is entirely long enough, and when frost and rain comes in the fall, harvesting can continue, for the cotton is unharmed, or hurt too little to count. Picking is easy, a fine work for women, who do well at it. Expert pickers are gathering 250 pounds a day; others from 150 to 175 a day, as a rule, and making big wages at 4 cents a pound—seed cotton. This has to be ginned and gives about 30 per cent lint; thus 1800 pounds of seed cotton will give approximately a 500-pound bale and 1300 pounds of seed, which is worth about \$60 per ton. Whatever the price of ordinary cotton is, this cotton with its long, strong fibre will be high, as there is little of it and the demand is large. Its fiber runs about 1½ to 1¾ inches long and common cotton about an inch less.

The Kearney ranch (owned by the University of California) is keeping the seed pure so that farmers can get the true Pima at cost price from it. Mr. Camp went through the whole field this spring, pulling up every plant that seemed the slightest off type, and there are no other cotton plants near to cross with it.

This cotton is suggested, not as a permanent crop, but as a money-maker in young orchards and vineyards while they are growing up. It is possible to ship the loose cotton to Bakersfield or Fresno gins for a hundred miles or more by auto truck and still to get nice profits. A number of farmers have done very well with it in young orchards.

Tractor Blows Hay into Barn.

The feed-chopping equipment came in for lots of interest. A tractor, belt connected to a feed cutter and a 22-inch blower, put several loads of alfalfa hay into the barn in short order, adding about a third to the value of the hay in the process. If a man could easily make his \$20 a ton hay worth \$30 a ton, he would think he was in luck, but that is what is done. According to Parker Frisselle, manager of the ranch, chopped hay has a third value more than ordinary loose hay. There is a great saving in feeding since the stock eat it absolutely clean and there is no waste. Also they digest it better and what they eat does them more good, so there is a double gain. Likewise there is a big gain in storage space. The hay falls from the pipe outlet in flakes, like a

(California)

lot of shingles, and packs itself as tight as baled hay. The barn can be filled to the ridge pole, which is a different thing from toiling and sweating with loose hay and only getting the barn partly full after all.

A crew of six men working on the outfit can put nearly five tons of hay into the barn in an hour at a cost of \$2.00 per ton or less. The size of this plant is larger than would be used on most ranches, but a smaller blower and chopper would do exactly the same work, only more slowly. It is a good line of work for silo fillers.

Fig Processing.

On the ranch is a power plant—very simple—for treating the figs produced before sulphuring and drying. The figs are not dipped at all, but the water is sprayed on them. There is a small cement tank, filled with slightly salted water. An electric motor drives a centrifugal pump that forces water from this to the figs in the form of a spray, washing all the dirt off them. The motor also runs a shaker, upon which the figs move from the hopper, through the spray, over the tank and on to the trays. All the handling the figs need is simply to have them shoved a few inches back from each end of the trays so that none will fall off. Then they go to the sulphuring house and from there to the dry yard. This method gives a product quite superior to dipped figs and the cost is only half of that of the former hand-dipping method.

All the figs produced are Adriatics, but the wind carries so many fig wasps across the ranch that a very high proportion of the figs are caprifigged and have a rich, syrupy quality that ordinary Adriatics do not have, though the difference is not great. One fig grower present mentioned that he could not get results caprifigging a single Adriatic fig in a Smyrna orchard, whatever the explanation is.

sweat boxes is practiced on the ranch. In fact, sweat boxes are used for everything possible and the only sacks handled are those for wheat that is marketed. In barley threshing, the grain drops into sweat boxes, which are only filled about three-fourths full, so that they will not spill in handling, and the barley is steamed and ground on the ranch under the same roof as the fig outfit, saving hauling to town and milling charges. By the bulk handling of everything in sweat boxes (barley is merely one crop mentioned), the boxes are used all the year round and not only for raisins and figs.

Alfalfa will come through the winter better and will contain fewer weeds in spring, if it is not pastured down to the bare crowns.

Significant Agricultural Pointers

Vetch or Fallow for Barley?

To the Editor: Would you advise inoculation of vetch and planting with barley to insure a barley crop? If so, what proportion of vetch seed and what of barley would you use. I have 35 acres from which I cut hay the past two years (2½ tons per acre this year). Would you advise summer fallow for this piece or would planting with inoculated vetch and barley give same results as summer fallow?—D. F. H., Dixon.

Inoculated vetch planted with barley give same results as summer fallow in the way of increased yield, but not for the same reason nor under the same conditions. The chief value of summer fallow is to save the rainfall of two winters for one crop. Where the lack of moisture limits a crop, summer fallow rightly handled will increase the yield per acre. Planting inoculated vetch and barley would not increase the amount of moisture.

But where one winter's rain is enough to produce as good a crop as you got in the second successive dry year, we would guess that you will have enough rain this year to produce a whale of a crop, provided other conditions are good. This is where inoculated vetch gets in its good work. It seems thoroughly demonstrated that legumes growing with cereals greatly increase the cereal growth and crop. It seems also demonstrated that where nitrogen in the soil is lacking and the particular bacteria that thrive on any legume are not already numerous, inoculation before planting that legume increases its growth. For a good feeding hay, mix vetch seed two pounds to barley one pound, and drill in moist ground not later than January at the rate of about 60 pounds per acre. This gives a large proportion of vetch to balance the high-carbohydrate barley hay. If you want to get almost pure barley hay, mix the seed half and half, or even less than half of vetch. Then the barley will be likely to smother the vetch before it gets too large, granting that the seed and conditions are good.

Making Cantaloupes Grow Early.

Cantaloupe growing in Imperial Valley involves some ingenuity. Of the 13,000 acres planted to this crop last year, it is estimated by a good authority, that a paper cap was put over every hill on 8,000 acres to protect it from the cold. Imperial Valley is not hot at all times and the earliness of its cantaloupes is not all due to climate. January is planting time for the acreage that is to be capped. A ridge for each row is provided for two purposes. Irrigation can be run between them without standing on the plants. The ridges are run east and west. The seeds are planted halfway up on the slope facing south. Caps of waxed or oiled paper are set over them until the plants are well up. Then the caps are turned back to protect the plants on the north side and expose them to the south. This treatment makes a much earlier crop than planting unprotected.

Disease-Free Potatoes, Higher Prices.

Housewives were much interested in the smooth clean-looking tubers in the certified seed-potato exhibit of the State Department of Agriculture at the San Joaquin county fair, October 6 to 11. They are more generally realizing that it is more economical to pay high prices for potatoes that do not lose a large percentage in peeling out rotten spots and worms than it is to buy cheap potatoes. For this reason, it is becoming recognized that the market will be better for uninfected potatoes. Such potatoes can be grown on clean land at as low a cost as diseased potatoes; for the increased yield more than compensates for the increased cost of seed and disease prevention. With a good market for clean potatoes, it pays to plant clean seed at a higher cost. This makes a market for seed potatoes certified by the State Department of Agriculture under the law passed by the latest Legislature. Raise certified seed potatoes!

Best Tomato Pack When Prices Low.

It is peculiar, yet reasonable, that when tomato prices are ruinously low, more care has to be taken in packing only firm, large, uniform fruit than when growers are getting better prices. Those who recognize this are the ones who sell when others cannot.

Salinas Beans Fine Quality.

The Salinas-territory bean crop this year is estimated by one of the leading warehouse men at about 65 per cent of the acreage of last year with the same yield per acre as last year. They are practically all under cover, though we saw one field of good beans unharvested October 28 in the upper part of the valley. There has been no rain damage, and if the market were stronger the growers would be feeling good. One grower near Chualar said the best offer he could get was 5½ cents for his small whites. He is still holding the crops of this season and last. On October 29 the warehouses of Salinas contained over 75,000 sacks of new beans and a third as many of last year's crop. One warehouse man estimated, after rather careful investigation, that 90 per cent of all the new beans are already in the warehouses, but it is hard to estimate how many are in ranchers' barns. A great deal of new machinery for harvesting has been put into use this season. This includes cutters, side-delivery rakes, and small threshers.

Implement for Better Summer Fallow.

Many a grain man has lost a large part of the benefit of summer fallowing because he left his field cloddy all summer. The clods dried out and left the subsoil exposed to the drying winds of summer. If the surface had been refined in spring and worked occasionally whenever it crusted or got weedy, it would have held moisture better and would have yielded more per acre. There are many implements built to make and maintain a surface soil-mulch. One of the newest of these has just been put on the California market by the International Harvester Co., though it has been in use on the Dakota and midwestern grain fields for some years. It consists of a double row of duck-foot cultivators each one in the rear row overlapping slightly on the ones in front of it. The frame is supported on two main wheels with a pair of smaller wheels in front. Shovels of several shapes are available and the tool is made in several sizes from six to twelve feet wide.

Make Those Waste Acres Productive

Those low spots that need filling, those rough acres that need leveling—they can be made as productive as the rest of your land by the use of a "Caterpillar" Land Leveler.

Batteries of five, or six, or more "Caterpillar" Tractors and Land Levelers are in successful use on some of the biggest reclamation operations in the country. Single outfits are doing equally good work, on a smaller scale, for individual ranchers or contractors.

A "Caterpillar" Land Leveler, pulled by a "Caterpillar" Tractor—the leveler is built in an 8-foot size for the "45" and an 11½-foot size for the "75"—will do this work for you in better shape and at less expense than any other equipment of animal or mechanical power.

The "Caterpillar" Land Leveler is simple, strong, easy to operate—there's practically nothing on it to break or get out of order—and it moves the earth; carries a big load and dumps it or spreads it—handles it just the way you want it handled.

If you have land that needs leveling, you need a "Caterpillar" Land Leveling outfit to do the work. Call or write, and let us give you more information about this tractor tool. Ask for booklet 422.

HARRON, RICKARD & McCONE
SAN FRANCISCO, LOS ANGELES

The Sweet Potato Crop is Short

The Sweet Potato Crop in Stanislaus county in the Turlock district north of Merced river is only 43 per cent to 45 per cent normal this year. This is due to the fact that the water in the Turlock irrigation district was turned off on July 10. South of Merced river, in the Livingston district, the crop is normal.

The Hunt-Jewett-Bontz Co., who are the largest sweet potato buyers in the Turlock district, give the following figures for grades of normal crop and present year crop:

Normal, 10% over size (Jumbo).
Normal, 70% market, this year 66.8%.
Normal, 10% cannery, this year 21.3%.
Normal, 10% hog feed, this year 11.9%.

The dehydrating plant of this company has a capacity of 100,000 bushels, or 220 cars. Every effort is

being made to fill the plant at this time. The quality and size of the sweet potatoes offered on contract is far from satisfactory, but in spite of this they expect to handle 100 cars of market quality during the present fresh market season.

The price has not dropped below three cents so far this season. Last year it dropped to two cents to the grower. There are three reasons for the price holding up this year: (1) Car shortage, lack of dry reefers. After November 1 no sweet potatoes can be shipped north unless packed in dry reefers, for fear of freezing. (2) Cannery contracts have already retired 40 per cent of the crop north of the river this year. (3) Crop failure. Only 1,000 cars have been grown in the entire district this year.

Chili Peppers in Los Angeles County

One of the finest fields of Chili peppers we saw this season in Southern California was six acres belonging to Frampton Bros. in Los Angeles county. Mr. Frampton pointed to a long row of poultry houses nearby and said that they explained a great deal of the thrift of the pepper plants. Two of the brothers furnish two others with green feed for the latter's poultry, and in return the manure is given for the peppers.

Save Their Own Seed.

Stakes beside many of the vines attracted our notice. They were low-down, squatted vines with an abundance of uniform-shaped-and-sized peppers already reddened. They were being saved for seed, which was to be picked early in October. Tall vines were not selected because the wind whips such vines more than is desirable. Seed last year cost \$5 an acre at

\$2.50 per pound. There is considerable blight in certain sections so that seed raising at home is a safeguard for next year's crop. This plant selection for seed is to continue throughout the future.

Culture and Harvesting.

Seed are planted in rows in the field and thinned with hoes rather than to raise plants in a seed bed and transplant them, on account of the labor. Early planting next year will permit replanting where a poor stand may be obtained. Three irrigations were given this season, just running water through the rows and turning it off. Too much water would turn the plants yellow.

The first picking came late in September. Contract prices at the factories were \$35 a ton as against \$28.75 last year and \$40 on the open market at picking time this year.

POTATOES ADVANCED 1994%.

(Continued from page 629.)

Dealers' Association, contained conditions entirely unfair to the farmer. **Contract Calls for 116-Pound Sack.**

This contract obligates the farmer to sell his product by the sack and to put not less than 116 pounds of potatoes in each; these to be delivered on the riverbank by the farmer and held there at his risk until picked up by the San Joaquin river boat for the San Francisco market.

The contract clearly sets forth that should the farmer find it necessary to go to law to enforce any part of the one-sided agreement, he must waive his legal rights, under the constitution, to bring action in the county where the farmer lives and, instead, carry his claim to the courts in the city where the dealer has his place of business. In fact, in this contract there are two pages of terms, conditions and qualifications under which the farmer is firmly bound; yet the dealer can refuse to accept these potatoes if for any reason by so doing his interests may be better served.

The contract called for the delivery of several hundred sacks of potatoes of at least 116 pounds each, at the purported market price of \$2.40 per sack.

Produce Dealer Reduces Sack Weight.

From the moment these potatoes were transferred from the river bank to the boat and thus passed from the farmer into possession of the produce dealer, they were never again bought or sold or thought of in terms of sacks of 116 pounds each. At once they were dealt with by the hundred pounds. Sixteen pounds, or more, on each sack became the dealer's "bit," and this before the potatoes had even reached the market where, ordinarily, his regular profits would be expected to begin. He bought by the sack and will sell by the hundredweight. For every seventh hundred pounds the farmer received no pay. The extra seventh hundred pounds came free of cost to the dealer, only to be paid for by the pound by the consumer. On a dollar and cent basis, and at the purported market price of \$2.40 per

sack, the farmer received (after losing the 16 pounds per sack overweight) but \$2.07 per hundred for his spuds, and he paid 16 cents for the sack container, leaving him, actually, \$1.91 per hundred to cover seed, labor interest, taxes and substantial loss as the seasons come and go through total or partial failure of crops or a glutted market.

Following these potatoes that have cost the dealer \$2.07 per hundred, down the river to his place of business, it was found that there is **No Such Thing as an Open Market for the Farmer's Products.**

The close organization maintained by the middlemen makes it practically impossible to buy from or sell to them except through designated channels and agencies, and at their established prices.

The first sale by the produce dealer of the potatoes traced by the investigators was to a retail dealer at \$2.50 per hundredweight, and the retail dealer sold them at the average rate of \$4.16 per hundred pounds, an advance of 116 per cent on the price paid to the farmer. In the city homes one pays \$4.16 for the same amount of potatoes for which the farmer, eighty miles away, received but \$1.91.

The rural hawkshaws, determined to trace the farmer's \$1.91 potatoes along every route that carried those potatoes to their final destination, now took up the cheaper restaurants in San Francisco, where they secured regular portions, boiled, baked, and otherwise. These they carefully matched for size and weight with the raw potatoes. This developed that they were served to many thousands daily at the price of \$11.42 per hundred pounds. This was an advance of 492 per cent over the \$1.91 received by the farmer at his ranch only eighty miles away.

Following this same process into the high-class cafes and hotels of San Francisco, it was found that these delta potatoes which brought the delta farmer only \$1.91 per hundred, were being served to patrons at a cost per portion that would aggregate \$40.00 per hundredweight or an advance of 1994 per cent.

Buy Real Protection

Dependability—that's what you want in the roofing that is between the weather and your valuable goods or crops or animals.

Good roofings like Ru-ber-oid and Malthoid resist sun and rain and give dependable protection for many years. That is why good roofing is the cheapest—it lasts long and no expensive repairs or replacing are necessary.

Ru-ber-oid and Malthoid are made of high-quality long-fibre felt, manufactured in our own mill. This felt is saturated and coated with highly waterproof and sun-resisting compositions, prepared in our own refinery. Ru-ber-oid and Malthoid will not rot or dry out, and are highly fire-resistant.

EACH THE STANDARD OF ITS KIND

AGONIZING ONION ARITHMETIC.

To the Editor: How does a multiplier onion multiply? Do you have to add anything to make a multiplier multiply? When you plant multiplier onions do you have to carry anything? Does a multiplier onion subtract anything from the soil? How fast can a multiplier onion multiply? Do multiplier onions multiply in rows or columns? Do multiplier onions multiply like rabbits? If you plant multiplier onions in a feather bed would they grow to be sets? When a multiplier onion is planted what does it multiply by? If you plant a set can the pesky thing ever be taught to multiply? What do you call those little onions that sometimes grow on the tops of the multiplier onions, are they the quotient? If you plant a little onion that grew on the top of a multiplier onion, will it grow a remainder? Does a multiplier onion divide before it begins to multiply, or does it multiply first? Why are multiplier onions always divided? The seed book says that multiplier onions don't use a table to multiply by but do better in a bed. What kind of bedding do you use? How is cow bedding? Is it better than horse bedding? After a multiplier onion multiplies then what does it do? What has a multiplier onion been doing before it got to be a multiplier onion? In your own words give a vivid picture of the evolution of the onion; commence at the seed, carry us through the various stages of multiplicity, dwell as long as you wish on the tops and finally lay before us a bushel basket full of beautiful Bermudas.

Yours with tears in my eyes,
Geo.

USE THE WEIGHTS AND MEASURES DEPARTMENT.

"The ground work of the department is to maintain accuracy in all weighing and measuring devices employed in the estimation of quantity by a uniform system of inspection to correct mechanical defects in apparatus and to eliminate from employment such as facilitate the perpetuation of fraud," writes State Superintendent of Weights and Measures, Chas. G. Johnson.

"Every weights and measures official must be fully informed on every phase of the service. He must be thoroughly familiar with his duties, strong and able to do the physical work, and above all he must be willing to work hard constantly, for there is no room in this service for laziness or incompetency.

"The service of this department is extended to every person without any cost. The compensation of the officials is fixed by law and they must be satisfied with this compensation.

Farmer's Scales Inspected Free.

"All wagon scales and apparatus employed by farmers are inspected regularly and at any time upon request. All complaints involving false weights, or such commercial misconduct as come within the purview of the laws, or complaints of violations of regulations, should be referred to the County Sealers, whose headquarters are in the county court houses.

"Upon receipt of requests for sev-

McKay Disc Plow and Subsoiler

Here is the plow that does just what is necessary to get good crops in California. It plows deep in the hardest ground.

Nothing Can Beat Improvement

LIKE THE fabled tortoise that outran the hare, persistent improvement in any service is bound to win—"Good enough" develops speed, but somehow never keeps going. And here you have one of the main reasons why Remington UMC modern guns and ammunition are so popular.

Remington UMC has contributed more improvements to the development of shooting than any other manufacturer. The most recent of them is the wonderful Wetproof process by which shot shells are for the first time made completely waterproof in body, crimp and top wad.

The hardest rain, the longest ducking, the worst of storage, can not affect the perfect shooting of the shot shells you buy if they are Remington UMC Wetproof—"Arrow" or "Nitro Club" loaded with smokeless or "New Club" with black powder.

They will not swell up, scuff, wilt at the crimp and jam. Instead, they will work through your modern Remington UMC autoloading or pump gun as perfectly as if taken direct from the loading machine. And fire just as surely and with the same always superior Remington UMC speed, pattern and penetration.

There are more than 82,700 leading sporting goods and hardware dealers in the United States who sell Remington UMC. That also means best service to shooters.

WOOLWORTH BUILDING NEW YORK

vice, or complaints, the sealer will make the necessary inspection or investigation and adjust the complaint if possible, and if necessary prosecute the violator.

"The County Sealer has at all times the fullest co-operation of the State Department, and he has positive instructions that all complaints must have his concern. During the past seven years I know of no complaint that has not been satisfactorily adjusted and every prosecution has been justified and sustained.

"Minor infractions or violations, due to ignorance or unattended with premeditated intentions, have been handled with tolerance and consideration. Education has been found to be the most practical policy to obtain compliance and co-operation.

"Owing to the commercial reforms that have been permanently established, eliminating vicious practices, the faith of the farmer is justified in this department, which guarantees to him the protection of a square deal.

"The regulation of the warehousemen, the development of the public weighmaster, the inspection of weighing apparatus, all tend towards honesty and accuracy. This constitutes the sum total of the purposes of this department.

"If there are avenues in which this department can express itself with greater usefulness and service to the farmers, they have but to command me. If there is prejudice or any misunderstanding on the part of the farmers regarding the policies or purposes of this service, I want their honest criticism."

FALL PLANTING OF

ALFALFA

Fall
Planting
of
Alfalfa

BOMBERGER
SEED COMPANY
MODESTO, CAL.

Surprising results have been secured by fall seeding under the proper conditions. Fall-sown alfalfa has shown a growth the next season after planting nearly as heavy as two-year-old alfalfa.

Notables at California International Show

Written for Pacific Rural Press by Thos. F. McConnell.

Cartoons drawn especially for the Pacific Rural Press by Elwood M. Albright.

It was not only a great stock show, but prominent breeders from all up and down the Pacific Coast were present inspecting the stock, attending the horse show and the various meetings and events throughout the week.

Practically all classes from the great draft horse to the economical milk goat and rabbit were filled, some of them to overflowing. It is hard to say which of the several departments were the best and no doubt all were in the eyes of the breeders in that department.

The Holstein-Friesian exhibit was pronounced by unprejudiced judges to be the greatest on the Coast this year. At the State Fair this year it was thought that the showing of this breed would not or even could not

ship on carlots and on pen of three barrows by this oldest of breeds of swine.

Awards in the Fat Cattle Division, California International.

To the University of California went the premier honor of the fat cattle division of the California International Live Stock Show, winning the grand champion of the show in this department with California Perfect Lady, a cross-bred heifer calved September 15, 1918, sired by Prince Lad 11th, a purebred Hereford, and out of California Lulu, a purebred Aberdeen-Angus cow. The same institution has the reserve grand champion in the purebred Angus steer, U. C. Jock 3rd.

Dean C. F. Curtiss, of the Iowa State College of Ames, Ia., who judged the fat cattle, paid a high tribute to this department of the show, saying that as a whole it was the best of anything he has seen, and the dean has visited every big show of the East and Central West this year.

"This has been the highest class of any show," said Curtiss, "and the grand champion is of outstanding excellence. I don't know when I have seen her equal in quality, and maturity at her age—beef type considered. Rarely has anything of her equal been led into the show ring. I consider her better than the fat steer the University of California won with at the Chicago International. At least, I surely believe that she will kill out better."

The complete awards in the fat cattle division, which are the cattle judged solely as fit for the butcher and not on points as to breeding animals, are as follows:

FAT CATTLE.

Shorthorns.

Yearling steer, spayed or martin heifer.—1st. Ormondale Co., Redwood City; 2nd. T. S. Glide, Davis; 3rd. Thomas D. Miller, Hollister. Calf steer, spayed or martin heifer.—1st. University of California, Davis, on Calif. Majestic; 2nd. Henry M. Elberg, Woodland. Champion, University of Calif. on Calif. Majestic. Reserve Champion, Elberg on Roselawn Jock.

Herefords.

Yearling steer.—1st. University of Calif. on Calif. Prince Duke. Champion—Univ. of Calif. on Calif. Prince Duke.

Aberdeen-Angus.

Yearling steer.—1st and 2nd. University of Calif. on U. C. Jock 3rd. and Calif. Thicket 3rd. Calf Steer.—1st. University of Calif. on U. C. Jock 4th. 2nd and 3rd. Congdon and Battles, Yakima, Wash., on Ericman C. B. 2nd. and Ericman C. B. 3rd.

FRANK MORRIS
Frank Morris knows that keeping tabs on production pays.

Lot of 3 head.—1st and 2nd. University of California. Champion and Reserve Champion—University of Calif. on U. C. Jock 4th and U. C. Jock 3rd.

Grades and Cross-Breds.

Yearling steer.—1st and 2nd. Univ. of Calif. on Calif. Grizzly and Calif. Peer. Calf steer or heifer.—1st. Univ. of Calif. on Calif. Perfect Lady.

Lot of 3 head—Univ. of Calif.

Champion and Reserve Champion—Univ. of Calif. on Calif. Perfect Lady and Calif. Grizzly.

Any Breed.

Champion and Reserve Champion yearling steer.—Univ. of Calif. on U. C. Jock 3rd and Calif. Grizzly.

Champion and Reserve Champion steer or heifer calf—Univ. of Calif. on Calif. Perfect Lady, and Calif. Majestic.

All Breeds, Grades and Crosses.

Grand Champion and Reserve Grand Champion steer or heifer of the show—Univ. of Calif. on Calif. Perfect Lady, and U. C. Jock 3rd.

Shorthorn Cattle Awards.

If the shades of Bates, Booth and Cruickshank witnessed the exhibit of the Shorthorns at the California International the past week, they certainly realized that their pioneer

work in establishing this great breed was not in vain. It means much to the beef cattle industry of the Pacific slope that such a showing of the "reds, whites and roans" could be gathered from within the confines of the State of California. It is true that the foundation of some of these herds dates back over half a century, but from a standpoint of breeding Shorthorns from the intensive side, the business is not of such long standing.

At first it was not considered worth while to keep the stock registered, but

F. M. Johnson believes the Durcos are best.

purebred cows and bulls were purchased and turned loose on the range from which to grow range or grass-fed beef, never thinking that raising registered stock for breeding would ever pay in California. Now we are finding a home market for large numbers of purebred beef sires and females, but we are also finding a market in South America and the islands of the Pacific. Such exhibitions as this was cannot help but stimulate this trade.

Judge, W. H. Pew, Ravenna, Ohio.

Exhibitors: H. M. Elberg, Woodland; Ormondale Company, Redwood City; Fair Oaks Ranch, Willits; Pacheco Cattle Co., Hollister; Wm. A. Bond, Newark; T. S. Glide, Davis; Estate of Thos. B. Dibblee, Lompoc; Thos. T. Miller, Hollister; University of California, Davis; Caledonia Farms, San Francisco and Sacramento.

Hereford Cattle Awards.

The exhibit of Herefords is one that would be so far as quality is considered, excellent anywhere. The outstanding feature of the show, so far as one herd is concerned, was the Hereford Corporation of Wyoming, getting both grand championships and many other prizes. The herds within the state also made a most excellent showing. Mission San Jose Herd getting two firsts with other awards and the Veramont herd, owned by H. M. Barngrover of Santa Clara made a very creditable showing. It would hardly be right not to mention the John Cazier & Sons herd, as they have a very good exhibit.

The detail of the awards follows:

Hereford Breeding Classes.

Bull 3 years old or over.—1st. Hereford Corporation of Wyoming, Cheyenne, Wyo.; 2nd. H. M. Barngrover, Santa Clara; 3rd. Chas. Rule, Jenett.

Bull 2 years old and under 3.—1st. Chas. Rule; 2nd. 4th. 5th. Wm. Henn, Kansas City; 3rd. Hereford Corporation of Wyoming.

Senior yearling bull.—1st. J. H. Cazier & Sons, Wells, Nev.; 2nd. J. A. Bunting, Mission San Jose; 3rd. Diablo Stock Farm, Danville; 4th. Wm. Henn.

Junior yearling bull.—1st and 2nd. Hereford Corporation of Wyoming; 3rd. H. M. Barngrover; 4th. 5th. Wm. Henn.

Senior bull calf.—1st. Harold Rice, Paia, Maui, T. H.; 2nd. Hereford Corporation of Wyoming; 3rd. J. H. Cazier & Son; 4th. H. M. Barngrover; 5th. Wm. Henn.

Junior bull calf.—1st. J. A. Bunting; 2nd. 3rd. Hereford Corporation of Wyoming.

Cow 3 years old or over.—1st. Hereford Corporation of Wyoming; 2nd. H. M. Barngrover; 3rd. Diablo Stock Farm.

Cow 2 years old and under 3.—1st. Hereford Corporation of Wyoming; 2nd. J. A. Bunting; 3rd. H. M. Barngrover; 4th. H. H. Gable; 5th. Diablo Stock Farm.

Senior yearling heifer.—1st. 3rd. J. H. Cazier & Sons 2nd. J. A. Bunting; 4th. Diablo Stock Farm.

Junior yearling heifer.—1st. J. H. Cazier & Sons; 2nd. 5th. Hereford Corporation of Wyoming; 3rd. J. A. Bunting; 4th. H. M. Barngrover.

Senior heifer calf.—1st. Hereford Corp. of Wyoming; 2nd. H. M. Barngrover; 3rd. J. A. Bunting; 4th. H. M. Barngrover.

Senior heifer calf.—1st. Hereford Corp. of

Wyoming; 2nd. H. M. Barngrover; 3rd. J. A. Bunting; 4th. J. H. Cazier & Sons.

Junior heifer calf.—1st. 3rd. Hereford Corp. of Wyoming; 2nd. 4th. H. M. Barngrover; 5th. Chas. Rule.

Senior Champion Bull.—Hereford Corp. of Wyoming, on Wyoming Prince.

Junior Champion Bull.—Hereford Corp. of Wyoming, on New Era 2nd.

Senior Champion Cow.—Hereford Corp. of Wyoming, on Miss Rialto 2nd.

Junior Champion Heifer.—Hereford Corp. of Wyoming, on Lady Fairfax 9th.

Grand Champion Bull.—Hereford Corp. of Wyoming, on Wyoming Prince.

Reserve Grand Champion Bull.—Hereford Corp. of Wyoming, on New Era 2nd.

Grand Champion Cow or Heifer.—Hereford Corp. of Wyoming, on Miss Rialto 2nd.

Reserve Grand Champion Cow or Heifer.—Hereford Corp. of Wyoming, on Lady Fairfax 9th.

Aged herd.—1st. Hereford Corp. of Wyoming; 2nd. H. M. Barngrover.

Emporium Special.—Hereford Corp. of Wyoming.

Young herd.—1st. Hereford Corp. of Wyoming; 2nd. J. H. Cazier & Sons.

Calf herd.—1st. Hereford Corp. of Wyoming; 2nd. H. M. Barngrover; 3rd. J. H. Cazier & Sons.

Emporium Special for herd owned and exhibited by a California breeder.—H. M. Barngrover.

Four animals, either sex, get of one sire.—1st. J. H. Cazier & Sons; 2nd. H. M. Barngrover; 3rd. Hereford Corp. of Wyoming.

Two animals, either sex, produce of one cow.—1st. J. A. Bunting; 2nd. Hereford Corp. of Wyoming.

Aberdeen-Angus Prize Winners.

Only one exhibitor of the "doddies" but that does not mean that the exhibit was not a good one. It is to be regretted that more herds of this compact, blocky, economical feeding and high quality meat-producing breed were not in competition for prizes.

The time is not far distant when there will be many more shown on the coast than there are now.

Judge, Alex McDonald, Davis.

Exhibitors, Congdon & Battles, Yakima, Wash.

Judging not completed until too late for publication this week.

Holstein-Friesians Are a Great Show.

The exhibit of the world famous Blacks and Whites was certainly an excellent one, cattle from many of the best herds on the Pacific Coast participating in the competition for prizes. Cattle from as far away as the great Salt River Valley of Arizona, where alfalfa grows the year around, were there to make the contests more interesting.

The ribbons were awarded by Prof. E. W. Majors of Los Angeles.

Exhibitors: Frank B. Anderson, Sacramento; A. W. Morris & Sons Corp., Woodland; Napa State Hospital, Napa; Toyon Farms, Los Altos; Annie Donders, Fresno; V. F. Dolcini, Davis; J. P. Phillips, Fresno; Frank Reed Sanders, Phoenix, Arizona; University of California, Davis.

DAIRY CATTLE.

Holstein-Friesian.

Bull 3 years old or over.—1st. A. W. Morris & Sons Corporation, Woodland; 2nd. H. E. Vogel, Fresno; 3rd. Toyon Farm Association, Los Altos; 4th. Frank R. Sanders, Phoenix, Ariz.; 5th. Napa State Hospital, Napa.

Bull 2 years old and under 3.—1st. Jared W. Scudder, Holt; 2nd. Sanders; 3rd. E. L. Holmes, Modesto; 4th. Morris & Sons.

Senior Yearling Bull.—1st. Holmes; 2nd. Sanders; 3rd. Toyon Farm Assn.

Senior Bull Calf.—1st. 3rd. Morris & Sons; 2nd. V. F. Dolcini, Davis; 4th. Holmes; 5th. Toyon Farm Assn.

Junior Bull Calf.—1st. 2nd. Morris & Sons Corp.; 3rd. 5th. Toyon Farm Assn; 4th. University of California.

Bull 3 years old or over.—1st. A. W. Morris & Sons Corporation, Woodland; 2nd. H. E. Vogel, Fresno; 3rd. Toyon Farm Association, Los Altos; 4th. Frank R. Sanders, Phoenix, Ariz.; 5th. Napa State Hospital, Napa.

Bull 2 years old and under 3.—1st. Jared W. Scudder, Holt; 2nd. Sanders; 3rd. E. L. Holmes, Modesto; 4th. Morris & Sons.

Senior Yearling Bull.—1st. Holmes; 2nd. Sanders; 3rd. Toyon Farm Assn.

Senior Bull Calf.—1st. 3rd. Morris & Sons; 2nd. V. F. Dolcini, Davis; 4th. Holmes; 5th. Toyon Farm Assn.

Junior Bull Calf.—1st. 2nd. Morris & Sons Corp.; 3rd. 5th. Toyon Farm Assn; 4th. University of California.

Bull 3 years old or over.—1st. A. W. Morris & Sons Corporation, Woodland; 2nd. H. E. Vogel, Fresno; 3rd. Toyon Farm Association, Los Altos; 4th. Frank R. Sanders, Phoenix, Ariz.; 5th. Napa State Hospital, Napa.

Bull 2 years old and under 3.—1st. Jared W. Scudder, Holt; 2nd. Sanders; 3rd. E. L. Holmes, Modesto; 4th. Morris & Sons.

Senior Yearling Bull.—1st. Holmes; 2nd. Sanders; 3rd. Toyon Farm Assn.

Senior Bull Calf.—1st. 3rd. Morris & Sons; 2nd. V. F. Dolcini, Davis; 4th. Holmes; 5th. Toyon Farm Assn.

Junior Bull Calf.—1st. 2nd. Morris & Sons Corp.; 3rd. 5th. Toyon Farm Assn; 4th. University of California.

Bull 3 years old or over.—1st. A. W. Morris & Sons Corporation, Woodland; 2nd. H. E. Vogel, Fresno; 3rd. Toyon Farm Association, Los Altos; 4th. Frank R. Sanders, Phoenix, Ariz.; 5th. Napa State Hospital, Napa.

Bull 2 years old and under 3.—1st. Jared W. Scudder, Holt; 2nd. Sanders; 3rd. E. L. Holmes, Modesto; 4th. Morris & Sons.

Junior Heifer Calf—1st, 3rd, Morris & Sons Corp.; 2nd, 4th, Napa State Hospital; 5th, Toyon Farm Assn.
Cow having official yearly record begun at 5 years or over—1st Toyon Farm Assn.; 2nd, Phillips.

Cow having official yearly record begun under the age of 5 years—1st, Toyon Farm Assn.; 2nd, Morris & Sons Corp.

Senior Champion Bull, 2 years old or over—Morris & Sons Corp., on King Morco Alcartra.
Junior Champion Bull, under 2 years old—Morris & Sons Corp., on King Morco Alcartra Mead.

Senior Champion Cow, 2 years old or over—Vogel, on Betsy Lamb Prilly.

Junior Champion Heifer, under 2 years old—Phillips, on Josephine Johanna Oak DeKol.

Grand Champion Bull, any age—Morris & Sons Corp., on King Morco Alcartra.
Reserve Grand Champion Bull, any age—Morris & Sons Corp., on King Morco Alcartra Mead.

Grand Champion Cow, or Heifer, any age—Vogel, on Betsy Lamb Prilly.

Reserve Grand Champion Cow or Heifer, any age, Phillips, on Josephine Johanna Oak DeKol.

Aged Herd, consisting of 1 bull, 2 years old or over; 1 cow 3 years old or over; 1 cow or heifer, 2 years old and under 3; 1 heifer 1 year old and under 2; 1 heifer under 1 year old—1st, Vogel; 2nd, Toyon Farm Assn.

Young Herd, consisting of 1 bull under 2 years; 2 heifers 1 years old and under 2; 2 heifers under 1 year old; all except bull must be bred by exhibitor—1st, Toyon Farm Assn.; 2nd, Sanders.

Calf Herd, consisting of 1 bull and 2 heifers, all under 1 year old and all bred by exhibitor—1st, 4th, Morris; 2nd, Sanders; 3rd, Toyon Farm Assn.

Four animals, either sex, get of one sire—1st, Sanders; 2nd, Morris; 3rd, Toyon Farm Assn.

Two animals either sex, produce of one cow—1st, Morris; 2nd, Phillips; 3rd, Sanders; 4th, Toyon Farm Assn.

Dairy Herd, to consist of five cows in milk, all to be owned by exhibitor—1st, Toyon Farm Assn.

Jersey Cattle Exhibit Awards.

The Jersey cattle show might have been larger, but it could not have been better. In this breed, as well as in the Holsteins, a herd from the Salt River Valley of Arizona was in the lists for their share of the awards. These beautiful cattle attracted much attention and were a feature of the show.

Judge, Prof. J. B. Fitch, Manhattan, Kansas.

Exhibitors: M. Fortini, Orland; L. J. Belknap, San Jose; Guy H. Miller, Venadera Farm, Modesto; Frank Reed Sanders, Phoenix, Arizona; J. E. Thorpe, Mossdale Farm, Lockeford;

University of California, Davis.

Reserve Senior Champion Cow—Sanders, on Desert Honeysuckle.
Junior Champion Heifer, under 2 years old—Fortini, on Jewel of Tintagel.

Grand Champion Bull, any age—Thorp, on Jolly Senator Raleigh.

Reserve Grand Champion Bull, any age—Miller, on Wanda's Altama Interest.

Grand Champion Cow or Heifer, any age—Thorp, on Salome of Mossdale.

Reserve Grand Champion Cow or Heifer, any age—Fortini, on Jewel of Tintagel.

Young Herd—1st, Thorp; 2nd, Miller.

Calf Herd—1st, Miller; 2nd, Thorp.

Four animals, either sex, get of one sire—1st, Sanders; 2nd, Thorp; 3rd, University of California; 4th, Miller.

Two animals, either sex, produce of one cow—1st, Thorp; 2nd, 3rd, Sanders.

Dairy Herd, to consist of five cows in milk, all to be owned by exhibitor—1st, Thorp; 2nd, Miller.

Best Grade Cow sired by registered bull, any age, with a testing association year's record for milk and butter fat production, completed since Nov. 1, 1918 (California Central Creameries Specials)—J. W. Coppini, Ferndale.

Bull, 3 years old or over—1st, J. E. Thorp, Lockford; 2nd, Guy H. Miller, Modesto.

Bull, 2 years old and under 3—1st, Miller.

Senior Yearling Bull—1st, E. F. Smith, Hayward; 2nd, Thorp; 3rd, Jersey Queen Farm, San Jose.

Senior Bull Calf—1st, Miller; 2nd, Thorp.

Junior Bull Calf—1st, Thorp.

Cow, 4 years old or over—1st, 3rd, Thorp; 2nd, Frank R. Sanders Phoenix Ariz.; 4th, 5th, Miller.

Cow, 3 years old and under four—1st, Miller; 2nd, Thorp.

Cow, 2 years old and under three—1st, 3rd, 4th, Sanders; 2nd, Univ. of California Davis.

Senior Yearling Heifer—1st, 3rd, Thorp; 2nd, Sanders.

Junior Yearling Heifer—1st, 5th, Miller; 2nd, Thorp; 3rd, 4th, Miller.

Senior Heifer Calf—1st, M. Fortini, Orland; 2nd, Miller; 3rd, Thorp; 4th, 5th, Univ. of California.

Junior Heifer Calf—1st, 5th, Sanders; 2nd, Thorp; 3rd, 4th, Miller.

Cow having yearly official record begun at 5 years or over—1st, 2nd, Miller; 3rd, Thorp.

Cow having official yearly record begun under the age of five years—1st, Thorp; 2nd, 3rd, Miller.

Senior Champion Cow, 2 years old or over—Thorp, on Salome of Mossdale.

Ayrshires Are Excellent.

Two great herds as good as found anywhere made the showing of the breed a good one. The Ayrshires are a bonnie lot and it would seem they certainly become more popular as time goes on, as they are excellent

performers at the pail under ordinary conditions and also readily respond to intensive conditions. The Meyer herd was at Los Angeles, but McFarland had not shown his since the State Fair.

Judge, Prof. H. H. Kildee, Ames, Iowa.

Exhibitors, J. Henry Meyer, Watsonville; E. D. McFarland, San Mateo; University of California, Davis.

Judging too late in the week for publication.

Dutch Belted.

Dutch Belted cattle were represented by the herd of Frank Reed Sanders of Phoenix, Arizona. They were awarded all the prizes in this class.

AWARDS ON CARLOTS OF FAT HOGS.

Competition was keen and much interest was manifested by the spectators. The decision awarding the grand championship to the Berkshire carlot was received with great enthusiasm by the admirers of this well known breed. It is claimed by their admirers that the Berkshires have won more grand championship prizes on fat hogs than all the other breeds combined. The detail of the awards follows:

250 to 300 pounds First, Napa State Hospital on Berkshires; second, M. Bassett on Poland-Chinas; third, Western Meat Company on Duroc-Jerseys.

175 to 250 pounds. First, Western Meat Co. on Duco-Jerseys; second, M. Bassett on Poland-Chinas; third, Napa State Hospital on Berkshires.

Grand championship to Napa State Hospital on the carlot of Berkshires that were awarded first prize in the 250 to 300 pound class.

The awards were made by Prof. H. H. Kildee of Iowa College of Agriculture, judge of Duroc-Jerseys and Berkshires, acting in conjunction with W. H. Pew, Ravena, Ohio judge of Poland-Chinas Yorkshire and Hampshires.

FAT SWINE.

Best senior Berkshire barrow—1st, University of Calif., Davis.

Best junior barrow—1st and 3rd, A. B. Humphrey, Escalon; 2nd, J. F. O'Connor, Santa Rosa.

Mechanical Power on the Farm

FOUND HIS ORCHARD TRACTOR TOO SMALL.

(Written for Pacific Rural Press by R. E. Hodges.)

"I've been using tractors five years on the two ten-acre citrus orchards owned by my father and myself. For the past three years we haven't had a horse on the place, except for hauling manure, and for two furrowings last summer, when I was too busy to do it myself," said T. J. Steves of eastern Los Angeles county recently. "But I made a mistake in buying tractors of too small size. My first one had five horsepower on the drawbar. The second one had six. I got rid of them and am better satisfied now with eight horsepower on the drawbar, though even it has all it can do in low gear sometimes."

Many a rancher has made the same mistake, although the Pacific Rural Press has repeatedly urged our readers to buy more powerful tractors than they think they will need.

Transforming the Subsoil Desert.

A progressive step in horticulture is responsible for Mr. Steves' desire for more power. Perhaps he didn't dream of that progress when he got the first tractor. He has found that the plowpan which forms each season in his well-cultivated orchards makes a barren desert under them. That makes the orange roots struggle for a living in the upper reaches of soil. But the

plow, it would not be desirable to turn those big chunks of dead subsoil to the top. The better idea is to break them up and leave them underneath where they could mellow up at leisure by means of the air and water that are admitted by the breaking. This operation is performed in two ways by two different implements. A deep cultivator with five narrow standards and resting on three wheels to regulate its depth was standing beside the orchard when we saw it. A seat was provided for a 150-pound driver and a chunk of concrete weighing probably 100 pounds had also been taking a ride.

This cultivator was not sunk in "deep" until the July drop was past. A weak man cannot do his heaviest work on short rations and a weak tree setting fruit must have all of its roots until this job is done. The spring cultivation did not go over four or five inches deep.

Furrows for irrigation were made two at a time on intermediate speed at $2\frac{1}{2}$ miles per hour. The writer saw the machine furrowing for an hour or more in this orchard, making all turns without a stop. After irrigation, the furrows were filled with a Forkner and were a week later worked over with the deep cultivator. After the summer-drop danger was past, the deep cultivator was run ten inches deep down each center and at less depth around each row.

There are places where the smallest orchard tractors are most economical; but as a rule, when a man begins to use a tractor, he soon finds that there is work which can be done more economically with a more powerful machine.

upper soil is stirred by cultivation and what the roots get out of it they have to grab in a hurry. There has generally been a considerable dropping of fruit. Why shouldn't it drop?

Of recent years, orchardists are realizing that the surface soil isn't worth \$1,000 per acre and that the sub-surface soil isn't worth anything unless they get water into it. The ordinary irrigation does more to form a plowpan than it does to penetrate plowpan already formed. That plowpan has to be busted during the irrigation season. Many growers think it should be busted several times each year. The plowpan busters require power which really was not available until tractors came into orchards. There isn't room for all the horses that would be required.

In one orchard Mr. Steves plowed a deep furrow down each center and then another one below the bottom of that. A trench was thus formed which he estimates at 15 or 16 inches deep. Manure was put into this and irrigation water went in. It did not come out at the other end. It stayed where it could convert that underground desert into a feeding ground for orange roots and it took their lunch along. Some roots were decapitated, but most of them got a chance to grow fat.

Deep Tractor Cultivator.

In the other orchard the soil was too hard for a plow, and here is where even more power than the 8-16 tractor would be desirable. But even if he had more power and a heavier

Subsoiling Orchards to Give Trees a Drink.

Deep cultivation is not all. A number of ranchers in this district have found that it paid to subsoil their orchards. Mr. Steves adopted this practice last summer by pulling a single-standard subsoiler twice down each center along lines about $2\frac{1}{2}$ feet apart to let the water in. He plans to subsoil two or three times every year. Some of his neighbors subsoil before each irrigation in the latter part of the season.

Dust Must Be Kept Out.

"I used to have considerable trouble with tractors until I got this one," says Mr. Steves. I've had this one a year and it has given entire satisfaction. I don't know whether the trouble before was due to the machines or myself. One thing I know. The dust in our orchards must be kept out of the engine and bearings or a tractor will go to pieces.

"You will be surprised when I tell you that the water clarifier doesn't keep out all of the dirt. O yes, it gets it all, but doesn't keep it all. The water splashes up on the insides of its chamber and sometimes it dries away there. After it gets sort of muddy, it leaves dry dirt on the walls and that dry dirt gets into the engine. The water clarifier wasn't ready when I got the tractor so I put on a clarifier consisting of a centrifugal device and a hair strainer. I now have both on the machine. The dry clarifier has caught as much as a spoonful of dust which had gone

8-foot Extra Heavy Tractor Chisel

KILLEFER
QUALITY

Now is the time to commence deep chiseling and subsoiling. Do it in time to prepare the ground thoroughly to receive the benefit of the winter rains. Break away from the old habit or mistaken idea of scratching the ground and expecting to harvest a crop.

Plow pan, although frequently referred to as mechanical hard pan, should not be confused with natural hard pan. However, so far as crop production is concerned, the effects of plow sole and hard pan are the same. Both must be destroyed before proper cultivation can be had, and the only difference in the two that will be considered here is in the method required for their destruction.

Plow sole offers less resistance to the available methods of breaking it up than hard pan, and, with the tractor and tool of sufficient

strength now available for tractor use, it can be broken up and subdued, bringing the land back to the point where a full yield may be expected.

Plow sole offers less resistance to tillage implements than does hard pan; both are in many cases imperious to horse teams and ordinary plows, and in some instances are difficult of handling with tractors and modern implements. Yet before a full yield may be expected this condition must be subdued, and to date the only satisfactory means is by use of the chisel or subsoiler.

Send for Catalog and Prices.

through the water. The tractor runs as well with both as with one, and it will last longer."

BALES HAY BY ELECTRICITY.

G. I. Lytle of Perris Valley, Riverside county, bales alfalfa hay by electricity and gets it aboard cars for the market with almost electric speed. He finds a five-horsepower motor sufficient to run a baler that turns out about 30 tons per day. Electricity costs \$10 per horsepower for six months, so the power used on the hay does not cost much. Mr. Lytle says the motor is very convenient and quite a few of the ranchers are doing it in the same way. He hauls hay from the field in the morning, having cured it so the stems are approaching brittleness, as felt by crushing a bunch of it in the hand. Late in the forenoon or early afternoon it is baled and hauled directly to the cars.

POWER FOR PUMPING.

To the Editor: How many horsepower will it take to lift water 16 feet in an eight-inch rotary pump. Also the speed of the pump. How will a rotary compare with a centrifugal of the same size. Is there any advantage in having a closed runner pump in wells having no sand.—J. W. Modesto.

In the catalog of a rotary pump manufacturer we read that their eight-inch rotary delivers 1050 gallons per minute at a speed of 150 r. p. m. A horsepower is the effort required to lift 33,000 pounds in a minute one foot high (33,000 foot-pounds). A gallon of water weighs practically $8\frac{1}{2}$ pounds. Therefore the theoretical horsepower required in your case would be $8\frac{1}{2} \times 1050 \times 16$ divided by 33,000, or $4\frac{1}{4}$. The actual horsepower used in running the pump and in overcoming friction of the water in pipes, and especially in passing through elbows must be added to the $4\frac{1}{4}$. The pump catalog quoted claims 65 per cent efficiency for its pump so the actual horsepower to lift the water and run

the pump would be about $6\frac{1}{2}$. Add $\frac{1}{2}$ -horsepower or more to this for pipe friction and enough more to make yourself safe when the water pumps down so you have to lift it over sixteen feet. Then add one or two horsepower so the engine will not have to work at full capacity. Too large an engine costs more at first but costs not much more to operate. Too small an engine costs a great deal for repairs and delay.

Centrifugal pumps are most commonly used for such conditions as you describe, largely because they are better known and costs less. The advantage of a closed runner is that no water escapes the action of the impellers.

The action of a centrifugal pump is to throw water at the opening of the outlet pipe hard enough to force it out. The action of a rotary pump is to squeeze the water through the opening and on up through the outlet pipe. A rotary pump is not long lived if the water contains sand.

WITTE Engines

Mechanical Power on the Farm

A TOMATO GROWER MAKES HIS OWN BOXES.

(Written for Pacific Rural Press.)

"The high cost of labor and of material necessitates every farmer getting his neck under the yoke and doing all he can himself." This was the substance of remarks made by Frank Essig of Shively (Humboldt county) recently. He is a grower of fruit and truck and is enthusiastic on the future of his county.

"We can grow all the truck needed in the San Francisco market," he said, "and we have no Orientals or Hindus in the business at all. We don't want them. Market gardening is a most interesting and profitable undertaking, and we can grow the stuff, as you have seen. Where else can they grow an average of 30 tons of carrots to the acre or turnips as large as a man's head. The State cannot beat us on potatoes, beets, parsnips, peas and beans, cabbage and cauliflower. Last year I sold 2,300 thirty-pound boxes of tomatoes from three acres, which netted me 50 cents a box after paying

for labor, packing, and material. This year my tomatoes will net me 75 cents a box; I am paid \$1. I made three cents a pound for Hubbard squash."

Mr. Essig has a small mill on his place and makes his own boxes. From one tree that had drifted down the river onto the bar opposite his place he and a son-in-law made 1800 tomato boxes from eleven three-foot cuts. They allowed themselves \$4 a day each for wages and \$1 a day for distillate for the engine, and then had 1800 boxes at a cost of three cents each.

Mr. Essig has bought 224 acres on Bull Creek where he will plant 15 acres of the bottom land to orchard and 15 acres will be devoted to market gardening and the raising of seed. He has a small mill run by water power on this new place, so will continue to make his own boxes, and the remainder of his land will be farmed for stock, to keep up the fertility of the bottom. He and his son-in-law figure on doing most of the work themselves. This little lay-out seems to the writer an ideal condition for farming in California, and Mr. Essig, who is a practical farm-gardener, is just the man to undertake it.

It is the individual personal care given by the family to the average holding that is the backbone of any State. Because a number of such farmers form a living community that is a unit of the nation's spirit—a part in it is in the back of every man's mind. Whereas a million-dollar farm, run entirely by hired men, is commercialized to such an extent that a live rural spirit is lacking. More power to Mr. Essig and every man like him that is doing his bit to make his acres more productive.

TRACTORS MAKE CONTENTED HELP.

It is frequently said that the labor question is a big one as it relates to tractors, but a large San Joaquin Valley fruit grower gives it as his experience that the labor problem is greater with horses than it is with tractors.

"It used to be," he said, "that every hired hand knew about horses and few knew about machinery, but now when the highways are covered with automobiles, and when horses are looked down upon for either work or pleasure, nearly everybody knows how to run an engine and feels proud to do so while they are not interested in horses and will not attend to them as they should. As a result horses are likely to be laid up with sore shoulders much of the time and you don't get the work done, while with decent handling and a close watch on the tractor to see that everything is tight and going nicely, the work keeps moving from starting to quitting time."

"More important on a labor proposition than lack of interest in horses is the fact that the hired men want to drop everything when the whistle sounds quitting time on Saturday evening and they do not want to show up again until Monday morning. That cannot be done with horses, but it can be done with tractors. The result is that men are much more contented now when they have tractors to run than when they are supposed to work horses. There has been a very great change in this way in the last two years and what I say will be even more true in the future than it is now."

A deep-well pump wore out its bearings trying to lift a heavier load than it was designed for. It was taken out June 9. On July 24 the pump was running again. On September 16 it had to be taken out again on account of the bearings. The operator took the injured parts to the factory September 19, and ordered a new shaft. Two extra stages recommended by the pump company were ordered. On September 30 he was still waiting for the parts. He doesn't recommend that company to prospective pump buyers.

TWIN CITY

12-20 Kerosene Tractor with 16-valve engine

Pays Big Dividends

For the first time in the history of the tractor industry, the 4-cylinder, 16-valve engine (valve in head type) is now applied to a tractor. The TWIN CITY 12-20 with its 16-valve motor actually develops 25 per cent more than its rated horsepower.

This new 12-20 is a light weight tractor that will out-pull, out-last, and out-dividend other tractors of equal rating.

Not built down to a price, but built up to a fixed ideal—to do the work assigned to it better than it has ever been done before.

The highest grade tractor will unflinchingly prove the least expensive and pay the biggest dividends.

The Choice of Governments

The "Caterpillar" Tractor was the only tractor used by the Allies for their heaviest war work—a choice made after severe and prolonged tests.

How the "Caterpillar" Tractor made good in war service is a matter of history—a marvel to the officers and men serving where "Caterpillar" Tractors were used.

This record merely verified what thousands of farmers who had been using the "Caterpillar" already knew—that Holt design, Holt choice of materials and Holt workmanship give the "Caterpillar" Tractor draw-bar pull, stamina and dependability almost beyond belief.

Order your "Caterpillar" Tractor now. Send for Catalog 406.

CATERPILLAR
Reg. U.S. Pat. Off.

You Wouldn't Haul Crops

to town on your back and yet you unnecessarily break your back doing a lot of odd chores around the farm such as sawing wood, turning the grindstone, pumping water for the livestock, etc., and let your wife and girls wear themselves out over the wash-tub, churn, and separator. Drudgery of this sort was absolutely necessary on the farm once upon a time—but times have changed.

There is no need to let these little jobs take the joy out of life, because an **International Kerosene Engine** will perform all of these tasks—and a lot more, besides—doing the work much faster and more cheaply, to say nothing of doing it better than it could be done by hand. These engines deliver steady, uniform power—they never lag—so any machine that they operate works to the best possible advantage. There are three sizes—1½, 3, and 6-h. p. engines.

The 1½ and 3-h. p. engines are the all-around "chore boys" while the 6-h. p. engine is the dependable "man about the farm". It does work that a dozen hired men couldn't do, such as shelling corn at the rate of from 1,000 to 1,500 bushels a day, baling 15 to 20 tons of hay in a day, grinding feed at the rate of from 5 to 25 bushels an hour, and threshing 20 to 40 bushels of wheat an hour (operating a Sterling thresher).

Shall we mail you a catalogue and tell you where you can see an **International Engine**?

Big Money In Stump Land

H. G. Hummer, of Foster, Wash., pulling a 24-inch fir stump with deep tap roots out of hard ground.

This man made \$35 Land Worth \$200 an acre Pulling Big stumps by hand

CLEAR your stump land cheaply—no digging, no expense for teams or powder. Your own right arm on the lever of the "K" Stump Puller can rip out any stump that can be pulled with the best inch steel cable. I guarantee it. I refer you to U. S. Government officials. I give highest banking references.

HAND POWER
K Stump Puller

One man with a "K" can outpull 16 horses. Works by leverage—same principle as a jack. 100 lbs. pull on the lever gives a 48-ton pull on the stump. Made of best steel—guaranteed against breakage. Has two speeds—60 ft. per minute for hauling in cable or for small stumps—slow speed for heavy pulls. Works equally well on hillsides or marshes where horses cannot go.

Write me today for special offer, and free booklet on Land Clearing.

No Stump Too Big For The K

CO-OPERATIVE IRRIGATION DEVELOPED DISTRICT.

[Written for Pacific Rural Press.]

Co-operative management of irrigation water has for many years proved satisfactory to members of the John T. Carpenter Water Co. in eastern Orange county. It has enabled them to develop to the limit all water from a small nearby canyon, and to supplement that with deep-well pumps at a relatively low cost for water. About 1,000 acres, mostly of orchards belonging to 67 members of the Water Company, are now under this project. Maximum economy in pumping is possible because the Association hires an engineer to look after the pumps and they run continuously during the season of less-than-needed gravity flow. The investment in pumps is not idle a good portion of the time as it would be if each orchardist had a pump of his own. No orchardist need lose any time or any sleep worrying about keeping the plant in order. Individuals could not make pumping pay in this district, for the water-lift, according to Engineer C. E. Burrier, is 290 feet at the wells, besides a boost of 150 feet to irrigate part of the higher orchards.

Organization of the Irrigators.

The Association was formed years ago, according to Supt. M. M. Bolton of the Water Company. Its first object was to use the canyon water to irrigate whatever area it would supply. Oranges did well in this district; the acreage increased, and the demand for water soon exceeded the supply. Anyhow, it did not last adequately all summer.

The Association was reorganized about 1912 or 1913 to catch and hold all of the canyon run-off for irrigation and to supplement this with whatever pumps might be necessary. They worked out a scheme to spread the waters of the canyon over the surface, beginning at a point about 15 miles back. This made a soil reservoir which would lose its water by underground flow were it not held back near the mouth of the canyon by a dam to bed rock. The overflow from this dam went down to 25 or 30 miners inches last May, but increased later to 50 inches, which it maintained at least throughout September when the water ordinarily begins to get low.

Fifty inches wouldn't moisten the thousand acres; so the wells were developed. Fortunately natural gas from the Southern Counties Gas Co. is available for engines to run the pumps, and Mr. Burrier states that the cost of gas runs only about one-half cent per horsepower hour. With distillate at present prices the cost would be over twice as great.

Pumping Equipment.

The private well belonging to President L. W. Evans runs quite steadily in the service. The Association plant consists of two wells 420 feet deep, a reservoir, and three pumps, besides pipe, which distribute much of the water without seepage. A deep-well turbine pump operated by a 100-horsepower engine, throws about 110 miner's inches into the pipes. A deep-well plunger pump, operated by a 60-horsepower engine, throws about 70 inches into a reservoir. A centrifugal pump, run by a 32-horsepower engine, boosts the reservoir water 150 feet to higher orchards on a side hill about three-quarters mile away. All of the engines are started by compressed air from a compressor operated by a two-horsepower engine. The water level has dropped about 20 feet in the past year, so the lift is now about 290 feet.

The deep-well plunger pump had run night and day from Christmas until October 1, except 22 days, when rain made pumping unnecessary. The engine which ran it had been running seven years and the pistons had never been taken out.

The turbine pump was not placed deep enough, so it had to be lowered 24 feet in July.

Fair Turns in Irrigating.

Each acre in the Association has a share of the original water stock and a share of the new. Since the turbine was installed a year ago, there has been enough water so six members could irrigate at once. Previous to

that, four irrigators could be busy at once. Their turns came every 30½ days, but interruption of the turbine disarranged this and rotation proceeds as fast as possible. In a co-operative concern such as this, if a man is not ready when his turn comes, he trades turns with another. When, as happened while the turbine was being lowered, there is not water enough for all, these fair-minded people allowed the Superintendent to turn all there was onto the orchards that needed it most and no fruit was lost.

BIG ELECTRIC POWER HOUSE PROPOSED.

"The present and future needs of the southern half of California require the development of all available sources of hydro-electric power. . . . The present demands for electric energy are such that steam plants are required to supplement the water-power plants. It is to the advantage of the public as well as to the company that this energy be developed by water power instead of by steam, because of the greater cost of steam-generated electricity."

The quotation is from the petition of the Southern California Edison Co. in asking the State Railroad Commission for authority to construct a power project on the Kern river, in Tulare county, estimated to cost \$9,231,358, and develop 43,000 horsepower of electricity. The company has already obtained a construction permit from the State Water Commission and a final power permit from U. S. Secretary of Agriculture D. F. Huston.

A diversion dam on the North Fork of the Kern river is to divert a maximum of 600 cubic feet per second thirteen miles through flumes, tunnels, etc., to a power-house in Kern county. The current is to be carried by a high tension line to the company's substation at Richgrove, Tulare county, and thence distributed throughout the system. The company operates in Los Angeles, Orange, San Bernardino, Riverside, Ventura, Santa Barbara, Kern, Tulare, and Kings counties.

ANOTHER MOTOR TRUCK DRIVES ON FOUR WHEELS.

Block up the Duplex Four-Wheel-Drive motor truck shown at the Los Angeles demonstration so any three wheels are clear from everything. Then throw the engine in gear and the one wheel remaining on solid footing will push or pull the truck off the blocks. This is due to the automatic self-locking differential which is designed to divert all of the power of the engine to whatever wheels find traction in slippery places. All four wheels are driven by a final internal gear.

PUTTING ROAD BANDS ON TRACTOR.

Putting road bands on tractor wheels is not so simple as it might seem to the uninitiated; but it is much simpler than the uninitiated would make it if he tried the job. T. J. Steves of Los Angeles County made the tractor do the hardest part of it. He bolted one end of the band onto the wheel loosely and let the band extend in the path of the wheel. The tractor was then started up until it had wound the band around its wheel far enough to get a long bolt through its other end and through the rim of the wheel. Then a plank was laid in front of the wheel and the tractor run upon it so that it rested on the ends of the band, holding them close to the lugs and pushing the bolts through to the limit. "Twas easy then to put on enough washers for the long bolts and tighten the nuts.

ARE YOUR PUMP REPAIR COSTS REASONABLE

"We have had our deep-well pump (of a certain make) five years," said a rancher recently. "We had no complaint as to first cost or the way it worked, but I don't know that we would get the same kind again. Last year we had it repaired. The manufacturer charged exorbitant prices for the parts and for the mechanic's time fixing the pump. We like the pump but we hate to be robbed; and there are others."

"MY use of Goodyear Cord Pneumatic Truck Tires shows me that pneumatics not only travel better on our clay roads but also are better for the roads. Solids have a hard time in the soft ruts and they are hard on the roads. I have observed that others here are taking note of this."—A. J. Emmerton, Farmer, Bloomer, Wisconsin

THERE is scarcely any work done on the Emmerton Farm, near Bloomer, Wisconsin, that is not aided directly or indirectly by a motor truck on Goodyear Cord Pneumatic Truck Tires.

Their traction enables this truck to haul fertilizer over plowed ground, to carry feed to livestock wherever located, to deliver oil to tractors and to distribute fencing.

For the same reason the truck

easily transfers corn from binder to silo filler and grain from separator to bins—all off-the-road work.

Mr. Emmerton's experience, however, equally emphasizes the advantage of the Goodyear Cords over solid tires on the local clay roads, noting that the pneumatic-shod truck overcomes conditions impassable to solid-tired trucks.

Still another important significance attaches to his statement

that the pneumatics are regarded with growing favor in the surrounding community because their cushioning action saves roads.

It prompts the observation that this particular virtue of the pioneer Goodyear Cord Pneumatic Truck Tires also is a factor in their rapid and broadcast rural adoption.

Spread Manure All Winter Long

If you want to save time and money and put an end, once and for all, to the dirty, disagreeable job of old-fashioned hand methods of manuring—

If you want to utilize to the very best advantage every scrap of manure that your stock produces—

If you want the manure spreader that is built stronger, lasts longer, shreds the manure finer, and spreads it wider and more evenly—

You Want The NISCO

See your dealer now and get the facts in full. Plan to make your NISCO pay for itself between now and spring. You can—easily—by spreading every week through all the winter. **Spread right over the snow!** Good results will be sure to follow.

The NISCO is built low down; easy to load. And because of its light draft, you can heap it 30 inches high and still have

a light haul for your team. There are dozens of big important, patented features that make this the best machine for your needs. For instance, note that it has no gears to break in cold weather. The chain sprocket wheel drive saves wear and gives you control, right at the seat, to spread any quantity desired—3, 6, 9, 12 or 15 loads to the acre.

NISCO Dealers Everywhere

Every spot on this map represents the location of a NISCO Branch or Distributor where both spreaders and repair parts are carried in stock.

Write For These FREE BOOKS

Every farmer who is interested in increasing the fertility of his soil will find these two booklets well worth having. The catalog shows you the many features that make NISCO the machine you need. "Feeding The Farm" is a recognized authority on manure and the right ways to handle and spread it. It gives you many helpful ideas on improving the texture and fertility of your land.

SEE your superior that make him today know what to send you booklet,

What Will Become of the

As a fertilizer alone, your straw is a ton. In addition, it is the greatest humus you can put on your soil.

Straw, spread properly, about 2 tons to the acre, is the finest prevention against killing of wheat, soil blow, or water keeps snow from drifting, holds moisture in ground and makes your soil warmer and friable.

NEW IDEA SPREADER

"Spreader Specialists"

Land Been Worthy of Its Hire?"

Have you always worked your land, or has it worked for you? Has its fertility, its power to produce, dropped steadily down, or has it held its own and perhaps even gained?

IF your land has been worthy of its hire, then pay up your debt to your soil. **Perpetuate** its prosperity--and yours. **Treat it right.** Begin now, and continue throughout the winter to spread manure direct from the stable onto your fields. For your land, drained by successive croppings, cannot possibly keep on feeding unless, in turn, it is fed.

Haphazard manuring and poor production invariably go hand in hand. Manure piles leaching away the best of their valuable plant food through a winter's wasting; wagon-tail distribution--where manure is scattered about unevenly by hand, over-feeding some portions of soil and allowing others to starve--hit-or-miss methods such as these invite scanty crops and soil starvation.

Figures have been compiled

through years of accurate tests which demonstrate conclusively the wonderful value of scientific manure spreading.

They cover every possible crop, climate and soil. Talk it over with your County Agent or Experiment Station Man, or consult any other authority. All will tell you that it does pay enormous returns--returns so big that their actual dollar value for one season alone is worth far more than the cost of a NISCO.

NISCO

The Original Wide Spreading Spreader

(Known as "NEW IDEA" in the East)

Our Dealer Will Show You

Dealer. Ask him for visible proof of NISCO and point out the many vitally important features and the big choice of farmers everywhere. Talk to men bigger profits for you next year. If you don't see NISCO dealer is, write to us direct. We will send you with a copy of our absorbingly interesting "The Farm."

On Our Billion Bushel Wheat Crop?

Don't Burn Your Straw

Spread your straw this fall and see how your winter grains thrive. Stack only what you need for your live stock. Don't burn your straw, and don't let it rot. Forget the absurd thought that burning is the way to control weeds. Even if it was, the price you pay is prohibitive. Either way, you rob your soil and your pocketbook--and damage the ground, for months to come, on which your straw stack stood.

Nisco Straw Spreading Attachment

"Two Machines in One"

At mighty small cost you can get this attachment for your new machine or old. Handles a big load, shredding the straw fine and spreading it evenly, 8 to 10 feet wide. With this simple attachment, you almost double your spreading profits.

Few Parts

The Straw Spreading Attachment consists of two framed sides which rest on the sides of the regular spreader--an upper, or third cylinder with a chain to connect it with the upper cylinder of the manure spreader--and plates to hold the cylinder frame in place. A metal shield around the ends of the topmost cylinder prevents straw from catching in the shaft.

You Need This Machine

If you already have a NISCO, get a Straw Spreading Attachment and put it on--you can do it yourself in 15 minutes. And if you haven't a manure spreader, get the original wide-spreading NISCO combination for spreading both straw and manure.

LITTLE-KNOWN FORAGE PLANTS.

(Written for Pacific Rural Press.)

Browsing around the accessories tent at the Los Angeles tractor demonstration we came upon a lot of different kinds of grass that looked good, though we had not seen any of it growing. We were referred to a place where these varieties were growing out of doors. Some nippings of information are given below for further rumination.

Rhodes Grass Perennial.

Rhodes grass is a perennial where temperatures do not go below 18 degrees. It grows several feet tall repeatedly if cut for hay or seed, and it makes fine pasture. It seems more drouth-resistant than many grasses and does not drown out easy. Through dry weather it hangs on waiting for a chance to shoot when rain comes. Hard frosts kill the tops. It grows from seed which has to be planted and irrigated carefully to give it a start. It also grows new plants from the joints of runners, which older plants send out in every direction on top of the ground only. It is not hard to eradicate. A whole armful, which grew from one root, was shown at the demonstration by Aggeler & Musser of Los Angeles. This forage came from South Africa where Cecil Rhodes found some wild seed and cultivated it. The plant was soon introduced to Australia and New Zealand, where it found great favor. It has also been tried out in Texas satisfactorily, and G. J. Renfrew, with W. D. Beatty, have been growing over 300 acres of Rhodes Grass in Imperial county a couple of years.

Teff Grass, Annual.

Teff grass, with feathery seed heads and fine grassy stems, is a non-hardy annual with a shallow root system. With irrigation, it should make four cuttings for hay. A bunch at the tractor demonstration, which had grown in three weeks from the cutting, was almost as tall as another bunch which had never been cut at all. A plot in the growing demonstration of Aggeler & Musser in Los Angeles had been planted May 1 and the seedlings transplanted a month later. It was ready to cut for hay July 15, but was cut for seed August 8. This is the plot from which the three weeks' growth mentioned above had come.

Smilo for Range Pasture.

Smilo grass is similar to Teff grass but seemed taller and coarser. It is a perennial bunch grass, claimed to be hardy, drouth-resistant, a heavy seed producer, and highly recommended for range seeding just before fall rains. Harding grass is of about equal value for range pasture as indicated in San Diego county.

Millet and Sorghums.

Pearl millet in the demonstration struck the visitor, due to the clublike heads of fine white kernels solidly covering central cores averaging over a foot long.

Kaffir sorghum is a new dwarf white-seeded loose-headed variety—leafy and well stooled. One stool on exhibit had eleven heads.

White Wonder millet had heads eight or nine inches long and over an inch thick, composed of tightly formed whiskered subheads rather loosely hung on the central stem.

Higari sorghum, untried in California but being grown in Arizona for the Germain Seed Co., is a hybrid, which is said to yield considerably more grain than milo.

Not all of these and the other varieties shown will eventually find favor with Californians, but who knows but that one of these will become a most popular crop? They are surely worth watching.

The Southwestern Cotton Conference convened October 23 at Mesa, Ariz., to discuss protective measures regarding crop pests and markets. The Arizona Cotton Carnival was being held at the same time.

Four first prizes and three seconds were won on grain sorghums and pumpkins by B. H. Sellers of Riverside county at the Southern California Fair in Riverside.

Champion

Dependable Priming Plugs

Equip Your Engine So It Sure-Fires When Cold

CHAMPION Dependable Priming Plugs sure-fire cold motors because, with the priming cup right in the plug, the gasoline trickles down the core of the plug and drips from the sparking point where the spark jumps and is the hottest.

They are imperative in cold weather for the hundreds of thousands of cars that do not have the priming cups, and are infinitely better for those that do, because priming cups let the gas in too far from the spark plug. Every car can be easily equipped with these plugs in a few minutes.

Price \$1.50 each.

THE HOME CIRCLE

A COLLECT FOR WOMEN.

Keep us, O Lord, from pettiness; let us be large in thought, in word, in deed.

Let us be done with fault-finding and leave off self-seeking.

May we put away all pretense and meet each other face to face without self-pity and without prejudice.

May we never be hasty in judgment and always generous.

Teach us to put into action our better impulses, straightforward and unafraid.

Let us take time for all things; make us grow calm, serene, gentle.

Grant that we may realize that it is the little things that create differences; that in the big things of life, we are as one.

And may we strive to touch and know the great common woman's heart of us all, and O Lord God, let us not forget to be kind.—Mary Stewart.

DAISY DUTTON'S RIDE.

"Oh, yes, Daisy Dutton is just as bright as they make them," said her big brother, proudly. "She can go alone on the electric car just as well as I can."

"She is a careful little girl," added her father, affectionately. "I know you can trust her, mother."

Daisy Dutton sat still, placidly eating her oatmeal.

Daisy was going to play the part of Little Red Riding Hood, as least so far as to take a basket of something good to eat to her grandmother,—grapes, if you really wish to know. Harry would usually be the one to do such an errand; but Harry had to catch in a baseball game that morning, and he couldn't. Patty, the maid, had to help in the ironing, and she couldn't. Mother had a dressmaker, and she couldn't. Father had an important engagement at the office, and he couldn't. So there was no one left but Daisy, who hadn't a thing to do.

This was all discussed while Daisy was eating her oatmeal; but as she pushed her saucer away she smiled serenely and said, "Why, of course I can," and the thing was settled.

Daisy's grandmother lived a few squares away, and Daisy had often walked there and back; but a new line of electric cars had been opened up between Llewellyn Park, where the Duttons lived, and Sunderland, a pleasant town about six miles to the eastward, and the fun of riding on them had not yet become familiar. She had not taken the full ride yet, although the day the line was opened she went with her mother down town and back. So the idea of even a short ride was most attractive.

"Now, Daisy," said her mother, "here are five cents to pay your fare there, and here are five cents to pay your fare back. You may stay till eleven o'clock, if you like; but be sure to come then, so I shall not be worried about you. Grandma will probably see that you get on the car all right; and, if she doesn't, Harriet will. But, in any case, remember, don't take a car marked 'Harrison'; for, if you do, that will switch off at Vine Street and you will have to walk two blocks home. Take any car that says 'Llewellyn Park,' and you are all right. There isn't any other car anyway, if you don't take the Harrison car."

"All right," said Daisy; and she walked down to the corner with her father, feeling very important, and carrying the basket of grapes with especial care. Her father held up his hand and the car stopped, and he lifted Daisy to the front seat and told the motorman where to let her off.

Daisy didn't quite like it because her father said that, just as if she weren't big enough to know when she came to her grandmother's and get off at the right place. The ride was altogether too short. Whizz, whizz, went the car, and before Daisy realized it they were there.

Her grandmother was not at home, after all. "She took an early start, Daisy, and went to Harrison to do some errands," explained Harriet. "She'll not be back till luncheon time, either."

"Then I guess I'll go right back home," said Daisy, giving her the grapes; "and I'm going to ride back, too. See, here are the five cents."

"All right, Miss," said Harriet, who was in a hurry. "Don't you want me to put you on?"

"No, of course I don't," rejoined Daisy, not huffily but with the distinct consciousness that she was quite big enough to go on the cars alone, if she liked. Hadn't Harry said so that very morning?

"Be sure to get into a car with the sign 'Llewellyn Park,'" cautioned Harriet, wondering if she ought to leave her work and go out with her, but compromising by thinking she could watch her from the window.

Daisy tripped down the steps; and, as the car wasn't coming, she walked to the next corner, and then to the corner beyond that, partly for the sake of having a longer ride and partly to escape Harriet's watchful eyes. The first car that came along was marked "Harrison." Of course, she didn't take that. The next car came in the opposite direction; but, as she glanced carelessly at it, there stood on the sign, in plain, staring letters, "Llewellyn Park."

"Any car that says 'Llewellyn Park,'" she murmured to herself; and quick as thought she darted to the other side of the street, held up her tiny finger, and in half a minute more she was aboard the car and spinning up the road in the direction of—Sunderland.

When the conductor came round for the fare, she gave him her remaining five-cent piece, and then said timidly, "Does the car always go to the place it says on it in front?"

"Yes, of course," replied the conductor, smiling reassuringly.

That was enough. She settled back and began to enjoy her ride. On flew the car, leaving soon behind it the pretty houses with their smoothly shaven lawns and taking its ways through green meadows and past gently sloping hills. Just before they came to Sunderland the conductor came round again.

"Where do you wish to get off, little girl?" he said.

"Oh, I'll know when I get there." And she smiled in the most friendly fashion.

"Don't you know the name of the street?" he persisted.

"Why, of course I do. It's Quincy Street," she replied with dignity.

"Oh, all right. That is the last street before the end of the route."

Daisy said nothing and continued to enjoy the ride. There were only three other persons in the car, and they were several seats behind her, so she felt as if she had the whole place to herself.

Pretty soon, after the houses had begun to be thick again, the conductor rang the bell and the car came to a stop. Nobody stirred.

"Oh, but I don't mean to get off here," piped back a clear treble voice. The conductor ran the bell twice rather impatiently, and made his way quickly to Daisy's side.

"Didn't you say you wanted to get off at Quincy Street?"

"Oh, yes; but it's Quincy Street in Llewellyn Park," said Daisy, sweetly. "You said a car always goes just where it says it will; and so I am waiting."

"Do you mean you are going to ride right round? This car goes to Sunderland."

"It says, 'Llewellyn Park,'" insisted Daisy, mildly; "and it always says just where a car is going."

The conductor looked puzzled. Then he spoke to the driver, who slowed up a bit; and then they both twisted their necks and stared up at the sign over the front platform.

"For the land's sake," said the conductor; "the little girl is right. It does say 'Llewellyn Park,' sure enough. Jim, you forgot to turn that sign over when we started."

Daisy did not care. She was permitted to take any car that said Llewellyn Park, and if she had a ride to Sunderland thrown in, so much the better. So she sat still while the conductor explained and told her they would start back in just fifteen minutes. She waited patiently, changing her seat as the conductor advised, and enjoyed every minute of the wait as well as the ride. She had often been to Sunderland in the carriage; but this was a new and much more exciting experience.

Soon they started back with more passengers than they had before. When the conductor came round for the fare, he stopped at Daisy's side; but she said gently, "Oh, but you know I haven't any more money. Mother gave me just a five-cent piece to ride home with."

"Well, I guess that's one on me," said the conductor; and a minute later Daisy could see him telling something to the motorman, and they both laughed.

After a while they passed her grandmother's house, and Daisy could see Harriet shaking her duster out the window. Four minutes later they stopped at Quincy Street; and Daisy ran home, well satisfied with her morning.

"You said, 'Any car for Llewellyn Park,' Mother; and so did you, Harry," declared Daisy at luncheon, as they talked it over.

"Yes, that is so," admitted Harry; "but tell me now, Daisy Dutton, didn't you know all the time that that car was on its way to Sunderland?"

Daisy never said a word, but she glanced up at her father with bright eyes and a roguish smile.

So Harry ended the story just as he began it, with saying: "Oh, she's just as bright as they make them. She can go on the cars alone as well as I can."

THE CONTROL OF WHOOPING COUGH.

In the last five years 1148 California children have died of whooping-cough, a preventable disease. This large number of deaths could be reduced greatly, if all cases were placed under strict supervision. Too many parents allow children suffering from whooping cough to mingle with other children and disregard all precautions for preventing the infection of others. The large number of deaths from this disease constitute an important factor in the making of a high infant mortality, but that is not the whole tragedy, for disastrous complications occur more frequently and in more severe form following whooping cough than any other of the communicable diseases common to children. It is time that parents and health officers begin to exercise rigid control over whooping cough.

LACE MENDING.

Fine lace should always be mended by hand, but heavy, coarse lace can sometimes be mended by the machine to be quite satisfactory. A tear in fine lace may be mended by first basting it upon white paper and then if the tear is not large, darning it with fine thread and filling in with lace stitches as much as possible like the original ones. If the hole is too large to be mended in this way, a piece of Brussels net to match the mesh of the lace can be basted beneath, and after the edges have been darned, adding several lace stitches to fill up the vacant places. When the edge requires mending, it should be basted upon thin muslin, put in an embroidery frame and carefully mended, taking care that the muslin is not caught by the stitches. After the work is finished and pressed, the result will be very satisfactory.

THE IMPORTANT AND LASTING THINGS OF LIFE.

Not long ago I visited a farmer—quite noted for the great success he had made of his business. He was producing grain and potatoes and cattle, and everything was in the finest shape. The land had been well cared for, the buildings were in good condition, and all the stock and crops were far above the average. Such a man had a right to be proud of his success, for I understand he started with a poor farm and very limited capital. It struck me, however, that this man carried his pride to the breaking point. His wife had developed flower gardens and a fringe of shrubbery around the house. It must have taken her long years to do this work, but she had added wonderfully to the beauty of the place, and she was justly proud of it. She started to show me some beautiful flowers, when her husband broke in with:

"Oh, he can't waste time looking at those posies! Come on out and see my Sweet clover and the way my potatoes grow after a crop of cow peas. We have got to spend our time over the important things of farming. No time for the things that won't last." Later he half apologized for raising flowers on soil that would raise "fine potatoes."

The woman was greatly disappointed, and I found time later to go through that beautiful garden with her. I have thought of that incident many times since. What are the important things of farming after all? It has come to mind again on this rainy Sunday as I look out across the wet lawn at the shrubbery we planted a few years ago. At that time we had the price of a car, but after some discussion we used it for improving the grounds about the house and a few household conveniences. A landscape gardener came and looked the place over and selected the plants for us. They have now grown into great beauty and we have never regretted our choice as we walked or jogged behind Bob or Brownie. It seems to us now as if the work we have done on these lawns is after all an important part of our farming, for it has given all of us—old and young—a spirit of pride and beauty which will ever be one of the richest blessings of life.

The cold wind is driving the rain against the windows. The hills are wet and chilly. I shall hardly care to go wandering through the woods after dinner. This roaring open fire is more seasonable, yet as I look up the steep hill I think of what lies in the woods beyond. Yesterday we were picking those big red Baldwins on the hill, and it seemed as if they represented about the finest thing that this farm had produced. Then I thought of two scrubby lilac bushes over in the woods, and I knew that they represented the most lasting and important crop. I remember as though it were yesterday the day we found them—though it must be nearly 20 years ago. That first Spring after we came here I explored every nook and corner of our 100 acres. Most of it was close to a wilderness, far out of sight of human habitation. One Sunday afternoon in May the children and I went wandering about through our woods. The children ranged ahead like little human hounds, hunting for new mysteries of the woods. Suddenly they screamed for joy and ran down an old path where once had been a road. Far ahead I saw the lilac bushes in full bloom. The children picked great bunches of these fragrant flowers, and carried them back to mother. To these little minds the two lilacs had no significance, except that they had burst out with pretty flowers.

I knew that you never found wild lilacs in this way unless they were originally planted by the hand of man. Those two bushes told me that in other years there must have been a human home on that spot. After a long search I found a hole in the ground with a pile of stones, well obscured by the brambles and brush which had grown over them. As I

hunted, a wild rabbit sprang out of this pile of rubbish and a big black-snake glided away into the bushes. These stones had once stood as the cellar wall and house foundation until the frost finally threw them down. Great trees had grown up all around. All evidence of the farm, if there was one, had been blotted out. There was nothing left to advertise that home but those fragrant lilacs—and a hole in the ground!

Later we learned all that is known of that ruined home. Years ago a man and woman, in the strength of their youth, went out into these woods to make a home of their own. I presume that like all pioneers they were full of hope. The man dug his cellar, stoned up the sides, built his little house, and the home was ready. He gnawed off the woods with his ax, sold the timber, burned out the stumps, cleared the fields and planted his crops. The soil around that place is strong, and I have no doubt they prospered, as prosperity was reckoned in those days. I have no doubt there were days in sunny September when this man looked out across his fields of corn or potatoes or young rye with great pride in his heart. Perhaps he could not give full expression to his thought, but like the modern farmer I visited recently, he felt that he had matched his human personality against the forces of Nature and had won the fight!

And the woman inside the home did her share. She worked, she was patient and kind, silent and true. When trouble came she met it with a smile. She taught her children and influenced them as mothers do, and I think it was her gentle hand that planted these lilacs in front of that little house. Perhaps she bought them out of her own slender earnings. She nursed and cultivated them with her own tired hands, and I can well understand

the glory that was in her heart and soul when at last, on just such a May day as that on which we found them, they burst into bloom for her. Very likely her husband and perhaps the older children laughed or even scolded at the time given to these "worthless flowers," but God only knows what these lilacs may have meant to that lonely woman prisoned in that little house in the woods. There are times in midwinter when the spirit of such lonely women will rebel and cry out for relief. I have no doubt that in such moments this woman, looking out through her narrow windows, could take courage from these lilac bushes. For she knew that though they seemed dead amid the ice and snow there was still within them the great promise and beauty of the mystery of life, which at the touch of Spring would burst once more into beauty.

I am told that misfortune fell upon that home. The man died; the woman followed him. The children were scattered, the home was abandoned. No one cared to live in that lonely place, and the house took fire and was burned to the ground. Slowly the birches and the cedars and the tangle of brush crept in upon that little homestead. Frost threw down the cellar foundation; the brambles choked up the hole; that which was once a home, filled with the light of love, became only the dwelling place of wild beasts. And the farm disappeared. The wild trees, kept at bay by farmer's ax and hoe, finally jumped over his stone walls and occupied his fields. Nature demanded her own once more. The man's labor has been blotted out. Great trees now stand where the corn and potatoes which he viewed with such pride were growing. How strong and secure he seemed in those days when he thought he had mastered the forces of Nature. Now all evidence of that mastery has disappeared. All that is left to show that here was once

a human habitation are the poor, dwarfed lilac bushes which that feeble, trusting woman planted at her door. They have finally become the important and lasting things of that farm.—H. W. C., in Rural New Yorker.

The beauty of a woman and an apple is only skin deep. One of the most beautiful appearing apples is the most worthless.

Developed

Mail us your exposed Film Pack. We develop twelve exposures, size 2 1/2 x 3 1/2, 25c.; 2 1/2 x 4 1/2, 30c.; 4 x 5, 35c. Prints on Velox Paper at reasonable prices if desired. The best grade of work.

IS THE AVERAGE HOME SANITARY?

Is the average home conducted along approved lines of sanitation? Are individual towels provided? Are common drinking utensils used? Are dishes thoroughly and properly washed? Are cups, forks and spoons scalded after each usage? Are soiled handkerchiefs properly cared for?

When one member of a family contracts a common cold, other members generally contract colds in due season. Affectionate greetings, the kissings and the embracings, even handshaking, between infected and uninfected members have considerable to do with the transmissions of colds as well as the promiscuous sneezings and careless nose-blowings. Droplet and spray infections also play their part. These methods of transmission are important and probably constitute the chief factors in the spread of common colds.

On the other hand, the use of the common towel and drinking cup, the careless washing of dishes, especially cups, forks and spoons, as well as the careless disposal of soiled handkerchiefs, may, under some conditions, be of even greater importance in the spread of common colds.

At any rate, no household can afford to neglect the practice of common approved methods of sanitation. Their adoption will undoubtedly have considerable to do with the prevention of the spread of communicable diseases other than common colds. No family should tolerate the common towel or the common drinking cup, and as for the efficient washing of dishes, that is the pride of every good housewife.—State Health Bulletin.

FASHION NOTES.

The new tailored suits of gabardine or tricotine are finished with rows of machine stitching, buttons and cord tucks. There is every indication that skirts will be fuller.

The coming season will show long and short coats in velvet, plush and other pile fabrics.

Embroidery leads as the trimming for blouses and dresses. Fringe, buttons, fur and stitching are also used.

The necks of blouses are round and untrimmed, though some square necks are shown; also some with straight line from shoulder to shoulder.

Long knitted scarfs are worn with tailored suits in place of a fur. When the weather permits, they are also worn separately, belted in at the waist with a narrow patent-leather belt.

Low shoes and pumps are very good style for this winter. Spats are worn with them for extra warmth.

ORGANIZED FARM WOMEN.

The Ohio Federation of Women's Clubs met in Cleveland this last month with 1400 delegates and visitors—among them some farm women. One thing made evident was that here is a great big opportunity for country women to render an important service to city education along certain economic lines and to contribute to public welfare of both city and country. But to do this, farm women will have to organize as generally and as effectively as this big federation, which is now composed largely of town and city women. A few of the distinctly farm women's clubs of the State had representatives there and some other farm women who were members of town clubs were present in force enough to combat some of the wrong impressions which some city housewives have had about farm-

mers being largely to blame for high food prices.

Discussion of the retail price of milk compared to the price paid the producer proved that in general the federation membership is fair-minded on this profiteering talk, even though some sections are misguided. It all emphasizes the need of organized farm women functioning in this federation as well as in a federation of their own.

USE OF MEAT SCRAPS.

When the hogs have been butchered and the meat salted down, even after the sausage has been ground and the lard rendered, there will be still some scraps that can be made into palatable dishes, such as scrapple, head cheese and the like.

Not only the head, but also the feet and other meat scraps may be used in making headcheese. Clean the head, cut out the eyes and ears, and boil it along with the other meat until the flesh will drop from the bone. Put all the meat through a sausage grinder, add a little of the liquor and season with salt, pepper and sage. Mold in a crock by weighting down. If there is surplus liquor, pour off after it is cold and firm. Serve headcheese either sliced cold or warmed up in hot fat.

To make scrapple, boil the meat as for head cheese, remove all pieces of bone and chop the meat fine. To the meat and liquor, add sufficient corn meal to make a thick mush and cook for an hour. Season highly and pack in crocks. Slice and fry in hot fat when ready to use.

These products may be kept indefinitely by putting them in jars and covering with melted lard. Sausage and other meats must be cooked before they can be kept in this manner.

PUMPKIN BUTTER.

Prepare two gallons of stewed pumpkin, cooked as dry and thick as possible. Put one gallon of sorghum syrup in a large kettle on the stove and as soon as it boils, stir in the pumpkin. Cook and stir carefully until it is about one-half the original bulk, then put in a delicate flavoring of all spice or cinnamon and pour into a stone jar. When cool, cover with paraffine or oiled paper.

This recipe was furnished by a dear old lady who had lived where fruit was scarce and it was necessary to use materials at hand.

AN INCIDENT.

Secretary (of overwhelmed business man): Pardon me, sir, but you are to be married at twelve o'clock.

So I am. Well call up the bride and clergyman and tell them to come here; ask the office girl to stay in from lunch as a witness; write out a check for a hundred to the clergyman, and make a memo to tell the bride that I will join her in a couple of days—unless those western buyers should surprise me.

TACT.

The other day I went to the bakery shop in the west end. While I was waiting for my war bread, in came a man in khaki who had just returned from the front.

"Why, lieutenant," said the bakeress, "are you back? I've been looking anxiously for you every day in the casualty list."—St. Louis Star.

Simple Chocolate Icing.—One and one-half cups powdered sugar, butter the size of a walnut, 2 heaping tablespoons chocolate, 3 tablespoons hot coffee. Dissolve chocolate in hot coffee. Cream butter and sugar and add chocolate. Beat till smooth. Add more coffee if too thick to spread. Spread with knife dipped in hot water. —Mrs. J. Goerner, 602 Thirty-third street, Oakland.

With deadly gleam in her eye, Mrs. Overwate rolled into the butcher shop and advanced on the proprietor.

"Mr. Allboan," she purred, "perhaps you can explain to me how that piece of rubber tire got into the sausage you sold me yesterday!"

DREADNAUGHT
BLAZING-AWAY-IN-COST-DEFENCE!

THE FUEL SITUATION

Fuel is high, strike or no strike, and it will stay high, but there is no terror in this statement to those blessed in the possession of a Dreadnaught Burner. When you can forever eliminate the usual fuel, its cost and muss and drudgery, by simply inserting a quarter inch pipe into the same stove, through the holes already there—and then have a wonderfully clean gas fire from common kerosene—it takes all the terror out of any strike talk or further increase in price of wood or coal. We have no complicated mystery or fancy prices—just an honest, simple little Burner that is warming its way to the heart of thousands of home-comfort, home-loving people. For the cookstove, or heating stove, it simply cannot be equalled. We also manufacture fast hot water heaters, large burners for boilers and furnaces. Also a miniature steamer for many uses where good dry steam and fast work is needed. If you are interested in real home comfort, write for particulars.

"Yes, yes, Mrs. Overwate," responded the butcher. "That just serves as an excellent illustration of how the motor car is replacing the horse and the mule in our modern life."

HAZEL-NUT BLOOMS OUT OF SEASON.

To the Editor: I have a Spanish hazel-nut 8 years old which blooms quite freely but has never borne any nuts. The bush itself has made a rank growth and is about 14 feet high and is now full of bloom; I have never pruned it. Any information through your query column will be very much appreciated.—W. R. H., Brown's Valley, Cal.

(Answered by Leonard Coates, Morganhill, Calif.)

It seems impossible to regulate the time of blooming of the hazel-nut or filbert in all the varied climatic conditions of California. In Europe pruning is done by cutting out strong wood growth and shortening in the small fruit wood. Blooming in October, 1919, would not auger well for a 1920 crop. And which bloom? The catkins, or staminate blossoms generally appear first, followed by the pistillate bloom, a deep red tuft at the end of large, plump buds. These buds are noticeably glutinous, to which the pollen from the catkins adheres, but it often happens that wet weather when the pollen is mature will prevent its distribution, and so pollenization will not take place. The natural aid to pollenization would be the admixture of two or more varieties, as no two would bloom at exactly the same time. The European filberts are becoming a profitable commercial crop in Oregon; they are reported as bearing well along irrigation ditches in the interior valleys of California; I have seen them bearing heavily on large bushes at Menlo Park, and 3-year-old plants were full of nuts in nursery row last year. Pollen of filberts and walnuts is very light in weight, and readily carried by the wind. In Europe bushes of 100 years old bear regularly; in time they would doubtless adapt themselves to changed conditions.

What doth it profit a man if he groweth the best fruit in the world and cannot get it to market?

"DUERO"

Deep Well Systems

JUST the thing to bring suburban or country home right up to date.

Pumps water from wells, where depth to water level ranges from 22 to 150 feet, and supply it under pressure for all purposes about the house or grounds.

Berkshire Merit

Proven Over All Breeds

Berkshire Hogs win in open competition over all breeds at the California International Live Stock Show at San Francisco.

Here is the Record:

Berkshires win Grand Championship on carload of fat hogs over all breeds.

Berkshires win first on carload of heavy packer's hogs, over all breeds.

Berkshires win champion under six months' barrow (the marketable age) over all breeds.

Berkshires win Grand Champion Pen of three barrows—any age—over all breeds.

THIS IS WHY THE BERKSHIRE IS THE STANDARD HOG, THE PROFITABLE HOG, THE HOG OF NO REGRETS

The above record is our reason for asking you to breed Berkshires.

Senior Champion Boar—Anchorage Farm, Natomas Baron Duke.

Junior Champion Boar—Humphrey, Escalon Type.

Senior Champion Sow—Humphrey, Emblems Escalon Belle.

Junior Champion Sow—O'Connor, Castleview Premier Belle.

Cow HEALTH is as Important as Good Feeding

When a cow's milk yield falls off, it is more likely to be a question of health than of food. Over-feeding will only make matters worse. Milk cows are subject to impairment of digestive and genital organs and the milk production is immediately reduced.

These vital organs can be toned up and strengthened by feeding KOW-KURE, the great cow medicine. This remedy is also used in treating such ailments as Abortion, Barrenness, Retained Afterbirth, Scouring, Bunches and Milk Fever. The best dairymen keep it constantly on hand. Sold by feed dealers and druggists; 60c and \$1.20.

Send for valuable free treatise on cow diseases, "THE HOME COW DOCTOR".

Duroc-Jersey Prize Winners.

The "red hog" is surely coming into his own. Hardly a show anywhere but the Duroc is as numerous or more so than any of the other breeds. They are fashionable and unlike some of the fashions they are deserving their popularity. Many of the principal herds of northern California and some from the southern end of the state made up the big showing.

Judge, Prof. H. H. Kildee, Ames, Lodi.

Exhibitors: Harvey M. Berglund, Dixon; Conejo Ranch, Newbury Park; F. M. Johnson, Napa; V. F. Dolcini, Davis; S. E. Whiting, Sacramento; Roy E. Fisher, Lincoln, Neb.; J. E. Thorpe, Lockeford; J. H. Rossiter, Burke; University of California, Davis.

Judging not finished until too late to publish. Will be given next week.

Hampshire Swine.

The "sheeted" hog had a most excellent showing. Three of the best herds in the country all having a large number entered made competition close and the ribbons of value. The breed seems to be coming into popularity, due to their good graz and feeding qualities and the fact that they dress out exceedingly well.

Judge, W. H. Pew, Ravenna, Ohio.

Exhibitors: C. J. Gilbert, Lancaster; Roy E. Fisher, Lincoln, Neb.; Conejo Ranch, Newbury Park.

Detail of the awards will be given next week.

Only One Herd of Yorkshires.

Yorkshires swine were represented by one herd, that of Lloyd & Tointon of Santa Rosa. They have excellent specimens of the breed and were awarded all prizes.

TOO LATE FOR PUBLICATION.

Awards on horses, sheep and goats were made too late for publication this week but will be given in detail in the following issue.

Mutton Sheep Exhibit Large.

Gradually the importance of the purebred sheep business is being realized throughout the Pacific Coast. It will not be many years before ex-

hibits of the different breeds at the fairs and shows will be as large and deserving of commendation as at state fairs and stock shows in the East. The agitation during the war, looking toward the establishment of small flocks of sheep on most of the ranches, has had a pronounced effect on the purebred sheep business of the State. Some of these flocks have come to stay, and where a man has only a few he many times gets into the purebred business.

The number of the mutton breeds shown was larger than at any previous show in California this year, including Shropshires, Corriedales, Southdowns, Romneys, Hampshires and Lincolns. This does not mean that there were nearly all the mutton breeds represented, but enough so that it can be called an excellent start in the right direction.

Frank Brown of Carlton, Oregon, judged all the mutton breeds.

The exhibitors were:

Shropshires—Butte City Ranch, Butte City; University of California, Davis; Vaughan & Fox, Lyons, Oregon; J. M. R. Boyd, St. Helena; Ratto Stock Farm, Napa.

Hampshires—Calla Grove Farm, Manteca; University of California, Davis; Conaway Ranch, Woodland.

LOS ANGELES

The Biggest and Most Interesting Livestock Show Ever Held in the West

Staged in the New \$350,000 Pavilion
 at North Portland, Oregon

Week of November 17th to 22nd

Open All Day and Evenings

The Pacific International Livestock Exposition was inaugurated and is supported by leading bankers, business men and breeders of the Pacific Coast—men of vision who see in the Pacific Coast the live-stock center of the World.

The staging of this exposition on so huge a scale is a long step toward the accomplishment of this aim and the benefits of its success will be widespread.

Thousands of entries of pure bred stock, many coming from the Middle Western States, necessitated additions to the immense \$300,000 Pavilion.

Hundreds of educational exhibits claim your attention, including the large Western Dairy Products Show with 250 entries and dairy lectures by Mr. O. E. Reed of Purdue University and Mr. M. Mortenson of the Iowa State College.

Los Angeles Livestock Awards Omitted

Owing to unavoidable circumstances the following principal awards at the Los Angeles Show were omitted from the issue last week.

Shorthorn Show is Good.

Shorthorns were judged by Frank Brown Carlton, Oregon.

Exhibitors: Estate of Thos. B. Dibblee, Santa Barbara; T. S. Glide, Davis; F. L. Hall, Perris; Will Henn, Kansas City; Pacheco Cattle Company, Hollister; University of California, Davis.

Glide won eight blue ribbons; Dibblee Estate, four; Pacheco, three; and Henn and University of California, each one.

Senior champion bull, Hallwood Flash, Dibblee. Reserve senior champion bull, Matchless Elite, Glide. Junior champion bull, Bashan Augusta, Dibblee. Reserve junior champion bull, Memory's Champion, University of California. Senior champion cow, Little Sweetheart, Glide. Reserve senior champion sow, Spicy Lady, Glide. Junior champion female, White Pacheco, Pacheco. Grand champion bull, Bashan Augusta, Dibblee. Reserve grand champion bull, Hallwood Flash, Dibblee. Grand champion cow, Little Sweetheart, Glide. Reserve grand champion female, King's Countess, Glide.

Aged herd: First, Glide; second, Dibblee; third, Pacheco. Young herd: First, Glide; second, Pacheco. Calf herd: First, Pacheco; second, Dibblee; third, Glide; fourth, Pacheco.

Get of sire: First, Glide; second, Pacheco; third, Dibblee; fourth, Dibblee.

Produce of dam: First, Dibblee; second, Glide; third, Glide.

Aberdeen Angus Awards.

Only one exhibitor to uphold the honor of this great beef breed—great in the show ring, at the feed trough and on the block. "May their shadows never grow less."

Congdon & Battles of Yakima, Washington, had the only herd and were awarded all prizes.

Holstein-Friesian Awards at Los Angeles.

Exhibitors: Anita M. Baldwin, Santa Anita; A. J. Stalder, Riverside; Burr Farm, Los Angeles; California George Jr. Republic, Chino; Frampton Bros., Artesia; Frank Reed Sanders, Chandler, Arizona; Los Angeles County Farm, Honda; Leo Steiner, Lawndale; University of California, Davis; James J. Jeffries, Burbank.

The judging was done by John B. Irwin of Minneapolis in a manner pleasing to the onlookers and satisfactory to the exhibitors.

In the number of firsts won, James J. Jeffries led with five, then Burr Farms and F. R. Sanders, with four each, Anita M. Baldwin, three, and California George Junior Republic, two.

Senior and grand champion bull, Merci Lad, Korndyke Burke, Baldwin. Reserve senior champion bull, Dichter Spofford Korndyke Lad, Calif. George Jr. Republic. Junior champion bull, King Elora Segis Pontiac, Sanders. Reserve junior champion bull, Sir Manuel Korndyke, Burr Farm. Senior and grand champion cow, Bessie Segis Pontiac 2nd, Burr Farm. Reserve senior champion cow, Topay Clothilde Hengerveld, Burr Farm. Junior champion female, Duchess Ormsby Sadie Vale, Burr Farm. Reserve junior champion female, Palo Verde King Pearl Piebe, Sanders. Reserve grand champion bull, King Elora Segis Pontiac, Sanders. Reserve grand champion cow, Duchess Ormsby Sadie Vale, Burr Farm.

Aged herd: First, Baldwin; second, Sanders. Young herd: First, Jeffries; second, Sanders; third, Stalder; fourth, Baldwin. Calf herd: First, Jeffries; second, Sanders; third, Stalder; fourth, Baldwin.

Get of sire: First, Jeffries; second, Sanders; third, Jeffries; fourth, Stalder.

Produce of dam: First, Sanders; second, Los Angeles Co. Farm; third, Burr Farm; fourth, Stalder.

Five cows in milk: First, Stalder.

Doings of the Durocs at Los Angeles Show.

This was probably the greatest Duroc-Jersey exhibit of the year west of the Rocky Mountains.

Exhibitors: California George Jr. Republic, Chino; Conejo Ranch, Newbury Park; Mrs. F. M. Connor, Pasadena; Michael Creamer, Los Angeles; Diamond Bar Ranch, Spadra; Elliott-Brant Rancho, Owensmouth; Falfadale Farm, Perris; Roy E. Fisher, Lincoln, Nebraska; Donald H. Graham, Lancaster; Hewitt Bros., Van Nuys; L. Leest, Van Nuys; E. F. Meyers, Lankershim; W. Moore, San Diego; E. Avery Newton, Los Angeles; C. T. Thompson, Bishop; J. E. Thorpe, Lockeford; University of California, Davis; Winsor Ranch, Bonita.

E. J. Barker, Thornton, Indiana, awarded the prizes.

The Diamond Bar Ranch won five firsts, Conejo Ranch, three; J. E. Thorpe, two; Falfadale Farm, two; Roy E. Fisher, Elliott-Brant Rancho, Winsor Ranch and U. of C., one each.

The University of California won first on fat barrow; E. F. Meyers, second, and C. T. Thompson, third. E. F. Meyers, first on pen of three barrows, and C. T. Thompson, second and third.

Grand champion boar, Ace of Pathfinders, Diamond Bar. Reserve grand champion boar, Great Orion Sensation Junior, Falfadale Farm. Grand champion sow, Model Defender Lady, Winsor. Reserve grand champion sow, Pathfinder's Very Best, Diamond Bar.

Senior champion boar, Ace of Pathfinders, Diamond Bar. Reserve senior champion boar, May Rose King, Elliott-Brant. Junior champion boar, Great Orion Sensation Jr., Falfadale Farm, Perris. Reserve junior champion boar, Giant's Type Conejo.

Senior champion sow, Model Defender Lady, Winsor. Reserve senior champion sow, Miss Orion Sensation, Diamond Bar. Junior champion sow, Pathfinder's Very Best, Diamond Bar. Reserve junior champion sow, Reggie's You'll Do, Thorpe.

Aged herd: First, Diamond Bar; second, Winsor; third, Conejo; fourth, Fisher. Young herd: First, Conejo; second, Diamond Bar; third, Conejo; fourth, Winsor.

Herd bred by exhibitor: First, Thorpe; second, Winsor; third, Graham; fourth, Thorpe. Get of sire: First, Diamond Bar; second, Conejo; third, Diamond Bar.

Produce of dam: First, Conejo; second, Conejo; third, Thorpe.

FRESNO EVOLUTION'S

Blood will mean much to California's Poland-Chinas—

Not because Evolution sold for \$25,000.00.

Not because Fresno Evolution's dam sold for \$1,750.00.

Not because his dam's dam sold for \$1,050.00.

But Because Evolution was sired by Miller's Giant, he by Disher's Giant, who traces to Big Ben. Also because Fresno Evolution's dam is Big Fancy Maid 2nd by Big Expanso by Expanso.

Master minds of Big Type Breeding

JOHNSON'S DEFENDER JR.

Owned by GREENWOOD FARM, Live Oak, Cal. Is California's greatest representative of Defenders, the greatest Duroc family. At the State Fair he was the smoothest boar shown, weighing 700 pounds at 17 months and carrying it on a perfect set of feet and legs. He won second in the strongest class of boars ever shown on the Coast and was a popular favorite. Three of his brothers won ribbons in the same class, showing the strength of this line of breeding.

Five Ribbons Won on Five Entries.

PEDDLING BOARS.

(Written for Pacific Rural Press.)

According to a news item from the South Dakota Agricultural College, a swine breeder of the state had more spring boars than he had been able to induce people to come to his farm and buy. Therefore, he loaded some into a small truck and started out "on the road" selling boars. On one trip alone from Rapid City to Philip he sold ten. He not only sold what he had with him, but he took orders for future delivery.

If this can be done successfully in South Dakota, breeders in this state of automobiles, trailers, trucks, "good roads" and "good weather" ought to sell boars like the proverbial "hot cakes."

Good Appearance Necessary.

In an undertaking of this kind it would pay to have the truck or auto and trailer as clean and attractive in appearance as possible, with a sign or signs signifying that the animals were for sale. Last, but not least, have the pigs in thrifty growing condition and washed and brushed so that the first impression given to prospective customers would be good. It would pay also to have the registration papers along as well as pedigrees. This certainly is worth trying, especially if the breeder is a good salesman.

California breeders, on account of our well-known climatic advantages, could sell fall boars in this way, as well as spring boars. Good roads are so common here that even in our so-called winter time it would be possible to travel with truck or trailer anywhere.

THE WHITLEY TU-TOCK-A-NU-LA RANCH FAVORS DUROCS.

(Written for Pacific Rural Press.)

To begin with the situation of this ranch could not be better, located as it is on Ventura Boulevard, about 10 miles from Los Angeles. Then they have 200 or more acres which can be irrigated and will grow anything from alfalfa to corn, either Indian or Egyptian. Besides this they have plenty of grain land and on top of it all some 200 acres of oak covered hills and valleys that will furnish a large amount of mast for market hogs.

After consideration of the merits of the various breeds of swine and also the location, which is becoming a Duroc-Jersey center, this breed was selected as the one to which Tu-Tock-A-Nu-La Ranch would pin its faith. They have within the past few weeks added the Chas. Swett herd to their already excellent nucleus. The head of the herd is Pathfinder's Model 2nd of the famous Pathfinder line. A large number of big-type sows of excellent bone and conformation of Orion Cherry King and Grand Golden Model breeding make up the female side of the herd.

It is the aim of this ranch only to register those hogs which are true to the large, fashionable type of the Duroc-Jersey and sell the ordinary type for market hogs. In this way they not only enhance their own reputation as breeders of swine, but also that of their favorite breed. If all breeders of registered animals would do this we would see a wonderful improvement in the mass of livestock in the near future.

Mrs. R. E. Whitley is active manager of the ranch and has already started a sales campaign in the Duroc line with pronounced success. We prophesy a brilliant future for this establishment in the livestock, as well as other departments.

How machinery has made it possible to produce food cheaper

We have just threshed one of the largest wheat crops in our history. Ever stop to think how impossible it would have been to grow those 915,000,000 bushels without modern, back-saving machinery?

The tractor never tires. A binder does the work of a hundred scythes.

Machinery has made economical, labor-saving agriculture possible.

The American farmer has found that he can do twice as much work with it—and do it cheaper. Every farm has several hundred dollars' worth of equipment on it.

It is the same way with the packer.

From knife and saw methods his equipment has grown until it takes many buildings to hold all his meat dressing machinery.

The packer, too, has multiplied his capacity. His modern equipment—like the farmer's—gives him ability to dress many more cattle and do it cheaper.

The difference between live stock and dressed meat prices has been narrowed. Swift & Company's profit—a fraction of a cent per pound from *all sources*—is too small to have any effect on live stock or meat prices.

All of which shows that big scale machinery pays—both on the farm and in the packing plant.

Swift & Company, U. S. A.

Founded 1868

A nation-wide organization owned by more than 30,000 shareholders

RIVERINA FARM HAS NEW POLANDS.

(Answered by Livestock Editor.)

Alex D. McCarty, senior member of the firm of McCarty & Starkweather, owners of Riverina Farm, Modesto, prominent breeders of Poland-China swine, has just returned from a month's trip through the eastern states.

Mr. McCarty visited many of the eastern Poland-China breeders and for all of seeing so many good hogs, he comes back very well satisfied with California and conditions here. One of the big herds visited was that of Lester Glover, Grand View, Mo., the home of Buster's Best, and 800-pound sow that has the reputation of being probably the most perfect hog in the world. The herd of 75 gilts and that also of 75 aged sows were a sight to be remembered for a long time to come.

Mr. McCarty purchased two boars and a gilt from the Fred Sievers herd of Audobon, Iowa. One was sired by Big Bob and out of a sow sired by Smooth Big Bone and second dam was by Big Bob, making this very promising youngster a line-bred Big Bob boar. The other boar was sired by Big Ed, he by Buster's Giant, and he by Giant Buster. The dam of the second boar was sired by Smooth Bob, a full brother of Caldwell's Big Bob. The gilt purchased was sired by

Grand Master's Model and he by Grand Mesterand, out of a sow by Big Bob Wonder.

These hogs are in California now and will be an excellent addition to an already great herd. We know they are good as individuals, as Mr. McCarty's judgment is known to be excellent.

E. E. Easley, the well-known dairyman of San Jacinto, is increasing his number of cows and increasing in the right direction—pure-breds, and intimates that in a short time the grade cow will be a thing of the past on his ranch.

Report any new crop diseases or insects to the State Department of Agriculture at Sacramento. They may save you many dollars loss in the next season.

Fall plowing on reasonably level ground prevents run-off of the rain which makes crops.

Duroc-Jerseys on the Whitley Tu-Tock-A-Nu-La Ranch, Van Nuys.

Livestock and Dairy Notes

SWINE.

Cross Bros. of Merced recently sold 2 good Poland-China gilts to J. F. McSwain, Merced.

A gilt sired by Rossmead Bob and owned by Fred Ross, Hanford, has just farrowed her first litter consisting of 11 fine pigs, and is raising them all. The sire is Big Timm.

Martin Bros. of Visalia, report that three of their sows, bred to California Big Bone leader have littered eight, twelve and fourteen pigs and that all of the young Polands are showing up in fine shape and promise to be classy animals. The sows are prize winners, having taken ribbons at the Tulare and Visalia fairs.

J. F. McSwain, Merced, recently marketed a lot of barrows sired by his herd boar, Big Model Fellow, that averaged 300 pounds at 7 months. Mr. McSwain reports sales of registered stock as follows: Service boar to Fred Wheaton, Hilt, spring boar to H. H. Whitworth, Hayward, 3 December gilts to Kern County Pig Club.

The California Poland-China Breeders will hold a consignment sale sometime next February at the University Farm, Davis. There will be 50 head of the best bred sows and gilts the breeders can select. Those who are contemplating purchasing hogs of this kind will make no mistake if they wait until this sale is pulled off.

Following their successful auction on October 21, the Tulare County Poland-China Breeders' Association has set Friday, February 6 as the date for their second annual sale of pedigreed open and bred gilts. The sale will be held at the sales pavilion of the Tulare County Live Stock Association at Tulare, where the previous sale was held.

A. J. Elliott and H. C. Shinn of Tulare are owners of the Big Poland-China boar The California, which has attracted so much attention at shows. This boar carries the blood of The Pilot, national grand champion at the National Swine Show at Des Moines. The boar was sired by Macs Big Orange of Colossal breed and is closely related to the Pilot on the dam side.

Buckland & Son, Fresno, are consigning to the Fresno county breeders Poland-China sale 3 gilts and 2 boars by California Jumbo Buster. Ira Mason of Fowler is consigning to the sale a service boar and 2 young gilts by his herd boar, Smooth and Leader. A Kings Wonder sow, owned by Buckland & Son, has just farrowed a very fine litter by the great boar, Liberty Bond.

W. L. Haag & Sons, proprietors of Lendorris Farm, Hanford, report a big demand for bred sows and gilts from members of local pig clubs. They recently shipped a fine young boar to James Ray of Holtville. Their herd boar, Young Jumbo, is getting exceptionally fine pigs and his services are in demand by many breeders from distant points, as well as those in the county.

Greenwood Farms, H. C. Witherow, manager Live Oak, reports the following sales. One bred gilt to C. H. Hartwig, Yuba City, which was sired by Johnson's Defender Junior and sold for \$200; two sow pigs to R. S.

Chrisman, the well-known veterinarian of Yuba City; also one under six months boar pig to H. S. Johns of McArthur, proprietor of the Shavista herd of Duroc-Jerseys.

W. T. Hollingshead & Sons of Orland, will hold a boar and gilt sale of 30 head, November 11. It is the first sale of its kind in northern California among Duroc breeders. Breeders and those looking for foundation stock will find an excellent opportunity to supply their needs at this sale, as this herd is one of the foremost in northern California and contains the most popular blood lines of today.

Allen Thompson of Tulare and Joe Chenoweth of Visalia, joint owners of Lord's Orion Cherry King, a prize boar shipped by them from India last year have sold the animal to Way and Lamb, of Modesto for \$500. Mr. Thompson, whose herd was sold almost entirely to the Boston Land Company of West Haven a short time ago has purchased a number of animals from the Thorpe herd at Stockton and will continue breeding.

The Merced County Poland-China Breeders' Association was perfected and the following officers were elected. J. F. McSwain, Merced, president; M. B. Cross, Merced, secretary-treasurer; P. M. Mitchell, Atwater, director; J. Q. Martin, Atwater, director; M. M. Reiman, Planada, director. It is the intention of the other breeders to get together into county associations which are going to co-operate in the "better sire" campaign about to be launched.

H. G. Ball, an extensive oil operator in the Taft and Coalinga fields has purchased a large ranch near Tulare and will raise purebred Holsteins and Poland-Chinas. To start off his herds he has purchased a senior two year old sow, Lady Zenobia 3rd and Jennie Wren Edith Pride from Walter Mitchell of Visalia and Miss Model C a Poland-China sow from A. J. Elliott, who last year made a thousand dollars on the animal. The sow was bought at the Tulare County Breeders sale October 21 for \$300 and Mr. Ball already has sold two of the unborn litter, a boar pig and a sow for \$100 each.

Dairy Notes.

Packwood Farm of Visalia, reports sale of a registered Holstein bull to M. B. Silveira, a large dairyman of Tulare.

Frank Reed Sanders of Chandler, Arizona, says the Holstein-Friesian classes were much stronger at the California International than they were at Los Angeles.

John B. Irwin of Minnesota, the Holstein-Friesian judge at Los Angeles, when he saw the aged cow class of this breed at San Francisco, said it was the best in the United States so far as he knew.

The Pocket Ranch, Geyserville, Sonoma County, owned by Leon F. Douglass of San Rafael, one of the coming breeders of dairy Shorthorns, recently purchased seven 21-month-old heifers and two yearlings. Four of them were from the farm of Thomas Harrison, Santa Rosa and five from H. L. & E. H. Murphy of Perkins.

Seventy-five head of pedigreed Holsteins will be offered at the first annual sale of the Tulare County

Live Stock Association at their sales pavilion at Tulare on November 25. The association, with the co-operation of the Tulare Board of Trade raised \$15,000 for the purchase of the ground and erection of buildings and the sales pavilion was opened only a short time ago. The place promises to be the scene of one or more big stock sales every month and is becoming the stock show place of the San Joaquin Valley.

Beef.

This is said to be the best year had in Arizona for 15 years. The cattle on all ranges are being range fattened instead of being shipped east for fattening before marketing.

A report from the Salt River Valley of Arizona shows that the dairy industry in the great alfalfa region is on the decline, due to continued high cost of production. The increased acreage of cotton is one of the reasons of the high cost of feed, as this fibre plant has replaced hundreds of acres of alfalfa.

Horses.

Growth of the Percheron Horse Society of America is normal according to Wayne Dinsmore in the Western Breeders' Journal. Nine years ago the society had 2,800 members and now it has almost 10,000. 4,831 men have bought Percheron mares during the past 3 years. Many of these men will eventually want to become members and will offset to a great extent those who have discontinued the business.

George Lane of Calgary, Alta, Canada, has the honor of being the first breeder to ship Percherons from America to Great Britain. On October 3 he reported a shipment going east of 77 Percherons, 24 of which went to Quebec and the balance to England. In addition to this shipment Mr. Lane has sold a registered stallion and 50 high grade mares to Lord Minto of Scotland.

Merritt-Bowers Co. of Tulare won most of the premiums and both grand championships in the Percheron classes at the Oregon State Fair. Also, first, second and third on Belgian stallions, as well as grand championship on stallion. In the Shire classes, first and grand championship on aged mares and first on aged Clydesdale mares. They sold the grand champion mare and mate, second in draft class, for \$1,800 at this fair. This does not appear as though the demand for drafters was entirely gone.

A special corner for production of your own seed is likely to increase the crop from your whole place.

THE PACIFIC HERD of big-type Polands. Herd sire, Hadly Wonder and an outstanding boar by Golden State King. Nettie E. Andrews, Modesto, Cal.

ONBONE HERD offers March boars for sale from King's Big Bone Leader, grand champion at State Fair, 1918. Write F. E. Fay, Tipton, California.

POLAND-CHINAS—Young boars and gilts. Prices and description on application. Edward A. Hall, Rt. 1, Box 39, Watsonville, Cal.

WAUKEEN HERD POLAND-CHINAS—Big type herd boar, the \$700 Grand Champion of California. Lee McCracken, Prop., Ripon, Cal.

A FEW BOARS of May farrow. Grandsons of Big Bone Bob. R. B. & L. J. Montgomery, R. F. D. No. 1, Walnut Creek, Calif.

FOR SALE—Poland-China Boar. Great herd sire of Major Hadley Wonder breeding. C. W. Probasco, Raymond, Madera Co.

BIG TYPE POLAND-CHINAS—Stock from the best herds of the Middle West. N. Hauck, Alton, Humboldt County, California.

10 SPRING BOARS—Tops from herd, will be sold at very low prices to close up partnership. Young and Clark, Lodi, Cal.

LAKE SIDE STOCK FARM—Large, smooth and big-boned Poland-Chinas. Geo. V. Beckman & Sons, Lodi, California.

REGISTERED POLAND-CHINA SWINE—Prize-winners. Finest stock in the State. M. Bassett, Hanford, California.

POLAND-CHINAS—If you want perfect type in a March boar or gilt I have it at the right price. J. E. Thomas, Gilroy, Cal.

POLAND-CHINA PIGS—Bernstein Trewitt and Ross blood. B. M. Hargis, Tulare.

LARGE TYPE POLAND-CHINAS—Winton Poland-China Farm, Winton, Cal.

POLAND-CHINAS—Strictly large type. J. F. Lehman, Lodi, Cal.

POLAND-CHINAS—Young stock for sale. H. E. McMahan, Lemoore, California.

BIG-BONED POLAND-CHINAS—Stock for sale. E. S. Myers, Riverdale, California.

REAOAKS RANCH herd of registered Poland-Chinas. W. J. Hanna, Gilroy, Calif.

Duroc-Jerseys.

FOR SALE—About 40 hogs, all sizes, both sexes. Durocs. Durocs are offspring from Rucker and Queen is Right 1st. One boar 18 months from Rucker and Queen is Right 1st. Reference El Dorado Co. Duroc Association. Egbert Veerkamp, R. A. Box 113, Placerville, El Dorado Co., Cal.

DUROC-JERSEY SWINE FOR SALE—Anything you want, from spring gilts and boars, from 800-pound O. C. K. breeding to yearlings, young bred sows—60 head to pick from. The best breeders' herd on the Coast. Jersey Queen Farm, San Jose, Calif.

HORNE'S REGISTERED DUROCS—A choice lot of oversize weanlings of either sex and a few gilts weighing 350 to 400 lbs. are ready to ship. Write for pedigrees, photos and prices. Money back guarantee on every animal leaving my ranch. Geo. L. Horne, Winton, Cal.

RANCHO RUBIO DUROCS—Two boar pigs, four months old and weaned pigs, both sexes. Stock of Orion Cherry King Pathfinder and Golden Model breeding. Sold on "Money Back" guarantee. Elmer Lamb, Ceres, Calif.

BIG-TYPE DUROCS—Herd headed by California Orion King. Am offering excellent young boars at right prices. Inquiries invited. Harvey M. Berglund, Dixon, Calif.

WE HAVE 100 YOUNG GILTS and boars, bred on the purple, which we are selling for about half their value. Money back if not satisfied. Derryfield Farm, Capital National Bank Bldg., Sacramento.

SWEETWATER DUROCS—The most popular herd in the West. Our Durocs make money for us—they will do the same for you. Winsor Ranch, Bonita, San Diego Co. Address R. K. Walker.

REGISTERED DUROC-JERSEYS—Weanlings, both sexes, from Orion, Defender and Golden Model stock. Pino Vista Ranch, Placerville, Cal. Address H. C. Baum.

DUROC-JERSEYS at Ireland, home of Cherry Volunteer II. and Ireland's Joe Orion. Ranch at Owensmouth, Cal. City Office, 1249 Brockman Building, Los Angeles, Cal.

REGISTERED DUROCS—Choice weanlings of either sex, breeding and satisfaction guaranteed. H. E. Boudier, Napa.

DUROC JERSEYS—Bred sows, gilts, service boars and weanlings. Premium stock. Ray McMillan, Ethanac, Calif.

HEAVY-BONED DUROCS—A few service boars for sale. Ormondale Co., Route 1, Redwood City, California.

DUROC-JERSEYS—Fine big type gilts, tried sows and boars—Eastern and California bred. H. P. Slocum & Son, Willows, Calif.

REG. DUROC JERSEYS—Fine spring stock, both sexes, not related. P. Hoagland, Motor A, Box 286, Ceres, Cal.

BIG-TYPE DUROCS—Gilts and boars of Orion Giant breeding. Falfadale Farms, Peris, Calif.

REGISTERED DUROCS—All from prize-winning stock. W. P. Harkey, Gridley, Calif.

REGISTERED DUROCS—Stock for sale. W. J. Fulgham & Sons, Visalia, California.

A FEW A-1 MARCH BOARS—Jack London Ranch, Glen Ellen, Sonoma Co., Calif.

Chester Whites.

CHESTER WHITES—BILLIKEN TYPE—The big winners at the State Fair. 15 extra choice spring boars, sired by the Grand Champion boar and out of Billiken sired sows. A few spring sow pigs; three bred Billiken sows and two gilts; all to farrow in October. Priced to sell; a chance to get the best type in the West at farmers' prices. Write for special catalogue and price list. C. B. Cunningham, Mills, Cal.

Hampshires.

REGISTERED HAMPSHIRE—"Belted Beauties." Weaned pigs a specialty. Uneeda Hampshire Swine Farms, Gardena, Cal.

Yorkshires.

LARGE YORKSHIRES—The ideal hog for the progressive farmer. Young stock for sale. A. L. Tubbs Co., Calistoga, Calif.

DAIRY CATTLE.

Jerseys.

REGISTERED JERSEYS FOR SALE—I am now offering my small but select herd of registered Jerseys—ten head. Cows of this class are rarely offered for sale. Most of them with first and second calf. Heavy milkers, high testers, now on official test. Received today monthly report from the Jersey Cattle Club for August, which shows my herd averaged 48.58 lbs. fat per cow. Half of herd heifers with first calf. Come to my place and see these cows. I will meet you in Modesto if you come by train. F. W. Ellerby, Carver Road, Modesto, Calif.

SERVICE JERSEY BULL, bull calves, Financial King blood, Chester white boars, prize winners. Best blood, type, production. N. H. Locke Co., Lockeford, Cal.

SUNSHINE FARM JERSEYS—Tuberculin tested. Production counts. E. E. Greenough, Merced, California.

Holsteins.

A PRICE ON EVERY ANIMAL. Herd free from tuberculosis. All sales subject to sixty days' retest. Son of Finkern Soldene Valdesa, whose dam is not only a world record cow in seven-day division, but has two sisters holding world's records for yearly production.

Toyon Farms Association, 679 Mills Building, San Francisco.

YOUNG HOLSTEIN BULLS—Excellent breeding and individuals. Satisfaction guaranteed. Pecho Ranch and Stock Co., San Luis Obispo, Calif.

PALO ALTO STOCK FARM, Palo Alto, breeders of registered Holsteins. Heifers and service bulls. Reasonable prices.

CREAMCUP HERD—Registered Holsteins. Pontiac bull calves. M. Holdridge, Rt. A, Box 437, San Jose, California.

REGISTERED HOLSTEINS—A. W. Morris & Sons Corp. Importers and Breeders, Woodland, California.

F. H. STENZEL, SAN LORENZO, CALIF.—Breeder of Registered Holsteins. High test producers.

REGISTERED HOLSTEINS—Best blood lines of the breed. R. L. Holmes, Modesto, Cal.

REGISTERED HOLSTEINS and Duroc-Jerseys. Sturgeon Stock Ranch, Tulare, Calif.

THE VICTORY HERD—Registered Holstein cattle and Duroc Jersey swine. H. E. Spire, Hillcrest Farms, Caruthers, California.

REGISTERED HOLSTEIN BULLS with world's record backing. Kounias' Registered Stock Farm, Modesto, California.

A FEW YEARLING registered bulls by King Morco Alcartra 2nd, from good producing cows. H. M. Cross, Merced, Cal.

REGISTERED HOLSTEINS—Best blood production. Leeman and Kilgore, Ripon, Cal.

J. W. BENOIT, Modesto, Calif.—Breeder of registered Holsteins.

GOTSHALL & MAGRUDER—Breeders of registered Holstein-Friesians. Ripon, Calif.

CHOICE HOLSTEIN bulls for sale. No females. Millbrae Dairy, Millbrae, California.

HOLSTEIN BULLS and bull calves from A. R. O. cows. C. A. Miller, Ripon, California.

REGISTERED HOLSTEIN CATTLE—E. B. Freeman, R. B., Modesto, Cal.

EL DORADO HERD OF HOLSTEINS—Alex. Whaley, Tulare, California.

Ayrshires.

ELKHORN FARM AYRSHIRES—Choice young bulls at reasonable prices. J. H. Meyer, 440 Montgomery St., San Francisco, Calif.

AYRSHIRES—Registered; all ages. E. B. McFarland, 412 Claus Spreckels Building, San Francisco, California.

NORABEL FARM AYRSHIRES—Le Baron Estate Co., Valley Ford, Cal.

Guernseys.

EDGEWOOD FARM GUERNSEYS—First in the show ring and in official records. A few choicely bred bull calves for sale. Edgewood Farm, Santee, San Diego county, Calif.

BELLA VISTA GUERNSEYS—May Rose Governor of Chene breeding. Bull calves from high record dams. J. W. Gemmer, Ripon, Cal. R. 2.

Milking Shorthorns.

BREEDERS OF REGISTERED SHORT-HORNS—Milk strain; choice young stock for sale. John Lynch Ranch, Box 321, Petaluma.

INNISFAIR DAIRY SHORTHORNS—Registered young bulls for sale. Alexander & Kellogg, Suisun, California.

DUAL-PURPOSE SHORTHORNS—registered and unregistered bulls. Chas. L. Weaver, Tulare, Calif.

BEEF CATTLE.

RANCHO SAN JULIAN SHORTHORNS—Purebred range bulls, unregistered, for sale. Estate Thos. B. Dibblee, Santa Barbara, or Lompoc, Calif., John Troup, Supt.

REGISTERED HEREFORDS—H. H. Gable, Diamond G Ranch, Esparto, California.

ALAMO HERD REGISTERED HEREFORDS (founded by Governor Sparks). Herd and range bulls. Reasonable prices. W. D. Duke, Likely, Modoc county, California.

REGISTERED MILK AND BEEF SHORTHORNS, bulls and heifers for sale; catalogue free. Thomas Harrison, Santa Rosa Stock Farm, Santa Rosa, California.

HEREFORDS—Sierra Vista Herd, Minturn, California. Over one hundred registered animals. Fairfax and Repeater bulls head the herd. On highway.

REGISTERED YEARLING SHORTHORN BULLS—Heavy-boned, thick-meated. Scotch and Scotch-topped breeding. Ormondale Co., Route 1, Redwood City, California.

THE NEVADA HEREFORD RANCH, Jno. H. Cazier & Son Co., Prop., Wells, Nevada. Registered Hereford cattle. Breeding stock for sale.

SIMON NEWMAN CO., breeders of Registered Hereford, Newman, California.

HEREFORDS—Mission Hereford farm, J. A. Bunting, Prop., Mission San Jose, Cal.

GEORGE CALLAHAN, breeder of registered Herefords, Milton, California.

REGISTERED SHORTHORNS—Fair Oaks Ranch, Willits, Calif.

GEORGE WATTERSON—Breeder Registered Herefords. Bishop, California.

SHORTHORNS—Carruthers Farms. Live Oak, California.

SHEEP AND GOATS.

F. A. MECHAM ESTATE, Petaluma, Cal.—Breeders and importers of Shropshire, Rambouillet and American Merinos, both sexes. Also Red Polled cattle. Take electric car at Petaluma or Santa Rosa for Live Oak Ranch.

FOR SALE—One good milk goat, and two fine young Toggenburg does, eight months old. Write or call, P. M. Peterson, R. B., Box 137, San Martin, Calif.

WANTED THREE TO FIVE Hundred, young bred ewes, Rambouillet or Southdowns preferred. Box 95, Warm Springs, Cal.

DORSETS AND ROMNEYS—Dorset ram lambs for sale. John E. Marble, South Pasadena, California.

FOR SALE—1500 Merino ewe lambs; 1500 yearling Merino ewes. C. G. Owens, Livermore, Cal.

FOR SALE—About 200 Purebred Shropshire ram lambs in lots to suit. R. J. Currey, Dixon, Cal.

BULLARD BROS., Woodland, Calif. Breeders and importers of Rambouillet sheep.

KAUFKE BROS., WOODLAND, CALIF.—Breeders and importers of Hampshire sheep.

CHAS. KIMBLE—Breeder and importer of Rambouillots. Hanford, California.

CALLA GROVE FARM, MANTECA, CALIF.—Breeders and importers of Hampshire sheep.

MISCELLANEOUS.

BUTTE CITY RANCH

SHORTHORN CATTLE, SHROPSHIRE Sheep, Berkshire Hogs, Shetland Ponies, Bronze Turkeys, White Plymouth Rocks. Stock for sale at all times. Third sale at the Ranch—all breeds—April 17, 1920. W. P. Dwyer and W. S. Guilford, Box P, Butte City, Glenn County, California.

FOR SALE—12 mules 3 to 5. Halter broke and gentle. J. A. Clark, Capay, Cal.

Is Sweet Pea Straw Good for Stock?

(Written for Pacific Rural Press by Prof. P. B. Kennedy, University of California.)

A communication from Farm Advisor Washburn of Santa Cruz county, regarding the feeding of sweet pea straw to live stock, brings up an interesting problem and one that has evidently been overlooked. The reason for this no doubt is that California is the only State that would have sufficient sweet pea straw to warrant an investigation of its utility as the bulk of the sweet pea seed of the world is probably grown in this State.

The scarcity of feed and the fact that leguminous plants of all kinds are now interesting everyone are additional reasons for wanting to know about sweet pea straw.

The general method of getting rid of sweet pea straw has been by burning. To burn any straw and especially that from a legume, is wrong in principle, so that we should at least get it incorporated with the soil somehow even if we are doubtful about feeding it. We were fortunate enough to have an excellent row of sweet peas in our own garden this summer. When they began to look unsightly after the blooming period we placed the vines deep in trenches and dug them under. The ground was thoroughly soaked afterward. One month later we dug down just to see what had taken place and found the vines black, and well rotted. We know that ground will produce heavily next year because the physical condition of the adobe soil will be greatly improved and in addition it will contain an abundance of organic nitrogen.

The sweet pea belongs to a different group of legumes from those that we grow either as food for stock or as a vegetable. The latter belongs to the genus Pisum and are not poisonous in any stage of their growth. Why we must be careful about what we say about the sweet pea is because it belongs to the genus Lathyrus, which has been under suspicion since early times. There are about 100 species of Lathyrus indigenous to North America, all known in their different localities as Wild peas. They look so much like the wild vetches that it takes an expert to distinguish between them. The representatives of the Lathyrus group that everyone is most familiar with are the common annual, garden flowering sweet pea (Lathyrus odoratus) with its dozens of gorgeously colored varieties and the perennial everlasting sweet pea, also of the gardens (Lathyrus latifolius).

The best known species cultivated for forage is the grass pea (Lathyrus sativus), presumably because it looks not unlike broad leaves of grass during the early stages of its growth. It is also known in the literature as vetchling or chickling vetch. On the Pacific coast the terms Swiss pea

and wedge pea have been applied, the latter because of the shape of the seed which tapers to a broad sharp edge resembling a wedge.

Another is the Tangier pea (Lathyrus tingitanus), promising both as a cover crop and as forage as soon as seed can be raised cheaply enough to compete with the vetches.

Occasionally we find the Flat pea (Lathyrus silvestris wagneri) offered for sale. It is very similar to the perennial sweet pea of the gardens. Although grown for forage in Europe the experiments with it by many of the Experiment Stations and by the United States Department of Agriculture are not very encouraging. As it is a perennial and very hardy it should be given extended trial in the North.

In our own State we have at least a dozen species growing wild from Humboldt to San Diego counties. The most interesting is what is known as the Pride of California (Lathyrus splendens), which has very large, showy, deep rose-purple flowers. It should be extensively introduced as a flowering plant. Traveling on the highway between San Diego and Imperial Valley during the months of May and June, one cannot help but be impressed by the gorgeous display produced by this plant as it climbs through and over the chaparral.

Another, Torrey's Wild pea (Lathyrus Torreyi), occurs in patches in the Sierras. It looks not unlike alfalfa and has perennial creeping rootstocks. Probably a valuable species to introduce into cultivation.

We could make similar remarks about the other species in the State, but it will suffice at this time to state that they are to be found in the marshes, by the seashore and on banks throughout the redwood regions. Everywhere they are grazed to a greater or less extent. They are nutritious and definite knowledge as to their deleterious nature if such they have is lacking.

Why we are unable to give all members of the genus Lathyrus, including the sweet pea, a carte blanc order as forage plants under any and all circumstances, is because the seeds of all of them at least in the wild state contain a poisonous alkaloid which causes a disease known as Lathyrism or Lathyrismus.

Man, the horse and the pig are especially susceptible to the disease. With human beings the trouble takes place when the seeds are ground up with the flour and made into bread, while with animals, apparently when the plant is fed when the pods are ripe.

No evidence seems to be available that would lead us to believe that the foliage of any of them is poisonous.

Universal natural milker

Right now good dairy help is hard to get and wages are mighty high. Why stick to the old-fashioned, laborious, time-wasting, hand-milking method while other dairymen are saving time and making bigger profits by using the Modern Universal Natural Milker?

One Universal lasts a lifetime. It alternates, milking two teats at a time, while it is massaging and relieving the other two.

SUNFLOWER SILAGE A SUCCESS.

(Written for Pacific Rural Press.)

The star of the gorgeous sunflower
is in the ascendant as a silage plant.
From all sides we keep having favor-
able reports as to its value in this re-
spect. Trials have been conducted in
both the humid and semi-arid regions
of the United States by state experi-
ment stations and private stock
raisers as well.

Results seem to favor this plant,
both from the standpoint of yield as
compared with corn as a standard,
and also as to its palatability. Those
who have tried it find that cutting it
about the time it comes in bloom gives
the best results. Like all plants ma-
turity means woodiness or develop-
ment of woody fibre, which is both
indigestible and unpalatable.

In the semi-arid regions west of
the Missouri River, where the season
is long enough to properly develop the
plant, it would seem as though the
sunflower might become a popular
forage plant, especially from the silage
point of view.

It has been the general opinion that
the sunflower seed was the only part
of this plant that had any value as
stock or chicken feed. The writer
noticed some years ago that the fam-
ily cow would eat the dried sunflower
heads readily after the seed was re-
moved. At first it seemed as though
bossy must be unusually hungry to
eat that "stuff," although she was
supposed to be and was well fed. It
was found, however, that she really
preferred them to some of the other
feeds.

It must not be supposed that cattle
will not eat the plant at all unless it
is made into silage. This is a mis-
take, as it has been used with some
success as a soiling plant, commencing
to cut it for that purpose about the
time it would be cut for silage. The
plant has also been cut and cured for
fodder and fed with profit in this way.

Where the plant is grown for seed
it would appear there is some feeding
value in that part of the plant, ordi-
narily thrown away or burned. The
woody stalks, of course, would not be
worth anything as feed, but the shell
or husk of the head certainly must
contain a palatable and digestible por-
tion that at the present prices of feed
would probably be worth saving.

MILK GOAT BREEDERS MEET.

The Central California Milk Goat
Breeders' Association met as per
schedule in the California Building on
Saturday, November 1, at 2 p. m.
President Carl Wilson of Palo Alto
called the meeting to order, and after
routine business was transacted, Miss
Irmagarde Richards read a very inter-
esting paper on "How to Raise Large
Kids," which was received with much
interest. Miss Richards has made a
close study of goat character and
caters to their capriciousness as well
as their needs, and in this way in-
duces them to eat more and therefore
grow more rapidly. Stockmen in
other branches of the business might
take pattern after these methods to
their advantage.

The subject of a greater publicity
for the milk goat business was brought
up and discussed by the members
present.

Winifred D. Howe of Oakland, who
has had a wide experience in the suc-
cessful feeding of infants on goat's
milk, was invited to read a paper on
this interesting subject at the next
meeting of the association.

This association has been in exist-
ence about three months and has a list
of 62 members mostly in the Bay re-
gion. At least two-thirds of those
members were present at the meeting
and are boosters for their business.

CALIFORNIA JERSEY CATTLE CLUB HAS INTERESTING SESSION.

Called to order by President J. E.
Thorpe, and after routine business,
discussion of various important sub-
jects was taken up.

Sam H. Greene, secretary-manager
of the California Dairy Council, spoke
of the possibilities of the organiza-

tion and the good they had already
accomplished.

Dr. Hand of Orland enumerated the
various benefits to be derived from
supporting the State Fair and making
it the one real show.

The need for a field representative
was discussed at length, and it was de-
cided to consult with the A. J. C. C. of
New York and ask their advice and as-
sistance. It is the intention to put a
man in the field as soon as possible.

A futurity class for the State was
discussed and various plans suggested
and one agreed upon. It has pro-
posed by J. E. Wherrell that every
member of the association subscribe
\$25 or give a calf annually to provide
funds for said futurity.

You can't have a Speedometer on your arm

Even if you could, it would not make you
turn at a certain speed every time you used
a separator. Own a separator that you do
not have to coddle by turning at a fixed
speed or by using speedometers and other
contraptions. Do the sensible, practical
thing and buy a Sharples.

SHARPLES SUCTION-FEED CREAM SEPARATOR

"Skims clean at any speed"

American ingenuity has perfected
a principle in the Sharples that
enables you to turn the handle
fast, slow or "as you like it."
You can loaf along, or speed it up
—and you do not lose a cent's
worth of butterfat nor change the
thickness of your cream. From
a straight, money-making stand-
point alone, the Sharples is the only
separator you can afford to buy.

Your nearest Sharples dealer
will tell you the rest of the
Sharples story or send for our
catalog and Sharples Book of
Old Songs, addressing Dept. 31

A general discussion of further
plans for the good of the breed and
publicity of its good qualities ended
the meeting.

Clean potato seed will count for
more dollars next year, while wormy
or diseased seed will count for smaller
dollars.

FRED M. JOHNSON'S RECENT DUROC IMPORTATION.

Fred M. Johnson, the well-known Duro-Jersey breeder of Napa, recently brought out from the east 33 gilts and 3 boars of his favorite breed.

He has only his senior herd sire on exhibition at the California Interna-

tional, King Orion Junior, but one good one like this is better than to have a whole lot of medium stuff. He was first aged boar at the Nebraska State Fair and second at the National Swine Show, Des Moines, Ia. He is an exceptionally smooth fellow, with great length, depth, strong arched back, stands well up on his feet and

has bone large enough to suit anyone. He stands 42 inches high and measures 78 1/4 inches from point between his eyes to the root of his tail. He weighed 930 pounds at Des Moines and could easily be made to weigh a thousand or better. He is one of the most promising individuals that has been brought out this year.

Among the gilts brought out by Mr. Johnson are 9 sired by Pathfinder's Likeness, who was grand champion at the Iowa State Fair in 1918. These are March gilts of the type that are so popular at the present time. Six others are grand daughters of Big Orion and he was sired by Great Orion. They are also the much desired big type, still having plenty of quality.

Of the other two boars imported by Mr. Johnson, one of them is a Pathfinder boar, farrowed last spring, the other by Great Sensation, farrowed a year ago.

Mr. Johnson is confident that his importation is fully up to that of any other breeder who has brought out hogs from the east this year, and those who know Mr. Johnson's judgment will feel sure that he is right.

FRESNO COUNTY POLAND-CHINA BREEDERS' ASSOCIATION.

One of the coming events in the near future in the Poland-China business is the sale of the Fresno County Poland-China Breeders' Association, to be held on November 19 next. This is a consignment sale from 20 prominent herds within this county that is coming to be such a Poland-China center. The sale will consist of 60 head of bred sows and gilts, open gilts and boars.

When such prominent breeders as Buckland & Son, W. C. Ficklin, Chas. Gatewood, Fred Gatewood and many others of equal note are consignors, it is a guarantee that the stock at the sale will be of the highest quality.

The animals will all be passed upon by a very conservative plucking committee, which is an additional guarantee that the stock consigned will be of the very best.

Those who wish herd headers, should not miss this great sale.

The Rambouillet Sheep Show.

It sometimes happens that only one flock or herd will make a great showing, and while awarding the prizes is lacking the excitement and suspense of keen competition, onlookers feel as though they had received their money's worth in having the privilege of inspecting the animals. Such an exhibit was the flock of Rambouillets shown by Bullard Bros. of Woodland. It is an exhibit that could be taken anywhere and in the closest competition win their share of the ribbons.

Bred right, fed right, fitted right, it was one of the pleasures of the show to inspect the exhibit. To borrow a phrase from one of the leading automobile manufacturers, we may say that "when California needs better Rambouillets, Bullard Bros. will breed them."

All prizes awarded the flock of Bullard Bros. by Charles Cook of Hayward, the judge of fine wool sheep.

H. M. Barngrover, the Hereford breeder of Santa Clara, is disposing of his unregistered cattle to make room for registered stock. He will sell 100 head in the yards of the Western Meat Company on the day following the Hereford consignment sale at the California International.

Meetings at California International

Banquet of the California Swine Breeders' Association.

On the evening of November 4, at the California Building, a banquet of the California Swine Breeders' Association, consisting of 35 plates, was an informal affair, but a very enjoyable one. No business was transacted, simply a gathering of the prominent breeders of swine, regardless of the kind they were growing, meeting, in harmony for an hour or two of enjoyment.

C. B. Cunningham, president of the association, acted as toastmaster in his usual acceptable manner. He called upon General Manager, Gordon H. True, for an expression of his thoughts at this particular time and Manager True responded with an address on the benefit and need of such livestock shows as the California International has proven to be. He was followed by Secretary Sam H. Greene, of the California Dairy Council, who talked on the best kinds of milk to feed swine, particularly with reference to the color.

Robert E. Jones of the Sacramento Bee also talked on the benefit of the stock shows for the livestock industry and the swine side of it in particular.

J. Francis O'Connor, proprietor of Castleview Ranch and prominent breeder of Berkshires, located in Santa Rosa, was called upon and wanted to know why they picked on him, but we all know that O'Connor always has something very acceptable to say, and it was no exception this time.

Last, but not least, Mr. Roy E. Fisher, breeder of Duroc-Jerseys and Hampshires from Lincoln, Nebraska, who has a most excellent exhibit at the show, said a few words in appreciation of his treatment while in California. This closed a very pleasant evening.

Banquet of Western Berkshire Congress.

A Joyous occasion? That hardly expresses it. Neither could it be called exactly hilarious, although with the Irish element always ready for a ruction, it sometimes veered in that direction.

There were numerous reasons for the good feeling prevailing and foremost perhaps was the presence of Dean C. F. Curtiss of the Iowa College of Agriculture and President of the American Berkshire Association. Another reason that always equalled the first was the winnings of the Berkshires in the fat classes. A pen of 3 barrows exhibited by A. B. Humphrey won in very strong competition the grand championship over all breeds and crosses. Something indeed to be proud of. In addition to this the winning by the Napa State Hospital of the grand championship on carlot of fat Berkshire barrows was a "great feather in the cap" of the Berkshire breeders. The awards were made not by prejudiced judges, but by Duroc-Jersey and Poland-China men. In fat barrow contests in a majority of shows, breeders of Berkshires claim most of the championship winnings.

Dean Curtiss spoke at considerable length on his favorable impressions of this, the first California International, and the need for the continuance of this institution at this place. He also mentioned the lack of interest on the part of breeders and the farmers generally in National Swine and National Dairy Shows.

General Manager True, J. L. Thatcher, Secretary Anderson, Mr. O'Connor, Mr. Upham, Mrs. Hardy and others spoke on the excellency of the Berkshire breed and the need of more publicity for them.

Wm. L. Carruthers acted as toastmaster in his usual genial manner.

Duroc-Jersey Meeting.

A meeting was held on Tuesday, November 4, in the California Building and was called to order by V. F. Dolcini, vice-president. The business of the most importance transacted was in relation to the consignment sale which is scheduled to be held January 14 next at the

University Farm, Davis. The breeders decided to make it a guaranty sale of 40 bred sows and gilts, of the very highest quality possible to procure in the State. Prof. J. I. Thompson is the plucking committee, which is a guarantee in itself that the animals will be everything they should.

Prof. H. H. Kildee, Ames, Iowa, judge of the Duroc-Jerseys at the California International, in an address to the members present, stated that he was particularly well pleased with the exhibit of Durocs and congratulated the members on having such excellent stock on the Pacific Coast.

J. P. Walker reports the sale recently of 5 junior yearling sows and 1 boar to A. W. Winterton for \$1,200. Mr. Winterton is owner of an 820-

pound male litter mate to the first prize junior yearling boar at Tulare and Visalia and second at Fresno, owned by Mr. Walker.

A farm magazine is improved by just as much as its readers indicate their pleasure or displeasure. Let's hear from you.

Is Every Animal At Its Best?

Don't let your stock lose their Summer's gain through November neglect. Your animals are now going on dry feed—hay and grain.

It's a big change from the succulent, nutritious grasses of summer pastures which supply the needed laxatives and tonics.

Keep your animals' bowels open and regular—drive out the worms—keep their blood rich and keep their digestion good by feeding

Dr. Hess Stock Tonic

A Conditioner and Worm Expeller

Keep your stock up on their appetites. Don't allow them to "get off feed" and in a run-down condition.

Condition your cows for calving by feeding Dr. Hess Stock Tonic before freshening. Then feed it regularly to increase the flow of milk. It lengthens the milking period.

Buy Stock Tonic according to the size of your herd. Here's a suggestion for your guidance: Get from your dealer two pounds for each average hog, five pounds for each horse, cow or steer, to start with, feed as directed and then watch results.

Why Pay the Peddler Twice My Price?

You buy Dr. Hess Stock Tonic at an honest price from a responsible dealer in your own town who guarantees it, and who refunds your money if it does not do as claimed.

25-lb. Pail, \$2.50; 100-lb. drum, \$8.00

Except in Canada.

Smaller packages in proportion.

Poultry for Profit and Pleasure

Prize Feathered and Furred Stock Seen at International Livestock Show.

Written for Pacific Rural Press by H. E. Pastor.

With eggs approaching the dollar-a-dozen mark, with rabbit pelts threatening to replace in popularity the expensive lynx, fox, and seal, and with fancy pigeons of all kinds away up in the air, it is not surprising that raisers of poultry, pigeons and rabbit stock should have waked up to the commercial possibilities of their specialties, and that they featured a record display of their best birds and bunnies at the California International Livestock Show this week, at the old California building on the Marina. In point of numbers and quality the display of animal life that rekindled for a brief span the glories of that old architectural relic of the P. P. I. E. "put it all over" any previous display of the kind ever attempted on the Pacific Coast; and any of our commercial poulterers or pouteresses, rabbiters or rabbitesses, who sidestepped this show sidestepped their best interests.

The aristocrats of California's finest poultry yards, rabbit hutches and pigeon lofts were there in satisfying numbers; and Dr. D'Evelyn and Robt. N. Moore, under whose joint superintendency this aggregation of feathered and furred blue-bloods was assembled, may well feel proud of their achievement. The throngs of visitors who viewed these splendid specimens of California poultry enterprise were repaid many times for their trouble in the educative value of the object lessons furnished. An early estimate placed the number of poultry exhibitors at 72 and of rabbit fanciers at 74, and it was confidently expected by the management that as high as 1,500 poultry and rabbit exhibits would be on exhibition. All the available space for livestock and accessories was taken.

The show was well attended, and most of the visitors showed by the keen interest taken that they were there on business bent. Exhibitors, on the whole, were pleased with the results of their efforts. Of course, it goes without saying that each exhibitor had the best stock in his class. But judges are contrary creatures at times, and refuse to view each exhibit through the rose-colored glasses kindly proffered by its owner. However, the consensus of judgment was that they erred little, if at all, in the distribution of the ribbons and the passing out of the prizes.

In this show, as in most others, the fancier was in the ascendant, which is quite natural, for it is pretty generally admitted that the great advances that have been made in the poultry industry have been his handiwork—the results of painstaking and intelligent experimentation. In the hands of the stouthead and indifferent the best of breeds will deteriorate—not only in beauty but in profit-making qualities. And were it not for the fancier it is doubtful if a poultry show were a possibility. Anyway, in this show the utilitarian side was not strongly represented. The White Leghorn, for example, the great commercial bird of the Pacific Coast, had but few entries, though what were shown were worthy specimens. A pen of birds of this class shown by Forster Bros. of Berkeley attracted much attention.

One of the most popular single classes in this show was the English Orpington, the buff and black colors being most in favor. The white variety, of which some fine specimens were on hand, have incurred some little prejudice among California breeders owing to the tendency of the white color of this fowl to become brassy in our warm climate—a peculiarity that White Leghorns and Minorcas are less prone to. The Blue Orpington, too, though undoubtedly the most beautiful in coloring, receives indifferent attention for the reason that it is so difficult to breed true to color. Some of these Orpingtons were magnificent specimens of dual-purpose fowl. Many of the Orpingtons shown, as well as R. I. Reds, were imported from the East directly to this show. Some Orpington entries of the Buff variety were scheduled by Samuel Abrams of

Los Altos, and buff appeared to be a favorite color.

The best represented breed in the show was the Rhode Island Red. It attracted much interest. Wm. A. French of Stockton entered two birds of this class; also one of the most beautiful Silver-Laced Wyandottes in the show. The R. I. Red is coming merits believable.

Plymouth Rocks ranked third in number, and some birds of superb marking were shown. C. H. Volden of Los Gatos had 24 birds of this class in the exhibit. The beautiful penciling and physical vigor of his Barred Rocks arrested the attention of most of the passers-by. As a successful breeder along scientific lines Mr. Volden is hard to beat, as his winnings on the show circuit evidence. C. E. Morrison of Fruitvale also showed some fine specimens of this class.

Japanese Silkies, Polish Crested and other frizzled freaks were on dress parade in the usual number for the amusement of the curious.

Pigeons.

There were 200 entries in the pigeon department, the squab or utility variety being strongly represented. Of the ornamental varieties, however, there was no dearth. The opportunities to observe the whimsicalities of Nature as exemplified in such feathered freaks as the Jacobean, Fantail, Pouter, Frillback, Crested Mondain, Tumbler, Roller, etc., was alone worth the price of admission to the show. The King lofts, Haywards, were the largest exhibitors in this line, and William A. French of Stockton showed some fine Pigmy Pouters and beautiful Carneaux. Haywards walked away with most of the prizes.

Turkeys.

For some unaccountable reason the turks were extremely shy of this show, only three specimens putting in an appearance. These were of the Bourbon Red variety—most beautiful birds. The great Bronze variety, the most popular of all and the most important from the commercial standpoint, was conspicuous by its absence. As one spectator exclaimed, to whom I made this remark: "They are not only conspicuous by their absence, but there are none!"

Geese and Ducks.

Only three geese, of the large Toulouse kind, were shown. Of ducks on exhibition the Indian Runner ranked foremost; then followed the Rouen and the White Pekin in the order named.

The Rabbit Section.

In the rabbit department there were specimens of all kinds, colors, creeds, conditions, and nationalities. There were Belgian, Flemish, Dutch, American, English, New Zealand, et al.—everything but a Welsh rabbit, with which the city visitors were probably most familiar. The writer was told by a rabbit connoisseur that it was the largest and finest exhibit of rabbits and hares ever held west of Chicago. It occupied the spotlight, so to speak, standing in the center of the old ball-room of the California Building, while the poultry and pigeon exhibits formed a fringe on the outskirts of the main floor and in the gallery above—a space allotment not altogether to the liking of some of the poultry exhibitors. Superintendent Robt. N. Moore said there were 642 rabbit specimens on display, and they were as fine a looking bunch as could well be gathered together under one roof. It numbered 35 more than were ever before assembled west of Chicago, and the management took a just pride in this record. There were 230 Flemish Giants alone. As a reproducer and meat-maker the rabbit takes on double-quick action, and when intelligently handled puts a deep crimp in the meat bill of its owner, to say nothing of the rich revenue received from the sale of the skins—at least, this is the information this writer got from interviews with enthusiastic exhibitors. Certainly, the soft and beautiful colorings of some of the varieties

shown, as the French Silver, Silver Gray, Steel Gray, and others would seem to make these perfervid statements believable.

In addition to the ribbons, silver cups were offered for outstanding displays by Dr. D'Evelyn, General Superintendent of the Poultry Division; Erwin Wiesner, Supt. of the Rabbit Show, the Sperry Flour Co., and others, which served to attract the large representation of furry favorites and to make this department so notable a success. The list of rabbit awards was not available at time of going to press.

POULTRY AWARDS.

Through the courtesy of Robt. N. Moore of Oakland, the Rural Press was enabled to obtain a list of the poultry awards (excepting sweepstakes) in time for this issue, which for mechanical reasons we were obliged to put to press early in the week. They are as follows:

BARRED PLYMOUTH ROCKS.

Chas. H. Volden, Los Gatos—First in hens, first and third on cockerels, first on pullets, first on exhibition pen, first on pullet-bred cocks, first on hens, cockerel-mated, first and second on cockerel, pullet-mated, first on hen cockerel-bred, first on pullet cockerel-mated, first and second on hens, pullet-mated, first on hens cockerel-mated.

Rosecraft Plymouth Rock Yards—First on cock, second on hen, third on pullet.

Poppy Hill Poultry Farm, Oakland—Second on cockerel, third hens, second and third on hens cockerel-mated.

Hale Prather, Ukiah—Third on hens, R. P. Lutz, San Francisco—Second on pullets.

WHITE PLYMOUTH ROCKS.

O. B. Hunt, Berkeley—First on cock and first on hen.

J. J. Smith, Oakland—Took all honors on pullets.

H. A. Land, Winters (the oldest poultry exhibitor in California) took first on hen.

BUFF PLYMOUTH ROCKS.

C. M. Newbert, San Mateo—First on cock, first on hen.

Mrs. D. F. Small, Willows—First on pen.

PARTRIDGE PLYMOUTH ROCKS.

Mr. and Mrs. S. Cavill, Kentfield—First on pen.

WHITE WYANDOTTES.

James Whyte, Oakland—First and second on cockerel, first on hen, first on pullet.

Geo. H. Buhrman, Santa Cruz—Third on cockerel, third on pullets.

SILVER-LACED WYANDOTTES.

Wm. A. French, Stockton—First on hen first on pullets.

Mr. W. R. Fuller, Richmond—Second on cockerel second on pullets.

Frank Blackwell, Sacramento—First on cockerel.

PARTRIDGE WYANDOTTES.

All honors to Manuel Roberts, Concord.

COLUMBIAN WYANDOTTES.

All honors to G. W. McNear, Jr., Concord.

RHODE ISLAND REDS.

M. E. Jeter, San Francisco—First on cock, third on hen, third on pens.

Oak Shadows Farm, Redwood City—Second on cock, first on cockerels, second on pullets.

Ward's Poultry Farm, San Jose—Second on hen, second on cockerel, first on pens.

F. M. Lall, San Jose—Third on cockerels, first and third on pullets, second on pen.

Alex. A. Peterson, San Francisco—Third on cock.

Mr. and Mrs. Sidney Cavill, Kentfield—Second on rosecomb hen.

S. C. WHITE LEGHORNS.

Jno. J. Wangan, Jr., Oakland—First on cock, first on pullets.

A. F. Schwartz, Calistoga—Second on cock, third on pen.

W. S. Frieman—Third on cockerels, second on pullets.

F. O. Halston, Haywards—First and second on cockerels.

Oak Shadows Farm—Third on pullet.

S. C. BROWN LEGHORNS.

All honors to Wm. A. French.

S. C. BUFF LEGHORNS.

Manuel Roberts, Concord—First on cock, second on hen, third on cockerels, second on pullets.

C. M. Newbert, San Mateo—Second on cock, first and second on cockerels.

Aug. Belfrage—Third on hens.

ANCONAS.

All honors to C. A. Wangan, Jr.

S. C. BLACK ORPINGTONS.

Sequoia Farm, Sacramento—First and second on cocks, first and second on hens, first and third on cockerels, first and third on pullets.

Iveywood Farms, San Leandro—Third on cocks, third on hens, second on cockerels, second on pullets, first on pen.

BLUE ORPINGTONS.

C. R. Frary, San Francisco—First on cock, first on hen.

Sequoia Farm—Second and third on hens, first on cockerels, first on pullets.

BUFF ORPINGTONS.

Oak Shadows Farm—Took all the honors on cocks and hens, first and second on cockerels, first and third on pullets, first and third on pullets, first and third on pens.

Happy Land Poultry Farm, San Mateo—Third on cockerels.

Samuel Abrams, Los Altos—Second on pullets.

C. R. Frary—Second on pens.

WHITE ORPINGTONS.

R. P. Lutz, first on cock, third on hen, third on cockerels, first on pullets, third on pen.

Oak Shadows Farm—First and second on hens, second and third on pullets.

Charlie Stewart, Sacramento—First on cockerel.

All honors to Mr. and Mrs. Sidney S. Cavill.
CAPONS.
Trises—First and second, Mrs. Henrietta W. McLagan on White Brahmas; third, Charlie Stewart on Buff Orpingtons.

GRAY TOULOUSE GESE.
Old gander, Wm. A. French.
First on young gander, and first on young goose, Mrs. B. Fowler, Lodi.

TURKEYS.
All honors to Happyland Poultry Farm on Red Bourbons.

ROUEN DUCKS.
Old drakes—First, Wm. A. French; second and third, Mrs. Emma V. Miller.
Old ducks—First, Mrs. Emma V. Miller; second, Wm. A. French.

Young drakes and ducks—All honors to Mrs. Emma V. Miller.

WHITE PEKINS.
All honors to A. J. Coe.
PENCILLED INDIAN RUNNERS.
Old drake—Second, Aug. Belfrage.

FAWN INDIAN RUNNERS.
All honors to Sacramento—All honors on old drakes, first and second on old ducks, first and third on young drakes. All honors on young ducks.

Mr. and Mrs. Sidney Cavill third on old ducks, second on young drakes.

COLORED MUSCOVY.
All honors to Mrs. Bessie Fowler.
COLORED MUSCOVY.
Mrs. G. C. Boeddiker—First on old drake.

Young drakes—First, Mr. and Mrs. Sidney Cavill; second, C. R. Frary.
Young duck—First, C. R. Frary.

HOW THE POULTRYMAN IS GETTING RICH.

Eggs are selling in San Francisco this week for topnotch prices, also in the larger cities of the East. It would seem like a harvest time for the egg poultryman, and would be if he had any stock to sell—but he hasn't or very little. High prices without supplies to realize on avail the poultry raiser little. He can't buy automobiles, pianos, phonographs, and government bonds on "high quotations." It is high prices on sales consummated only that bring these luxuries—and the hens are now on strike.

A SUCCESSFUL POULTRY ORGANIZATION.

The annual report of General Manager J. H. Barber, of the Poultry Producers of Central California, presents this summary of the growth and operations of that association since its incorporation in October, 1916. It began business January 29, 1917.

During the first year of operation, ending January 31, 1918, we handled 213,532 cases of eggs, which sold for \$2,382,444.23. After deduction of transportation charges, 2 cents a dozen for selling cost, and 1 cent for capital stock, the net amount paid to the members in cash was \$2,170,626.26. This was an average of 34 cents a dozen net for all eggs of all grades.

In the second year, ending January 31, 1919, we received 270,313 cases of eggs and sold them for \$3,712,523.17. The net returns to the members totaled \$3,425,717.91, which averaged 42½ cents a dozen, net cash, for all eggs of all grades.

For the seven months from February 1, 1919, to August 27, 1919, we received 228,677 cases of eggs, which sold for \$3,055,337.31. The cash returns to the members were \$2,814,737.90, an average of 41 cents a dozen, net cash, for all eggs of all grades during the seven months.

The amount of eggs handled in 1918 was 26 per cent more than in 1917, and the amount of money received for eggs was nearly 56 per cent more.

The total cash returns to members increased 58 per cent.

Comparing the seven months' record of 1919 with the same period of 1918, we find that our egg receipts this year have so far exceeded those of 1918 by 15 per cent, while the increase in money received is 30 per cent.

This association has succeeded in carrying out two leading principles had in view at its inception, viz.: First, to establish a reputation for association eggs as the very best on the market. Second, to stabilize the local market by removing from it the surplus which in the past has enabled speculators to manipulate the market for their own profit at the expense of both producers and consumers.

TARIFF ON FOREIGN EGGS ILL-ADVISED.

The effort to initiate an agitation for legislation imposing a tariff on egg imports from foreign countries is not encouraged by our legislators at Washington at this time. The popular protest against the high cost of living, and especially the present high market cost of eggs, both East and West, makes the time for such a move inauspicious.

A BATTERY OF QUESTIONS.

To the Editor: Please answer the following questions. I have three acres of alfalfa and one and one-half or two acres of yard. 1. How shall I make a chicken house to keep about 2,000 or 3,000 chickens? 2. How many chickens are enough for one man to take care of? 3. Is there any market for capons? If any, what difference of price between capons and roosters? 4. Where can I get the best book on the poultry business in California, and price? 5. Where is the best location around Los Angeles?—Subscriber, Callexico.

1. Long, open-front houses divided into sections.

2. One thousand for the man of average experience.

3. Capons find a ready market, particularly if offered to private families, clubs, etc. On an average the price per pound is about 40 per cent more than for roosters.

4. California Poultry Practice. We sell it—one dollar, postpaid.

5. The best location for our correspondent near Los Angeles is that neighborhood in which are already located the greatest number of successful commercial poultry keepers.

FALL OFF IN EGG PRODUCTION.

To the Editor: Have about 150 hens that have the range of a rice field where they get green stuff and ripened rice. They have before them all the time green ground bone, beef scrap, ground oyster shell, grit, and a ready mixed "Egg and Feather" food and clean water. They are also fed wheat twice daily and about five gallons of garbage, of which at least half is skim milk. Most of them are through the molt, but their egg production is decreasing instead of increasing. Their combs appear pale and shrunken. Have been told that garbage would cause trouble but none fed are over 24 hours old. Is that the trouble; if not, what is it?—Mrs. B. F. C., Pleasant Grove.

Probably two chief causes of trouble. (1) Rice is very starchy. (2) Perhaps something detrimental in the garbage. The skim milk is very desirable. If all other things in garbage were discarded and the milk made into clabber or cottage cheese, it would go a long way to balance the rice and excess grains.

FATTENING AND SELLING TURKEYS.

To the Editor: I wish you would tell me the best thing to fatten turkeys on and the best place to sell them to advantage and if there is a market for the feathers.—M. S., San Miguel.

Any of the sorghum grains. An assortment of them is better than one kind. If some Indian corn is added the result will be better still. Indian corn and common yellow corn, fed alone, is also good for the purpose.

(2) McCullough Provision Co., 340

"I was away for several days-and found, on my return that the machines were regulated within a fraction of a degree"

—says P. R. Lyding, of Sebastopol—a poultry raiser with 26 years' experience. The machines that kept temperature so remarkably even were equipped with Charters' Regulators. And the Charters' Regulator is an important—but not the only feature of

CHARTERS INCUBATOR

The incubator is of particularly substantial build—540 egg capacity—a special ventilation and moisture retention system—hollow cylinder boiler that gives the greatest heating surface, insuring active circulation in the coils. The boiler has removable bottom—which allows easy cleaning. Every detail of construction has been made as nearly as possible perfect. And to add to this—the Charters' Incubator has the Charters' Regulator built in—the only incubator so equipped in its manufacture.

With reference to the Regulator—it's the two thermostats that do the trick, one outside and one in the egg chamber: by actually anticipating any change of temperature—and automatically adjusting the flame to meet the new conditions. The temperature outside may vary as much as 70 degrees, without producing as much as half a degree of change in the egg chamber. Charters' Regulator is entirely unlike the "sleeve" type—which has proven unsuccessful.

And the big tank—holds a supply of fuel that will run the lamp from two to three weeks without refilling. That means one refilling and trimming only each week.

Write today for our catalog—or better still send in your order now—for a Regulator, or the fully equipped incubator—so we can deliver in time for your fall hatch. The incubator, equipped with Regulator is \$65. The Regulator is \$10.

See The Charters at principal fairs and poultry shows this year.

The quality of California fruits has been attained by elimination of undesirable varieties. It is not so easy to improve the character of our population by this means.

Market Comment

The Dollar a Dozen Egg Arrives.

The dollar-a-dozen egg is no longer a figment of the imagination. It makes its unwelcome bow this week San Francisco to a protesting public—but the protest is in vain. This is the price demanded by a number of local dealers, due to light receipts. The egg raisers who have no stock to sell—which is the majority—are not getting rich on the raise.

Wine Grape Men Not Discouraged.

In spite of the threatening aspect of recently enacted prohibition legislation it is reported that a number of Sacramento valley vineyardists are contemplating an increase of their wine-grape acreage on account of the insistent demand for wine grapes from outside sources. Grape prices have been unusually good this year and grape men have had, on the whole, the best year in their history.

Hop Culture Still a Live Industry.

Contracts for next year's hop crop are already being entered into by dealers and growers. So far the highest price yet reported for the 1920 output is 42½¢. Three-year contracts are offered on a basis of 34¢. A purchase of 400 bales in Santa Rosa last Saturday virtually cleaned up the Sonoma crop.

Eastern Fruit Shipments Heavy.

California fruit shipments for this season to the East exceed those of last year by approximately 2,000 carloads. Grapes overtop last season's record by 1600 cars. This is the record to Nov. 1st:

	1918.	1919.
Cars.	Cars.	
Cherries	351	419½
Apricots	432½	419½
Peaches	2,662	2,772½
Plums	2,889½	2,880
Pears	4,424	4,198½
Grapes	14,027	15,670
Miscellaneous	53	48
Total	24,340	26,533

American Bacon 18c in France.

To stem the high cost of living in France, the French Government has this week put on public sale army food supplies from the United States. Prices have been fixed at a maximum of one-half current retail prices. This would fix the price of American bacon at 18c.

Big California Almond Sale.

T. C. Tucker, who has been in New York in the interest of the California Almond Growers' Exchange, has sent back word that he has sold to one Eastern buyer 16,000 bags of almonds at a price exceeding \$500,000.

Milk Price Jumps in Los Angeles.

On the first of this month standard grade milk was advanced to 16c in Los Angeles and other grades proportionately. The usual protests are in evidence.

Good Prices for Sugar Beets.

Beet sugar percentages over in the Pleasanton district have been running very heavy this year. The growers here anticipate that the average price for beets will exceed \$12 per ton.

LIVE STOCK DATE SALES.

THE MARKET REPORTS

SAN FRANCISCO.

San Francisco, November 5, 1919.

BARLEY.

Some demand for barley arose during the week, and while it was not large it was enough to encourage the local dealers. This demand added to the fact that there are almost no arrivals in this market caused an increase of the price of futures, which was reflected in the advance for spot barley.

Feed	\$3.15 @ 3.20
Shipping	\$3.25 @ 3.30

OATS.

Oats reflected the barley market and made some advance on price this week. There was no new demand for oats and in advance was purely sympathetic with the higher level of barley.

Red feed, per cfl.	\$2.85 @ 3.00
Red for seed	Nominal
Black for seed	Nominal
Re-cleaned Red or Black for seed	Nominal

CORN.

Like the other grains corn was stronger this week, its strength being based mainly on the generally better tone to the other grains. There were practically no receipts in quantity and no new demand was developed.

California	\$3.60 @ 3.70
Egyptian, choice	\$3.30 @ 3.40

HAY.

Receipts of hay for the past week were 885 tons. This is a drop of over 450 tons from the previous week and over a thousand tons compared with the receipts of two weeks ago. Of these receipts those coming in by car are practically nominal. The fact that stocks now in the city are being consumed and the receipts are so small makes the advances in prices quite natural. A considerable hay is reported to have changed hands in the country districts at increased prices and this also has had its effect on the local market. Export trade is almost at a standstill, owing to the strike of stevedores, and the handling of hay coming in on boats is made difficult from the same cause.

No. 1 Wheat, or Wheat & Oat	\$18.00 @ 22.00
No. 2 Wheat, or Wheat & Oat	\$17.00 @ 19.00
Choice Tame Oat Hay	\$20.00 @ 23.00
Wild Oat Hay	\$16.00 @ 19.00
Barley Hay	\$16.00 @ 20.00
No. 1 Alfalfa Hay	\$18.00 @ 23.00
Stock Hay	\$13.00 @ 23.00
No. 1 Barley Straw, per bale	.50 @ .80

FEEDSTUFFS.

All the feedstuffs made from the grains were advanced in price this week in sympathy with the advances made in the whole grain. There has been no material change in the demand.

Rolls Oats	\$63.00 @ 64.00
Rolls Barley	\$64.00 @ 65.00
Cracked Corn	\$80.00 @ 81.00
Alfalfa Products	\$38.00 @ 45.00

POTATOES, ONIONS, ETC.

Both potatoes and onions showed considerable strength this week, and while there was little change in quotations of the latter the tendency is upward for both products. The firmness of the market indicates further increase in prices in the near future. Tomatoes are getting scarcer, and while not so good as a while back they are being sold

at higher prices. Summer squash also took a decided upward turn, and eggplant sold as high as \$1.75, compared with \$1 last week. Hot-house cucumbers are arriving in quantity, and bring a higher price than produce grown in the open air.

String Beans	.8 @ 1.3½¢
Peas	.9 @ 1.1¢
Carrots, per sack	\$1.00 @ 1.25
Rhubarb, Strawberry, box	Nominal
Cucumbers	.75¢ @ 1.00
do, Hot-house	\$2.00 @ 2.25
Eggplant, box	\$1.25 @ 1.75
Lettuce, per crate	.75¢ @ 1.25
Tomatoes, Early Annas	None
do, Stone	\$1.50 @ 1.75
Summer Squash, lug, Alameda	\$1.25 @ 2.25
do, Hubbard	\$1.25 @ 1.50
Pumpkins	.75¢ @ 1.00
Green Corn, Alameda, sack	None
Potatoes, local whites	\$2.50 @ 2.75
do, Rivers	\$2.50 @ 2.85
do, Sweets, new, lb.	3¼ @ 4¢
Onions, new red	Nominal
do, Browns	\$4.00 @ 4.25
do, Yellow	\$3.75 @ 4.00
do, Green, Alameda	\$1.00 @ 1.25
Garlic	.20 @ 22¢
No. 1 Wheat, or Wheat & Oat	\$18.00 @ 22.00

BEANS.

There is no change for the better in the bean market. The report that the Oriental bean crop this year will be a failure is not generally believed by the dealers, who say that reports of this crop are never reliable. In any event the report, which was encouraging to the Coast bean growers, had no effect on the local market, which showed an advance in no variety, while several sold at lower quotations. While lima quotations are officially unchanged there seem to be plenty from sources outside the association which may be had for a dollar or more below these figures.

Variety	Old crop	New crop
Bayos	\$6.25 @ 6.50	7.00 @ 7.25
Blackeyes	\$5.75 @ 6.00	6.00 @ 6.15
Cranberry	\$6.00 @ 6.25	7.25 @ 7.75
Pinks	\$5.50 @ 5.75	6.75 @ 5.90
Red Mexican	\$5.00 @ 5.75	5.50 @ 5.80
Tepary	\$2.50 @ 2.75	
Garbanzos		9.50 @ 10.00
Large Whites	\$5.25 @ 5.50	5.50 @ 5.75
Small Whites	\$6.00 @ 6.25	6.00 @ 6.25
Limas		\$14.50
do, Baby		\$13.00

POULTRY.

The turkey market was more or less shot to pieces this week by the arrival of stock in excess of the demand. Live turkeys sold as low as 38 cents a pound and 50 was about the limit on any sales. Dressed turkeys were also scaled about 5 cents in price. Some of the local dealers are figuring on dressed turkeys at less than 50 cents for the holidays, and state that the supply in sight justifies their prediction.

Broilers, 1½ lbs. and under	.40 @ .44¢
do, 2 to 3 lbs.	.35 @ .36¢
Fries, 2 to 3 lbs.	.33 @ .34¢
Hens, extra, per lb.	.35¢
do, Leghorns	.31 @ .33¢
Smooth young roosters, per lb. (3 lbs. and over)	.30 @ .31¢
Old Roosters, colored, per lb.	.22¢
Turkeys, dressed, young spring, lb.	.45 @ .48¢
do, live	.38 @ .40¢

Special Deciduous Market Report

(Written for Pacific Rural Press by J. L. Nagle.)

Sacramento, Cal., Nov. 4, 1919.

By J. L. Nagle.

Eastern markets in general remained firm on sound arrivals during the past week. The demand continued active, both for table and wine grapes, despite the uncertainty of the wine situation in connection with Congressional action.

As shipments have been reduced materially, owing to the fact that the season is very near its end, and due also to recent frosts in the grape sections, we look for a sharp advance on sound arrivals next week.

Weather conditions remaining favorable, shipments should continue, though in light

supply, for the next three weeks.

Averages for the week:

NEW YORK: Malaga Grapes, \$2.43; Mission, \$2.40; Tokays, \$2.18; Cornichon, \$2.40; Emperors, \$2.35; Alicante Bouschet, \$2.90; Zinfandel, \$2.42; Winter Nells Pears, \$3.64; B. Clairgarn, \$4.15; Duchesne, \$3.70; E. Beurre, \$3.60.

BOSTON: Zinfandel Grapes, \$1.75; Tokays, \$1.90; Cornichon, \$2.58; Alicante Bouschet, \$2.10; Malagas, \$1.80; Muscats, \$1.20; Emperors, \$2.41.

CHICAGO: Tokay Grapes, \$1.70; Malagas, \$2.20; Emperors, \$1.91; Muscats, \$1.25; Cornichon, \$2.35; Alicante Bouschet, \$1.60.

PORTLAND LIVE STOCK.

Portland, Ore., November 3, 1919.

CATTLE—Market shaky; receipts, 2902 head. Steers, best, \$9.50 @ 10.50; good to choice, \$9 @ 9.50; medium to good, \$8 @ 9; fair to good, \$7 @ 8; common to fair, \$5.50 @ 6.50; good to choice cows and heifers, \$7.50 @ 8.50; medium to good, \$6.50 @ 7.50; fair to medium, \$5.50 @ 6.50; canners, \$4.75 @ 5.75; bulls, \$5 @ 7; prime light calves, \$12.50 @ 13.50; heavy calves, \$7 @ 12.50; stockers and feeders, \$7.50 @ 9.25.

HOGS—Market 75c higher; receipts, 843 head. Prime mixed, \$14 @ 14.75; medium, \$13.50 @ 14; smooth heavies, \$12.50 @ 13.50; rough, \$11.50 @ 12; pigs, \$12.50 @ 13.

SHEEP—Market steady; receipts, 772 head. Eastern lambs, \$11 @ 11.50; valley, \$10 @ 10.50; feeders, \$8 @ 9; yearlings, \$7.50 @ 9; wethers, \$7.50 @ 8.50; ewes, \$5 @ 6.50.

Los Angeles, Nov. 4, 1919.

CATTLE—Steers in good demand and the market is firm. Cows coming in freely but the market is dull and weak. All quotations the same as last week.

Per cwt. f. o. b. Los Angeles:
Best steers, 1000 @ 1100 lbs. \$9.50 @ 11.00
Prime cows and heifers \$8.00 @ 9.00
Good cows and heifers \$7.50 @ 8.00
Canners \$5.00 @ 5.50

HOGS—Demand is only fair. This market is quoted 50c higher since last week, being in sympathy with Eastern market prices.

Per cwt. f. o. b. Los Angeles:
Heavy average 275 @ 350 lbs. \$9.00 @ 10.50
Heavy average 225 @ 275 lbs. \$11.00 @ 12.00
Light \$12.00 @ 13.00
Rough docked 20 lbs. piggy sows 40 lbs. and wags, 40 per cent.

SHEEP—Prices are steady and the market reports a fair demand. Slow sale on wethers and ewes.

Prime wethers \$8.50 @ 9.50
Yearlings \$8.50 @ 9.50
Prime ewes \$8.00 @ 9.50
Lambs \$12.50 @ 13.50

Geese, young, per lb.	.26 @ 27¢
do, old, per lb.	.22 @ 23¢
Squabs, per lb.	.60 @ .65¢
Ducks, young	.26 @ 28¢
do, old, per lb.	.23 @ 25¢
Belgian hares	.16 @ 17¢
Jack rabbits	\$1.50 @ 3.50

BUTTER.

Butter continues firm at about last week's prices, although the average for the week was slightly higher. If butter follows the course of last year approximately these same prices may be expected to prevail until after the middle of next January, when a decided recession may be expected.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extra	.62	.62	.62	.63	.63½	.63½

EGGS.

Extra eggs hit the high point of the season today, when the exchange price of 90 cents or 83 cents to the dealer was scored. These eggs will reach the consumer at not less than a dollar a dozen, and it is likely that grocers in some localities will charge even slightly more. At the same time this grade of eggs was quoted at from 93 to 97c in New York, and the differential between the eastern quotation and 83 cents repays the producers handsomely for careful sorting of his eggs and shipment to New York. The Government report shows that two cars were shipped to New York during the past week from Petaluma, one of 512 cases and one of 400 cases. Two other cars shipped during the week, one from San Francisco and one from Los Angeles, went to Seattle and Prescott, Ariz. The advance during the week of extras turned more attention to pullets and undersized and both descriptions made decided advances. However, extra pullets have not yet reached the normal differential with extras and considerable advance in pullets and undersized may be looked for unless an unexpected break comes in extras.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	.79½	.80½	.80½	.82	.82	.83
Dirty, No. 1						
Ex. pullets	.61½	.61½	.61½	.63	.64	.67½
Undersized	.57½	.58½	.59	.59	.61	.61

CHEESE.

The market continues quiet, with only minor changes in prices of the California product. Oregon prices are firmly maintained at last week's figures.

California Flats, fancy	.31¢
do, First	.26½¢
Y. A., Fancy	.33½¢
Oregon Triplet	.30½¢
do, Y. A.	.33¢

FRESH FRUITS.

There was something of an unexpected surplus of raspberries received several days this week and most of them were sent to the canneries. Quotations varied from \$9 to \$13. Strawberries did not come in very freely. But the demand was slight and the variation from last week's high was not large. The market is now bare of peaches and no more are expected this season. Apples continue to dominate the fresh fruit market, at prices that vary but little from day to day.

Apples, Jonathan	\$1.25 @ 2.25
do, Spitzenberg	\$1.50 @ 2.00
do, Bellflower	\$1.75 @ 2.00
do, Pippins	\$2.00 @ 2.25
do, Oregon	\$3.00 @ 3.50
Quinces	\$1.00 @ 1.50
Pears	\$2.00 @ 4.00
Strawberries	\$15.00 @ 18.00
Raspberries	\$ 9.00 @ 13.00
Grapes	\$1.50 @ 2.00
Figs	\$1.50 @ 1.50

CITRUS FRUITS.

Grapefruit from the valley came in in quantity this week and is now selling at \$4.50 to \$5. The Arizona grapefruit, which was about all there was on the market for a couple of weeks, has now disappeared. New navel oranges are looked for next week, although they probably will not be in quantity for still another week. In the meantime there is no change in Valencia. The lemon market is also steady and unchanged. Oranges, Valencia \$5.25 @ 5.75; Grapefruit \$4.50 @ 5.00; Lemons, fancy \$7.00 @ 7.50; do, choice \$6.00 @ 6.50; do, standard \$5.00 @ 5.50.

DRIED FRUITS.

No changes in prices occurred in the dried fruit market this week. The market is firm, but all speculation or tendency to speculate has gone out of it. Prices may go higher, but if they do it will be on an easily recognized demand. There is almost no probability that they will go lower.

Apples	.16 @ 18¢
Pears	.16 @ 18½¢
Apricots	.21 @ 28¢
Prunes	.11 @ 13¢
Figs, Adriatic	.12 @ 18¢
do, Calimyrna	.15 @ 21¢

HONEY.

Nothing new developed in honey this week, and all prices are normally unchanged.

Water White	.18 @ 20¢
Light Amber (Mountain)	.16 @ 18¢
do (Alfalfa)	.14 @ 16¢

RICE.

Under the impetus of several large European orders Fancy and Choice California rice showed considerable strength a week or two ago, but prices were advanced too rapidly apparently for the European market, and little actual business resulted from this. As a consequence the price of the two descriptions is \$10.75 and \$10.50, respectively, with but small demand.

LOS ANGELES.

Los Angeles, Nov. 4, 1919.

BUTTER.

This market remains the same in price as last week. The demand continues very good. Receipts somewhat above those of a week ago, being 284,800 lbs.

Fresh California, extra creamery	.64¢
do, prime first	.62¢
do, best	.61¢

EGGS.

This market continues to advance. Though higher, the demand is reported good and receipts slightly above last week, being 692 cases.

Fresh ranch, extras	.75¢
---------------------	------

do, case count70c
do, pullets59c

POULTRY.

Broilers reported to be in very good demand, though not so many coming in. Friers in fair demand. Heavy hens scarce and a good call for them. The market is dull on light hens. Slow sale reported on ducks and turkeys. Prices are the same as last week. Broilers, 1 to 1½ lbs.42c
Broilers, 1½ to 1¾ lbs.43c
Friers, 2 to 3 lbs.32c
Roosters (soft bone), 3 lbs. and up33c
Stags and old roosters, per lb.19c
Turkeys35@37c
Hens31@35c
Ducks25@27c
Geese27c

HAY—F. O. B. Los Angeles.

Grain hay quoted higher. Alfalfa prices remain unchanged, and the same as last week. Demand is fair.
Barley hay, ton\$22.00@25.00
Oat hay, ton\$24.00@26.00
Alfalfa Northern, ton\$24.00@25.00
Alfalfa local, ton\$25.00@27.00
Straw\$10.00@12.00

BEANS.

This market is reported to be very dull, with limas quoted lower. All other prices remain the same as a week ago.
Limas, per cwt.\$12.00
Large white, per cwt.\$6.25
Small white, per cwt.\$6.50
Blackeyes, per cwt.\$5.00@5.25
Tepary, per cwt.\$3.00@3.25
Pink, per cwt.\$6.25

FRUITS.

The demand is very good and all prices are holding steady at present quotations. Berries are now out of season.

JOAQUIN VALLEY WATER ASSOCIATION ORGANIZED.

Permanent organization of the San Joaquin Valley Water Conservation and Development Association was perfected at a meeting in Tulare on October 24, following a water conference held in the same city at the call of the Tulare Board of Trade September 5 and 6. Permanent officers were elected and a constitution and by-laws were adopted, the purpose of the organization being stated "to consider all water problems affecting the counties of Kern, Kings, Tulare, Fresno, Madera, Merced, Stanislaus, Tuolumne, Mariposa, Calaveras, and San Joaquin counties, to work harmoniously for the adoption and carrying out a comprehensive plan for irrigation, drainage, and reclamation and the conservation of the water supply of the entire San Joaquin Valley."

Resolutions were adopted opposing the referendum on Senate Bill 493, calling for amendments to existing laws so that comprehensive irrigation projects may not be interfered with by smaller proposals within the same territory and supporting the fight of the Kern County Farm Bureau against Miller & Lux to prevent the land corporation from killing the extensive system mapped out for irrigating Kern county.

Permanent officers elected are William Glass, Fresno, president; John T. Crowe, Tulare, secretary; National Bank of Visalia, treasurer. County vice-presidents and alternates in the order named are: Tulare, W. B. Kiggins, C. H. Slaughter; Kern, H. T. Miller, W. C. Hannawalt; Kings, W. A. Long, alternate to be named later; Fresno, John Fairweather, M. B. Harris; Madera, J. F. Griffith, Craig Cun-

ningham; Stanislaus, Allen Talbot, L. L. Dennett; San Joaquin, Al Ferguson, E. R. Weeks, Jr.; counties not represented to name their representatives in 30 days. The vice-presidents will have charge of the organization campaigns in their respective districts and keep each other and the general organization advised of developments in their sections of the valley.

GIANT BRONZE TURKEYS

The Gold Nugget Strain continually prove their superiority by winning Gold Special Sweepstakes for best turkeys at the following great shows:

Live Stock Show, Los Angeles, Cal., October, 1919.
Liberty Fair, Los Angeles, Cal., 1918.
Southern California Fair, Riverside, Cal., 1918.

Pacific Coast Exposition Oakland, 1918.

Texas State Fair, 1917.

Los Angeles Show, 1917-18.

California State Fair, 1917-18.

Arizona State Fair, 1916.

Each judge pronounced them the best in show, all breeds competing. An unequal record. This year's awards all first prizes at the Washington State Fair, September, 1919, and the Oregon State Fair, 1919.

Large turkeys can be raised at practically the same cost as small ones. Let me help you make more money. My stock will assure you of more meat when market time comes. Stock and eggs for sale. Circular. J. Will Blackman, Originator Gold Nugget Strain, 607 E. Third St., Los Angeles, Cal.

BABY CHICKS after January first. Book your orders, remembering "the early bird." Hatching R. I. Reds, Barred and White Rocks, Black Minorcas, White, Brown and Buff Leghorns. Large or small lots, from first-class breeding stock, hatched right and priced right. Circular free. **MISSION HATCHERY**, Box 17, Campbell, Cal.

MAHAJO FARM

P. O. Box 597.

Sacramento, Calif.

offers

White Leghorns, Brown Leghorns, White Rock; Cockerels and Pullets.
High-class, standard-bred stock.

PEERLESS WHITE WYANDOTTES—Our 200-egg strain, bred for years for show qualities and high egg production. 50 cockerels, 100 pullets for sale. Trios and mated yards. Eggs for hatching. Catalogue free. J. W. Atkinson, Box 8, 130 Willard St., San Jose, California.

THOROUGHBRED S. C. White Leghorn chicks in 100 and 1000 lots from Hogenized and trap-nested stock. Order early for spring delivery. Inventors and Distributors of "For-bros" Separator and trap-nest combined. Forster Brothers, 2918 Otis St., Berkeley, Cal.

ORDER BABY CHICKS NOW—For immediate or spring delivery. Several varieties. Safe arrival guaranteed. Write for free circular. R. I. Red, Buff Orpington and White Rock cockerels now ready for shipment. Stubbe Poultry Ranch and Hatchery, Box 67, Palo Alto, Cal.

BABY CHICKS—From my Single-comb White Leghorns, bred for heavy layers, which have been in the race for 12 years, and today is among the leaders. You don't go wrong by placing your order with me. Write for prices and terms. H. A. Schlotthauer, Exeter, California.

"WATCH US GROW"—Baby chicks. Booking orders now for January and February delivery. White and Brown Leghorns, R. I. Reds and Barred Rocks. Safe delivery guaranteed. Order early. E. W. Ohlen, Campbell, Cal.

S. C. RHODE ISLAND RED cockerels, February hatch, breeding pens. Hatching eggs. Improve your color and egg capacity. Also Rose-comb Reds. Wm. Larm, 3915 39th Ave., Fruitvale, Cal.

MAMMOTH BRONZE TURKEYS—Order now for immediate or future delivery. Choice young stock from prize winners. Prices reasonable. A. W. Ganger, Rt. 1, Dos Palos, Cal.

WHITE HOLLAND TURKEYS—Young breeding stock. January and February hatch. Chance to get a thoroughbred young tom reasonable. A. P. Ward & Son, Calistoga.

BARRED PLYMOUTH ROCKS—Nothing better in poultry. Prize-winners and wonderful layers. Choice stock for sale. Chas. H. Voden, Box 3, Los Gatos, Calif.

"EASTMAN'S BRED-TO-LAY". Hogenized and trap-nested Barred Rocks. Fall chicks, eggs, cockerels. Fairmead Poultry Farm, Fairmead, Calif.

BUFF ORPINGTONS, BUFF DUCKS, BOURBON RED TURKEYS—The Ferris Ranch, Rt. 2, Box 144D, Pomona, California.

GOLDCROFT BUFF ORPINGTONS—Winners San Jose show. Choice stock for sale. Samuel Abrams, Los Altos, Calif.

CHICKENS, DUCKS, GESE, GUINEAS, Pea Fowl, Pigeons. Wm. A. French, 545 W. Park St., Stockton, California, Stamps.

PUREBRED S. C. RHODE ISLAND RED hatching eggs. \$2.00 per fifteen. E. G. Goins, Quail Ranch, Pixley, Cal.

MAMMOTH BRONZE TURKEYS, Embden Geese and Collie Dogs for herding purposes. John G. Mee, St. Helena, Cal.

HANDSOME BLUE ANDALUSIAN Cockerels from prize-winning strain. February hatch. \$5.00 each. Box 459, Route B, San Jose, Cal.

FOR SALE—Pencilled and White Indian Runner and Pekin ducks; also Buff Orpington cockerels. Ralph Mossman, Antioch, Cal.

FOR SALE—Very fine young White Holland turkey toms. Wanted—a few Guinea fowls. Mrs. R. S. Mossman, Antioch, Cal.

WANTED FIFTY RHODE ISLAND Red Pullets. Geo. J. Webster, Nevada City, Cal.

BRONZE TURKEYS—Albert M. Hart, Clements, Calif.

MISCELLANEOUS.

PROGRESSIVE FARMER WANTED who understands handling alfalfa and planting corn and field crops. Also team work in orchard. If married, wife to cook for 3 men; everything supplied. Party must be reliable and thorough. The place is a highly equipped and improved orchard farm of 170 acres. Address Box 12, Rutherford, Calif.

REMANUFACTURED PIPE.

All sizes standard pipe and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices. Weissbaum Pipe Works, 160 Eleventh street, San Francisco.

RAISE SILVER FOXES—Exceptional opportunity. Large profits. Easy to raise. New syndicate plan. Will not interfere with your regular occupation. Particulars free. Dryz Silver Fox Syndicate, 5244-46 S. Maplewood Ave., Chicago, Ill.

FOR SALE—Two-hole power corn-sheller, extra large blower, with sacking elevator and chaff catcher, good order. Shells quick and clean, delivering corn into sack. Price \$30. Address Ogden Bolton, Jr., Route 4, Box 447, Santa Rosa, Cal.

BERRY PLANTS—Strawberries, Raspberries, Blackberries, Currants, Gooseberries, Dewberries and Loganberries. Order now to assure delivery. Write M. J. Moniz, Berry Specialist, Sebastopol, California.

FOR SALE CHEAP by owner—40 acres good irrigated land, ¾ miles west of Gridley; some fruit and alfalfa. Houses, large barn and silo. Good for dairy or fruit. D. L. Smith, Gridley, Cal., R. F. D., No. 2, Box 113.

WANTED—Position caring for orchard near coast; salary or shares. Have had experience with different kinds of orchards. Can furnish references. B. F. Michael, R. 2, Merced, Calif.

WANTED—Services of a competent man about two months this winter for tree surgery and to work over an old orchard. Jas. Reade Watson, 4008 Judah St., San Francisco.

MADE OF REDWOOD, Rawley's Perforated wooden well casing, the best and cheapest well screen made. Send for descriptive circular. G. M. Hawley, La Mesa, California.

WANTED—From 2,000 to 10,000 Myroboran seedlings; also about 2,000 Japanese Pear seedlings. Send price and quantity on hand. B. B. Nursery, 27 Union St., Napa, Cal.

ALL SIZES OF PIPE and screw casing, both new and second-hand, dipped and undipped. Guaranteed. Prices right. Sheeter Pipe Works, 304 Howard St., San Francisco.

HOLT 30-CATERPILLAR—new tracks, engine recently overhauled. 5 disc plow, 8-ft. double disc harrow. A bargain. \$2,000. Fair Oaks Ranch, Willets.

CROLEY'S BALANCED HOG FEED—The cheapest feed to fatten hogs. Write Geo. H. Croley, Townsend St., San Francisco, Calif.

FOR SALE—Bean Tractor, has latest improvements; in A-1 condition. Will sell cheap. Gibson Development Co., Oakdale, Calif.

WANTED—Married dairyman, experienced in A. R. O. fitting for shows; calf raising, etc. Sunnybrook Ranch, Willets, Calif.

BOYS, YOU CAN MAKE MONEY saving Pumpkin seeds. Write for particulars. Bomberger Seed Co., Modesto, Cal.

A NEW ALFALFA—Investigate now. Our great "Hardy Hybrid" alfalfa. For facts, write J. L. Lawson, San Jose.

MAMMOTH JERSEY KALE SEED—2 oz., 15c, by the pound, \$1.00. A. P. Ward & Son, Calistoga.

SUDAN—We want to buy Sudan grass seed. Send us samples. Bomberger Seed Co., Modesto, Cal.

COUNTRY LANDS.

100 A., \$3300; WITH Pr. Horses, 8 Cows and Bull, heifer, pigs, tools and implements, hay, fodder included for quick sale; easy terms. Convenient R.R. town, high school, 6 churches, creamery, markets. 50 acres fertile fields adapted all general crops, 16-cow pasture, wood fruit. Good buildings, 9-room house, large barn, granary, corn poultry, hog houses. THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's

Gaustic Balsam

IT HAS NO EQUAL

For the Human Body
—It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils, Corns and Bunions. CAUSTIC BALSAM has no equal as a Liniment.

Perfectly Safe and Reliable Remedy for
**Sore Throat
Chest Cold
Backache
Neuralgia
Sprains
Strains
Lumbago
Diphtheria
Sore Lungs
Rheumatism
and
all Stiff Joints**

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

REMOVES THE SORENESS—STRENGTHENS MUSCLES
Cornhill, Tex.—"One bottle Gaustic Balsam did my rheumatism more good than \$150.00 paid in doctor's bills."
Price \$1.50 per bottle. Sold by druggists, or sent by express prepaid. Write for Booklet R.
THE LAWRENCE-WILLIAMS COMPANY, Cleveland, O.

**THE PREMIER BURNER**

The Premier makes its own gas from Kerosene (common coal oil)

There are now more than twenty thousand Premier Burners in use. This is a very significant fact. You can't mistake the meaning. It's as plain as day. Obviously it means added comfort: No smoke—soot—or ashes. But its real significance lies deeper—**ECONOMY PLUS LUXURY**. PREMIER S are selling faster and faster and faster. The demand proves its popularity.

COMPLETE OUTFITS:

\$12.50—for No. 6 and smaller stoves.
\$22.50—for No. 7 to No. 9 stoves.

Pacific Coast Rep.

San Francisco, Calif.

The Car For Rough Roads—New Overland 4 With Three-Point Suspension Springs

BOUNCING, jolting and swaying are replaced by a wonderful new riding comfort—the kind that cushions road bumps; that absorbs shock and vibration.

It is the new riding comfort of Overland 4 with Three-Point Suspension Springs—the greatest improvement to riding since the introduction of pneumatic tires.

These Three-Point Suspension Springs are attached at the ends of a

130-inch frame, giving Overland 4 long wheelbase road steadiness. Yet they preserve the lightness, driving ease and economy of 100-inch wheelbase.

Many other notable advantages result from these springs. Every part of the car has longer life with correspondingly lower upkeep cost because shielded from constant road blows. Tires have greater mileage. Light weight effects economy in fuel and oil.

Overland 4 is a sturdy, serviceable car of highest quality as well as handsome design and attractive appearance. Equipment is complete from Auto-Lite Starting and Lighting to Demountable Rims.

Have the Overland dealer show you this remarkable car. Ask for Booklet. Overland 4 Touring, \$845; Roadster, \$845; Coupe, \$1325; Sedan, \$1375. Prices f. o. b. Toledo.

Early Baart Wheat Has Made Good

Written for Pacific Rural Press by R. E. Hodges.

STUPENDOUS TASK has been accomplished. Wise heads said it could not be done—they spoke on the basis of multitudes of experiences with projects not greatly different in nature, but seldom of such magnitude.

The introduction of Early Baart wheat throughout a State eight hundred miles long, and containing every variety of soil, moisture conditions, and climate—all in one season—it was some job! The Sperry Flour Company undertook it in the fall of 1918. By securing co-operation of practically all mediums of publicity, they carried it through. Their reasons were that California wheat production had dropped from 53,000,000 bushels in 1896 to 7,000,000 bushels in 1918. Its quality had degenerated until most of the crop was of little value for flour. California requirements were between 20,000,000 and 25,000,000 bushels. The great difference between what we produced and what our mills made into flour had to be imported.

flour made from it has put our flour markets in the best shape. Probably half of the Sperry Company's business is export. They and the other milling companies of California have assured a home market for our wheat and have been assured of a supply, the quality of which enables them to compete with the world.

Early Baart has quite generally outyielded the varieties formerly grown, in every section where it was planted. Thin red soil, sandy soil, heavy adobe, and all variations between have yielded an average better than 20 bushels per acre. In Butte county on old rice land it yielded over 40 bushels per acre where drainage was good, and about 17 bushels where there was no drainage. It yielded about 26 bushels per acre in the clay loam of the Sierra foothills. Imperial Valley farmers began delivering Early Baart crops to Los Angeles mills late in June, and they were enthusiastic. In the sediment of the Tulare Lake bottom we saw crops promis-

"Plant More and Better Wheat"—Gratifying Results.

In that time of world need, it seemed necessary for California to raise at least enough to feed herself.

The Sperry Company bought Early Baart seed in the Northwest and probably in Arizona, in which States this had already become a leading variety. They sold it to the ranchers of California at or close to cost—6,000 tons—enough for 170,000 acres. Probably 25,000 acres were planted with seed from other sources. It was certainly an accomplishment.

But what would the harvest be—wheat or wheat? The writer has inquired from ranchers in all parts of the State this season, and most of his findings agree with those of Geo. E. McLeod, who had charge of the Sperry campaign.

Superiority Proved.

Early Baart has proved its superiority over other varieties in nearly every section, especially where the locations were more than commonly wet or dry. Its quality or "strength," where grown at elevations around 2,000 feet, equals that of wheat imported from the best hardwheat sections of the United States. In our valleys, and even in the coast counties, it takes the highest grade—"No. 1 hard white." It has been exceptionally clean—free from smut, weed seed, etc.—due to its having been thoroughly cleaned before sale to planters and due to its running so true to type. The

ing as heavy a yield as the Sonora, which is almost exclusively grown there, but which sells at the lowest price per hundred. Eight or ten miles from the coast in San Diego county, a crop of 32 or 33 bushels per acre is reported. Another crop almost as big grew on a ranch the same distance from the coast in Santa Barbara county. The variety has gained favor in Sonoma and Mendocino counties. The dryness of this season, along with hot winds in the Sacramento and San Joaquin valleys, gave all grains a hard test. Baart compared favorably with the best in all cases and was the best in most cases. One rancher in Tehama county was disappointed with his yield of a little over eight bushels per acre where the hot wind had broken down his wheat early in July and had shattered it. However, he expects to plant more Baart this fall. Bluestem, which has so deteriorated in many parts of the State that many lots have graded No. 2 Soft, is losing its acreage to Baart.

The dryness of this fall has held back the wheat planting. The shortage of summer fallow is likely to hold the acreage below that of last year. Sperry sales of Baart wheat are much less than last year to date. This is expected, because in all parts of the State farmers will buy from their neighbors. It seems likely that Early Baart will occupy a much greater proportion of total wheat acreage than last year.

AGRICULTURAL REPRESENTATION.

STATE DIRECTOR OF AGRICULTURE HECKE is making a suggestion at the Chico Convention this week which should be enthusiastically adopted and acted upon. It is the creation of what he calls a "legislative committee," upon which every co-operating group of California farmers is invited to representation. It is a move toward a central co-operation of all the co-operative organizations now acting in our agriculture which we have been constantly urging for the last few years. It will be, when realized, an expansion of the organization of co-operating groups now acting under Col. Weinstock's auspices to include all our farmers' societies so that there may be one body of convenient size which can justly claim to be representative of our whole diversified agricultural production. In this way all the large general groups like the membership of the Grange, the Farmers' Union, and the Owners' and Operators' Association, can be brought into direct action with the special-purpose organizations—all the way from the great citrus, dairy, prune, raisin, peach, almond, walnut, poultry, and other large groups to the smaller bodies of every kind, from the graduated Gooseberry Growers of Greenfield to the Reciprocating Rabbit Raisers of Redwood, which will ere long no doubt be created. What we need, in our judgment, is a central body which shall unite and correlate all our associated efforts so that those which are working for the enforcement of sound economic and social principles and agricultural relations in general shall co-operate with those which are working to meet specific needs requirements and privileges of particular producing groups of farmers, and in that way move public opinion and political action toward promotion of profitable food production and the fair relations of producers thereof to all other elements of population. These things can never be secured without ample agricultural data and correct agricultural points of view, and no amount of academic erudition can keep these essentials always up to date under constantly changing economic and commercial conditions. It is the function of continuous production itself to supply this essential to correct public opinion and action, and producers can never discharge this function broadly and accurately without co-operation which shall represent all forms and phases of their varied activities. We trust the Chico convention will act energetically along the line of Director Hecke's suggestion, to which we allude and of which details are given on another page. It will be a step in the right direction.

AGRICULTURE IN THE UNREST.

President Wilson's very proper arrangement for an adjustment of reasonable relations between employers and workmen by conference, has apparently been hopelessly wrecked by the action of the labor representatives as described in our issue of November 1. So far we hear nothing more of operations by any successor to the original conference. Possibly the collision of the conference with the steel

strike and the following collision of the government with the coal strike have thrown the general conference idea off the track and President Wilson may be realizing the truth of the apothegm of his predecessor, President Cleveland, when he said: "We are confronted by a condition, not a theory." The attitude of the President toward the strike, which defies the government of the United States, is one which the public must be thankful for, and his words are expressive of the patriotic sentiment of the country when he said:

"It is time for plain speaking. These matters with which we now deal touch not only the welfare of a class, but vitally concern the well-being, the comfort and the very life of all the people."

"I feel it is my duty in the public interest to declare that any attempt to carry out the purpose of this strike and thus to paralyze the industry of the country, with the consequent suffering and distress of our people, must be considered a grave moral and legal wrong against the Government and the people of the United States. I can do nothing else than to say that the law will be enforced and the means will be found to protect the interests of the Nation in any emergency that may arise out of this unhappy business."

And this is what the government of the country is trying to enforce as we write on "Armistice Day"—the new national holiday. There is a chance that those who are in opposition to the welfare and the enjoyment of their rights by their fellow-citizens may turn from the error of their ways before the sun sets on Armistice Day, which was instituted to commemorate the return of law and order to world affairs. There can be no armistice until loyalty to law and order and recognition of the rights of the public as higher than the claims of any class, shall be declared.

The position of farmers, when unpatriotic action crops out in this country, has never been doubtful nor uncertain. Farmer's have always stood for patriotic conservatism and against destructive radicalism. They are now coming to a better definition of the requirements of their industry, which will allow them to continue to be such conservative force as the country needs. We are printing on another page a carefully drawn declaration of the relations of farmers to other industries and group-interests in this country. It bears the endorsement of one division of the tri-partite conference at Washington, which was arrested in its work, as we have already stated. This declaration should be carefully studied by our readers and made the subject of frank and free discussion in our agricultural assemblies.

WOOLEN MANUFACTURING.

We quite sympathize with the elation of our Oakland contemporaries over the projected establishment in their city of a two-million-dollar plant to be entitled the "Federal Wool Manufacturing Co.," for which a site of twenty-three acres has been secured upon which the following things are planned to be done.

There will be constructed buildings to cost \$740,000 while the machinery will reach in value \$780,000. The buildings will consist of a wool scouring structure 82 by 225 feet and four stories high; a five-story building for spinning, carding and combing, 80 by 225 feet; a warehouse 350 by 250 feet, and a ten-story administration building, 50 by 100 feet. It is planned to have the plant in full operation by next summer. Employment will be given to 200 men and 600 women. Many of the expert workers will be brought from New England, it is said.

It will be a good thing to establish on this coast a wool-center which shall share the honors with Boston, New York and Philadelphia, and which may liberalize somewhat the attitude of the Atlantic interests toward the wool production of the West half of the country through competition with a nearer marketing center. The institution noted above is apparently the realization of a desire announced last year by an Australia visitor, "that the Pacific Coast should possess large woollen mills that would obviate the necessity of shipping Australian wool all the way to the Atlantic coast." So far as it is desirable to import Australian wools it is reasonable that they should be landed on this coast and carried along in the process of manufacturing, is feasible here so that they may cross the continent as an improved product rather than whirled through our State as raw-material. To what extent and how long it may be necessary to

import Australian wools are questions for later consideration. As to the relation of the new undertaking to wool production on the Pacific slope, it should be strongly promotive. If we can get the reasonable protection for home-grown wools, which our wool growers contended for several years under the leadership of Mr. Ellenwood and lost through the insanity of the Underwood law of 1913, there seems ample reason to believe that our waste lands will be carrying useful sheep instead of destructive coyotes and other vermin. For it was clearly shown that the old tariff law was unjust to growers in that it talked so much turkey to dealers and manufacturers and so much crow to flock-owners. How the manufacturers were able so long to successfully talk protection to growers and realize so much privilege to themselves can only be explained on the ground that the manufacturers held the starter on protective legislation and kept the growers in the gasoline tank. We are glad the Oakland institution is starting up for the discussion of the whole wool industry will not take a new start, and recognition of justice to growers may return our California wool production to more creditable figures.

BOVINE AND PORCINE CONFECTIONERY.

Speaking of manufacturing enterprises which may be promotive of California agriculture, we remark another venture which is scheduled for Oakland. It is credited with being financed wholly by eastern people, and will construct a manufacturing plant covering six acres—operating under the name of the Stockmen's Service and Supply Company. It will make stock medicine, presumably of the tonic type, and to meet the greater appetite thus induced will do manufacturing which an Oakland exchange describes as follows:

It will employ 100 men at the plant and 100 in the field; it will turn out 3,000 tons of balanced ration product per month, valued at \$45 per ton, composed of rice, copra, corn meal, alfalfa and other commodities. It will open a market for grades of rice and by-products of the rice mills which now are difficult to dispose of and for copra, meal and various forms of farm output.

It seems to be a good, logical and self-promotive scheme for it will make more medicine to induce more appetite for more factory-balanced rations to furnish more manure to grow more farm by-products to make into more rations to feed more animals to take more medicine, etc. Evidently the projector has such a business vista in mind for he is credited with saying:

"Through the plant's product and the methods pursued, this State's total tonnage of pork will be increased from 20 per cent to 40 per cent over present output and the raising of hogs will immediately increase. The same will be the case with other livestock of food value. The result will be greater shipments and better prices."

And surely that is what we need—especially the better prices or decreased cost of production to leave more margin for producers. If the new outfit will insure that outcome it will deserve to be one of the most popular concerns in California!

NO ARMISTICE WITH DISORDER.

As we are writing this on Armistice Day, because the printers cannot release their requirements for editorial promptness, we hear the patriotic music, the tramp of the patriotic processions and the soul-stirring periods of patriotic oratory by which Americans are doing honor to the memory of their fallen heroes—rendering thanks and honors to them for their willing sacrifices for the lasting good of mankind. It is significant that on the very day that such gratitude and honor is being paid, the nation is rising, through the stalwart bravery of the government, to make it everlastingly sure that our heroes have not made the supreme sacrifice in vain. While we honor their memories it is fitting for every patriotic American to solemnly resolve that no portion of our population shall ever be permitted to substitute its arbitrary will for the national will, nor to claim a right to serve its own fancied interests when they are destructive of the public welfare. Shall we sacrifice our men abroad to secure world peace, order and justice to all mankind, and tolerate defiance of our representative government to secure these blessings for our own people? God forbid! Ours is a land of free speech and free opportunity—under the laws and institu-

tions which we enact and establish. We are a people believing in the enactment of the popular will into laws which shall conserve human rights, dispense justice and promote freedom, and thus provide remedies for all demonstrated evil and injustice—but we are not a people to defy law and destroy order as we have ourselves established them. We are a people to progressively create justice, as we are able to discern its more perfect forms. Such is the American spirit and method to correct wrongs and establish rights, and a true American can brook no crime against the endowment which our forefathers created and bequeathed to us as our national birthright. There can be no armistice with disorder!

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Refrigerating Walnut Trees.

To the Editor: I am planning to import walnut trees from California next March, having them put in the refrigerating chamber of the steamship. Is the chamber likely to kill them through freezing? Should the experiment only prove successful with a few of the trees, would it be worth while budding from those trees? Of course, they would be grafted or budded trees, so the scions taken from them would be true to the parent trees. Would the buds or grafts, as the case may be, come into bearing as soon as the parent tree?—E. H., Victoria, Australia.

If the temperature runs from 35 to 40 degrees, or whatever degree above 32 degrees is used for fruits, dairy products, etc., no harm would result. We presume that would be the case in some of the chambers, for probably nothing is going from here which requires as low a temperature as you may be using for your frozen meat exports, and ships are not likely to undertake the expense of maintaining a lower temperature than is required. The buds or scions which you take from the grafted trees which you buy in this State will grow true to their own kind, no matter what kind of a walnut tree you succeed in getting them to grow upon. As a rule they may bear a little later than the nursery tree from which you take them, but sometimes it works the other way.

Putting in Alfalfa with Oats.

To the Editor: I was interested in the article of October 11, 1919, headed "Cracking-in Alfalfa." It seems to be the common opinion among most California farmers that one must sow the alfalfa seed alone in all kinds of ground and at all times. I have even heard some call a "nurse crop" for alfalfa "a murder crop," but I think there are exceptions to the alfalfa rule as well as any other. Last spring I prepared my seedbed thoroughly in heavy sandy, loamy soil, sowed oats as if there was to be no other crop sowed. I then broad-casted the alfalfa seed about eighteen pounds to the acre, and cross harrowed the alfalfa seed in. The oats came up nicely and I cut over one ton per acre of oat hay with the clipping of the alfalfa and over a ton per acre the first cutting of the alfalfa, so by my actual experience I believe if Mr. D. L. S. of Antioch will sow his alfalfa real early and watch the young plants and cut the nurse crop for hay at the time the alfalfa should be clipped, he will be ahead of the old game one crop of hay, providing the land can be irrigated properly. My crop was on subirrigated land.—Wm. Patton, Los Molinos.

Your steady moisture supply and your cutting the oats early made your method reasonable. The California practice of giving the land to alfalfa alone, is surely the right practice for ordinary conditions, and it is backed by several decades of local experience.

Do Not Drain into a Well.

To the Editor: I am building a house on my ranch. There is an old well near, and I have been told I can drain my cess pool into the old well. It is seventy-five feet from my well which I am using for my water supply. Please let me know if I can use it or not.—W. R., Sacramento.

The disposal of house wastes in the old well would be very dangerous because of the chance of discharging the sewage into the same water-bearing stratum from which the well you are using draws its supply. It would be safer to use almost any method of surface distribution. The reasonable and safe way to dispose of sewage on farms is the septic tank, with the use of the discharging water for irrigation in surface ditches or for sub-irrigation by tiles of orchard trees or other plants.

Barley after Alfalfa.

To the Editor: We have 30 acres that have been in alfalfa for the past 7 or 8 years. Soil is known as the Orland sandy loam. We are plowing this alfalfa with the intention of planting Mariout barley, and after harvesting it, to plant milo. Would you advise fall planting or spring planting of the barley? If planted in the fall would it make too rank a growth? If in the spring, will it be ready to harvest in time to plant the milo, say in June? We plan to sow about 80 pounds seeds per acre. The land can all be irrigated if necessary.—K. C., Orland.

We would turn under the alfalfa as soon as possible and as soon as the ground is thoroughly wet down by the rains get the barley seeded. On light, well-drained soils in the interior barley should be in before January 1 if the season favors. By getting the alfalfa under a month or two sooner and rolling a sandy soil it will start decay and give you less trouble from drying out than the coarseness of it otherwise might in a light soil if the rainfall should be scant. By starting early you will get the main growth of the barley while the rains are falling and you have a much better chance at double-cropping. By starting early your chances of getting a crop of barley is better also. Spring-sown barley in the interior needs a very favorable season to come through.

Sowing Barley in Alfalfa.

To the Editor: Is it advisable to sow barley in alfalfa one year old? Would I get enough extra hay to pay me? Is there any disadvantage to this method? My alfalfa is a good stand—my object being to get greater tonnage.—L. J., Hemet.

Successful experience with this practice has been reported during the last few years and one has to conclude that under certain conditions it is reasonable and profitable, but we apprehend that there is danger of going too far in this direction. On lands where alfalfa has a long dormant season, because of continuous low temperatures, it seems to us better to get a crop of barley feed or hay than to get a rank growth of fox-tail—which one usually does under such conditions. On the other hand, in places where alfalfa gives a cutting as late as December, and another on in February, and where the plant is hardly dormant at all (as particularly in some places in southern California, perhaps), we would keep barley away and scratch out fox-tail and other weeds, and let the alfalfa go it as best it can alone. It is probably true that the better the alfalfa stand is the less there is to be gained in the years' tonnage of cut—and vice versa. But as we said at first, some are strongly advocating a good growth of barley when the alfalfa is dormant.

Almond Hulls as a Fertilizer.

To the Editor: Do almond hulls contain elements valuable to the soil, or are they rather injurious? The orchardists seem to be of various opinions, so kindly settle the question.—I. B., Arbuckle.

We shall have to settle it on very general grounds. Almond hulls do contain a considerable amount of substances valuable to plants if they can be put into available forms, but this may not always be practicable. They contain enough nutritive substances to make them useful as stock feed, and while they are still soft enough stock will eat them. If then they can be put where they are handy for stock to help themselves as they desire, the hulls can be transformed into an available manure. Whether they contain enough value to make it profitable to grind them for stock, or to return to the soil in a fine form, which will facilitate their decay, has not been determined or demonstrated. Until they decay they are of no use to the soil. We do not see how they can be injurious except possibly in cases where masses of them get into too active acid fermentation, and we never saw that.

Are Cats Good for Chipmunks?

To the Editor: We thank you for your josh about cats to scare birds in your reply to R. P., of Oakland in your issue of October 18. Funny we didn't think of it before, but there is nothing like having a wide-awake editor to prod us up occasionally. While this may or may not be effective with birds, it surely will with chipmunks, which are a great pest in this valley. Next years we will chain a cat to every tree, and invite you to come and note results.—T. J. T., Lancaster.

You are making the formula too difficult. If you will only breed cats enough to have one for each tree, you will not need to chain them up. They will do better if left free to hunt!

Replowing for Grain.

To the Editor: I have some land which was plowed late this spring, and intended to be summer fallowed, but I didn't get time to work the ground this summer and it grew up into weeds now, mostly tuccalote and summer or dove weeds. Which would you prefer to do now: replot it or disk it, for grain?—F. W., Valley.

If you had been able to carry out your intention to secure a well-worked and clean summer fallow, we could chance it with a disk, but as it is still early we would plow as soon as possible—covering all the rubbish and getting in rainfall enough to rot it and make a crop also. If it were much later, or if it is a very light soil, we might trust to the disk.

Sorghum Poisoning.

To the Editor: Are milo maize stalks poisonous under certain conditions? I have been feeding my cow on them and have been told they have proved fatal to cattle. Is second growth milo poison?—G. H. W., Van Nuys.

As we have frequently said before, rank, fresh growth of any of the sorghums is apt to be poisonous, and therefore should be fed with care and in small amounts at first. It is the growth after cutting, or "second growth," which is likely to be most rank and most dangerous. Dry sirghum stalks or fresh growth which is cut and wilted for a day are not poisonous. Fortunately, it is only occasionally that a poisonous condition occurs.

Fig and Olive Cuttings.

To the Editor: I wish to know the best time to plant fig and olive cuttings. I wish to put out a good many and would be pleased to have you start me right.—G. H. P., Red Bluff.

The best time to set cuttings of both fruits is after the coldest weather and the heaviest rains are over and the soil is beginning to warm up though still amply moist. This usually comes in February in most valley and foothill places. If you are intending to propagate these fruits to any extent you need to know about handling different kinds of cuttings, etc., as is described in detail in our book, "California Fruits," which contains the fullest available descriptions of California nursery methods.

CALIFORNIA WEATHER RECORD

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending November 11, 1919.

Need Agricultural Legislative Committee

By G. H. Hecke, State Director of Agriculture at the Fruit Growers' and Farmers' Convention at Chico.

State "Fruit Growers' Conventions" began in 1881, and the one being held in Chico this week is the 52nd—because sometimes two are held in a year. At the convention of 1917 it was decided to enlarge the scope of the assemblies and a new name was selected, viz.: "Fruit Growers' and Farmers' Conventions." In 1919 a reorganization of the State executive work for agriculture was effected and G. H. Hecke was appointed "Director of Agriculture." In opening the convention at Chico Mr. Hecke discussed the scope and relations of his new function.

THE new California Department of Agriculture, which came into existence on July 22 of the current year has an interesting historical background. As early as 1909, Mr. Seavey, now a member of the State Board of Control, proposed a revision in the method of administering the agricultural activities of the State, but at that time the project failed to attract sufficient support to effect its passage in the Legislature. A similar program was broached at the State Fruit Growers' Convention at Los Angeles in 1914, and a committee was appointed which presented a bill to the 1915 legislature to unify the work of the several agricultural offices under one effective head, to be known as the "Secretary of Agriculture." This bill died in legislative committee. At the Convention at Visalia in November, 1915, I, as County Commissioner of Yolo County, took the stand that such consolidation should be effected. Such consolidation and the creation of the State Department of Agriculture are now accomplished facts, due to the strong initiative of Governor Stephens. The result is a unification of the following bureaus, boards and commissions under the direction of the "Director of Agriculture," viz.: Office of the State Commission of Horticulture; Board of Viticultural Commissioners; Office of State Veterinarian; State Board of Cattle Protection; State Dairy Bureau; Administration of the Insecticide and Fungicide Act, and the Fertilizer Act.

What the Director Will Do.

The Director of Agriculture, appointed by the Governor under the provisions of the legislative act of 1919, thus finds himself engaged in a broader field of work, definitely outlined and clearly established by legislative action. The well-defined work, previously carried on by the various agencies before consolidation, will be continued, and notwithstanding the program of making an effective saving over the cost of conducting the former disconnected work, an aggressive campaign is being pursued to make the services of the new organization more and more valuable to the farming interests of the State.

The branches of the work within the department represent the application of the laws of the State for the protection of the different phases of agriculture. These laws are of a regulatory nature, dealing with the inspection service of the plant and animal industries for the purpose of enforcing the standardization of plant and dairy products, the protection of the cattlemen, and preventing the introduction into the State of plant and animal pests and diseases and controlling those that already exist.

The Department of Agriculture is assuming a large responsibility in endeavoring to carry on the work outlined on a budget less, by nearly \$40,000, than were the combined resources of the former independent offices—and this in the face of an increased demand for services and the necessity for providing a better living wage to our employees, thus making quite an increase in salary expense.

It is expected to accomplish this and give at least the same efficient service as was given before consolidation. We will endeavor to do it by preventing overlapping—by combining, for instance, the cattle inspection with the dairy inspection wherever possible, and rodent control with pest control—and by bringing the headquarters of the former commissions, boards, and bureaus together in one building in Sacramento.

The new Department of Agriculture

is fully aware of the danger that may come to the State in proceeding in this important police work without adequate personnel or sufficient equipment; but it is hoped that the result of the trial will demonstrate the wisdom of the plan and at the same time convince the next legislature that the equipment and working force of the Department must be commensurate with the responsibilities assumed.

Greatness of California Agriculture.

Agriculture is by far the largest and most important industry in the State of California. Figures recently prepared by this office show production values for the 1918 as follows:

Fruit and grape crops....\$171,626,000
Field and truck crops.... 351,400,000

Marketable farm animals...\$523,026,000
Dairy products.....\$67,696,955
Total Agricultural and.....\$122,125,011

Livestock.....\$645,151,011
The figures of 1919 naturally will exceed the 1918 production estimates by many millions and at least 15 per cent would be only a very conservative increase.

For further comparison the 1918 production values show

Minerals.....\$37,686,072
Oil.....127,459,221
Lumber.....29,000,000

The agricultural production is more than three times as large as these three great industries combined; and it is thus very evident that the great bulk of California's economic wealth accrues to her from agricultural production.

As a logical conclusion it follows that the Department of Agriculture, which is now charged with the protection of such an extensive industry, must expand to meet the heavy demands to be made upon it now, and increasingly in the near future.

The State Must Promote Farming.

The need for adequate assistance for agriculture has been fully recognized by Governor Stephens, who has laid out his agricultural platform as follows:

"Never before in the history of the world has the realization of humanity utter dependence on the agriculturist been so acute as it is today.

"The critical situation of civilization in these times will be determined as the farmer may succeed in providing food. And it is not alone in the production of eatables that the farmer is important. He is the bulwark of governments and of peace and order.

"I cannot point to a more advantageous use of public funds or employment of the energies of the State officials than aiding the farmer to grow more bountiful crops and to protect them until the harvest time."

What Farmers Have Done for Themselves.

How, then, may we promote the growth of this Department of Agriculture to realize the maximum benefits at this time? Let us look back upon the proceedings of years ago. It was at fruit growers' conventions that the need and possibility of co-operative marketing organizations were emphasized, and where the ideas materialized which later resulted in the formation of the earlier cooperative associations, which have proved of sterling worth from every viewpoint.

The outgrowth of the co-operative idea has been the organization of growers of practically every kind of farm products and fruit, and this has resulted in placing the individual growers in a position where, instead of realizing a loss for their time and

work, they have been able to secure at least a reasonable profit.

These co-operative associations represent the greatest development which has come to California agriculture, and as a united body they are in a position gracefully to suggest such needful agricultural legislation and to secure the well-merited attention which their projects justify. Here, then, are the means by which adequate assistance and necessary protection to the agricultural industry may be secured.

How Farmers May Protect Their Interests.

In the past, special attention has been given to questions of labor and capital by our legislatures and under the extraordinary stress of present conditions this is the time for agriculture to be accorded its well-deserved and vital consideration. Especially is it timely that these problems be given due consideration and provided for against the coming of the 1921 legislature with its usual complement of progressive agricultural legislation. We feel that these co-operative marketing organizations form the logical bodies from which to secure such needful legislation and that the ideal method of procedure is through the creation of a legislative committee composed of a representative from each of these associations.

The reasons for the formation of a legislative committee may easily be found in the fact that our recent legislatures as a whole have been kindly disposed toward measures fostering progressive agriculture. In the past, however, no concerted effort has ever been made to bring the farmers' case to the attention of the legislature in a unified way. Every agricultural appropriation bill usually has met with opposition through unfortunate misunderstanding. Under such conditions, was it not almost impossible for our law makers to know the great thing to be done in any given case? The very lack of concerted action on the part of the farmers added to the uncertainty of the legislators and inadvertently clouded the merits of the case, and it is through such ill-timed and disconcerted activity that a resulting lack of support was realized in many cases.

Independent Legislative Committee.

Such a committee should approach these legislative questions impartially, and should not be bound to any one State department or to any special organization, but should carefully consider and work for the needs of all concerned. Any featuresavoring of a political aspect must at once be eliminated for that is not the function of such a body, and there is nothing which will so quickly destroy its effectiveness and purpose. Its members should be men who will be able to attend its meetings with regularity, and to secure this the means should be provided by which the expenses of these members will be paid from a fund created for the purpose of enabling the committee to accomplish effective work.

The attention of this committee then should be turned to a consideration of

NEWEST TREE-FRUIT IN STATE.

"The newest and most precocious fruit in California" is the characterization given to a rather extensive bearing orchard of jujubes at the U. S. Plant Introduction Garden near Chico. The fruits resemble California dates in color, size, shape, and seed; and are not distantly related in sweetness and flavor. To eat one is to want more, whether fresh or cured. Having been brought from China, they are also called "Chinese dates." But the trees are nothing like our date palms. At a distance they remind one of spreading poplar trees, but the leaves are compound. Fruits are borne on these compound leaves where they hang until they dry some and shrivel slightly, ripening in October. The leaves drop annually. While the

the various needs, their relative importance and urgency, and some definite and workable plan prepared for presentation to the coming legislature, behind which plan the entire force of all these organizations can be placed.

As suggested at the Visalia Convention in 1915, "this legislative committee should be furnished with financial means for employing a trained jurist known to be versed in the systematic arrangement of acts embodying a common subject, and able to express the will of his clients in legal and certain phraseology. It should, if possible, understand the spirit and inspiration that have enabled the fruit growers to protect and conserve their own interests so well in the past by legislative pioneering that, with all its faults, is yet supreme in that line."

Every step taken by the committee would be under the direct control of the organizations that it represents, and its work would be submitted at last to the fruit growers and farmers for approval at the next fruit growers' and farmers' convention, and finally to the legislators for enactment. It is certain that such procedure would suggest a proper guide to legislative consideration and one that would command respect and support from all concerned.

Act as Agricultural Grand Jury.

In addition, it might even perform the functions of an agricultural grand jury, investigating present methods and the operation of law-enforcing machinery as it relates to agriculture, investigating the uses made of various funds appropriated for the benefit of agriculture, the needs of agricultural industry and thereby preparing for any recommended changes that may be necessary.

To summarize the principal duties of this committee:

First, it must investigate the needs of agriculture and secure concerted and definite action.

Second, it must act impartially, looking always for the opportunity to secure the best legislation regardless of what branches of the State government or individual agencies may be affected.

Third, it must enjoy absolute freedom from politics, and must avoid all reference to political controversies.

This, then, is the all-important and history-making step which the Chico Convention may take toward the up-building of California agriculture. To my mind this movement bids fair to become one of the most effective steps that could possibly be taken, and is one which will maintain our agricultural industry in its rightful first place as, indeed, no other single step has ever done. As a concrete example of the effectiveness of such measures, we can point to the progress which has been made through unification by the labor union, and we are in sympathy with the labor unions in the systematic manner in which they have secured legislative attention. Let us follow their example in this respect, and by united and concerted action secure that recognition for agriculture which is rightfully ours, and of which we have been deprived these many years.

fruits are real confections as they come off the tree, their chief use is for Christmas candies, being prepared by stewing in syrup. Several varieties, six months to three years old, are bearing at the Plant Introduction Garden. Some of them bear fruit on trees from seed planted the same year. Hence they are most precocious.

Ayrhardt walnuts grafted onto a ten-year-old paradox on the W. H. Warren place look as though the grafts will produce as large a growth as the paradox itself. Other varieties grafted on blacks of the same age are dwarfed by comparison.

Continued effort at production will cure the spiritual and material ills of the world quicker than anything else.

California International a Great Success

Written for Pacific Rural Press by Thos. F. McConnell.

The great show is over and we can take stock of what was shown, what was done, and how it can be improved upon in the future shows, for it seems to be the unanimous verdict of the live stock men that this great show should be continued. This was not due to any enthusiasm of the moment, but was the honest conviction of each and every one as the result of eight days of experience. It was not perfect, but it was so good that it will

C. N. Hawkins, Head of Pacheco Cattle Co.

seem as though a part of the life of the livestock men who participated was gone or obliterated if it should be discontinued. The time and the place (San Francisco) were right and the exhibit, from one end to the other, was excellent—better than was even expected by the most sanguine.

The exhibit in the dairy classes was an excellent one from every viewpoint. Some of the prominent herds were not in evidence, but others came in and took their places, and the result was on of the great shows of dairy cattle of the season.

The beautiful and economical Jersey was represented by cattle from the best herds on the Pacific Coast. Guy H. Miller of Modesto, J. E. Thorpe of Lockeford, Frank Reed Sanders of Phoenix, Ariz., Jersey Queen Farm of San Jose, and M. Fortini of Orland, all had good ones. Thorpe had the grand champions in both bull and cow class, although some experts think that it would be possible to place Alameda's Interest over Jolly Senator Raleigh without breaking many rules of the game. M. Fortini's heifer, Jewel of Tintagel, was made junior and reserve grand champion female and attracted much attention by her excellent type and quality.

A. B. Humphrey of Escalon won most of the prizes in the Guernsey division, although L. Dee Smith of Oakland got into the blue in some classes.

The Ayrshires were really a wonderful showing although but two herds were exhibited. Elkhorn Farm of Watsonville, owned by J. Henry Meyer of San Francisco, won a majority of the prizes, although Steybrae Farm had many good cattle and was right in the money all the time. This breed has never had the publicity given other breeds or really what it deserves. There is no doubt in the minds of unprejudiced dairy cattle experts but what the breed is capable of as great performance at the pail as any of the other breeds, and withal is very attractive in appearance.

It is seldom that at any dairy show anywhere is there as large a percentage of "long distance" performers on exhibition in the Holstein-Friesian classes as there was at the California International. Three cows with more than 30,000 pounds of milk and more than 1,000 pounds of butter in one year to their credit. A combined product of more than 45 tons of milk, 3,500 pounds of butter in one year, and the beauty of it is they are keeping right on doing it. They don't stop with one year's work. It don't seem hardly worth while to talk about mere appearance or judge on mere looks in the face of such figures. We can say

that A. W. Morris & Sons Corp. of Woodland won grand championship with their great sire King Morco Alcartra and that H. E. Vogel of Fresno had the grand champion cow in Betsy Lamb Prilly, but really it does not mean as much as the real production records, as at another show another judge might place the animals differently in the show ring, but the records stand.

The three great cows mentioned above are Tilly Alcartra, owned by A. W. Morris & Sons Corp., Woodland; Ormsby Segis Marie, owned by Toyon Farms, Los Altos, and Raphaella Johanna Aaggie 3rd, owned by the Napa State Hospital.

The beef classes were especially well filled in the Shorthorn and Herefords with one good herd representing the Aberdeen Angus. Many shows will not have as good exhibits and still know they are worth going to see.

The Shorthorns were represented by the best of the Pacific Coast and some from as far east as Kansas City. Most of the herds have been on the circuit since the State Fair, but Caledonia Farm entered some that had not been shown this fall. They won the grand championship bull with Gainsford Matchless, the \$12,000 Canadian bull. Little Sweetheart, shown by T. S. Glide, still continues to be grand champion female wherever exhibited. She is certainly a very thickly fleshed straight-lined animal, and is even smoother than at the State Fair. Thos. B. Dibblee Estate had reserve grand champion on their young bull, Bashan Augusta. He is a very straight youngster, with

lots of quality but not as much scale nor as thickly fleshed as Gainsford Matchless. However, he is a coming fellow, and another year may see him in the purple again. Ormondale Company and the Pacheco Cattle Co., both had their show herds in the ring and money.

The feature of the Hereford exhibit was the showing of the Hereford Corporation of Wyoming. They won both grand championships and most of the herd prizes, although H. M. Barngrover of Santa Clara, J. A. Bunting of Mission San Jose, Diablo Stock Farm, Danville, and J. H. Cazier & Sons Company of Wells, Nevada, all were in the money and showed some crackerjack stock.

Hogs galore and of the kind that it is hard to tell which are the best. Arguments and exhibits both were of the flawless kind. Tall, tasty Tamworths, beautiful Berkshires, pleasing premium Polands, dandy Durocs, young and old Yorkshires, handsome Hampshires and choice Chester-Whites—all were there and looking their best.

Fred M. Johnson of Napa, the genial Duroc-Jersey breeder, brought one boar, and he was good enough to win first in class and grand champion of the Duroc exhibit. His name is King Orion Jr., and from the famous herd of Ed Kern, Stanton, Nebraska. Conejo Ranch had a very strong showing and won many prizes.

Roy E. Fisher of Lincoln, Nebraska, was in the money with some good

ones. Harvey M. Berglund made a most excellent exhibit with his "Economic Feeding" strain. V. F. Dolcini of Davis, S. E. Whiting of Sacramento and J. H. Rosseter of Burke all had some in line that helped make a great Duroc show.

The Berkshires exhibit might have been larger but it could not have been better. Anchorage Farms won grand championship with Natomas Baron Duke, an animal that, according to the best authorities, would probably have won anywhere in the United States this year. Castleview Premier Belle, junior champion at the State Fair, grand champion at the Los Angeles show, was made grand champion at this show. This sow was exhibited by J. Francis O'Connor, proprietor of the Castleview Ranch, Santa Rosa. Mr. O'Connor sold this sow to F. L. Hall, Perris, at Los Angeles, but brought her to San Francisco to see if she would not also continue her winnings here, which she did. Mr. Hall is to be congratulated on the acquisition of such a sow. A. B. Humphrey of Escalon had many firsts and seconds, also both reserve grand champions, with first on aged and young herds. First on produce of sow was won by O'Connor of Santa Rosa. Other exhibitors in the money were F. B. Anderson, Sacramento, A. L. Stephenson, Los Molinos, J. H. Rosseter of Burke, and Mrs. J. J. Weber, Yuba City.

The grand champion boar of the Poland Chinas was Golden West King, owned by J. F. Lehman of Lodi, who also won in the junior boar pig class. M. & A. L. Bassett of Hanford won the grand championship on sows, with Hopeful and reserve grand champion with Gerstdale Best. McCarty & Starkweather won all except the 5th in the senior sow pig class and other moneys besides. In the herds Lehman won first on Young Herd and Get of Sire and Produce of Dam classes. Bassett won first on Aged Herd.

The animals shown were all of the big type that are sought after by the fanciers at the present time.

The Hampshires were well represented by three herds, two from the southern end of the State and one from Nebraska.

Hampshire swine were well represented by three full herds filling all classes. Roy E. Fisher of Lincoln, Nebraska, had a strong bunch winning both grand championships, Black Beauty winning in the boar class and the aged sow, Duke's Florine 2nd, winning over a very strong class. Conejo Ranch of Newbury Park had first on aged and senior yearling boars, junior boar pig, and first, second, third and fourth on junior yearling sow. Altogether, it was a fine Hampshire showing.

Mutton Breeds Make Big Show.

Mutton breeds of sheep were well represented for a California show. Butte City Ranch won grand championship in the Shropshire ewe class with a wonderful ewe from the flock of Geo. McKerrrow & Son, Pewaukee,

Wm. J. Bemmerly.

Bemmerly's Bulls are Best.

Wis. The ewe is "McKerrrow 3385" and was sired by the famous "Senator Bibby." The Ratto Stock Farm won the grand championship on rams.

Calla Grove Farm won their share

of the ribbons in the Hampshire sheep classes, but Conaway Ranch, Woodland, and the University Farm, Davis, also won enough so that the ribbons were about equally divided.

The University Farm, Davis, had the only exhibit of Romneys at the show.

Ellenwood & Ramsay of Red Bluff had a pure bred Corriedale ram on exhibition that would please the eye of either a mutton sheep breeder or the man who wants a medium type of wool as well.

Rambouillet Row Real Exhibit.

Bullard Bros. of Woodland had the only animals of this kind on exhibi-

CHAS. KIMBLE Sells Sheep all the way from Red Bluff to Texas.

tion, but they were a whole show in themselves. They are very large, but symmetrical, carrying a very long, fine, dense fleece of the kind of wool from which the finest worsteds are made.

Such sheep are worthy of competition, although it would take very strong competition to make much of an impression on their winnings. It is sometimes said of an exhibit without competition that "they won, of course," but in this case it could be said, "they would have won in any class."

Draft Horses Draw Crowds.

Percherons, Belgians, Clydesdales and Shires all were represented and fitted to the minute. All were ready to dance, prance and walk at the crack of the whip.

N. W. Thompson of Patterson won grand champion on Sensation in the Percheron class and all other firsts in stallion classes as well. Merritt-Bowers Co. of Tulare, Ruth Maxwell of Sonoma, University of California, L. A. Hall of Mountain View and Palo Alto Percheron Farms, all were in the money and all had good exhibits of this great breed.

The Shire classes were represented by two breeders, Easton & Ward of Diablo and Merritt-Bowers Co. of Tulare, with a great lot of this old English breed, Easton & Ward winning most of the awards.

The Clydesdales, that great Scotch draft horse with the superabundance of action and quality, were well represented by the studs of Thos. B. Dibblee Estate of Santa Barbara and O. H. Brandt of Shellville. Dibblee won grand championship on Bonnie Edward and was especially commended by Dean Curtiss. Brandt also was in the money.

Belgians were shown by Merritt-Bowers Co. of Tulare, N. W. Thompson of Patterson and Ratto Stock Farm of Napa. Merritt-Bowers Co. had grand champion stallion, Thompson, reserve grand champion stallion, with Ratto winning on mares. This blocky, massive breed is worthy of some attention from breeders, as it will be scarce for some years to come.

Yorkshire and Tamworth Swine Exhibits.

Although on hand with a strong show herd to give anybody a run for the ribbons, Lloyd & Tointon of Santa Rosa, Cal., had everything to themselves with Yorkshire swine, meeting no opposition. Judge V. F. Dolcini of Davis, Cal., who passed on this breed, (Continued on page 689.)

OVERHANGING FRUIT TREES.

Halton D. Bly of New York gives the American Fruit Grower this interpretation of the law about overhanging fruit trees:

When fruit trees stand near the division line of adjoining owners, and the branches spread over the two farms, who owns the fruit? The question has troubled the owners, been productive of fist fights and settled by the courts.

A case involving such a dispute was heard by the New York courts many years ago, and the decision then given has been followed in many other states. It appears from the printed case that one Dr. Hoffman had a cherry tree which stood on his side of the line fence. The branches spread over the adjoining land of Mr. Armstrong. Dr. Hoffman told his sister to go out and pick the cherries and while she was doing so Mr. Armstrong came along and ordered her to stop. It appears, however, that she was bound to get the cherries, and while endeavoring to stop her it was claimed that Mr. Armstrong was guilty of assaulting her. She sued him for the assault, and got a judgment of one thousand dollars. He claimed that he used no greater force than was necessary in defense of his property, and therefore, was justified in using force. The court held, however, that inasmuch as the trunk of the tree stood upon Dr. Hoffman's land, he was entitled to all the fruit even though the branches projected over the land of his neighbor and when the neighbor attempted to prevent the gathering of the fruit, he was a wrong-doer. It was further held, following the decisions of the courts of England, that an adjoining owner does not have title to any part of a tree projecting over his land, unless the trunk of the tree stands on the line or on his side of the line, although it was admitted that there had been some cases decided otherwise.

But it does not follow that the man who does not own the trunk of the tree has no rights or remedies. If he is damaged by reason of the overhanging branches, he can collect his damages. Moreover, if he sues for it, he is entitled to an injunction restraining his neighbor from planting trees so near the boundary line as to injure him.

HEREFORDS HAVE HIGH SALE.

Twenty-seven Hereford females sold for \$20,200, or an average of \$748.14. Six bulls sold for \$3,285, or an average of \$547.50. The average for the whole sale was \$711.66. This was a good sale from every viewpoint. The cattle were good and the prices were good; a combination that should always obtain.

A new buyer in Wm. Briggs of Dixon stepped in and bought six of the good ones, paying \$6,475 for them, or an average of \$1,095. H. H. Gable came next, buying five for \$4,950, paying an average of \$990 for the five. Molton Warner of Cool, El Dorado County, bought four, but did not pay as high an average for them. The remainder went mostly to individual buyers. H. M. Barngrover of Santa Clara bought three.

The top of the sale was Miss Dale with calf at foot, a cow consigned by the Hereford Corporation of Wyoming, purchased by Wm. Briggs of Dixon for \$1,450. Several brought over \$1,000 each. Altogether, it was a "Whiteface" day.

Col. Earl Gartin of Greensburg, Ind., cried the sale in a very acceptable manner, but it is doubtful in the minds of many if he brought in a dollar more than "Coast" auctioneers would have done:

STOCKMEN'S BANQUET.

(Written for Pacific Rural Press.)

Friday night at the Palace Hotel a banquet was given, which was attended by about 100 stockmen, as well as officers and directors of the California International Live Stock Show. President W. T. Sesnon acted as toastmaster, welcoming the visitors and introducing the speakers. The keynote of the meeting was that the stock should be made an annual event at San Francisco; this city being the logical headquarters of the livestock industry and the first event, successful as it was, but pointed the way for greater expositions in the future.

Among the speakers were Ralph P. Merritt of Berkeley, Frank Thompson of Chicago, C. N. Hawkins, president of the California Shorthorn Breeders' Association; H. M. Barngrover of San Jose, representing the Hereford Association; A. B. Cunningham, President State Swine Association; Fred Ellenwood of Red Bluff, president of the State Wool Growers' Association; Bob Jones of Sacramento and Geo. E. Hecke, State Director of Agriculture. In closing the meeting President Sesnon said that he hoped for a permanent organization, and modestly refused to accept but a small share of the credit of conducting the first exhibition, stating that the directors and particularly the executive committee, composed of T. W. Dibblee, A. W. Foster, R. B. Hale, M. H. Esberg, Frank Honeywell, C. K. McIntosh, B. F. Schlesinger and F. L. Washburn, as well as the Manager, Gordon H. True, had worked untiringly to make the show successful.

SULPHUR

It has been proved and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILDW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the 10 lb. and 40 lb. sizes.

bleaching purposes, LEAVING NO ASH. VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphur.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this Sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out in labor for spraying your orchard, even if you pay your men \$1 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR, 100% pure. This has increased various crops up to 500%.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur Mixtures, etc., and "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 deg. Be. Fungicides and Insecticides. Carried in stock and mixed to order.

TIRE CONSERVATION COURSE

LESSON 5

Series of Six

*How to
Increase Tire Mileage
By Proper Care
of Tubes*

GOODYEAR

Copyright, 1910, by
The Goodyear Tire & Rubber Company
Akron, Ohio

A Few Hundred Yards May Cost 10,000 Miles

A MAN with a new car had one of his tires blow out. He didn't have a spare, so he decided to run a few hundred yards to a friend's house. When he got there he discovered that neither the tire nor the tube was worth repairing, for running on the rim had fractured the casing fabric. And the tube was riddled with holes caused by being pinched against the rim. Those few hundred yards of running on the rim probably cost him 10,000 miles—miles that could have been saved by properly caring for the tube. Proper care of tubes saves miles in many other ways—not only in emergencies, but all the time. Ask your Goodyear Service Station, or write to Akron, for Lesson 5 of the Goodyear Conservation Course—telling how to increase tire mileage by proper care of tubes.

Repairing a tube with the Goodyear Tube Repair Kit

PROPER care of tubes increases by thousands of miles the life of even the best of tires. For whenever a tube fails, the casing is seriously damaged by being run flat.

Only a few hundred yards of such running may utterly spoil the tire; and even if the tube merely has a slow leak the tire will suffer the inevitable injuries due to under-inflation.

Take care of your tubes, if you wish to get the most from your tires.

Tubes inserted in the casing without being properly talced, either stick to the casing and tear because of the lack of French Talc or—when too much of this lubricant is used—they are injured because the talc collects in puddles and hardens.

Tubes must be properly inserted in the casing; otherwise they will be pinched against the rim, or—if the valve stem is at an angle—they may be torn.

Lesson 5 of the Goodyear Conservation Course gives simple but detailed directions for making your tubes serve your tires.

It also tells how tubes can be repaired permanently and in a few minutes with the Goodyear Tube Repair Kit.

Ask your Goodyear Service Station to show you one—and ask also for the other lessons of the Goodyear Conservation Course.

Here and There in the Fruit Business

THE STANDARDIZATION OF FIGS.

(Written for Pacific Rural Press.)

"The recent action of the directors of the California Fig Growers' Association in attempting to standardize the quality of figs delivered to the packing-house, will have more to do with enhancing the reputation of the California dried fig than anything says I. J. Condit, Horticulturist of the J. C. Forkner Fig Gardens and Director of Experiment Station. The California fig has suffered in comparison with the imported article purely because standardization had not been effected. Comments by the trade to this effect were published in the Pacific Rural Press earlier in the year and their tone resented.

The directors of the Association, on September 20, endorsed the proposition made to it by Dr. J. E. Lea, head of the Pure Food and Drug Department of the State Board of Health, and appointed two inspectors to work in the fig-growing districts during the ensuing two months to examine and pass judgment on the dried figs offered by the growers or delivered to the packing houses. This inspection work and standardization are essential to the life and well-being of the California fig industry for keener competition than ever from Asia Minor will have to be met in the future, and our industry is a live, active, going concern. Complete organization will be necessary for its continued success.

The authority vested in the inspectors recommended is shown under the provision of the State Pure Food and Drugs Acts and is on a pure-food basis.

Figs may be graded into four commercial grades: extra fancy, fancy, choice and standard. The last grade includes figs of the lowest marketable quality to be sold for cooking or packing in bulk or for by-products.

Matters of the utmost importance, including a definite outline of standardization and merchandizing, will come up for consideration, discussion and determination at the next Fig Growers' Convention, to be held early in the year, at which there will be a record of attendance it is anticipated.

MORE ABOUT THE PEACH-ALMOND.

To the Editor: Regarding inquiries about peach-almond for stocks for budding peach and prunes on, I have been experimenting with it for several years, and believe it is superior to peach root for dry land. It might not do as well on wet land. It seems to be freer from root-knot than almond, but is, I believe, more variable. Some of the seedlings appear to be fully as vigorous and drouth-resistant as the almond, while others are more like the peach. I have on sandy loam underlaid with sand and gravel, mixed with some silt and decomposed granite, and with limited irrigation, peach trees, which have considerable "little leaf." On almond root they are practically free from it, but are quite subject to root-knot. On peach-almond, they are but slightly affected with "little leaf," and show no evidence of being dwarfed. I think the dwarfing effect mentioned by Mr. Bergtholdt must have been from some other unknown cause as far as my experience goes. I consider the peach-almond superior to peach-apricot, or Myrobolan for dry land. Contrary to the usual belief, I find the Myrobolan root stands drouth on sandy soil much better than peach, and some better than apricot.—T. J. True, Lancaster.

Mr. Bergtholdt Still on the Trail.

To the Editor: Referring to our recent correspondence relative to the peach-almond as a root stock, I have continued my investigation, and recently in conversation with Millard Sharpe at Vacaville, who does a great deal of practical experimental work in horticulture, I was advised that a certain proportion of peach-almond, when planted, will revert to a less

thrifty and more inferior type, and that seedlings grown from seeds gathered from the same tree will show a proportion of seedlings less thrifty and that will dwarf any stock propagated on them, while a certain proportion of seedlings grown from seeds gathered from the same parent tree did not do so, but on the contrary are a thrifty root stock for whatever tree is propagated on them. This is one feature that would discount the desirability of the peach-almond as a root stock and probably accounts for the dwarfing tendency which was observed by our Mr. Reinecke, as noted in my former letter.—J. E. Bergtholdt, Newcastle.

SAVES MONEY PRUNING GRAPES.

Mr. H. P. Bralle of Sanger has for several seasons effected a saving of one-fourth to one-half in the cost of pruning his Thompson seedless vineyard. He found that a fast experienced pruner could do 124 vines a day on this vineyard. Before doing the actual cutting close to the stump of each vine he had to spend most of his time tearing the canes from the wire trellis to see just where to make his cuts. Mr. Bralle set two cheaper and untrained hands at tearing the canes from the wires. It was then found that the experienced man could just keep up with them and do three times the number of vines he originally pruned in a day.

Even though the price of the unskilled labor is equal to that of the skilled, say \$5 per day, as is the case in many localities, a saving results from the faster work. Where it took 16 days to prune the vineyard at a cost of \$80, it takes only 5 days at a cost of \$65 the better way.

POISONING RATS WITH APPLES.

(Written for Pacific Rural Press by Samuel Haigh.)

Rats invaded our premises after we got rid of them two years ago, but the newcomers refused to take an egg that had been poisoned. When the apples began to ripen we noticed that quite a lot of them were being eaten. Close examination showed that the predators were not either birds or poultry, but a rodent, as the marks of their teeth showed very plainly. At first we thought it was 'possums, although no claw marks could be seen on the bark. As rats had gnawed several holes through the floor and began to destroy the grain and feed in our grain house, we cut some apples into 6 or 8 pieces and dusted them over with powdered strychnine and placed them among the sacks of grain and barrels containing corn meal, etc. The result was that they left the grain untouched, but took every piece of apple for several nights. We allowed them the run of the grain house for several nights, or until the apples were left undisturbed, showing that they had either been killed off or scared away. Pocket gophers are equally as fond of apples as rats are. By cutting apples in pieces, dusting them with strychnine, impaling them on sticks about 1 foot long and inserting them in the main runway, gophers can be exterminated.

San Jose.

The citrus fruit growers of the State are already preparing for their tenth annual exposition, which will be held in San Bernardino, February 13-23, 1920.

The Federal Farm Loan Act does for the American farmer what the Federal Reserve Act does for the business man and banker.

If citrus trees are sprayed in winter the operation should cease by two o'clock if there is a likelihood of light frosts.

Play the game straight and watch your opponent closely—not necessarily with suspicion, but to forestall his moves.

[This is one of a series]

Spray thoroughly or not at all

Results will be disappointing, and therefore
A dead loss, in time and material,
Unless the orchard is sprayed thoroughly.
Use the proper material and spray to cover
Every trunk, branch, twig and leaf
(if they are on).

Some insects breed very rapidly, and
Sparing application means sure reinfestation.

ZENO

NEW PRUNING AT SHORT COURSE.

Inquiries and statements by people all over the State indicate that there will be an overwhelming enrollment in the Horticultural Short Course to be held at University Farm December 20 according to Prof. W. L. Howard. This is largely because of the interest in the systems of pruning young deciduous trees which has been proved out at University Farm and as overturned the popular notion of cutting-back to gain stockiness. Ever since the startling results were announced about a year ago the stream of visitors and correspondence has so impeded the normal routine of this department that it is only now that a bulletin describing the experiments and results has gone to press.

Roeding's Fruit Growers' GUIDE

A book that tells you what you need to know (not a catalog)—just issued.

101 pages—142 illustrations—endorsed by the horticultural press and prominent fruit growers everywhere.

BROWN ROT AND "DIE-BACK" ON APRICOTS.

(Written for Pacific Rural Press.)

In regard to the badly shot condition of so many apricot trees from Brown rot this year, Wm. T. Horne of the University of California said: "I wonder if you have noticed that this condition is worse when there are frost pots? Not that the frost pots are not beneficial, but as an indication that cold weather is experienced and expected." We had, as a matter of fact, noticed that this condition was worse in cold sections or on cold, heavy land, or on hillsides in places where air drainage was bad. Continuing, Mr. Horne said: "When men have decided to plant out an orchard to apricots they should give grave consideration to these important points: (1) Shall I have to fight frost? (2) If so, how much will it cost and how effective is it likely to be? (3) Can I afford to lose a single crop on such valuable land? (4) Would not something else thrive better here and be safer? There is no doubt that the apricot belongs in the thermal belt and then you get thermal belt soils too in which the apricot feels most at home."

Cold Dampness Inimical to the Apricot.

It would seem that the cold sets up a circulatory and sap condition that is favorable to the growth and spread of the brown rot fungus which this year developed in a rotting of and under the jacket or calyx as well as at the buds where no fruit showed. The best locations, Mr. Horne said, for the health, well-being and fruitfulness of the apricot, must be free from cold and dampness. These are almost as bad for this delicate-tissued and sensitively vigorous-growing tree as an actual frost. The locations really suitable for apricots then are very imagined and yet there is still plenty of it that is suitable. The San Fernando Valley is becoming a competitor with the Santa Clara and Santa Cruz valleys; so is King's county, Hemet and other new sections. Professor Horne's advice with regard to selecting more salubrious locations for apricots will be considered in future plantings.

**NATIONAL ASSOCIATION OF
COUNT AGENTS.**

County Agricultural Agents from all over the United States are invited to be present at the Third National Association Conference held in the Live Stock Record Building in Chicago, December 1 and 2, at the time of the International Live Stock Show. The conference will start on Monday at 3:00 p. m. and the first session will be for county agents only. On Tuesday the sessions will be open for all. A big banquet will be held on Tuesday evening, to which everyone who is interested in county agent work is invited. Reservations should be made with Carl N. Kennedy, Des Moines, Iowa.

Some of the high-lights of the conference will be a discussion of the problems in each state by a representative from the different states; work of the National Federation of Farm Bureaus by some officer of that Association who is elected in Chicago, November 12; "Representing Farmers' Interests in Washington," by J. R. Howard, President of the Iowa Federation who was a spokesman for farmers when they helped kill the Day-light Saving Bill.

Generally it is well to let fall plowing for summer crops lie rough all winter and work it down before there is reasonable chance for the rains to stop. Better work it down too soon than too late, for repeated cultivations after late spring rains will do more good than harm.

About 4,000,000 cases of canned tomatoes are this season's pack in California as estimated by officials of the California Packing Corporation. Last

Plant some carrots for the horses. These roots promote thrift, keep the digestive organs in good shape, and save much food.

STAUDE MAK - A - TRACTOR EQUIPMENT

is a strong, well-built attachment, which in only 20 minutes, converts a Ford touring car or runabout (or similar light car) into a powerful farm tractor, which can be changed back into a touring car or runabout in the same short length of time. The equipment consists of 2 all steel driving wheels, with Hyatt Roller Bearings, (8 inches wide by 39 inches high, with grousers), 2 large driving gears, 1 pair 6 tooth pinions, "special" heavy duty radiator, centrifugal water circulating pump, force feed oil pump, "special" fan, fan bracket and belt. Axle is of 2-inch steel, fastened to frame by heavy channel irons. This equipment is also suitable for building or converting Ford (or other small cars) into a permanent tractor.

In the California Orchard

Exhaustive tests prove the Staude Tractor to be a proven success. In the citrus and deciduous orchards it has been through all the practical operations of plowing, harrowing, discing, cultivating, and furrowing for irrigating, etc. Hundreds of letters from farmers offer positive proof of the above facts. Any variety of farm work that can be done by 4 horses, can be accomplished, quicker and better, and at less expense by the Staude Mak-a-Tractor.

H. P. Rating

The Staude Mak-a-Tractor, with 6 tooth pinions, when attached to a Ford (or similar car) in good condition, is guaranteed to deliver not less than 750 pounds draw-bar pull, S. A. E. rating, which is more than the average continuous work of 4 horses in reasonable soil conditions. Every part is protected from dust and wear.

You save \$110.00

The regular price of the Staude Tractor is \$275. I am the distributor, but find that I must devote my entire time to the pumping equipment business. Therefore, have decided to discontinue this line and am willing to give you the benefit of my loss on each machine, but you must act quick if you want to take advantage of this big saving. I carry a complete line of parts in stock.

Palestine, Strong Competitor in Almonds

(Written for Pacific Rural Press.)

"The total annual world production of almonds is about 400,000 tons. Of this quantity California produces about 6,000 tons—at the highest average cost per pound of any almonds produced. Palestine, a country very similar in climatic conditions to California, produces almonds in constantly increasing quantities, at a production cost so low as to be almost unbelievable."—Geo. W. Pierce, President, California Almond Growers' Exchange.

Mr. Pierce recently spoke to us on the subject of low cost-production of almonds in Palestine, saying he believed they could be delivered at the port of Jaffa at the cost of as low as two cents a pound. He spoke of a visit he had received from a gentleman, native of Palestine, who had come here to study our system of growing and cultural methods, processes of harvesting, grading, cleaning and packing, and above all, our system of market through the growers' association—the Almond Growers' Exchange. This man wishes his own fellow countrymen to profit by following our methods and by organization that they may themselves receive the full fruits of their labor instead of handing it over to a dealer.

From an article written by Mr. Pierce in the Almond Growers' Exchange we will quote some "detailed information relative to the practices and conditions under which almonds are produced and marketed in Palestine," learned from his visitor from there.

"It is most fitting that reports of progress in almond culture should come to us, one of the most recently developed almond sections, from Palestine. For the almond had its origin somewhere in the vicinity of the Holy Land. It is more pathetic, however, that the old, still handicapped by primitive conditions, should need to come for counsel and advice to one that feels itself still in its infancy, and with many of its known problems awaiting solution."

"Roughly speaking, Palestine is about 120 miles long and 70 miles wide or about as large as Kern county. It has four seaports, neither of which has a natural harbor of any considerable proportions. It is described as

a marvellous mixture of hilly and level country, with all kinds of climate.

Mr. Pierce's visitor "resides on the plains of Sharon, about seven miles from Jaffa in Palestine, on the highway and railway from that seaport to Jerusalem, which is some 30 miles to the East. The annual rainfall there is light, but is usually sufficient to insure crops. Practically no water is available for irrigation. The chief crops of the section are grapes, figs, almonds, oranges and wheat. The almond does well and in recent years the planting of almond orchards has greatly increased."

"Previous to about six years ago the prices received by producers was so miserably low that the industry was not attractive. The growers were not organized and were at the mercy of the speculator. From what we can gather we are inclined to believe that the speculator in Palestine and in California operate along the same lines. They take unto themselves all the traffic will bear, never for a moment entertaining a thought for the welfare of the producer. They figure that if the almond grower falls by the wayside that there will be other lines to invite the activities of the wrecker."

"Under Turkish rule but little protection was given the property owner. So marked was this that the farmers did not reside on their farms but lived in the cities and towns, going back and forth daily to their work. Employees, upon the farms lived in nearby villages. Sometimes trusted native employees remained as watchmen on the place."

"Taxation was most inequitably levied and taxes most atrociously collected. The privilege of collecting the taxes was sold at auction to the highest bidder. He then became responsible for the entire amount levied and proceeded to collect to his heart's content. He was both Assessor and Collector and from his ruling there was no appeal."

In planting, "no thought was given to alternating varieties, nor are varieties in all cases kept separate when harvested. Pruning and cultivating are carefully attended to, but spraying has not yet become common. Cultivation is done with utmost care. Little or no scientific work is being done to advance horticultural interests."

"As the harvest time approaches the farmer engages such help as his necessities demand. These are engaged for the season and are paid at the end of the season, when they are called together and the employer states the daily wage to which, in his opinion, each is entitled. This decision is final. Compensation fluctuates between certain well-defined limits."

The nuts are gathered from the tree by hand (with a step-ladder, as we gather peaches) as the almonds begin to open only, so the tree has to be gone over several times. "The gathering is done in this way to preserve the light color of the partially ripened almond. This they consider their choicest product. The men who do this work receive 15 to 20 cents a day, boarding themselves."

"The almonds are put into baskets, somewhat larger than our bushel basket, tamped down and heaped up for good measure. Women hull these by hand for one cent a basket, the average daily wage being about 10 cents."

The "almonds are grown all around the shores of the Mediterranean Sea, in Europe, Asia and Africa. Much of the outside product is shipped to Spain, France and England, where it is prepared to meet the demands of other markets, when it is again exported, this time to its final destination."

TRACFORD

\$100

F. O. B.
San Francisco

Ideal for Vineyards. At a small cost you can cut your Ford down to 3 feet wide and shorten to 48-inch wheelbase, for 8 feet. Row vineyards. Will do as much work in a day as two two-horse teams.

An attachment for converting any non-floating axle automobile into an economical or horse power Tractor.

\$100

F. O. B.
San Francisco

Ideal for Orchards. Will pull any implement that 4 horses can successfully handle. The most economical implement made for the Farm.

PRICE REDUCED!

We are closing out our stock of Tracford attachments at less than cost. Can you afford to be without one of these machines? Worth five times the amount asked. You need a ranch run about—only a few more left. Send us your order today. First come, first served.

How Many Acres Can Be Plowed with the Tracford in a Working Day of Ten Hours?

This depends upon the width of cut. Pulling a two-bottom, 12-inch plow, from four to five acres a day can be plowed.

What Is the Working Life of the Tracford?

It is practically indestructible. The side members are constructed of 4-inch channel steel. The wheels of the TRACFORD run on a one and fifteen-sixteenth-inch solid steel dead axle, which carries the entire weight of the Ford, and to which the Ford frame is bolted. The Tracford wheel has a 10-inch face, equipped with angle iron lugs for field work, and is fitted with large grease cups, which thoroughly lubricate wheel, bearing and axle, sufficient for a full day's work.

Is the Car Run on Low Gear While Working?

Never. It is run exactly as on the road. Low gear is reserved entirely for starting and for making unusual pulls of short duration. Wherever we say that the TRACFORD will do this work and that work, we mean that it will do it on HIGH GEAR. Any attachment which necessitates running a Ford car on low gear is not practical.

How Much Gasoline Will the Tracford Consume?

About one gallon an hour. This depends on the work that is being done and the adjustment of the Ford car to which the TRACFORD is attached.

How Much Oil Will the TRACFORD Require?

About the same amount per hour that the Ford to which the TRACFORD is attached will require for steady road work.

WALLIS

America's Foremost Tractor

How Long Will Your Tractor Last?

THE important feature for you to ascertain when selecting a tractor is durability—long life. Will it last?

In the Wallis the question is answered for you in an unrivalled record of service. This "quality" tractor is today recognized everywhere as the one great, dominating tractor success.

For over 12 years the Wallis has been serving on American farms and throughout the world.

Wallis advanced ideas of tractor design, light weight, simplicity, durability and economy have been proven more than practical. This master tractor has unmistakably proven its ability to do the work demanded of it year after year. It has power. But, more important, it has stamina.

The Wallis "valve-in-head" engine—with completely machine finished combustion chambers—the wonderful "U" frame—the cut and hardened steel gears, fully enclosed and running in a

constant bath of clean oil—the over-size bearings—the exact machining of every part and the unusual care in every step of Wallis building, are responsible for this tremendous success.

Wallis has proven that the rough work required of the farm tractor demands the finest materials and most accurate workmanship. Long life lies in quality and design, not in bulk or heavy weight.

Wallis users—who know that after years of service the Wallis is as efficient as ever,—readily confirm this fact. And phenomenal records of low cost plowing and low upkeep per year of service attest to the economy of Wallis operation.

Naturally, the Wallis is in great demand. Men realize that it is a profitable investment because its service is constant.

If you want a Wallis for next Spring, today is not an hour too early to see the local Wallis dealer or write us.

Farmers' Attitude in Industrial Conference

(Written for Pacific Rural Press.)

In our issue of November we outlined the obsequies of the Industrial Conference at Washington, which perished because of the withdrawal of the representatives of organized labor and their refusal to proceed farther with deliberations unless their basis of collective bargaining, the right to strike and the closed shop idea were agreed to. Since the date of that occurrence there have been rumors of the appointment of another conference and continued effort to arrive at an industrial code which will be approved by both employees and employers, and what comes of that remains to be seen.

We have several times protested that farmers, as the greatest employing class in this country, were not adequately represented in the wrecked conference. Such representatives as they had, however, were good and influential and declarations which they made to the Employers' Group, to which they belonged and which were later submitted by this Group to the Conference itself, constitute a statement of farmers' duties and farmers' rights which all farmers should carefully consider. The representatives were C. S. Barrett (president of the Farmers' Union); T. C. Atkeson (representative of the National Grange), and J. H. Tittmeyer of Wisconsin. Their declaration is printed herewith.

Farming and farmers must have the economic, social and political justice which will make farming as profitable and livable as any other occupation involving the same amount of hard work, business ability and investment, or the balance between farm production and urban consumption cannot be maintained. It is unfortunate that a technical meaning has arisen to the words capital and labor, which in many minds excludes agriculture from either class when from the standpoint of capital the business is easily the largest business, and from the standpoint of labor there is no other industry that includes nearly as many laborers within its activities. Any conclusions, therefore, that may be reached in this conference can scarcely prove to be permanent unless they shall include the welfare of farmers as laborers and farm owners as capitalists. And added to this is the fact that if any industry may be defined as basic, it is the one that independently of all others is self-sustaining and self-perpetuating; one that was in the beginning with the birth of civilization and without which civilization must perish. The great bulk of the actual wealth of the nation springs from the soil. And the balance of trade that has made this nation rich comes from the same source.

Modern Agriculture.

Farmers have responded to the ever-increasing demands of modern industrial and economic developments. The modern farm is no longer a self-sustaining unit as in primitive days, but has become a highly specialized production plant, the operation of which requires technical skill and managerial ability with large investments in modern labor-saving machinery. Six million such farms make up the vast industry of America's agriculture, on the uninterrupted operation of which depends the daily supply of food to all the people.

The Farmer as a Laborer.

The daily manual labor of operating farmers in this country is equivalent to that of 13,000,000 adult workers. The price of farm products determines the farmer's wage. The solidarity of labor is such that farmers cannot continue on one wage level while the rest of labor is on another level. One must rise or the other fall until a level is reached.

The Farmer as an Employer.

American farmers employ more laborers than any other single industry. The number of operating farmers and their hired employees is greater than that of laborers in all other industries combined. Any adjustment of industrial wage disputes to be fundamentally sound and permanent must give full consideration to the relation between wages on American farms and in other industries. To pay higher wages on the farm inevitably means higher prices for farm products. The present level of wages makes it impossible to cultivate American farms with the greatest efficiency and must reduce production.

Reciprocal Duties and Obligations.

To produce sufficient food is the

primal duty of those engaged in agriculture, and to the limit of their physical and financial ability this duty should be performed. For this there must be an equivalent in value. Farmers discharging this duty to organized society have a right to demand:

(a) Such returns as will fairly compensate them for their capital invested, their technical skill, their managerial ability and their manual labor.

(b) That they and their families have social, educational and political opportunities equal to those engaged in other activities.

Failure to meet these demands will result in a continuance and an acceleration of the decline in agriculture. Increased production is still the slop of the hour, and the farmer is still working at high speed and long hours and without adequate help, and facing falling markets for his products. He now appeals to those in other callings to buckle down to work and turn out the product, stop the profiteering, and all together begin to pay the debt that hangs over the land.

Farm Production.
